THE BICYCLING WORLD and MOTORCYCLE REVIEW

Founded 1877

Indian

Motocycles always lead on the track, road and hill because they are unequalled in power and efficiency. They lead in the favor of all experienced riders because in the Indian they get superior quality and the full value of their money. They get what they pay for.

THE HENDEE MANUFACTURING CO., Springfield, Mass.

CHICAGO SAN FRANCISCO LONDON

93849

New York, N. Y., Saturday, September 23d, 1911

In numbers as well as performance United States Tires were the "Stars" of the Western Endurance Contest.

United States Motorcycle Tires not only brought in the winning private owner and two out of three members of the winning trade team, but were used by 14 of the contestants in this memorable 600 mile struggle.

Think this over United States Tires were on twice as many machines as any other single brand. In fact, more contestants rode on United States Tires than on any other two makes combined.

These "tire wise" veterans of the road and track used United States Tires because they knew by experience that they could absolutely depend on G & J and Morgan and Wright tires to stand up under the hardest grind they could possibly put them thru.

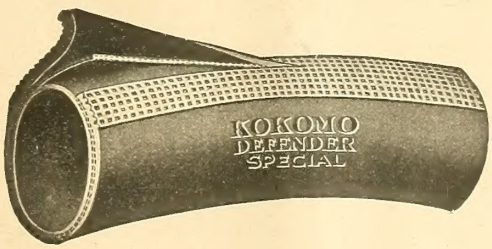
It will pay you well in both pleasure and profit to use these tires, that have so unquestionably proven themselves to be

the strongest tires in the world.

UNITED STATES TIRE COMPANY

Broadway at 58th Street
New York

Kokomiles save Kokomoney for the Rider and make Kokomoney for the Dealer!



Kokomiles are those myriad miles of satisfactory service that are given by

Kokomo Tires

Again we ask:

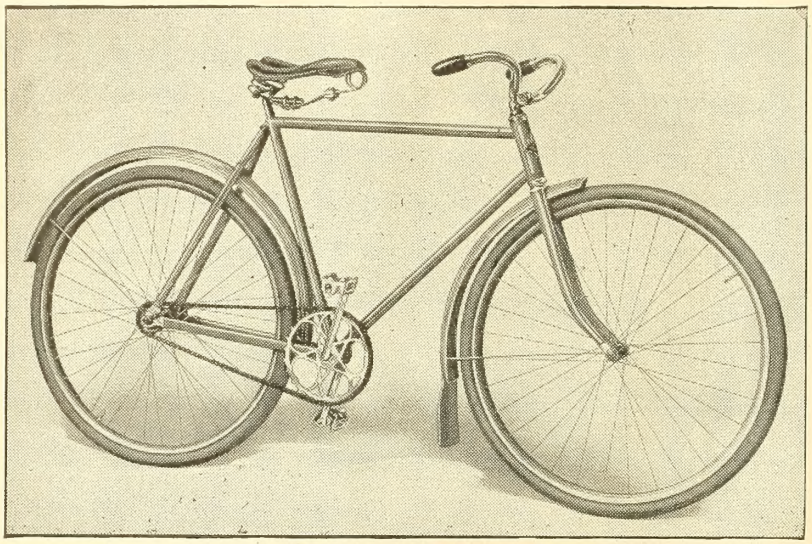
"Are you profiting by what we offer you in Kokomo Tires?"

For instance:

Kokomo Defender Special

This popular guaranteed tire is specially designed and constructed for road use. It is made from the best materials obtainable, being carefully built up by hand with pure para inner tube, and, owing to the very high quality of the inner tube used, a puncture is very easily repaired.

Kokomo "New Oxford"



A medium price tire, yet so good in quality that it does not do it justice to call it a medium grade tire. We have built these tires so that in case of puncture they will not be worthless but can be repaired. Also furnished in smooth tread.

Every dealer handling these tires is doing a benefit to his customers and to his own bank balance.

KOKOMO RUBBER COMPANY, Kokomo, Ind., U. S. A.

The Ball-Fintze Company

12 to 20 Canal St. MANUFACTURERS AND JOBBERS Newark, Ohio

The Avalon Blue Streak Single Tube Tire is the Sensation of the Season. Write for particulars.

These tires carry an *Unqualified Season's Guarantee* and absolutely prevent side-slipping.

Pennsylvania VACUUM CUP Bicycle Tires

They exert a *vacuum hold* on wet and slippery pavements. Skidding in any direction is impossible. The triple row of cup-shaped knobs is molded on a tread of regular thickness, which means extra long service. Puncturing is extremely rare.

These tires are so well made and of such fine material that we give an unqualified season's guarantee with each.

They do away with the greatest of bicycle worries—tire trouble.

Made by an Independent Company. Sold by Independent Dealers.

For our Jobbing Trade, season 1912, we have samples and prices of our complete line of Bicycle Tires. To this popular-priced line we have added the new Vacuum Cup Tires quoted above and also the No. 90, a special high-grade tire made in either smooth or corrugated tread.

Jobbers will please note that our line of Bicycle Tires for 1912 covers eleven different grades.

We market our tires exclusively through the jobbing trade.

FLANDERS MOTORCYCLES

make the opportunity for little men to become big men, and for the big men in motorcycle selling to become bigger than they may ever have thought possible. The Flanders "4" is selling in thousands where the liveliest motorcycle trade heretofore has been in hundreds.

It is altering the whole situation, making motorcycle selling a business of sufficient magnitude for the talents and energies of the ablest.

It was good news that there would be a Flanders motorcycle, bearing the name of Walter E. Flanders. But what stupendous news it was and is that the Flanders motorcycle can be bought for $175, including the magneto. Think what a marvelous multiplication of motorcycle selling it means as the great public awakens.

The Lightning of Success Strikes

THE PIERCE

Four Cylinder Model

Single Cylinder Model

We Have Made Tremendous Strides With Our Motorcycle Product

DURING the past season we have sold machines in almost every community in the United States and in fourteen foreign countries. Very good, but better still, we have been able to satisfy and please practically every agent and every rider. It is everywhere conceded that the Pierce models are the best that were marketed in the United States during 1911.

¶ Next year we shall deliver single cylinder models which will equal the performance of twin cylinder machines and yet maintain the simplicity and reliability of single cylinder construction.

¶ We shall deliver a four cylinder which will be in advance of all other motorcycles—an irreproachable construction.

¶ We are establishing exclusive agencies everywhere. Dealers are handling Pierce motorcycles and bicycles to the exclusion of all else. Are you alive? Get into line.

Dealers! **Ask for: The World's Best Agency Proposition on Motorcycles and Bicycles.**

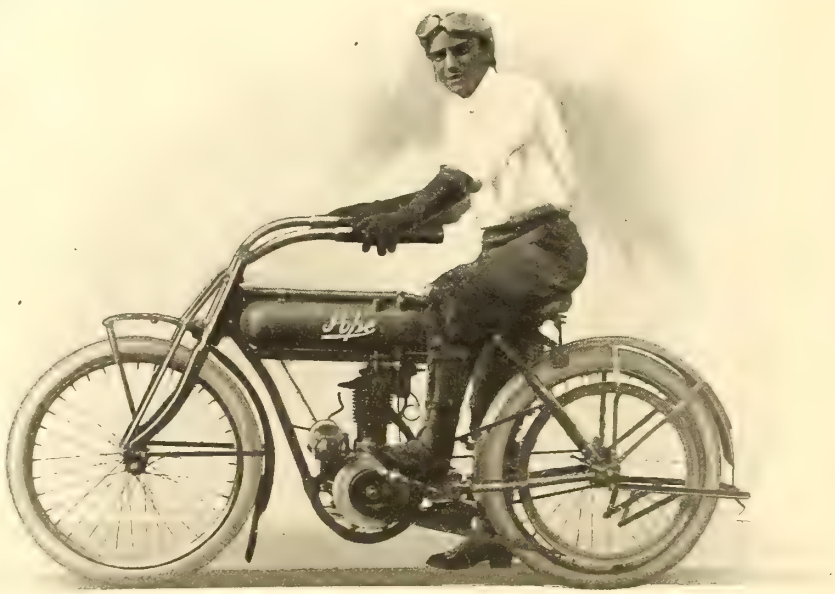
Facts Not Fancies

We have received voluntary returns from hundreds of dealers and riders regarding the merits and performances of their Pope Motorcycles. These testimonials taken separately and collectively not only vindicate all our claims but make us think that they were altogether too modest and conservative.. Below are given as many of them as we can crowd into a limited space.

The Pope Has Won Contests in Hill Climbing, Endurance and Road Racing.



Louisville, Ky.,
August 12, 1911.

Pope Mfg. Co.:

Pope won first place in the hill climb here today. My son, Ed. Davis, rider; time, 18 seconds flat. Nearest competitor, 20⅗. Particulars via letter.

R. L. DAVIS.

8:35 A. M.

"ED" DAVIS, A POPE WINNER

From Daily Press—

Eighteen out of 25 riders finished in the New Jersey Motorcycle Club of Newark endurance run to Atlantic City and return Labor Day. Two local boys, Walter Babb on a Pope, and Harry Scott on a ———, made perfect scores and will be awarded medals.

From our dealer in Lynn, Mass.—

Our demonstrator put the wheel over the road Sunday for 100 miles in company with two free engine twin machines, not only staying with them all the time but beating them at the finish, owing to the fact that he could operate slower in the city without stopping."

How the Pope Performs on the Hills

From Evansville, Ind.—

September 7, 1911.

The writer was going up a hill some time ago and met a man stopping half way up on the hill with a Pope machine, and by the way this was a very steep hill. Thinking that the man had stopped because he could not go up, the writer called to him to come on as that would not do. After getting up to the top of the hill I stopped and started to go back to see about my friend and help him up, if possible, but just about that time I was surprised to hear the machine come puffing up the hill. Now this man started his machine at the steepest part of the hill coming up. This is more than most of the larger machines could possibly do, as they have all they can do to get up a hill with a running start, and the man who was on the machine weighed about 190 pounds.

Our dealer in Quakertown, Pa., writes—

The new Pope Motorcycle is fully up to my expectations. I have tested it thoroughly and severely with the best of satisfaction. I can speak very highly in regard to the machine. There is plenty of motive power to go almost everywhere and anywhere without the least bit of trouble. The Pope is a good hill climber. I have tested the machine on the steepest hill in this vicinity, about one-third of a mile long and very steep.

From our Paterson, N. J., dealer—

I have received the sample Pope Motorcycle in good condition and have given it a good tryout. I have ridden it about 75 miles around Paterson and we have some of the greatest hills in the country and I have gone up all that I have tried. From comparison with other machines, I believe that I can go from 43 to 45 miles an hour and none of the higher powered machines with which I have had a trial have anything on me, so I consider I have the best motorcycle in Paterson and did not make any mistake in waiting. I used my own judgment in the matter, feeling sure that the machine would be alright. When will I receive one or two machines more? I don't want to keep my customers waiting.

From our Ogden, Utah, dealer—

We have given the Pope Motorcycle a thorough trial and are highly pleased with it. It climbs the hills without any difficulty and moves smoothly and quietly. It has been admired by many for its fine workmanship.

From Massillon, Ohio—

July 20, 1911.

Motorcycle received and was tried out by several prospective buyers and also myself, and all were more than satisfied at the performance of the machine, especially on the hills. It also pleased me to hear the remarks about the machine while on display in my show window.

From Newark, N. J.—

August 30, 1911.

The machine goes like a watch and climbs hills like a four horsepower.

From our dealer in Farmington, Maine—

The motorcycle is giving entire satisfaction, and to use my customer's expression, "Is a bird on the hills."

THE POPE MANUFACTURING

TORCYCLE Has Done

claims for the Pope Motorcyle seem altogether too modest

How the Pope Has Proved Its Reliability and Power

From Lynn, Mass.—

August 25, 1911.

We are pleased to advise that our Model H motorcycle demonstrator has run 2,500 miles in the last 5 weeks, covering three states under all existing road conditions without a skip or trouble of any nature. Our demonstrator rode from Lynn to Portsmouth, N. H., sixty-five miles, in two hours, and from Portsmouth to Portland, Maine, in two hours and forty minutes, returning to Lynn the same day, a distance of 105 miles in four hours and fifteen minutes, making a total of 210 miles at an expense of fifty-five cents. We consider this the most reliable wheel on the road and equipped with the best ignition to be obtained.

Yours very truly,
(Signed) E. T. REYNOLDS.

From a rider in Gaithersburg, Md.—

The motorcycle which I bought of you through your local agent, Mr. ———, arrived last week O. K. I gave it a thorough tryout yesterday over rough country road and I find it will do more than you claim. I traveled over 68 miles of hilly country and pulled every one of the hills with ease. While the "Pope" does not claim much speed, I have very little trouble to keep pace with a 5 H. P. twin machine of another make. I also noticed that the Pope uses very little fuel and oil. Even if the price was $50.00 more, I would rather have the Pope than any other single cylinder machine I have ever tried.

From Camden, N. J.—

August 14, 1911.

I had another good trip yesterday with four other Pope riders and myself. We covered about 200 miles, and went up sandy hills which I thought I never could do. For one of the riders this was his first trip. He was very well pleased. Another rider of the Model H rides every day and has covered 1,500 miles. Says he would not change with any other machine, his machine keeps running so good and quiet. He did not know how to ride a bicycle when I ordered his machine.

From our dealer in Grand Rapids, Mich.—

The little Pope Motorcycle works fine. I rode 36 miles over sandy and hilly roads in one hour and ten minutes. Other riders with 5 and 7 horsepower machines did not equal this time. Others say the roads were the worst they have ridden this year.

From Goshen, Ind.—

August 30, 1911.

The little Pope is a dandy. It does everything other motorcycles will do.

From our Elmira, N. Y., dealer—

I received the motor and am very much pleased with same. Have tried it out and it works perfect.

From our Piqua, Ohio, dealer—

Would say, we received the Pope O. K. and it is a wonder for speed and power. We have driven it 400 miles without a single adjustment. How soon may we expect the others?

How the Pope Has Pleased Riders

From New York City—

September 12, 1911.

The little Pope Motorcycle has been entirely to my satisfaction. In the eight hundred miles I've gone, it has taken me through all kinds of roads without the least bit of trouble or attention. It takes the hills without the least bit of effort. Although you do not claim great speed I find that I can get up to forty-two miles per hour with ease. I expect to leave for Panama in about a month and hope to be able to act as your agent.

Yours very truly,
(Signed) LOUIS A. STILSON.

Our dealer in Corinth, N. Y., writes—

August 17, 1911.

I received your motor bicycle today and it is a dandy—the best I have seen in a long time, and the weight is just right. The man that I sold it to thinks it is all that you say, and I expect to sell some more in a day or so.

From a rider in Peekskill, N. Y.—

I have a Pope light weight motorcycle. I have given the machine a thorough tryout and find it very good on hills and speedy.

Our Bridgeport dealer writes—

September 11, 1911.

Father Judge is delighted with its willingness to climb the hills, in fact he takes no notice of hills, neither does the machine.

Our Bridgeport dealer writes—

The motorcycle arrived yesterday afternoon. It looked good. Dr. ——— is very well pleased, and so am I. Let me have another machine as soon as you possibly can. The boys are getting impatient.

From our Macon, Ga., dealers—

We wish to say that the Pope is one of the best machines that has been to this town. I (the writer) went up a hill with a boy on the machine, that a lot of $225 machines can't pull. In fact it is well known that if an agent comes to town, we take him to this hill to see if he can make it, and if he can, the machine is O. K.

From our Hudson, Mass., dealer—

I wish to say in regard to the motorcycle that everybody who has seen it is more than pleased with it, and several fellows who have been riding other machines tried it and said it went like a bird. I have never had anything in my windows which has attracted so much attention.

From our dealers in Greensboro, N. C.—

August 30, 1911.

We wish to express to you our satisfaction with your little Pope machine. Our first rider was in this morning and stated that he was highly pleased and would not exchange for a larger machine, no matter what inducements were offered. He averages from 70 to 80 miles every day over some awful roads. He says for a business machine it can't be equalled. Our other riders are all satisfied and we have yet to have our first kick on the Pope. Looking forward to a prosperous season next year.

How the Pope Has Impressed Dealers—Quick Sales

From our dealer in Newport News, Va.—

I tried the Pope out yesterday and sold it today. Please send me another one as soon as possible. I am delighted with it and so is my purchaser, and all others whom I have shown it to. I hope to sell many.

From our Camden, N. J., dealers—

I gave our demonstrator another pretty good test yesterday of 160 miles, which totals up over 500 miles altogether, and it has showed up remarkably well alongside of other makes, as regards endurance and speed. One of the best makes of machines on the market came along yesterday and I made it run so long that the motor heated up and broke an exhaust valve off. My motor did not show any signs of overheating and I ran faster than he did. I ran for 30 miles at full speed and made all the riders open their eyes. I am not afraid of any of the machines, even if they do cost $250. I told them I would run as long and go anywhere they would.

This one from Indianapolis, Ind., dealers—

July 8, 1911.

The writer believes in the Pope Motorcycle and has been riding the sample you sent every day without failing. It is a machine for the masses without question, and next season we expect to cut out one or two of our agencies in order to do more for the Pope.

From our Oshkosh, Wis., dealers—

Relative to the merit of the new Pope, will say that it has met with general favor and I am sure will prove a selling proposition.

From our Newark, N. J., dealer—

I received the Pope Motorcycle, and must say that it is all I expected and I cannot see how it can help being a great success.

Our Columbus, Ohio, dealer writes—

We received the Pope Motorcycle all right and it is a jewel.

Splitdorf Plugs

Won in the Big Lake District Endurance Run, September 8-9-10.

In that gruelling three-day endurance through mud, sand and water, SPLITDORF Plugs won not only the Individual Prize, but the Team Prize as well.

The same excellence that marks the SPLITDORF Plug is also present in the

Splitdorf Motorcycle Magneto

which is destined to be the exclusive Magneto choice of the wise riders.

One large manufacturer already uses the SPLITDORF Magneto as standard equipment, and he will not be lonely.

We're here to tell you all about SPLITDORF equipment. Ask us.

These Telegrams Tell the Story of the Excelsior Country-wide Winnings!

September 6, 1911.
Excelsior won eight out of nine races at meet held here Labor Day, including a 100 mile race in which stock Excelsior singles finished 1st, 2nd and 4th against a special open port 4 Indian and twin fives: time, 2 hours 1 minute 24⅘ seconds, on a half mile dirt track. And 6 minutes 5⅕ seconds for five mile time for 30-50 class. All sold out and have sold all that are coming. Rush shipments of twins and singles.
PIPER & TAFT,
Seattle, Wash.

September 4, 1911.
Balke on Excelsior wins five mile three twenty eight match. Armstrong wins on Excelsior by half lap. Balke barred from invitation. Armstrong on Excelsior loses handle to oil pump and loses by six inches. Balke wins ten mile in seven eleven in a joy ride with the field. Great excitement. Prepare carload machines for shipment.
MEAD AUTO-CYCLE CO.,
1376 Broadway, Denver, Colo.

September 4, 1911.
Entered Excelsior five open races, got four firsts, one second in ten mile handicap. Broke track record, one mile 58⅗.
JOE DE SALVO,
Peoria, Ill.

September 5, 1911.
Excelsior wins stock fifty-five cubic inch event at Poughkeepsie, also gets position against racing twins. Did you ship me twenty-five twins today? Can use fifty at once. Hurry along nineteen twelve type machine. Advertising arrived, must have large shipment more at once.
S. T. KELLOGG,
169 Beechwood Ave., Bridgeport, Conn.

September 6, 1911.
Excelsior twin, ridden by Morchouse, wins Dunlop cup in Manitoba endurance run; only lost eleven points broken saddle spring, loose hind cone, bent pedal. Machine had already been ridden six thousand miles without ever a claim for defect. Started over rough roads, went through miles of deep sand, ended in blind bursts.

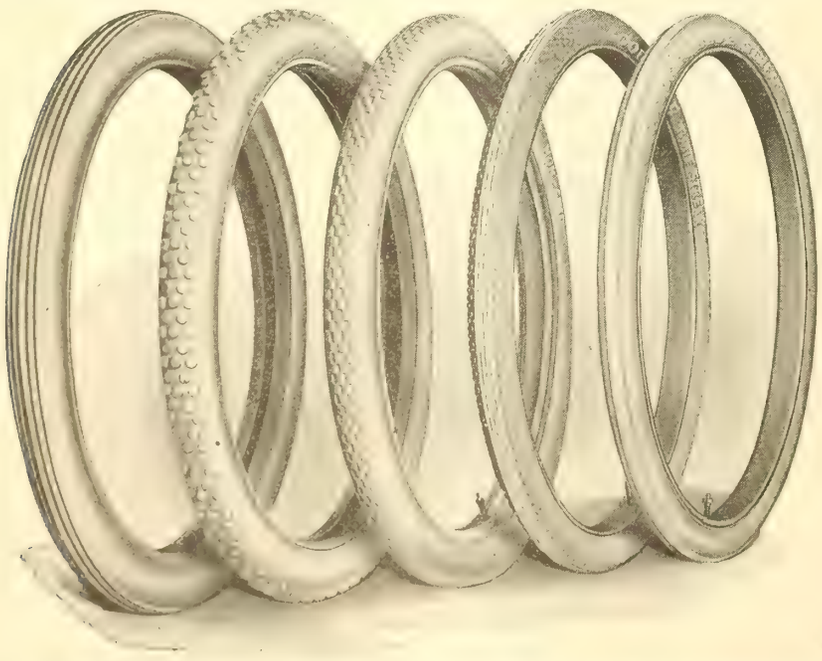
World's First Perfect Score Made on Goodyear Motorcycle Tires Proves Their Superior Endurance

The first perfect score ever made by a motorcycle carrying two men in tandem is the latest achievement of Goodyear Motorcycle Tires, proving our claims for superior endurance.

In the recent reliability run of the Los Angeles Motorcycle Club—one of the severest tests to which tires could possibly be put—these premier motorcycle tires ridden tandem by Erwin Knapp and Sam Eccleston plowed through two hundred miles of sand and gravel and came through first winning the race with a perfect score and almost without a scratch. This, the first perfect score of its kind ever made in the history of motorcycling, was duplicated by two other machines running tandem in the same race and also equipped with Goodyear Motorcycle Tires.

Don't Have Tire Troubles



Start right **at first**—start with a Goodyear Tire equipment and know what it means to realize to the veriest limit the enormous possibilities of pleasure and profit pent up in your motorcycle. Goodyear Motorcycle Tires **let all that pleasure and profit out.**

GOODYEAR
Motorcycle Tires

Trouble-Proof Tires

Goodyear Tires offer you more service—more speed and endurance—more **pleasurable assurance** than any other motorcycle tires manufactured. They are practically trouble proof. Performances **prove** it.

Nor **could** they be otherwise: For the reason that Goodyear Motorcycle Tires are built by the pioneers of the motorcycle tire industry—by the world's greatest and most experienced automobile tire builders and there are five different types, one for each road condition.

Why Speediest and Strongest

Better rubber—tougher fabric—a more perfect compound—thicker treads than found elsewhere—size, larger than most others, and the only successful method of holding the tire on the rim; these are but a few of the pleasing details that ought to invite your serious attention toward these trouble-saving motorcycle tires.

Such tires as these would be worth it if they **cost more** than common tires. But they don't. The only thing extra is the SERVICE.

There is a wealth of facts we haven't given you. But if you have been reading these ads you know how these tires hold all world's professional and amateur records and most every other individual track record and endurance run record as well. And that tells everything, doesn't it?

Ride One of These Five Great Tires

One for Each Road Condition

1. Goodyear Corrugated Tread Tires—For the average give-and-take road.

2. Goodyear Studded Tread Tires—For mud, sand, snow and ice travel.

3. Goodyear Non-Skid Tires—For use on slippery pavements.

4 and 5. Goodyear Blue Streak Racing Tires—Hold all world's records. One tire for dirt tracks, another for cement or board.

Just write "Send me 'Tires of Old War Horse'" and mail the card tonight to

Vol. LXIV. New York, U. S. A., Saturday, September 23, 1911, No. 1

A. B. COFFMAN VERY ENTHUSIASTIC

Yale Sales-Manager, on Southern Trip, Gives Characteristic Interview With Promise of Good Things to Come.

A. B. Coffman, vice-president and sales manager of the Consolidated Manufacturing Co., has been visiting the trade in the South and while in Savannah, Ga., was "caught" by a representative of The Bicycling World and Motorcycle Review and asked for an interview on trade conditions and prospects for 1912. Mr. Coffman says:

"I find trade conditions throughout the country exceptionally good and prospects even better than that. Last year we had what we call a 'hummer'—that is one of the best since we have been in business and the coming year we fully anticipate will be a still greater one.

"In regard to our 1912 announcement, I cannot say anything at this time, but there will be a great surprise when it does come, which will be shortly.

"We are going to do some very extensive advertising in all of the leading trade papers and magazines of the country and go after business in a more extended way than ever before. I fully believe that next year will see sales in number that will even surprise the most enthusiastic. I find throughout the entire course of the present trip an interest in motorcycles that will undoubtedly result in an enormously increased business next year.

"So far this year we have closed contracts in practically every part of the country. I am now on my way to Florida and after closing in that state will go back to headquarters and start something with an announcement that will cause many to "sit up and take notice."

"Live Wire" Stings Motorcycle Dealers.

C. H. Lang of Chicago is sending out the following notice:

"$25.00 reward for the arrest and conviction of a culprit posing as the brother of C. H. Lang, distributor of the Harley-Davidson Motorcycle, 24 East Adams street, Chicago.

"The young man is of medium height, stout built, smooth face, big chin, rather large mouth, large, red face, and a big head. Appears very intelligent. Wore a small stiff hat and a gray suit. Some grease spots on this trousers, from which it appears that he was working in a store or repair shop.

"Appears intelligent enough to deceive the devil, as Mr. Chadman, manager of the Economy Cycle Supply Co. of Detroit, Mich., is saying.

"The man borrowed $5.00 of Chadman on Saturday, the 26th of August, claiming that he sent a long distance message to his brother, C. H. Lang, of Chicago, but the money did not arrive yet. On the following Monday he got $2.00 more, claiming that the check was on the way. After that Mr. Chadman saw him no more. He seemed to know all about the Harley-Davidson business, and the motorcycle game in general.

"On September 5th the same complaint was made to C. H. Lang by Albert Scherer, of Benton Harbor, Mich., the agent for the Harley-Davidson motorcycle. This same man got $10.00 by telling a different story, but also pretending to be Mr. Lang's brother. Later on this man was at the Harley-Davidson agency at Toledo. He seems to be working his way east. Agents please look out for him."

TIMELY SUGGESTIONS ON EXPORT

Valuable Hints by Expert—Shows Why American Bicycle Manufacturers Lost Lead to English and Germans.

Throwing considerable light on why it is that American manufacturers of cycles and accessories ar eforced to yield to English and German rivals in certain of the export markets where for years the Americans dominated the situation, P. W. Herbert, who represents the Birmingham house of Eugen Baedeker, importer and exporter of cycle and motor materials, and who is in the United States incidental to one of his periodic journeys between England and Japan, has some very pertinent comments to make on the situation. He expresses the opinion that the American manufacturers fail to modify their goods sufficiently to meet the export customers' predilections and prejudices, and that the Americans also fail to realize that English and German firms now make extremely low prices on export goods, while Americans continue to quote prices that might have been satisfactory to export customers some years ago but which are now too high.

"Japan is one example of a market that was practically owned by the Americans not so long ago," said Herbert, in giving his views to the Bicycling World and Motorcycle Review. "In many respects it has been improving as an export market, because of improved credits and integrity of its business men, but the American cycle firms have been losing nearly all of their business there. The business now goes to the English and the Germans, because of

price and because they will give the buyers what the latter want, instead of what the manufacturer thinks they should have.

"In many countries there is a preference for the English style of bicycle instead of the American style, by which I mean models with mudguards, free-wheel, hand brakes and the like. It would not be difficult for American cycle manufacturers to make models of this kind for the export market, but I doubt if there is one who does. In parts and accessories the Americans do not seem to know what a low price means. They ask figures that are almost ridiculously high in the face of what the European factories ask for the same things. As a consequence a great many so-called American specialties, such as wrenches and fittings, are now being made abroad. Around Birmingham, for instance, there are a number of the cycle component makers who in the last year or so have made big preparations to produce specialties that heretofore were produced chiefly in America. This means that these will be available at a mere fraction of the price asked by the American manufacturers. Even despite the 45 per cent. duty, there is a heavy importation of cycle components and fittings into the United States from England and Germany, because of the low prices the manufacturers across the Atlantic are able to make. Labor costs are going up in Europe just the same as they are in the United States, but the factories still find ways to lower the production cost from year to year. Consequently they are able to take the export markets away from the Americans, and will continue to do so unless the latter wake up."

Who Stole Schmidt's Indian Twin?

Notices have been sent out from Detroit, Mich., by Superintendent of Police John J. Downey to the police departments of the various cities regarding an Indian motorcycle belonging to William Schmidt of Detroit, which was stolen on August 4th by a young man about 20 years old; five feet eight inches tall; weighing about 140; smooth face; light complexion, and wore at the time a blue suit and a flat soft hat. The motorcycle was a seven-horsepower twin, blue Indian, with engine number 72C 059, and Michigan license 1385. Schmidt will pay $25 reward for information leading to the recovery of the machine.

Prest-O-Lite Tube to Inflate Tires.

The Prest-O-Lite Co., Indianapolis, Ind., manufacturers of the Prest-O-Lite Gas Tanks, are putting on the market what they call the Prest-O-Lite tire tube, a small steel tube containing sufficient gas to inflate one tire. It is equipped with a puncturing valve and metal hose connection which is easily attached to the filling valve of the tire, and by the turning of a screw the gas is released—just about one minute being necessary to fully inflate a flat tire.

PLAN NEW HOME FOR SHOWS

Syndicate to Build Larger and Better "Madison Square Garden"—Co-operative Plan to be Followed.

Never has the demolition of any building aroused more general public interest than that of old Madison Square Garden, and since the news that this "building of shows" was to be torn down to make room for an office structure the constant query has been as to where these shows would be held in the future. Now comes the announcement that a group of Long Island capitalists are going to build a new and larger "Madison Square Garden" somewhere uptown (they are not ready to announce the site, although they have the property), west of Broadway, and between Thirtieth and Fifty-ninth street. It is said that the syndicate controls $10,000,000, and have bought the land outright at a cost approaching the million dollar mark.

A meeting of the owners and promoters of practically every large show held in New York was held on Wednesday afternoon, the 20th inst., for the purpose of securing suggestions as well as assurances that the new building will be leased for their shows. The plans and scope of the new building was explained to those present and the syndicate guaranteed to have the building ready by October, 1912. It was suggested that those present form themselves into an association guaranteeing to lease the building for so many days each year for their individual shows at a fixed charge and this seemed to meet with general approval. This association would then sit as a body of the whole when the question comes up as to the admittance of another show, thus giving it the power to veto any other show desiring to exhibit in the building.

The Cassidy, Van Nostrand & Chapman Realty Co. have charge of the negotiations. Joseph Cassidy was formerly president of the Borough of Queens; E. R. Chapman is president of the Hudson Trust Co.; D. L. Van Nostrand is president of the First National Bank of Jamaica, and S. N. Van Allen, another member of the company, is reputed to be a millionaire several times over, and is one of the managers of the Spotrsman's Show. It is probable now with this building in prospect that the Sportsman's Show and the Motor Boat Show will not be held at all this year, but will await the completion of the new structure. It is stated that the new building will take in an entire block.

George Carlton Comstock, vice-president and counsel of the new F. and D. Co., which purchased Madison Square Garden, states that the plans for the new commercial building to be erected on the site of the old Garden had been drawn and approved and that the work of tearing down the Garden would begin on February 5th next without fail. "The new building," said Mr. Comstock, "will be 24 stories high. The four top stories will be used for offices, the other 24 for lofts. We hope to have it completed in 1913 and estimate the total cost at $12,000,000."

"Glad to send you herewith subscription for one year for the Bicycling World and Motorcycle Review. Money well spent."—A. C. Newman, Bridgeport, Conn.

M. Nabors, manager of the Flanders Motorcycle Companw of Atlanta, Ga., on the first Flanders shipped South.

MOTORCYCLE DEALERS ENLARGING

New York Association Reports Marked Improvements in Trade Conditions—More Dealers Apply for Membership.

Considerable material progress, indicating a marked improvement in local circles as regards business conditions in general among motorcycle dealers was accomplished at the meeting of the Motorcycle Dealers' Association of Greater New York, held on Monday, 18th inst. There was also brought out some slight additional features in the requirements of the Motor Finance Co. relative to the instalment sale of motorcycles as negotiated between the association and the finance company's representative, Mr. C. E. Black, at the meeting of the 5th inst.

The additional requirements placed on the prospective purchaser stipulate that the 10 per cent. bonus paid by the purchaser be paid in cash at the time the deal is consummated; that he carry insurance on the machine against fire and theft, the policy to be in favor of the Motor Finance Co., and that he pay interest on the notes outstanding. In the absence of Mr. Black or any representative of the Finance company, the secretary, Mr. Rotholz, was instructed to again request Mr. Black to forward the articles of agreement incorporating therein the terms as stated by him and accepted by the association and agreed to by both parties at the previous meeting.

Those present at the meeting were H. A. Gliesman, president; Gus Rotholz, secretary; Henry Heyer and R. G. Brazenor of Brazenor, and Ruderman, Brooklyn; E. C. Kicherer, F. B. Widmayer, George P. Jenkins and Mark Eisner, counsel for the association. Joseph Buckingham, manager of the motorcycle department of the Weaver-Ebling Automobile Co., Harley-Davidson agents, was admitted to membership as representing that company. Applications for membership were received by mail from dealers in Newburgh and Peekskill, N. Y., and these were referred to the committee on membership.

By far the most significant action tending to the general betterment of trade conditions and one forecasting great results was that brought about by the discussion of ways and means for mutual assistance of all members of the association by the appointment of a committee on credits. The scope of the work as outlined for this committee augurs well for a co-operation among the dealers hitherto much desired, but under their existing conditions impracticable. Those appointed on the committee were George P. Jenkins, chairman; F. B. Widmayer and R. G. Brazenor.

Those reporting sales closed under the new instalment plan were G. Rotholz, for two machines of $300 value each, and two practically closed by Henry Heyer for $200 and $300. The advertising committee was instructed to repeat advertising as published heretofore. Mr. Eisner, counsel, reported that the incorporation papers were not yet quite fully prepared, but that same would be completed by next meeting.

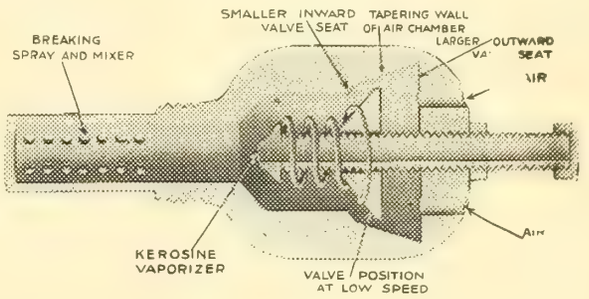
The meeting was adjourned to meet at 9:30 p. m., Monday, 2nd prox., at 1213 Fulton street, Brooklyn, N. Y.

Alco Salesman on Motorcycle Trip.

Mr. H. E. Turner, the wanderlust salesman for the Alco Manufacturing Co., of Syracuse, N. Y., mounted on a Reading-Standard, arrived in Cleveland on his cross-country tour for the Alco Manufacturing Co., September 4th, Labor Day.

Turner, who reports that business is picking up the farther west he gets, left New York about two weeks ago and arrived at Rochester after a few days' ride After spending a few weeks at the Alco works, he mounted his Reading-Standard with Fisk tires, and Alco hip leggings, leaving Syracuse Friday, September 1st, over roads which appeared to be boulevards, he arrived at Rochester the evening of the same day, visited the Rochester Club rooms, was entertained by the members, and bunked in the club rooms that night. After a visit to the dealers the next morning he made his way to Niagara Falls. The roads continued to be in the boulevard class and with only a spill, caused by a skidding auto, Turner arrived at the Falls Saturday. After the usual business calls at Buffalo he pointed his machine towards Erie and arrived there 6 o'clock Sunday At Erie his acquaintance was made with C. F. Williams, Harley-Davidson representative at Mansfield, and they together picked camp on the lake just outside of the city for the night. After breakfast they made Ashtabula in the afternoon and were delayed there on account of home-week celebrations. Cleveland was made late in the day and visits paid the dealers.

One of the features of Turner's trip is the fact that he wears the same trousers on the road that he uses during his business calls, and they are yet without a grease spot, due to his high hip Alco leggings.



Falor Tells of Blue Streak Campaign.

In an article entieled "Rapid-Fire Tactics in Marketing a New Tire," S. A. Falor, sales manager of the motorcycle tire department of the Goodyear Tire & Rubber Co., Akron, Ohio, tells in the September number of Judicious Advertising how Blue Streak tires were given a quick introduction to the trade and the public, once the Goodyear company was prepared to make them in big quantities. He gives in detail the facts concerning the highly successful Blue Streak advertising campaign.

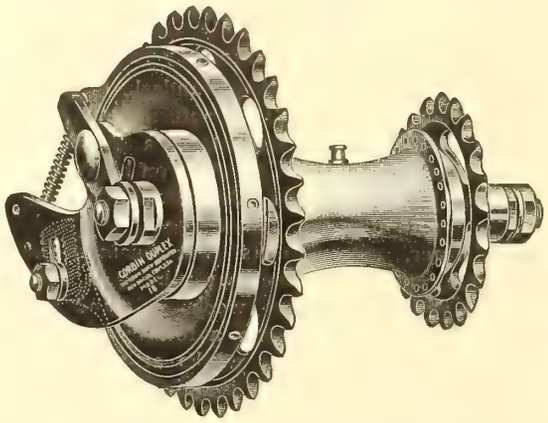
FOR BETTER MIXING THE MIXTURE

New Device to Break Up Fuel and Add Necessary Extra Air—Tall Claims Made by Makers.

Speedo is the name of an attachment manufactured and marketed by the International Accessories Corporation of New York, Chicago and Los Angeles. Speedo is applicable to all makes and sizes of gasoline engines by simply drilling and tapping for one-quarter inch pipe, a hole at a convenient point above the carbureter in the intake pipe. It is guaranteed by its makers to increase the power of a gas engine fully 20 per cent. without increase of cost. To make five gallons of gasoline do the work of six. To run the engine cooler, and to remedy carbonization. Decarbonizing attachment furnished complete, $3.50.

It breaks up under spray, each particle of gas after leaving the carbureter. This makes more air necessary and Speedo injects additional air perfectly and automatically, according to speed, giving highest perfection of mixture with lowest amount of fuel.

The procedure for attaching is as follows:



Drill hole and tap for one-quarter inch pipe thread at convenient point on intake mannifold above carbureter. Insert threaded end of body, screwing in tight, taking care to have one flat side up. This is important, to enable each spray of air to cut crosswise through the carbureter mixture, to completely break up the gas particles.

To use as a decarbonizer, the cap is unscrewed from the projecting stem and applied then to a small rubber hose, allowing the end of the hose to hang downward in a receptacle containing about a pint of kerosene Start the engine and the suction will automatically spray the kerosene in the proper prorotion into the intake. The resulting vapor acts as a solvent on the carbon deposits. This treatment will be required about twice a month. The price, required about twice a month. The price of the little device is well within the means of every rider, as it is listed at $3.50. The International Accessories Corporation is planning a very extensive advertising campaign for "Speedo."

Another Crisis in Bicycle Racing.

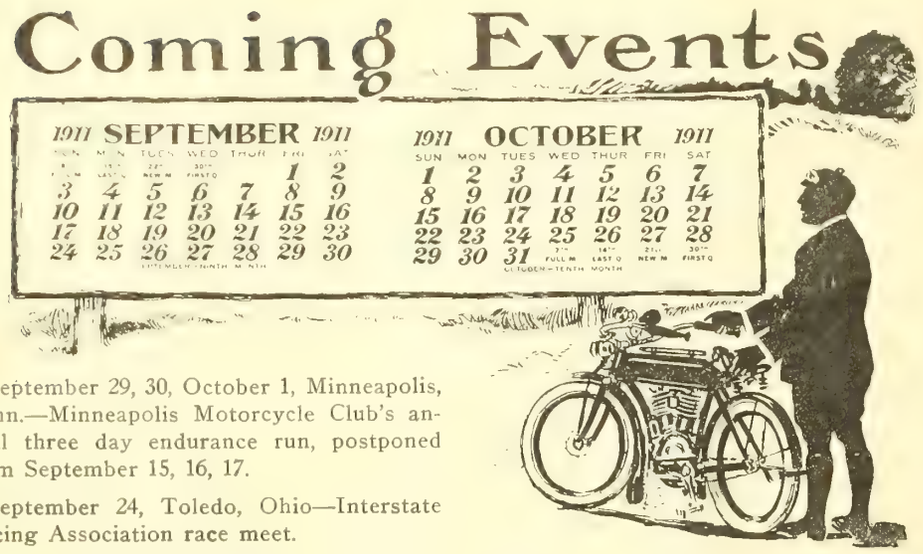
Again the bicycle track racing game approaches a crisis. This time charges and counter charges of teaming are being made against a number of the leading professionals. Those well up in the amateur ranks are also apparently guilty in no small degree. An idea of the situation may be had by referring to an account in another column of the races at the Newark Velodrome, around which the present agitation centers.

Teaming is one of the most reprehensible transgressions of the rules; not alone in the hardships it works on those against whom it is employed, but also in the fraud committed on the patrons by whose support the very existence of racing is made possible. By its intricacies teaming is also one of the most difficult crimes to unerringly detect by the officials.

In his endeavor to assure the public of fair and square competition, the manager of the track has all of the riders under contracts specifically forbidding teaming, in addition to the riders' compliance to the rules of the National Cycling Association, whose board of control is the governing body. The official referee, Walter Bardgett, has been most earnest in the discharge of his duties, but when the championship series of the season neared the end, it is alleged Kramer, in his anxiety to win, overstepped the rules and the terms of the contract, with Alfred Goullet as chief partner.

In response to the demand of Manager Chapman and an overzealous declaration by him, a hearing was held, and Kramer practically admitted having teamed. It was also brought out that he of the leaders in the season's series had not been alone guilty of the offense. In rendering the decision to dismiss the charges the members of the board undoubtedly came to the most equitable conclusion and also provided against further repetition, if possible, by appointing a board of three referees to serve simultaneously. In deciding as they did and avoiding the possibility of placing Manager Chapman in a position rendering necessary the fulfillment of his declaration, to wit: . . . "all previous races would be thrown out and a new series run," the board also avoided a most unpleasant prospective situation, as there is a decision on record in the courts of New Jersey by which the management and N. C. A. would no doubt have lost should the question have reached the courts.

The referees' decisions on Sunday last, according to most recent evidence, did not, if anything, go far enough, and the contention of Floyd Macfarland, speaking for Clark, evidently based on the supposition that if Kramer could team and escape so also should Clark, can be answered conclusively by the homely, though true, saying that two wrongs never yet made one right. It behooves all, for the mutual good, to purge bicycle competition of such serious infractions, and thereby build and improve a game that has by all means had more than its share of abuse and one which recently has shown such splendid progress.



The Export Situation.

It is possible to draw a line around the United States and regard sales to buyers in any country outside that line as export business. But there are as many kinds and conditions of export business as there are communities outside the United States, and it remains for the manufacturer to discover where export business is most profitable for him. Exportation business to Great Britain and Continental Europe has little to offer that would attract American bicycle and accessory manufacturers; not because the volume of business is not big, but because that portion of the world is well supplied with its own factories, who can make prices on the spot that are impossible for an American over the sea. In those countries, however, where buyers are dependent on factories in distant lands, the geographical advantage of the European factories ceases. Nevertheless, the latter are crowding American manufacturers out of export markets where once the Americans were supreme. And the reason is price, together with an unwillingness on the part of many American factories to make the product fit the market.

To assume that a decline of American cycle exports to one country or another is caused by a falling off in demand for cycles, parts and accessories, is to make the prime mistake of the whole situation. In nearly every case such a decline is due to the fact that other factories are making materially better prices than are the Americans. If the factories abroad can afford to spend money in developing their export trade, making better prices from year to year on standard goods, it is fairly convincing evidence that they are not unloading an embarrassing surplus of old stock but are manufacturing for a permanent and profitable market.

They also are showing that to get an export buyer's money, it is necessary to give him exactly the goods he wants at a favorable competitive price.

Coming Events

September 29, 30, October 1, Minneapolis, Minn.—Minneapolis Motorcycle Club's annual three day endurance run, postponed from September 15, 16, 17.

September 24, Toledo, Ohio—Interstate Racing Association race meet.

September 24, Cresta Blanca, Cal.—Central California Motorcycle Club's runs and barbecue.

September 25, Detroit, Mich.—The Motorcycle Club of the Detroit Wheelmen's racemeet on mile dirt track.

September 26, Bowling Green, Ohio—Interstate Racing Association race meet.

September 27, 28, 29, 30, Adrian, Mich.—Interstate Racing Association race meet.

September 29-30, Springfield, Ill.—Illinois Motorcycle Club race meet on half mile dirt track.

October 1, Ft. Wayne, Ind.—Interstate Racing Association race meet.

October 1st, Motor Parkway, L. I.—Club Races Concourse Motorcycle Club.

October 1, Worcester, Mass.—Worcester Motorcycle Club's endurance run to Springfield, Boston and return; 200 miles.

October 1, Providence, R. I.—Rhode Island Motorcycle Club's record run; third and last of series; to Narragansett, New London, Worcester and return.

October 5, 6, 7, 9, 10, 11, 12, 13, 14, Birmingham, Ala.—Motorcycle races at Alabama State Fair, mile dirt track; W. D. Gresham, 1912 Fourth avenue, Binghamton, Ala., referee.

October 7, Providence, R. I.—Regular fall business meeting of F. A. M. New England District, in Verdani Hall, 8 p. m.

October 8, Detroit, Mich.—Detroit Motorcycle Club's race meet.

October 8, Providence, R. I.—Providence Motorcycle Club's triangle run from Providence to Boston, to Worcester, to Providence.

November 20-25, London, England—Annual Olympia motorcycle and bicycle show.

January 6-20, New York City—Twelfth annual automobile show in Madison Square Garden; motorcycle section first week.

January 20.—New York City. Eleventh annual ball of the Century Road Club Association, Eastern Division, at Alhambra Hall, Seventh avenue and One Hundred and Twenty-sixth street.

CORRESPONDENCE

Considers Cut-Out Necessary.

Editor of The Bicycling World and Motorcycle Review:

In the face of so much that has been written of late against the open cut-out I wish to send in a little opposition to the opposition. There are times when the cut-out should be used and also when it should be muffled. (The riders often need a little advice about these times). It will take some time before the public becomes accustomed to what is now a novelty and therefore, as usual, objectionable. Make a comparison the next time an automobile goes up a moderate grade with partially opened throttle. It makes as much noise, in the total, as half a dozen motorcycles, and yet there is no particular complaint, the people are used to it and in time I claim they will not mind the noise caused by the open muffler.

Some time, while you are trying to fall asleep, along about midnight, you will hear a locomotive, a mile or two away, making as much noise with its always open "cut-out" as 100 motorcycles, then following it up with a whistle that can be heard five miles away or more. Do you complain? You have accepted it as one of the modern sounds and more than likely enjoy it.

There are times when an open or partially open cut-out is a real necessity, particularly in a city with its many other noises from elevated trains, trolley cars and general traffic. Passing under an elevated structure, with a train going overhead, a horn is absolutely uselsss—and here is one of the times for the proper use of the cut-out, or you are approaching a trolley transfer point—slow speed, with a partially open cut-out will secure an open roadway and I have also noticed that people warned in time are better natured than when they hear a horn at close quarters and excitedly jump. Advise the riders to use discretion when near restive horses or near churches and in the residential sections, where there is no cross traffic.

An open muffler is unnecessary and wrong on boulevards like Riverside Drive, with its steady going traffic, but the cut-out is necessary at many points on a street like Broadway, New York. M. T. A.

Timing Valves No Job for Novice.

Editor of the Bicycling World and Motorcycle Review:

I have a four horsepower Indian motorcycle, 1911 model, chain drive, with magneto ignition, regarding which I would like some information, through the columns of your paper. I think the valves need timing. First, should the mechanical inlet valve be wide open when the piston starts down on the suction stroke. Second, should the exhaust valve be wide open when the piston starts up on the exhaust stroke. Please answer these questions very plainly, whether the valves should be wide open or just commencing to open at the beginning of the strokes. If I have to time the valves will I have to go in motor head, and are there any marks on valve gear to go by.

J. W. ADAMS, Willard, Ga.

(Unless your motor has been taken apart there is no possibility of your timing being wrong, and it is improbable that this is your trouble. It may be that the valve tappets need adjusting, or else the magneto circuit breaker. To time the valves it is necessary to take the motor base apart to get at the timing gears which are next the flywheels. This is not a job for any novice to tackle, for the chances are strongly against his getting things right. The timing gears are marked for proper meshing. The inlet valve should open just as the piston starts down on the suction stroke. The exhaust valve has a slight "lead" on the piston and should open about half an inch before the piston reaches the bottom of the explosion or working stroke.)

Boy Scouts Cycle Race.

Troop No. 7, Boy Scouts of America, with headquarters in Newark, N. J., closed their entries on the 16th inst. for their six-hour team bicycle race in the series for the troop championship. The present race is to be held Saturday, 23rd inst., and is the third of the series. The score in points at present is: William Gilman, 13; Clement Honess, 10; Winans Klesick, 6; George Frost, 5; Harold Wands, 3; Ernest Porter, 1. The twelve entries were paired in teams as follows:

Mortimer Hill and Winans Klesick, Harold Wands and Ernest Porter, John Wittpenn and David Meeker, Clement Honness and Mandiville Stratt, Max Struble and Hubert Hutchinson, Arthur Wolf and Willard Gilman.

Ideal Track and Phenomenal Riding at Columbus Meet

Evans, on an Emblem, Wins 100-Mile Free-for-All—Hart Lowers Mile Track Record by Four Seconds—Enormous Crowd Attends the Racing.

Columbus, O., Sept. 17.—Before over 15,000 spectators "worlds" records, and two local track records were sent glimmering at the Columbus (O.) Motorcycle racemeet held at the Driving Park on the 17th inst. Frank Hart, the national amateur champion, found a place in the hearts of the local speedsters when he sped about the one-mile dirt track in 50⅖ seconds. Hart broke Don Klark's former record of 54⅖ seconds, made on this track in July. In the 100-mile free-for-all race, George E. Evans, on an Emblem, broke, it is claimed, the world's record for 100 miles on a dirt track, when he crossed the finish in first place with a time given out as 1 hour 53 minutes 9⅘ seconds for the distance. E. L. Baker, on an Indian, broke the local track non-stop record in the 100-mile free-for-all race, which he completed without a stop.

Spills were in order all afternoon. Don Klark, on his Indian, took the first spill in the ten-mile 61 cubic inch, open event, when he blew a tire, and crashed into the outer fence. He escaped uninjured. Hart, on his Indian, on the first lap of the five-mile, 50 cubic inch, open race, blew a tire and skidded into the fence, badly damaging his machine, he fortunately escaping uninjured. In the 14th mile of the 100-mile free-for-all event, "Shorty" Mathews, on a Thor, and Homer Funk, on an Emblem, mixed it up a little. Shorty blew a tire and found a soft spot up against a fence post. His shoulder was dislocated, and he will probably be out of the racing game for a few weeks.

From the viewpoint of the spectators, the 10-mile open race for the Columbus Motorcycle Club Championship Challenge Cup was the most interesting and exciting. Fred Hare, on an Indian "7," forged to the front of the field of starters at the first of the race, but he was promptly overhauled by L. P. Birkenbach, also on an Indian. At the end of the first mile Birkenbach led Hare by almost 20 yards, and this distance was kept between the two riders until nearly the sixth mile, when Hare, making a sudden spurt, passed Birkenbach. Birkenbach, speeding almost every mile in 57 seconds and under, tore after his fleet competitor. In the seventh mile Birkenbach tied Hare on the turn, and the two riders came down the straightaway shoulder to shoulder. Enthused by the thunderous applause they were receiving from the spectators, the two Indian riders seemed to fairly leap over the oval. On the eighth lap Birkenbach passed Hare and then held the lead of the race until the finish. Birkenbach's daring and steady driving made him a favorite with everybody, and he was presented with the magnificent challenge cup, which gives him two legs on it.

In the ten-mile, 61 cubic inch, open event, Hart showed himself in championship form by traveling about this track as had never been done before. Although crossing the finish first, Hart was disqualified because his starter stepped over the line. The champion clipped off the sixth mile in 54 seconds, the seventh mile in 54⅕, the ninth mile in 53 seconds, and made eight miles in 7:00⅖. The time for the ten miles was 9:02⅖.

The five-mile 30½ open event was very exciting, and Don Klark, on his Indian, wrested first honors from Hart by half a wheel length. Will Teubner, on his Flying Merkel, did some fast riding and finished third in the race.

One of the prettiest races of the afternoon was the five-mile private owner handicap. George Ditz, riding a Flying Merkel, was in fourth place for almost four miles, when he picked up speed, passing Bascom, on a Thor, and Woolley, on an Indian, who were in second and third places. On the home stretch the Merkel rider lost his lead to Woolley and was only able to finish in second place.

One of the most interesting races of the meet was the 100-mile free-for-all event. During the first part of the race Birkenbach was in the lead with L. S. Taylor, on the Emblem, at his heels. Hart, who was in third place, scored a stalled engine in the ninth mile, and after being lapped four times by Birkenbach, restarted in the race. Birkenbach's time for the first ten miles was 9:58½. Don Klark, on his Indian, passed Birkenbach and took the lead in the 22nd mile, when a broken pedal compelled the latter rider to stop for repairs, continuing, however, before many seconds had elapsed. Klark' time for the 25 miles was 24:53 flat, and for the 30 miles, 29:30⅗. The Detroit rider's time for the first 40 miles was 38:57. Klark, still in the lead, completed 50 miles in 48:30, and reeled off 60 miles in 57 minutes. Hart, during this race, was having trouble continually and losing ground despite the fact that he was making miles in 54 seconds and under. In the 54th mile, Hart's hopes were shattered when he obtained a broken gasoline line. The race was then left to Klark, but the Indian rider, too, seemed to be marked, as he broke a connecting rod in the 81st mile and was out of the race. Evans, on an Emblem "7," then took the lead and held it up to the finish. The summary:

Five-mile, novice, open—Won by Otto Tresenmer (Indian); second, H. D. Woolley (Indian); third, Grant Lees (Harley-Davidson). Time, 5:46⅗.

Five-mile, private owners, handicap, open only to Columbus M. C. members—Won by H. D. Woolley (Indian); second, George Ditz (Flying Merkel); third, R. R. Bascom (Thor). Time, 6:39.

Ten-mile, open, Columbus Motorcycle Club Championship for Challenge Cup—Won by Leo P. Birkenbach (Indian); second, Fred E. Hare (Indian); third, L. S. Taylor (Emblem). Time, 9:15.

Five-mile, 30½ open—Won by Don Klark (Indian); second, Frank Hart(Indian); third, Will Teubner (Flying Merkel). Time, 5:05.

Ten-mile, 61 cubic inch, open—Won by Leo P. Birkenbach (Indian); second, Geo. E. Evans (Emblem); Frank Hart (Indian), was first, but was disqualified because his starter overstepped mark. Time, 9:02⅖.

Five-mile, 50 cubic inch, open—Won by Don Klark (Indian); second, L. S. Taylor (Emblem); third, Billy Wells (Harley-Davidson). Time, 5:08⅖.

Ten-mile, open, belt drive—Won by L. S. Taylor (Emblem); second, Geo. E. Evans (Emblem); third, Raymond Snyder (M. M.). Time, 10:24⅕.

Time trials to lower track record of 54⅖ seconds, held by Don Klark, Detroit, Mich., won by Frank Hart (Indian). Time, 50⅖ seconds; second, Don Klark (Indian). Time, 54 seconds. Third, Leo P. Birkenbach (Indian). Time, 58¼ seconds. Fourth, Matthews (Thor). Time, 59 seconds.

100-mile, open—Won by Geo. E. Evans (Emblem); second, Billy Wells (Harley-Davidson); third, L. S. Taylor (Emblem). Time, 1:53:09⅘.

Cogburn Best at Boulder (Colo.) Meet.

Three thousand people saw the motorcycle racing at the old fair grounds in Boulder, Colo., the 10th inst. Summary:

Five mile professional—Won by Cogburn; second, Cassidy. Time, 6:50.

Eight mile professional—Won by Cogburn; second, Cassidy. Time, 11:24.

Five mile amateur—Won by H. Beck; second, C. Beck. Time, 7:04.

Ten mile professional—Won by Cogburn; second, Wales. Time, 14:23.

Five mile amateur—Won by H. Beck; second, C. Beck. Time, 7:03.

Fifteen mile professional—Won by Cogburn; second. Patterson. Time, 21:59.

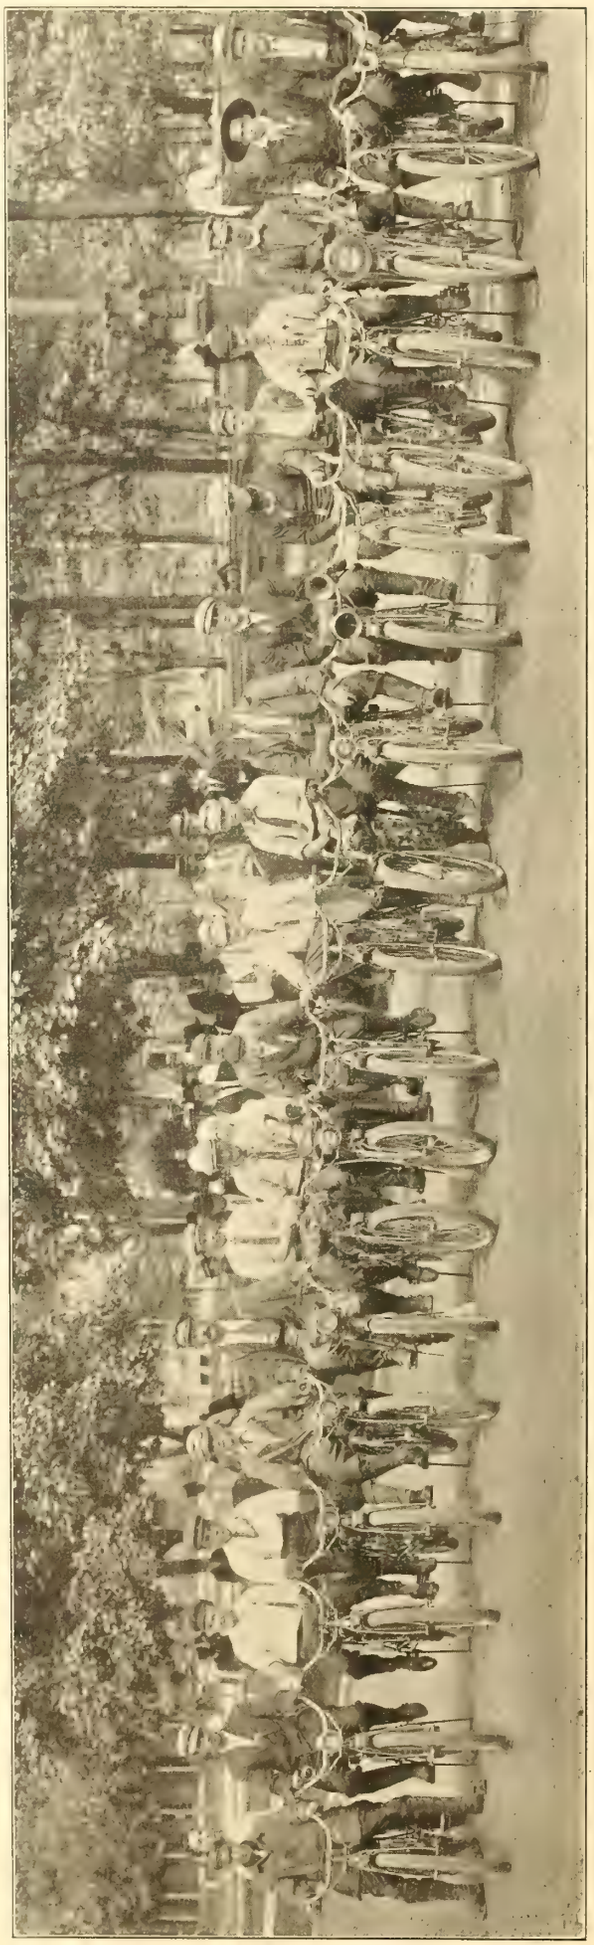
DE ROSIER'S NEW KILOMETER RECORD

Champion in Top Form Wins Every Race and Lower World's Record for Kilometer by Two Seconds.

Jake De Rosier, champion motorcyclist of the world, taught all his Chicago rivals to take a joke on Sunday afternoon, the 17th, when he won every race in which he entered, and then went out and broke the world's record for a kilometer. His time for the European distance was 23⅕ seconds, or two seconds faster than the world's record and five seconds faster than the American record for a kilometer.

De Rosier was riding a brand new Excelsior, and lost no time in showing the Riverview Stadium crowd that he had something speedy. He won the five mile open professional race, defeating Wolters, riding the Excelsior on which the Chicago boy has been making phenomenal records for distances from one to seven miles; Balke, riding an Excelsior, was third in this event, and only a few feet behind. The speed aroused the Sunday afternoon crowd, but there was something better to follow.

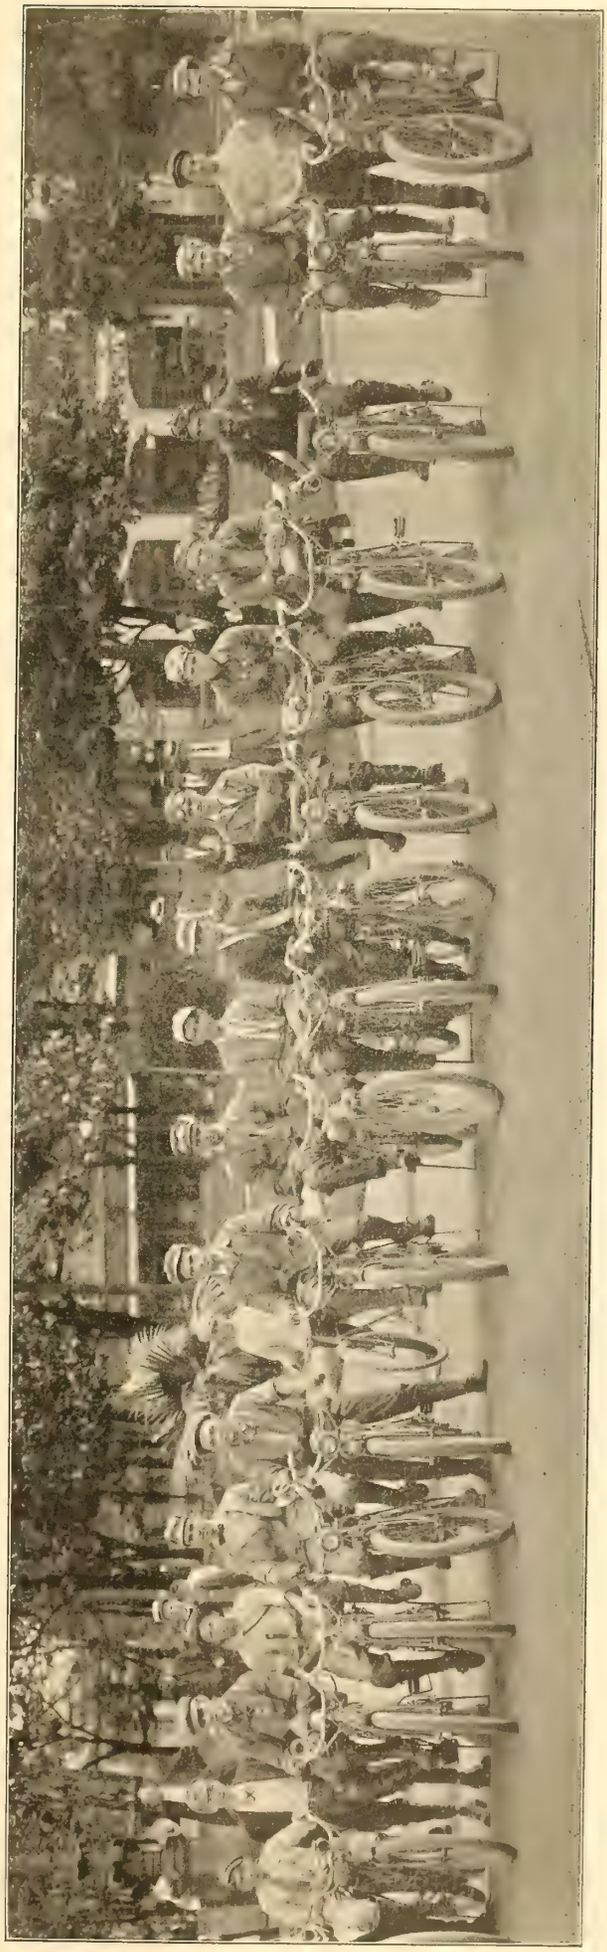
In the Hermes Sweepstakes, at six miles, De Rosier, Balke, Wolters and Albright, all riding Excelsiors, circled the track eighteen times neck and neck, now one leading and then the other, and furnishing the best race ever held on the track. William Samuelson, on an Indian, was only a few feet in the rear, and it was anybody's race until the last lap, when De Rosier nosed out Balke at the tape, with Wolters third, and trying desperately to get by. The riders were so closely bunched all the way that there was little chance for Wolters, who had folded in behind De Rosier on the white line, and Albright never gave Wolters a chance to climb up the track. "Joe's" only chance would have been to drop back, which would have been a losing venture in that kind of a contest.



An invitation race at three miles brought together four Indian riders, and was eventually won by William Samuelson, with Wickwire second and Theodore Samuelson third.

"Johnny" Albright and William Samuelson met in a match race at two miles, the contest being staged to settle an argument, but it took a second heat before Albright was decided the winner. In the first heat the pair crossed the line so close together that the scorers and judges could not decide, and the riders were asked to settle the matter by going one mile in a second heat. Albright ran away from Samuelson in the first lap, and finally won by 200 feet.

The five mile handicap was won by H. P. Mitchell on an M-M, with two Thor riders taking second and third places.



While the afternoon meetings do not draw so well as did the evening racing, the

THE INDIANA MOTORCYCLE CLUB OF INDIANAPOLIS

READY FOR ITS REGULAR SUNDAY MORNING RUN

enthusiasm is sufficient to warrant the fulfillment of the schedules until the weather gets too cold. The summaries:

Five mile amateur handicap—Won by H. P. Mitchell (M-M); second, P. Wenk (Thor); third, A. Smith (Thor). Time, 5:27⅖.

Five mile professional—Won by De Rosier (Excelsior); second, Wolters (Excelsion); third, Balke (Excelsior). Time, 3:38⅖.

Three mile invitation—Won by W. Samuelson (Indian); second, Wickwire (Indian); third, B. Samuelson (Indian). Time, 2:16.

Hermes Sweepstakes, six miles—Won by De Rosier (Excelsior); second, Balke (Excelsior); third, Wolters (Excelsior). Time, 4:26.

Match race at two miles between Albright (Excelsior) and W. Samuelson (Indian), dead heat. One mile run-off won by Albright.

De Rosier against time, distance one kilometer. Time, 23⅕. Previous world's record, 25⅕. Previous American record, 28⅕.

"Thank Heaven!—She's Gone!"

Fervent sighs of relief were breathed last week by the motorcycle squad of the New York City Police Department, when they learned that Miss Dorothy Rice, daughter of Mrs. "Anti-Noise" Rice, and not long since a daring motorcycliste, was to remain abroad for several years to study art. She was a familiar figure on a motorcycle, and possessing a striking personality never failed to create a mild sensation as she dashed recklessly about town on her machine. Miss Rice once had racing ambitions, but they were squelched by the chairman of the competition committee, much to the disgust of the fair aspirant and the 1910 management of the Guttenberg track. She gave the police no end of worry and trouble by her escapades a la motorcycle.

Harley-Davidson Agent on Long Trip.

P. J. Kline, Louisville (Ky.), agent for the Harley-Davidson, has recently returned home from a motorcycle trip to Milwaukee, where he visited the Harley factory and made a thorough inspection of the plant On the return trip Mr. Kline left Milwaukee at 7 o'clock on the morning of the 29th ult. and reached Orchard Grove, Ind., a distance of 142 miles, at 4:30 that afternoon, remaining there for the night. The next day he traveled 304 miles to Louisville, arriving there at 6:55. Kline reports good roads between Milwaukee and Chicago and Orchard Grove and Indianapolis.

Speeders Fined at Waynesboro.

Leaving his motorcycle as security, because he did not have the necessary legal balm in funds, William Newcomer, a motorcyclist, of Waynesboro, Pa., later paid a fine of $10 and costs, $15 in all.

Ten New Yorkers Start and Finish in Third Trio-Cup-Trial

Meinel (Merkel) and Molin (N. S. U.) Win Premier Honors in Strenuous Triple Road Test—Schultheis Has Only Other Perfect Score—Final Results of the Three Trials.

Completing the whole set, the third trio-trial of the Motorcycle Touring Club of New York, Affiliated, was held on Sunday, 17th inst., the two previous trials having taken place on April 23rd and July 23rd, respectively. With the completion of Sunday's journey to Newburgh and return, the winners of the awards for the whole series were decided, and the premier honors, in the form of gold medals for the best individual performance in all three trials, goes to J. B. Meinell (Merkel) and D. Molin (N. S. U.), each having made a perfect score in all the trials. Meinell has the further honor of being a member of the winning Merkel single cylinder team, consisting of himself, L. Schultheis and C. Buechner, which captured the "same make" team honors, with a total of 8,955 points out of a possible 9,000.

Originally there were five "same make" teams in the contest, each made up of three riders using the one make of machine, but in the second and third trials all but the winning team suffered severely in their scores by reason of absences of team members, no substitution of riders being permitted. They were not "trade" teams, being composed of private owners grouped according to the make of machine they rode. Individual cups go to the three members of the winning Merkel team. In addition, the trials also embodied a club team competition, but inasmuch as the Motorcycle Touring Club itself had the only club teams in the contest, the honors in this respect were rather empty. The award of the club team cup falls to the trio composed of A. Hoffman, J. Siemsen and G. Ashley, riding Merkel twins.

For the third trial the weather conditions were ideal, a cool northeast wind rendering the ride very pleasant. The ten contestants were started promptly at 7 a. m. by Referee Edgar, of the Indian Motorcycle Club. They proceeded along Broadway to the 130th street ferry across the Hudson. On the Jersey side the crooked Fort Lee hill, which was used as a test hill on the outward journey, confronted the riders, and they lined up for the climb. Checkers and flagmen were stationed at the bottom of the hill, at the two turns and at the top, to see that the contestants made a clean ascent. Three of the ten riders received penalties as a result of the climb, as follows: C. A. Buechner, for pedaling, 10 points; W. Wood, for dismounting, 25 points, and F. Wise, who failed to climb the hill. The other seven all went up with flying colors.

From the hill test the route led through Englewood and Nyack to Suffern, where the first control was located and where all the contestants checked in on time except W. Wood, who lost 26 points for being late. Leaving Suffern, the motorcyclists entered the beautiful Ramapo Valley, passing through Tuxedo and Central Valley, with Newburgh for the noon control. This stretch of road is unsurpassed in the vicinity of New York, and everybody was able to check in on time at Newburgh without difficulty.

After the hour allotted for lunch was up and the gasoline tanks had been filled, the trialists crossed the ferry to Fishkill Landing and commenced the homeward journey. The road after leaving Storm King Mountain became poor and slippery, owing to the recent rains. The stretch in the woods near Peekskill was a mire of black mud ankle deep, causing numerous spills, and it was here that G. Ashley and A. Kreuder were delayed to an extent that made them late at the Tarrytown control, so that they lost their perfect scores.

A poor stretch of road between Aqueduct Hill and Phillipse Manor kept the riders busy dodging mud holes and stones. The road is being prepared for repaving with wood blocks, part of the expense being borne by John D. Rockefeller, who has a large estate nearby. With a gold medal in sight, for a perfect score in all three trials, A. Hoffman was made the victim of the puncture fiend. After passing Kingsbridge a 3-inch wood screw penetrated his rear tire, and after a repair had been made he picked up a large staple a mile further on, which caused him still mode delay, so that he lost 9 points and his perfect score for the third trial.

The presentation of the cups and medals will take place at the clubhouse of the Motorcycle Touring Club of New York, Affiliated, 237 West Eighty-third street, New York City, on October 2nd, at 8:30 p. m., and a housewarming will be held in conjunction with the ceremonies.

The summary of Sunday's trial and of the results for the whole 1911 series is as follows:

Individual Scores.

Rider and Machine.	Points.
D. Molin, N. S. U.	1,000
J. B. Meinell, Merkel	1,000
L. Schultheis, Merkel	1,000
A. Hoffman, Merkel	991

Rapid Riding at Grand Rapids Race.

Giving the automobiles a good rub in the matter of speed, two motorcycle events were features in the mixed program given at the West Michigan State Fair, at Grand Rapids, Mich., on the 11th inst. They were as follows:

Five miles, single cylinder belt drive—Won by Poe Poisson (Indian); second, Vettman (Marvel); third, Corbin (Harley-Davidson); fourth, Wolgemuth (Sears); fifth, Ferguson (Merkel). Time, 6:23⅕.

Five mile, single cylinder chain drive—Won by Poisson (Indian); second, Hull (Indian); third, Ruth (Indian). Time, 6:09.

Six Perfect Scores on Rome Run.

Six of the 13 starters in the 138-mile reliability run of the Rome (N. Y.) Motorcycle Club on the 27th ult., earned perfect scores.

Proposition to Grant Racing Franchise to Chicago Riverview Track Discussed

Dr. J. P. Thornley, Chairman of F. A. M. Competition Committee Issues a Statement Favoring the Granting of Exclusive Sanctions—"Happy Days" Pitman Also Approves Plan.

The proposition to grant the new Riverview Stadium-Motordrome in Chicago what would practically be an exclusive franchise, has caused much comment pro and con among the members of the F. A. M. and President Hamilton will, it is understood, put the proposition before the board of directors for a vote within a week. It appears that there is more than simply the matter of granting the franchise to Chicago in the question, for it is rumored that if the precedent is adopted there are capitalists waiting to ask for a similar privilege in other cities, where they will build tracks, but they do not care to sink the $25,000 or $35,000 necessary to build such a track without the assurance that the F. A. M. will protect them with an exclusive franchise. Dr. J. P. Thornley, chairman of the F. A. M. competition committee, has issued the following statement:

"I notice with surprise that a western publication that has bitterly denounced dirt track racing is now opposed to the F. A. M. entering into an agreement with a board track management for their protection. Such an agreement made between a track management and the F. A. M. would encourage the building of board tracks in various localities all over the country, particularly in small localities where competition would be fatal. Men who have the money to invest in board tracks are not going to put them up unless they can see their way clear for good profit. While in large cities capital might be induced to take a chance with opposition, certainly in smaller communities any man would be a fool to put up a board track unless he could be assured of prompt and satisfactory returns. To have sanctioned a second board track in Chicago would discourage the building of board tracks in smaller communities indefinitely, and no one would be able to depend upon the F. A. M. for protection, however loyal their behavior might be. For the F. A. M. to refuse sanction for a second track in Chicago and receive no return for so doing, even though the management of the track protected had volunteered a most liberal offer for such protection, would be about as remarkable an attitude as one would care to find in a day's journey. I for one will be unwilling to go on record as refusing sanction to a second track, and at the same time refuse for the F. A. M. the liberal proposition made by the first track. I wouldn't care to strain my reputation for honesty and square dealing to any such point. At the same time I am firmly of the opinion that two tracks in Chicago would not be to the best interests of the F. A. M., or the motorcycle game at large. Two tracks would be bad enough under the same management, but under different managements it would be disastrous.

"The F. A. M. grants a certain amount of protection at the present time whenever it issues sanction to a promoter for a single day. For this protection as much as anything else, the promoter is willing to pay the fee required. Why the F. A. M. should not be willing to extend this protection over a long period for the purpose of encouraging the building of board tracks, and giving the riders the safety which such tracks offer, and accepting a reasonable and liberal offer from the promoters for such protection, is beyond my powers of comprehension.

"While the F. A. M. may be called a fraternal body, it is also as far as racing is concerned, a governing body. The government of all countries offers protection to life and property to its citizens, and taxes them therefore. Why the F. A. M. in its government of racing should not grant similar protection to property rights and accept a voluntary contribution for such protection, or demand more within the bounds of fairness and reason I can't see. Here is an opportunity for the national treasury, not the competition committee, to obtain revenue honestly, fairly, and for valuable services rendered. The F. A. M. needs such contributions in order to carry on the much needed work. No organization with a governing function is entirely independent which has to depend upon small dues for its source of income. Every committee of the F. A. M., with the possible exception of this committee, requires more funds to carry on its work. The legal committee requires funds to retain lawyers all over the country to instantly look out for motorcyclists who are unjustly and unfairly treated. It needs money to be able to properly present before various legislatures arguments against burdensome and unfair laws. What would the men who had been run down by automobiles, wagons and street cars, think of the board of directors that would neglect a fair opportunity to honestly increase the funds of the legal committee which could then have seen to it that they received justice? What would the men who had been unjustly treated for alleged violation of the laws of the road think of a board of directors who had refused to avail themselves of an honest opportunity to furnish them with proper protection in the police courts. What would the motorcyclists of small communities think of an organization that would refuse to honestly increase their ability to fight unjust and burdensome local ordinances? What would the great majority of riders think of an organization that refused to supply itself honestly with the necessary funds to start agitation, and push the establishment of better roads all over the country. And so on we might go through every committee of the F. A. M. which are now hampered by lack of the necessary funds to do anything at all. It is ridiculous to say that granting of franchises to board tracks would interfere with local clubs. To establish such a precedent, local clubs all over the country will be encouraged to build board tracks themselves, or to become financially interested in them.

"Moreover, where tracks are built by independent promoters, I for one should be opposed to granting franchises that would not consider the vested interests of the local clubs. Two clubs in a community would, however, enable local clubs, if so inclined, to play one track against the other, hold up first one and then the other, until the very name of the F. A. M. would become a stench in the nostrils of every right thinking person. It is asking too much of human nature to believe that such playing of one track against the other and practically sandbagging of promoters would not occur. For the preservation of the good name of the F. A. M. and its local members, sooner or later the organization will be forced to grant franchises to board tracks or none will be built, and the sooner we arrive at that conclusion and look at the situation from a broad standpoint, and not from the narrow local interests of some few men in a given community, the better it will be for the F. A. M., and the longer will motorcycle racing endure.

"Johnson's proposition is only in outline and his letter is the only thing that I have to go on. I do suggest to the board of directors that they accept this proposition with the following modifications:

"First, that instead of 2½ per cent. of the net receipts we should offer to make a contract for one-half of one per cent of the gross receipts.

"Secondly, that the local affiliated clubs should have once a year a benefit, the total receipts of such benefit to be turned over to the clubs for the maintainance and possible building of a club house which would

be free to all F. A. M. members. Or, the local clubs would be allowed to rent the track for one or two specific days during the season for a specific reasonable sum, and the proceeds to go to the local affiliated clubs without restriction.

"Finally, that protection would only extend to the granting of sanction to board tracks, and that road events, and dirt track events, would be sanctioned in accordance with the rules as they now exist, or may be subsequently altered.

"You will note that this provision about the clubs is identical with what I recommended in the case of the Denver track, last year, that applied for franchise, offering it under similar conditions as the above excepting the one-half per cent contribution to the F. A. M.

"I suggest that this contract with Chicago track be made a standard one, to be granted to any track by the board of directors, to responsible promoters in communities all over the country. This will eliminate any question of putting franchises up to the highest bidder. Franchises would be granted for a standard amount, and would be only granted to parties who were unquestionably reliable, and if there was any doubt about their honesty or reliability, a bond should be required.

"The acceptance of this idea by the board of directors in my opinion will assure to the F. A. M. a nice income, which can be devoted to the support of the various committees other than the competition committee.

"It will also assure to the F. A. M. legal control over the tracks granted such a franchise, and will prevent the dishonesty and sharp practices which are certain to come where there is active competition between two tracks, both struggling for existance. I do not believe that the mere fact that a man is a member of the F. A. M. should give him any inherent right to put up a board track or any other kind of a track. The financial responsibility and known honesty of purpose and good business ability should be the only requirements for our recognition.

"Motorcycle racing has become a very rotten sport in many localities because of the violent and rotten competition between the manufacturers. It need but one thing more to make it still more rotten, that is, to have competition in communities between two or more tracks."

Some have suggested that if two or three tracks were to spring up in Chicago, or in any other city, running in opposition to one another, the promoters would go through the same experience as the managers of the three tracks that were built in and around New York, when the interest in bicycle racing was at fever heat. No one is more competent or able to speak with authority on this situation than Will R. (Happy Days) Pitman. He says:

"With three tracks in and around New York—Manhattan Beach, Berkley Oval and Ambrose Park—one playing against the other, the natural result was that we all lost money and were forced out of the business. So will be the result today anywhere if two or three tracks are built for motorcycle racing. I consider this proposition from the Riverview track in Chicago a most excellent one and the wisest plan for the F. A. M., without question, is to accept it and accept it promptly.

"Just where the injury to clubs would come in, as suggested by one of the trade papers, I am at a loss to see. The F. A. M. in their contract with the track management can easily arrange that proper consideration be given clubs and when they desire it an opportunity to hold racemeets. In the end the club would really be benefited by such an arrangement for they would have the management of the track in back of them in promoting their races, with the experience and the following that the track would have for its regular meets. It would be far better in every way for the clubs to hold their races under the direct management of the regular track people than for them to attempt it themselves.

"Two tracks in Chicago or in any city for motorcycle races, today particularly, when motorcycle racing is in its very infancy, would eventually mean the ruin of both, while one track with proper protection means a constant and growing advertisement for motorcycling.

"My experience as managing director of Berkley Oval in the bicycle racing days was proof enough to me for all times that one good track properly managed is all that can be supported in any city. The riders are divided and the attendance is divided, while with but one track the promoter can offer better prizes and hence better racing because he has the large attendance. Motorcycle racing all over the country is constantly making motorcyclists and hence members for the F. A. M., and where men have sunk their capital in such a track as the Chicago one, and through that are really making members for the organization, and such a track is for the good of the sport in general, the F. A. M. should give these men their support and protection. Anyone that invests from $25,000 to $30,000 in a track without this protection is a fool.

"In New York City there are men who have been approached on the question of building a board track similar to the Chicago Stadium, but their first question naturally is, What protection will we have for our investment? New York, as big as it is, would not support more than one track, but it absolutely needs that track to stir up interest in the sport. What I say here is from what knowledge of the game I have gained in my 33 years' experience in bicycle, and later, motorcycle racing, entirely independent from my personal relations with any one, and I honestly believe that no harm can come from the F. A. M. at least trying the experiment of protection for licensed tracks.

"If the N. C. A. is practically the tool of certain track promoters, as stated in a western trade paper, I can state positively, as one in a position to know, that the F. A. M. competition committee as at present constituted is not and will not be the tool of any one. As one of the founders of the Federation of American Motorcyslist, I propose as long as I am on this earth to uphold it in a straight, clean business-like manner. Racing is the big end of the F. A. M., just as it was with the L. A. W., but let the F. A. M. take its lessons from the mistakes in the racing department of the league and avoid them."

Daylight Racing at Riverview.

Wolters and De Rosier, both riding Excelsior motorcycles, shared the honors of the first daylight meeting held at the Riverview Stadium, on Saturday, the 16th inst. The crowd was "not so large as had been hoped for, but better than expected," according to Manager "Jack" Prince, who is an authority on racing matters. The other attractions at the park have been closed for the season, and motorcycle racing must draw its own audience without assistance.

The opening professional race, at five miles, was won by De Rosier in the comparatively fast time of 3 minutes 33⅖ seconds, and he was so far ahead of Wolters and Balke that there was no argument.

In the six mile University of Chicago Sweepstakes, De Rosier, Balke and Wolters were abreast for three miles, when De Rosier's tire exploded, leaving Wolters and Balke to fight out the battle. Wolters won by a few inches.

Ther three mile invitation race was won by Albright, riding an Excelsior, and in fact every professional race of the day was won by this make of machine. The Merkel machines have been withdrawn from the track, leaving the Indian crew to fight it out with the new flock of Excelsiors.

The Samuelson brothers, of Salt Lake, are adding much to the interest of the racing, and their Indian machines are showing excellent speed and stamina.

The summaries:

Five mile amateur handicap—Won by P. Wenk (Thor); second, W. F. E. Williamson (Excelsior); third, T. Shaw (Thor). Time, 5:32⅖.

Five mile professional—Won by De Rosier (Excelsior); second, Wolters (Excelsior); third, Balke (Excelsior). Time, 5:33⅖.

Three mile invitation—Won by Albright (Excelsior); second T. Samuelson (Indian); third, W. Samuelson (Indian). Time, 2:13.

University of Chicago Sweepstakes, six miles—Won by Wolters (Excelsior); second, Balke (Excelsior); third, W. Samuelson (Indian). Time, 4:23.

Splendid Speed Performances Stir Toronto Fans

Records Fall by the Wayside, While Cole and Kipp Battle for Premier Honors in 25-Mile Marathon —Light Weight Winner Protested—Cole Canadian Champion.

Everything in the way of records went by the boards at the second annual Dominion motorcycle championships held on the exhibition dirt two lap track at Toronto on Saturday, September 16th, under the auspices of the Toronto Motorcycle Club. A record attendance, record time, the grandest riding ever seen in Canada, and good management, made up a remarkable afternoon's sport. Fully 9,000 persons turned out to see the "single trackers" while practically all the existing records for the country were swept clean off the

HAROLD COLE, TORONTO'S BOY WONDER

list while new marks for 15, 20 and 25 miles were created through the remarkable performance of Harold Cole, Toronto's boy wonder, who mounts the Reading-Standard, in the 25 mile grind for the Commerford trophy, which stood out preeminently as the feature contest of the afternoon. With the first race of the program, a three-mile for lightweights, M. E. Amoss, on a 2½-horsepower N. S. U., clipped seconds off the lightweight record, while each succeeding event saw better time made. The ten-mile Canadian record was broken three times in succession, while on three occasions at least, the five-mile time was bettered.

The 25-mile marathon was the longest motor race ever put on in Canada and the remarkable endurance of the racers was a matter of surprise to the spectators. There were seven starters, as follows: Herb Kipp, 7-twin Indian; R. Connor, Indian; Orr and McIntosh, on stock twin Excelsiors; Walter Andrews, on a single Pierce; Banfield, on a Triumph, and Cole, 6-twin Reading Standard. The first five miles saw a sharp struggle for the lead between Cole and Kipp, but at this stage Cole stole to the front and gradually widened the gap. Orr, riding third, and Andrews, both found punctures, and others also dropped out. At 20 miles Cole had almost a lap on Kipp, but could not catch him, and thus they finished. All the while Cole was smashing records right and left, each fresh announcement drawing vociferous cheering from the crowd, who marveled at the manner in which Cole kept up his pace all through. Cole's time was: Five miles, 6:11; 10 miles, 12:20; 15 miles, 18:30⅖; 20 miles, 24:45, and 25 miles, 30:56⅖.

The handsome Auto-Tire trophy, donated by the agents of the Goodrich Tire Co. for the five-mile private owners, single cylinder event, was captured by W. Stoner, Triumph, although Banfield, Triumph, led until the head of the stretch for the final sprint, when his machine stopped and he was only able to get third place by running with his mount. Banfield took the 4-horsepower belt drive race from Staudt, late of Reading, Pa., and Cole. H. H. Corsan, had the distinction of winning his novice, after which he came home first in the five mile chain drive race and ran second in the Auto-Tire trophy contest.

Several spills sustained by the crack riders, rather spoiled one or two events, but a real test was seen in the ten-mile open, in which Kipp, on a powerful 7-twin Indian, was beaten by Staudt on an imported Reading racer after a great struggle. In the 10-mile, 50 class event, Kipp fell when he looked the winner, but got up and finished second, behind Staudt. In the five-mile open Cole took a spill while he was giving Kipp a great tussle, after which the latter won as he pleased. Barnes, Triumph, rode the fence in the belt-drive race, which had nine starters, and suffered a broken shoulder. This was the only unfortunate incident of the whole day. There were 52 starters, while there were 10 events on the program beside a couple of automobile races.

Three-mile lightweight championship, 2½-horsepower limit—Won by M. E. Amoss (N. S. U.); second, Roy Thompson (Motosacoche); third, Charlie Orr (Motosacoche). Time, 4:44⅘. Seven starters. Winner was protested for being over size.

Five-mile private owners, novice, unstripped stock, 30½ class—Won by H. H. Corsan (Indian); W. Stoner (Triumph); third, W. Martin (Harley-Davidson). Time, 7:28⅖. Five starters.

Five-mile chain drive, unstripped stock, 30½ class—Won by W. Banfield (Triumph); second, Harold Cole (Reading Standard); third, W. Staudt (Reading Standard);. Time, 6:56⅗. Nine starters.

Five-mile private owners, unstripped stock, single cylinder, for Auto-Tire Co.

THE COMMERFORD TROPHY

trophy—Won by W. Stoner (Triumph); second, H. H. Corsan (Indian); third, W. Banfield (Triumph). Time, 7:19. Four starters.

Ten-mile, 50 class—Won by W. Staudt (Reading Standard); second, Herb Kipp (Indian); third, C. Orr (Excelsior). Time, 12:25⅖. Six starters.

Five-mile open, single cylinder—Won by Herb Kipp (Indian); second, R. Connor (Indian); third, W. Andrews (Pierce). Time, 6:34⅖. Six starters.

Ten-mile open—Won by Staudt (Reading Standard); second, Herb Kipp (Indian); third, R. Connor (Indian). Time, 12:24. Five starters.

Twenty-five-mile Canadian championship for the Commerford trophy—Won by Harold Cole (Reading Standard); second, Herb Kipp (Indian); third, R. Connor (Indian). Time, 30:56⅗. Seven starters.

THE CUT-OUT MUST GO

Manufacturers and F. A. M. Officials Strongly Opposed to Open Mufflers—Cause Opposition to Motorcycles.

The campaign against the open cut-out is receiving the endorsement and approval of every one who has the interests of motorcycling at heart, and both manufacturers and the officials of the F. A. M. are strongly against the use of the cut-out, particularly in the streets of our cities. That the motorcycle will not have its proper place in the minds of the general public until the open muffler is a thing of the past is conceded by all.

The following statement is made by the Hendee Manufacturing Company, manufacturers of the Indian:

"We assure you that we are in thorough sympathy with your action in the matter of the open muffler.

"As far as our own machines are concerned, the opening of the cut-out does not increase the power to any appreciable amount, for our muffler, as at present constructed, gives practically no back pressure whatever, and consequently there is absolutely no reason for a rider opening his cut-out.

"We have often sonsidered the question of removing the cut-out from our machines, but our experience has been that if this was done many riders would either knock the end off the mufler, or remove it entirely. In a previous form of muffler which we used there were several concentric partitions, and we found that many riders would open the muffler and remove all of the internal parts leaving a mere shell; and in this condition it made more noise than if the muffler had been entirely removed. As a result of this experience we designed a new muffler which produces absolutely no back pressure and is quieter than the old muffler, and also has no internal parts that can be removed.

"This was about as far as we could see our way to go for fear the noise loving rider would knock out the end of the muffler if he did not find a cut-out.

"We think that our present muffler has converted a great many of the riders who formerly used the cut-out, and whenever we feel that we can safely omit the cut-out we most gladly do it."

G. H. Hamilton, president of the Federation of American Motorcyclists, said:

"I am heartily in favor of any movement that has as its object the control of the open muffer on motorcycles. I do not hesitate to give you my views on the situation.

"I consider that you have taken a step in the right direction in taking up the open muffler nuisance in your editorial columns. The evils of the open muffler are so apparent that no comment is really necessary, but what is necessary is an avtive campaign in making plain to the motorcyclists the injury they are doing themselves and the industry as a whole by running their machines with mufflers open. This applies more particularly to the cities and towns, but there is really no reason for riding over the country roads with mufflers open continually.

"It is the desire of the F. A. M. to elevate the standing of the motorcycle in this country, and one of the best ways to accomplish this result is to make it perfectly clear to the public that the motorcycle is not a nuisance, and a noisy machine.

"The F. A. M. intends to inaugurate an educational campaign in the future to abolish the open muffler nuisance, and you can depend on our organization for support in the work you have undertaken. The trade papers can accomplish a great deal in an educational way and personally I hope that all of the papers will take up the movement that you have started and assist in accomplishing the results we are all after."

F. B. Hart, of the Reading Standard Co., says:

"You cannot make your condemnation of the indiscriminate use of the muffler cut-out too strong to meet our approval. The writer has fought this idiocy on the part of the average motorcyclist in both a business and personal way for some years.

"As to eliminating this part of the equipment, we do not believe that this can be done, much as we would like to. If the muffler is efficient as it should be, it is practically impossible to adjust the carbureter without the use of the cut-out. Unfortunately all mufflers are not so effective, but it is a fact that we cannot adjust a carbureter on the Reading-Standard machines without either removing the muffler entirely or opening the cut-out as it is impossible to tell whether your engine is running steadily or missing fire with closed throttle. It is not merely a matter of putting on the cut-out to save the rider the trouble of disconnecting his muffler, but if he is compelled to go to that trouble it is, I believe, unquestionably a fact that in many instances machines will be run with the carbureter so far out of adjustment that they would materially decrease the efficiency of the motor and cause considerable damage."

"BACK TO NATURE"

DRUMMOND WINS AT OLYMPIC PARK

Beats J. U. Constant in Two Races—"Billy" James and Pierson Also Land Two Events Each.

If Percy Drummond was treating John Constant as a guest of the meet, he treated him mighty roughly, but if he regarded him as an invader from another state, he repelled him nobly, at the Olympic Park meet, Newark, N. J., on Sunday, 17th inst. He not only beat Constant in a special two mile match race, but he nosed him out for second place in the ten mile handicap, both starting from scratch. Percy seemed peeved that anybody from Brooklyn should try to throw dust on his goggles, and in the last mile of the two mile match he just opened her wide all the way around and streaked up the stretch at a gait that carried him by Constant a few yards before the finish line. And Constant, who like Drummond was mounted on a 5 Indian twin, had not been riding a slow freight, either.

The sweetest triumphs of the day, however, were those of William Pierson, of Newark, who with a 6 horsepower Excelsior captured the three mile novice handicap from scratch, and later was the first man home in the big ten mile handicap, in which he had been given 80 seconds over Drummond and Constant. It was his first track racing attempt, but he showed unusual judgment and skill. William James, or "Billy," as he prefers to be called, another Newarker, was pretty nearly as happy as Pierson, since he not only won the five mile private owners handicap from scratch, but with a handicap of 110 seconds in the trade riders handicap at the same distance, he also piloted his 4 Indian over the line ahead of the bunch in that event too. The meet was given by the New Jersey Motorcycle Club, and was so successful that another is scheduled for Sunday, 24th inst.

The summary:

Three mile novice handicap—Won by William Pierson (6 Excelsior), scratch; second, Lester Lippincott (5 Indian), scratch. Time, 4:20⅕.

Five mile trade rider handicap, 50 cu. in. limit—Won by William James (4 Indian), 110 seconds; second, Watson Kluscek (4 Harley-Davidson), 115 seconds; third, W. Ed. MacDougall (6 Excelsior), 80 seconds. Time, 5:25⅗.

Five mile private owner handicap, 50 cu. in. limit—Won by William James (4 Indian), scratch; second, William Pierson (6 Excelsior), scratch; third, Herbert Aryault (6 R-S), scratch. Time, 6:59.

Three mile open handicap—Won by Percy Drummond (5 Indian), 8 seconds; W. Ed. MacDougall (6 Excelsior), 20 seconds; third, Watson Kluscek (4 Harley-Davidson), 30 seconds. Time, 3:40⅖.

Two mile match race between Percy Drummond (5 Indian), and John Constant (5 Indian), flying start—Won by Drummond. Time, 2:19⅕.

Special novelty race—Won by John Constant (5 Indian); second, Herbert Aryault (6 R-S); third, Earle Eckel (5 Indian).

Ten mile open handicap—Won by William Pierson (6 Excelsior), 80 seconds; second, Percy Drummond (5 Indian), scratch; third, John Constant (5 Indian), scratch. Time, 12:15⅘.

Cox Wins Free-for-All at Guttenberg.

Racing at Guttenberg, N. J., was revived again on Sunday, 17th inst., when four motorcycle events constituted the afternoon's program. J. J. Cox, with his 7 horsepower R-S racing machine, was the victor in the five mile free-for-all and in the ten mile trade rider handicap, while M. C. Wright, on a 7 Indian, survived all the rest of the field in the five mile trade rider miss-and-out. A five mile race for private owners opened the program. In this E. C. Haas, on an Indian, ran away from his two opponents. The summary:

Five mile private owner—Won by E. C. Haas (Indian); second, M. C. Wright (Indian); third, H. W.G. Cox (Excelsior). Time, 6:03⅗.

Five mile trade rider miss-and-out—Won by M. C. Wright (Indian); second, Joseph Buckingham (Harley-Davidson); third, J. J. Cox (Indian). Distance, 6 miles; time, 6:45⅘.

Five mile trade rider free-for-all—Won by J. J. Cox (Reading-Standard); second, H. W. G. Cox (Excelsior); third, Joseph Buckingham (Harley-Davidson). Time, 5:55⅖.

Ten mile trade rider handicap—Won by J. J. Cox (Reading-Standard), 30 seconds; second, Joseph Buckingham (Harley-Davidson), 3 minutes; third, H. W. G. Cox (Excelsior), 3 minutes. Time, 15:00.

Five Events at Sandusky (O.) Fair.

Sandusky, Ohio, had a lively motorcycle meet on the 13th inst., in connection with the Erie county fair. The summary:

Ten mile open—Won by Huntsbery, of Cleveland; second, Tracey, Cleveland; third, Willis, Canton. Time. 11:57.

Five mile open—Won by Fletcher, of Elyria; second, Federkell, Sandusky; third, Willis, Canton; fourth, Studden, Lorain; fifth, Tracey, Cleveland. Time, 6:43.

Miss-and-out, four miles—Won by Fletcher, of Elyria; second, Federkell, Sandusky; third, Willis, Canton; fourth, Studden, Lorain. Time, 5:10.

Fifteen minute race—Won by Federkell, of Sandusky; second, Fletcher, Elyria; third, Willis, Canton. Distance, 11⅜ miles.

Ten mile open—Won by Huntsbery, of Cleveland; second, Willis, Canton; third, Studden, Lorain. Time, 11:50.

OSHKOSH SEES DARK HORSE WIN

"Mysterious Stranger" Drops in on Wisconsin Meet and Grabs Three Firsts—Karl Oaks Best of Locals.

A "mysterious stranger," as he was called by the spectators, arrived in Oshkosh, Wis., on Sunday, 17th inst., in time to give the local speed artists something of a surprise at the Oshkosh Motorcycle Club's "diamond race meet" on the half mile dirt track. He proved to be C. W. Fisk, of Beloit, who has been doing considerable race riding this season in southern Wisconsin, and who has a big bunch of cups as evidence of his prowess. In the four races he entered, he bested his Oshkosh rivals three times and was second in the remaining event. Karl Oaks won the two five mile closed club events and the miss-and-out. A big crowd attended and there was not an accident the whole afternoon. The summary:

Five mile cup race for club members only—Won by Karl Oaks (Harley-Davidson); secand, Clyde Oaks (Harley-Davidson); third, William Koeck (Thor). Time, 6:46⅗.

Three mile novice—Won by Guy Oaks (Harley-Davidson); second, Otto Kernler (Harley-Davidson); third, W. H. Pepper (Harley-Davidson); fourth, Carl Mack (Harley-Davidson). Time, 4:48⅕.

Ten mile, 4 horsepower—Won by C. W. Fisk (Indian); second, Karl Oaks (Harley-Davidson); third, William Koeck (Thor). Time, 13:12⅕.

Five mile race for city championship, club members—Won by Karl Oaks (Harley-Davidson); second, William Woeck (Thor). Time, 6:57⅗.

Two mile miss-and-out—Won by Karl Oaks (Harley-Davidson). Time, 2:48⅗.

Ten mile open—Won by C. W. Fisk (Indian); second, Karl Oaks (Harley-Davidson); third, William Koeck (Thor). Time, 13:15⅘.

Five mile open—Won by C. W. Fisk (Indian); second, Karl Oaks (Harley-Davidson); third, Clyde Oaks (Harley-Davidson); fourth, William Koeck (Thor). Time, 6:42.

Time trials, one mile—Karl Oaks (Harley-Davidson); time, 1:17⅗. Clyde Oaks (Harley-Davidson); time, 1:21⅖. William Koeck (Thor); time, 1:23.

Two Accidents Mar Newark (O.) Meet.

Tumbles in practice and a spill or two during the races were by no means sufficient to cast a damper on the motorcycle speed program given at the fair ground track in Newark, Ohio, on Labor Day. While warming up before the races, Edgar Jones, one of the younger riders, struck a fence. He received a bad cut on the leg

and was taken to the city in an automobile. In the three mile event for belt-driven machines, Byrle Schenck struck the fence, turning a somersault over his handlebars. He scrambled out of the path of following riders, pulling his machine off the track in quick order. An inventory of his injuries showed two badly crushed fingers and a bruised shoulder. Happily all the other races of the day were free from mishap, with Charles McGrew, on a big Yale, taking most of the honors.

The summary:

Three mile—Won by Walter Kussmaul (Indian); second, Jesse Keeley (Indian); third, William Gallagher (Minneapolis). Time, 3:45.

Three mile, belt drive—Won by William Gallagher; second, Hartley Schenck; third, Fred Kelly. Time, 4:10.

Three and a half mile novice—Won by Charles McGrew (Yale); second, Walter Kussmaul (Indian); third, Hartley Schenck. Time, 3:19.

Five mile free-for-all—Won by Charles McGrew (Yale); second, Walter Kussmaul (Indian); third, Hartley Schenck (Excelsior). Time, 7:34.

Miss-and-out—Won by Charles McGrew; second, Walter Kussmaul; third, Fred Kelly. Distance, 2½ miles; time, 3:51.

Ten mile club championship, free-for-all—Won by Charles McGrew; second, Hartley Schenck; third, Walter Kussmaul. Time, 15:11⅕.

Busy Times for Estabrook.

Chairman E. M. Estabrook of the F. A. M. membership committee reports that the new organization literature is now on the press and will be ready for distribution shortly. Officers or others desiring copies are requested to send in requisitions at once. The booklet, "Object and Benefits of the F. A. M.," has been increased in size and will contain 20 to 24 pages instead of 12 as now. The other literature includes, Form 1, "Why Not Organize a Motorcycle Club?" Form 2, "Hints on Club Organization;" Form 5, affiliation blanks, and "How to Affiliate;" Form 6, booklet, "Object and Benefits of the F. A. M.;" Form 7, individual application blanks; Form 8, local club constitution and by-laws.

Five clubs affiliated during the week ending September 9th, with a total membership of 113, as follows: No. 187, Decatur, Ill., M. C., 14 members; 188, Norwich, Conn., M. C., 27 members; 189, Aberdeen, S. D., 12 members; 190, Redlands, Cal., 30 members; 191, Owego, N. Y., 30 members. All are 100 per cent. clubs with the exception of the Redlands organization, which reports that 75 per cent. of their members are affiliated. During July and August 1,257 members were received in the F. A. M., just double the number for the same period of last year.

Chairman Estabrook says:

"Come on in. Get in the swim. The water's fine."

"IMPORTED" STARS AT CLEVELAND

But Kissig, a Local Rider, Shows a World of Speed—Don Klark Wins Fifteen Mile Open.

With "Shorty" Matthews, Don Klark and other "imported" bright lights of the racing firmament on hand, the motorcycle race enthusiasts of Cleveland, Ohio, had a grand afternoon at North Randall Park mile dirt track, on Sunday, 10th inst. Fortune favored the initial "K," as Klark, of Detroit, was triumphant in three events and L. F. Kissig, a local rider, accounted for an equal number. Herbert Huntsbery, of Cleveland, was next on the honor list, with two of the eleven numbers to his credit. The summary:

Five mile novice, 30.50 stock—Won by L. W. Morris (Indian); second, E. H. Tracy (Indian). Time, 5:56⅖.

Five mile club, 30.50 stock—Won by Herbert Huntsbery (Harley-Davidson); second, E. H. Tracy (Indian). Time, 5:50⅗.

Five mile open, 30.50 stock—Won by Matthews (Thor); second, L. F. Kissig (Indian). Time, 4:48.

Five mile, 30.50, belt, stock—Won by Herbert Huntsbery (Harley-Davidson); second, Heintzman (Yale). Time, 6:19.

Ten mile, 55 stock—Won by L. F. Kissig (Indian); second, Herbert Huntsbery (Merkel). Time, 10:15.

Fifteen mile, 61 open—Won by Don Klark (Indian); second, Dan Willis (Indian). Time, 14:00⅕.

Ten-mile club, 61 stock—Won by L. F. Kissig (Indian); second, E. H. Tracy (Indian). Time, 9:06.

Miss-and-out, 61 open—Won by Don Klark (Indian); second, Dan Willis (Indian).

Pursuit race, 30:50 open—Won by L. F. Kissig (Indian); second, Shorty Matthews (Thor). Distance, 26½ miles. Time, 25:06⅕.

Five-mile trade rider, 61 stock—Won by Dan Willis (Indian). Time, 4:38⅕.

Time trials, one mile—Don Klark (Indian), 50 seconds; L. F. Kissig (Indian), 51 seconds; Dan Willis (Indian), 52 seconds; Taylor (Emblem), 55⅕ seconds.

Nelson Wins Five Out of Six.

In two senses it was a "novelty" when Ed Nelson, a native son, was not the winner in the events given at Manitowac, Wis., on Sunday, 10th inst., because of the six races of the day, it was only the two mile novelty race in which he failed to lead the bunch over the line. The other five times it was Nelson first. Nor was it because Nelson did not have some real speed talent to go up against. The promoters of the meet had imported P. Wenk from Chicago, Wenk being one of the Thor racing contingent at the Riverview motordome in the Windy City. But Nelson lead Wenk such a pace that twice the Chicagoan spilled trying to follow him.

The first tumble was in the miss-and-out, when Wenk, who is more familiar with board track work than with dodging soft spots on a gravel curve of a half-mile dirt track, took a slide that jammed his front wheel up against another rider's rear wheel, whereupon Wenk was down. His second bump was at practically the same point in a special five-mile challenge race between himself and Nelson. The latter, as in all his races, had jumped for a big lead at the start, and Wenk went after him so hard that again he took a slide, which tangled his front wheel enough to send him flying out of the saddle for a header. He was picked up, placed in an automobile and hurried to the doctor, but his injuries were found to be not serious and he was able to return to Chicago in the evening. The summary:

Five-mile single cylinder open—Won by Ed Nelson (Indian); second, P. Wenk (Thor); third, Ed Colyar (Indian); fourth, Oestreich (Excelsior); fifth, Karl Oaks (Harley-Davidson); sixth, William Koeck (Thor). Time, 6:23.

Two-mile pie eating novelty—Won by Levanetz (Excelsior); second, P. Wenk (Thor); third, Hammel (Excelsior); fourth, William Koeck (Thor). Time, 3:12⅖.

Five-mile twin open—Won by Nelson (Indian); second, Wenk (Thor); third, Karl Oaks (Indian). Time, 6:17⅗.

Three-mile miss-and-out—Won by Nelson. Time, 3:50⅖.

Ten-mile single cylinder open—Won by Nelson; second, Ed Colyar (Indian); third, Levanotz (Excelsior). Time, 12:49.

Five-mile challenge match between Ed Nelson (Indian), and P. Wenk (Thor)—Won by Nelson. Wenk fell.

Morrison Riders Have Speed Mania.

Earl Brown had one easy victory and one hard fought victory in two motorcycle races at Morrison, Ill., on the 8th and the 13th inst., respectively, against four local rivals. The motorcyclists of Morrison have been holding a series of race meets at the local fair grounds track, with the result that so many of them have become imbued with the speed bug that the local police are busy hauling them to the station for speeding on the streets.

Planning Indiana Racing Circuit.

Circular letters are being sent out in behalf of a movement for an Indiana circuit of motorcycle racing, the headquarters for the plan being in Elwood. The idea is to interest the clubs in Richmond, Peru, Newcastle, Anderson, Marion, Muncie, Kokomo and Logansport, Ind., and the club in Hamilton, O., for a circuit embracing all these cities, with a racemeet in each city once a month during the summer.

Again Another!

¶ At Columbus, Ohio, September 17, a 4 horsepower Harley-Davidson, ridden by William Wells, covered 100 miles in 111 minutes flat,

A WORLD'S RECORD

For a Single Cylinder on a Flat Dirt Track

¶ Out of 20 entries the Harley-Davidson was the first single cylinder to finish, and it defeated eleven double cylinder machines, several of them being 7 horsepower port-holed racers.

¶ Wells, although a new rider, had the pleasure and honor of defeating the very best riders in America—such experts and veterans as Frank Hart, Shorty Matthews, Don Klark, L. S. Taylor, and E. G. Baker.

¶ Incidentally, Billy Wells' Harley-Davidson was the only Harley-Davidson starter.

Referees Rule With Iron Hand at Newark Velodrome

Bardgett Gets Assistance from N. C. A.—Clark and Fogler Disqualified for Teaming—Amateurs Also Feel the Whip—Kramer and Blatz Still Hold Their Titles.

Sunday, the 17th inst., saw about as stirring scenes as ever were enacted at the Newark Velodrome. The action began almost immediately with the opening of the day's program, when the preliminary heats in the championship were started. The interest of over 9,000 spectators was centered in the outcome of the one-mile championship race for professionals, the winning of which, considering the approaching end of the season would mean so much to either Frank L. Kramer, the ten times holder of the title, or A. J. Clark, who for three years has been the most serious contender for the honors. Their points in the score stood, previous to this race, at 62 and 50 respectively, with Alfred Goullet in third place, having 29 points to his credit.

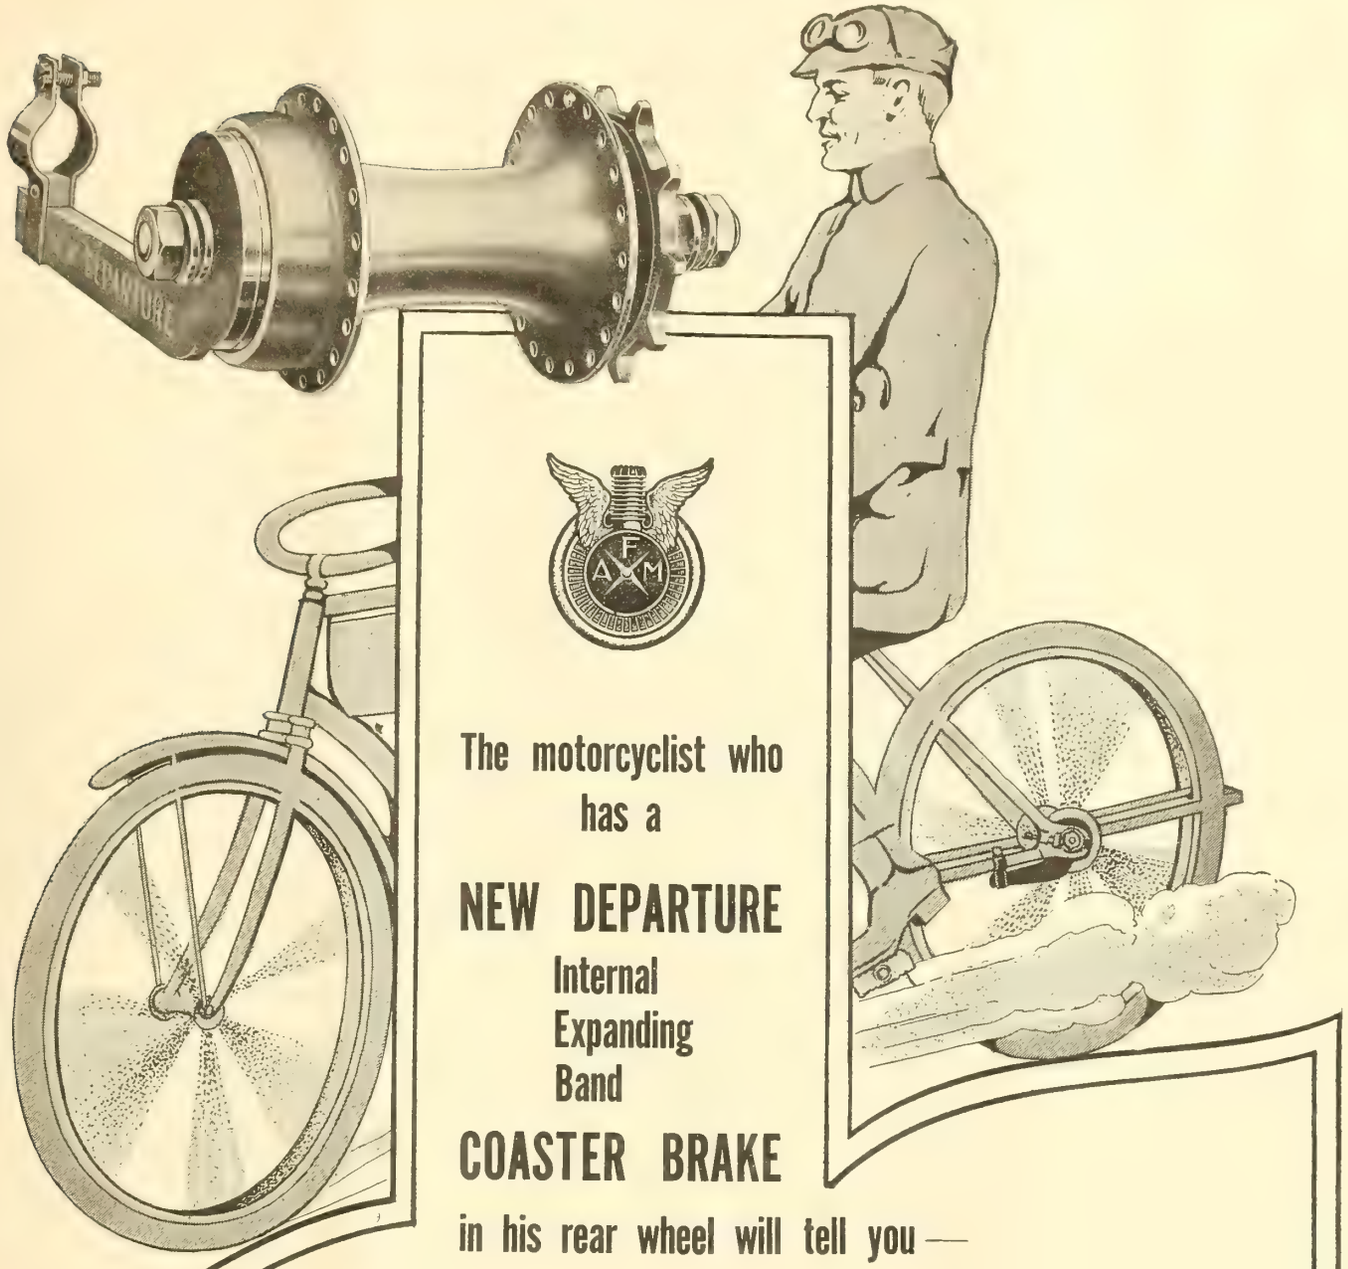
Aside from the possibility that was accorded to Clark should the race result in a victory for him, was also the fact that this was to mark the resumption of the professional championship series after a hiatus brought about by the declaration of Manager Chapman, of the Velodrome, that no more championships should be run unless he received assurance that there would be no teaming. The feeling in the situation was further intensified by the presence of three referees, decided necessary by the Board of Control of the N. C. A. at the meeting called for the purpose of investigating recent championship races, particularly those of the 3rd, 4th and 6th inst., in which it was charged that Kramer had flagrantly transgressed the rules and the terms of the contracts with the Velodrome management by teaming with Goullet to such an extent that Clark did not have a chance to win in those events.

In addition, Manager Chapman had stated, presumably for publication, as it appeared in print, that were teaming proved he would request the board to throw out from the championship event the scores of all those races in which the offense was proven, and if found necessary a new series would be run. A rather strong attitude, to say the least, to be taken by a promoter from the point of view of the ports governing body, and that of the riders who competed in the races and were judged and placed and accepted the final decisions of the regular appointed staff of officials with referee included.

At the hearing before the Board of Control on Monday, 11th inst., Kramer admitted to having teamed and it was also pointed out that Clark had been, when the opportunity offered, just as willing to take the risk of incurring the referee's disqualification and the consequent gain or loss as the case might be. After much deliberation it was decided, wisely, that those races could not be tampered with, but in the future, particularly in championship races, that a board of three referees be on duty. Accordingly Walter Bardgett was continued on in the capacity of referee and John Valentine, who for years had officiated at the Velodrome, and Chairman R. F. Kelsey, of the Board of Control, were added. At the track Bardgett was stationed on the home stretch with Kelsey at the tape and Valentine on the back stretch.

It required four preliminary heats and two semi-finals to sift the 39 riders down for the final mile heat in the title race. At the start of the final, with Clark, Lawson, Fogler and Kramer up, they went away slowly in that order and at the completion of one lap Kramer went to the front; they all rode in practically every position until the beginning of the fourth lap, when the positions were: Kramer, Lawson, Clark and Fogler, going slowly and on the bank. Clark, with Fogler close up, suddenly dropped down to the pole and Kramer took a position on Fogler's rear wheel. Clark started to wind up, gradually working up his sprint and keeping close watch for any surprise. At the bell, beginning of the sixth lap, Clark was on his way and Fogler appeared to be hanging on for dear life; when the bell struck, Lawson, who had been trailing, came up abreast of Kramer, and when the latter apparently found there was no getting through an opening, he decided at the half lap to back out and go around Lawson on the outside, but the best the champion could do was to race Lawson to the tape, barely getting the third, with Clark and Fogler one-two. When the referees conferred it was found that Valentine had heard Fogler tell Clark to "go" on the back stretch, and accordingly both were disqualified for teaming and probably rightly so; although it was pointed out that one riding in second position is likely to say something to that effect if by doing so one could improve one's own chances. By many it is claimed Lawson was the real culprit by coming up on the outside at the crucial point and remaining there long enough to prevent Kramer from using his wonderful jump in the last half lap. But here again the riding of Lawson, since that race in other events, shows that he is outclassed by the other three and in all probability was making use of all his ability to finish as well as he did.

In all probability Kramer could have at least taken second had he jumped to the front when the play was first started in the 4th lap and remained there, taking his chances at staving off Clark in the jump for the tape. At any rate, Kramer did not protest the team work; also he may not have made his utmost endeavor to win as he has been in other championship scores on a much narrower margin.



When the decision was announced Clark and Fogler, with the irrepressable Macfarland, manager-mentor for Clark, started a lengthy argument with the referees; ending finally with the decision more firmly rooted, and Macfarland suspended indefinitely and assessed $50 also. Macfarland's peevishness did not appear to result so much from the alleged discovery and punishment of the riders for teaming as it did from the fact that Kramer had admitted teaming, and the Board of Control had, as said before, wisely concluded to pass it over as beyond their power to recall, and that Clark should be the first victim of the evident determined resolve of the officials to put a stop to teaming regardless of whom the offenders may be.

The final and deciding race of the amateur championship, a five-mile event with three pacemakers, was also on the card. Like the professional event, it was destined to see the two leaders over the tape eventually disqualified for teaming.

The standing of the scores in points for the national title for the simon purse was as follows: Blatz (present holder), 14; Loftes, 13; Smith, 11; Cavanaugh, 10; Ericson, 3; Adams, 2; Pendleton, 1, and Pettit, 1. Twenty-five lined up for the start and John Becht, H. F. Abbott and Stanley Carmen alternated in hustling the big bunch around the bowl at a lively clip. Becht proved the best of the trio at this game, being quick on the pick-up and leading the march at a lively tune.

At five laps to go when a change of pace was being made, Ericson jumped out from third position and tacked on to the fresh pacemaker, remaining there to the bell. Shortly before the bell Cavanaugh moved out of the line, and passing Loftes, called to the latter to "get on." Loftes immediately did so and was carried past the intervening riders, and Ericson, into the last turn of the final lap, when Cavanaugh swung up and allowed Loftes to slip through for first, Ericson finishing third.

The call by Cavanaugh, the pull follow-

The motorcyclist who has a

NEW DEPARTURE

Internal Expanding Band

COASTER BRAKE

in his rear wheel will tell you —

It never fails to operate satisfactorily.

It is the most reliable part of his machine.

It has more power than he ever really needs — he can stall his engine with it.

It is strong to the point of indestructibility.

It has proven it's success.

Among all the motorcyclists who attended the big Buffalo F. A. M. meeting and whose machines were equipped with New Departure Coaster Brakes all reported the brake as giving excellent service and fulfilling all claims made by it.

THE NEW DEPARTURE MANUFACTURING COMPANY, Bristol, Conn.

Coaster Brake Licensors

ing, and the eventual back-pedaling by him to let Loftes through, were each and every one too glaringly committed to escape, consequently both riders lost their positions at the tape.

In a manner, Loftes was rather severely dealt with as by the disqualification he not only lost the race, but the national amateur championship of the season as well. To this honor he was undoubtedly entitled so far as ability and speed is concerned, as he is by far the best performer in the class on the circuit this season. Just previous to the race, Loftes had told Cavanaugh not to interfere with him or offer assistance, as he felt and knew he had the ability to win on his own merits, and in view of the strict regulations as to teaming Loftes did not desire to have his chances jeopardized.

But it is a generally established fact that these two riders have been over friendly to each other more or less all season, and it appears when the call came, Loftes, on the spur of the moment, probably through force of habit, accepted the proffered, though unnecessary assistance, with the result which he most feared. The decision could not be termed otherwise than a just one, although with such drastic effect. Thus Frank Blatz, with 14 points, by the disqualifications, was moved up from fifth to third position, with a total of 16 points, and awarded the title of national amateur champion for the season of 1912.

The summary:

One-half mile handicap—Won by Alvin Loftes (scratch); second, Anthony Rivello (35); third, Gus Wohlrab (20). Time, 0:57⅗.

One mile national championship professional—Won by A. J. Clark; second, Joseph Fogler; third, F. L. Kramer; fourth, Iver Lawson. Time, 3:06⅘. Clark and Fogler disqualified for teaming.

One mile invitation, professional—Won by Jumbo Wells; second, Charles Stein; third, Floyd Krebs; fourth, Norman Anderson; fifth, Willie Fenn; sixth, Dave Mackay. Time, 2:50⅗.

Two-mile open, novice—Won by A. Reiker; second, Raphael Capadenno. Time, 4:57⅖.

Two-mile handicap, professional—Won by John Bedell (110); second, Worthington L. Mitten (100); third, Jumbo Wells (145); fourth, Peter Drobach (100); fifth, Charles Stein (180). Time, 3:46⅖.

Five-mile national championship, amateur—Won by Alvin Loftes; second, Frank Cavanaugh; third, Carl Ericson; fourth, William Pettit; fifth, Frank Blatz; sixth, Donald MacDougall. Time, 10:46. Loftes and Cavanaugh disqualified for teaming.

Two-mile open, tandem, professional—Won by Root and Fogler; second, Fred Hill and Lawrence; third, Bedell Brothers; fourth, Hehir and Stein. Time, 4:02⅕.

Two-mile motorcycle race, Charles Turville vs. Jimmie Hunter—Won by Hunter. Time, 2:21⅗.

C. R. C. A. ON STATEN ISLAND RUN

Speed Contests and Time Trials at Grant City—Kopsky Proves Fastest in Ten Mile Event.

Starting from Columbus Circle, 58th street and Broadway, at 9 a. m., Sunday, the 17th inst., 35 members, neatly attired in the regulation uniforms of the Century Road Club Association, Eastern Division, attracted much favorable attention as they proceeded in double file down Broadway, New York City, on their run to Grant City, Staten Island.

Pleasant skies, perfect roads and unlimited good humor all contributed to make the occasion most enjoyable. At South Ferry several ladies joined the run and took part throughout. Upon arrival on Staten Island the run was still further augmented by 10 members of the New Jersey Division. All proceeded leisurely to Grant City.

After an hour's recreation the first two of a series of four races for the club championship and a 10 mile unpaced time trial were arranged and furnished some very interesting sport for the participants and entertainment for the spectators. The speed contests finished, a visit to the beach was next in order, and after indulging in the varied pleasures to be found there the return trip to the city was begun, reaching the disbanding point shortly after 6 p. m.

The two mile handicap, with 16 starters, was won by S. Segal (150). time, 4:58; second, H. Lilienthal (40), time, 5:06; third, J. O'Conner (scratch); fourth, J. Kopsky.

Five mile handicap—Won by S. Segal (1 min.), time, 14:02⅗; second, H. Terhune (1 min.), time, 14:03⅖; third, S. Taub (1 min); fourth, M. Cigal (2 min.).

Ten miles unpaced exhibition in competition for Bieregel Trophy, offered for the C. R. C. A. member making the best time of the year for the distance—By Jos. G. Kopsky. Time, 26:37⅖.

Points scored in championship—S. Segal, 10; H. Lilienthal, 3; H. Terhune, 3; J. O'Connor, 2; S. Taub, 2; J. G. Kopsky, 1; M. Cigal, 1.

Houston Prizes Finally Awarded.

According to late advices from Houston, Tex., they have distributed the prizes to the contestants as they finished in the 14-mile bicycle race between that city and Harrisburg, Tex., held Labor Day, under the auspices of the recently organized Houston Bicycle Club. The delay in announcing the winners and awarding the prizes was caused by the receipt of several protests to the effect that some of the riders had accepted outside pace. Upon investigation the protests were disallowed.

This is the first race of the new club and barring the protest, proved highly successful in every particular. Thirty-nine riders competed and unbounded interest was shown in the affair by the large majority of the population of the two cities. A very commendable plan was adopted in the apportioning the prizes. Instead of the usual custom of creating a list with a long string of place prizes, awards were posted for those finishing first, second, third and fourth in the race, and in addition were groups of prizes graded in value to correspond to the relative number of entries of the various makes of bicycles.

The first grand free-for-all prize, a Rambler racer, was won by J. A. Schuddemagen, time, 46:15; second, Charles Culmore, pair Palmer tires; third, Henry Bradshaw, Persons saddle; fourth, Maynard Chance, coaster brake. In the group riding Iver Johnsons, the first prize was an Iver Johnson revolver, won by George Moore; second, Claude Hopkins, pair Indian Head tires; third, R. H. Anderson, coaster brake. Raycycle riders class—Won by Albert Fox, pair Volunteer tires. Worth riders—Won by Burnett Jordan, pair Hartford tires; second, Claud Kaufman, Columbia gas lamp. Superba riders—Won by Lewis Kelsey, pair Diamond Oriental tires; second, Andrew Johnson, Diamond chain. Various special makes—Won by Glen McClanahan; second, Oscar Chance, Whitney chain.

Special time prize—Won by E. Suttles, coaster brake.

Otto Meyer is German Sprint Champion.

Otto Meyer won the 1,000 meter (nearly ⅝ mile) race in the championship of Germany, at Dresden, on Sunday, 10th inst. His time in the final heat was 1:50⅘; the last 200 meters, a distance four feet short of one-eighth mile, was ridden in 0.12⅕. Walter Rutt finished second, being beaten by half a length, with Peter third.

Remarkably fast time was recorded in the sprints of the preliminary heats, as well as in the final. Rutt won the first heat in 2:19⅖; the last 200 meters was ridden in 0:12⅘, with Schuermann and Lorenz second and third respectively in a blanket finish. The second heat was won by Meyer, one-fifth of a second faster than the final, 1:50⅗, and the sprint from the bell in exactly the same as the final, 0:12⅕, Arend and Wagner second and third by inches. Peter, Henri Mayer and Schilling finished in that order close up in the third heat, in 2:04⅖, the sprint in 0:12⅖.

C. R. C. of A. Announces Century Run.

The Century Road Club of America, New York State division, announces its annual fall century run, to be called at 7 a. m. Sunday, October 1st. Rain date October 15th. Start will be made at the Park Plaza, Brooklyn. Fred E. Mommer will officiate as pacemaker of the fast division and Emile E. Fraysse will act in that capacity for the slow division. Entry blanks and particulars can be had of dealers or from the chairman of the century run committee, Emile E. Fraysse, 790 Ninth avenue, New York.

A New Prest-O-Lite Motorcycle Gas Tank, Equipped with Gauge, $10

The addition of a gauge makes our motorcycle gas tank similar to our famous automobile tank in everything but size. This gauge shows, at all times, the amount of gas in the tank.

Our tank without gauge, which formerly sold at $10, will hereafter sell for $8. We have arranged with our dealers to take in this tank and exchange it for the new model with gauge, if the user desires, upon payment of the difference in price, $2.

Prest-O-Lite Tanks are now handled by nearly all motorcycle and automobile dealers in the United States.

Investigate Prest-O-Lite

Some of your friends are probably using this famous lighting system.

Ask them if it costs any more to maintain than the troublesome, treacherous generator.

Ask them about its convenience, safety and insurance against accidents. Ask them how much pleasure they find in having 40 hours of brilliant, unflickering, dependable light, turned on and off like a gas jet.

Just one accident due to poor light would probably cost you more than a year's supply of Prest-O-Lite.

But get the genuine. Imitations can be exchanged in very few places. Prest-O-Lite Tanks, when empty, can be promptly exchanged, anywhere and always.

LICENSED COASTER BRAKE MANUFACTURERS

Thor Service

There may be other motorcycles manufactured in the country that the producers claim will give as good service as the Thor IV, but do they? That is the question.

It isn't what a motorcycle can do, but what it really does that counts in a business like this, or in any other business for that matter. Service is the biggest thing in the world, whether you want a gallon of gasoline or a pound of sausage, and Thor Service is guaranteed.

The business graveyard is full of broken promises, words of honor, promised co-operation, agreements to deliver. Hell is paved with good intentions that never made good.

Only the man who has the motorcycle that does just what he says it will do is entitled to hold his head up and say, "I am entitled to your business; I sell Thor and guarantee it to make good."

Thor Motorcycles are making good in all parts of America from the far Northwest to the Everglades of Florida.

If you, Mr. Reader, doubt this, give us a chance to make good. We have the motorcycle that in a reliability contest, if it doesn't win, it has to be beaten. We build this Thor IV with the best material and the finest factory equipment in the land, run by regular high class mechanics. The result is sure, a high grade motorcycle that does give Service. All that any motorcycle can do is run and the Thor IV does this more consistently than any other.

It is an admitted fact that the Thor IV costs considerable more money to manufacture, but the final result is worth it. We are proud of our work and want you to know it.

If you are a live hustling fellow and think you could sell a high grade motorcycle in your community write us today. Time soon passes and time is money to the Thor dealer. Get a hustle on now and let's hear from you regarding the Thor Agency for 1912.

The Thor catalogue is a guide to every motorcyclist. Send for it.

United States Tires

clean up everything in the Trio Endurance Runs.

With a remarkable exhibition of trouble-proof tire service, UNITED STATES TIRE users cleaned up every trophy awarded in the three 150-mile Trio Trials from New York to Newburg and return.

The only two perfect score medals, the three "one-make" team cups and the coveted Fleming trophy for club contestants all went to riders on UNITED STATES MOTORCYCLE TIRES.

Here is the Roll of Honor:

Perfect Score Gold Medals

Won by Meinell	Merkel	on UNITED STATES TIRES
Molin	N. S. U.	on UNITED STATES TIRES

"One-Make" Team Cups

Won by Meinell	Merkel Team	on UNITED STATES TIRES
Schultheis		on UNITED STATES TIRES
Buechner		on UNITED STATES TIRES

Fleming Trophy for Club Team

Won by Hoffman	Merkel	on UNITED STATES TIRES
Siemsen		on UNITED STATES TIRES
Ashley		on UNITED STATES TIRES

This overwhelming victory of UNITED STATES TIRES so closely following their brilliant records in the Lake District Endurance Contest and at the Riverview Motordrome track, only confirms what 80% of the American riders already know from experience — that UNITED STATES TIRES are unquestionably

the most reliable tires in the world.

UNITED STATES TIRE COMPANY

Kokomiles save Kokomoney for the Rider and make Kokomoney for the Dealer!

Kokomiles are those myriad miles of satisfactory service that are given by

Kokomo Tires

Again we ask:

"Are you profiting by what we offer you in Kokomo Tires?"

For instance:

Kokomo Defender Special

This popular guaranteed tire is specially designed and constructed for road use. It is made from the best materials obtainable, being carefully built up by hand with pure para inner tube, and, owing to the very high quality of the inner tube used, a puncture is very easily repaired.

Kokomo "New Oxford"

A medium price tire, yet so good in quality that it does not do it justice to call it a medium grade tire. We have built these tires so that in case of puncture they will not be worthless but can be repaired. Also furnished in smooth tread.

Every dealer handling these tires is doing a benefit to his customers and to his own bank balance.

KOKOMO RUBBER COMPANY, Kokomo, Ind., U. S. A.

FLANDERS MANUFACTURING CO., Pontiac, Mich.

These **tires carry an** *Unqualified Season's Guarantee* **and absolutely prevent side-slipping.**

Pennsylvania VACUUM CUP Bicycle Tires

They exert a *vacuum hold* on wet and slippery pavements. Skidding in any direction is impossible. The triple row of cup-shaped knobs is molded on a tread of regular thickness, which means extra long service. Puncturing is extremely rare.

These tires are so well made and of such fine material that we give an unqualified season's guarantee with each.

They do away with the greatest of bicycle worries—tire trouble.

Made by an Independent Company. Sold by Independent Dealers.

For our Jobbing Trade, season 1912, we have samples and prices of our complete line of Bicycle Tires. To this popular-priced line we have added the new Vacuum Cup Tires quoted above and also the No. 90, a special high-grade tire made in either smooth or corrugated tread.

Jobbers will please note that our line of Bicycle Tires for 1912 covers eleven different grades.

We market our tires exclusively through the jobbing trade.

The Announcement You Have Been Looking For

Owing to the remarkable demand for

The New R-S

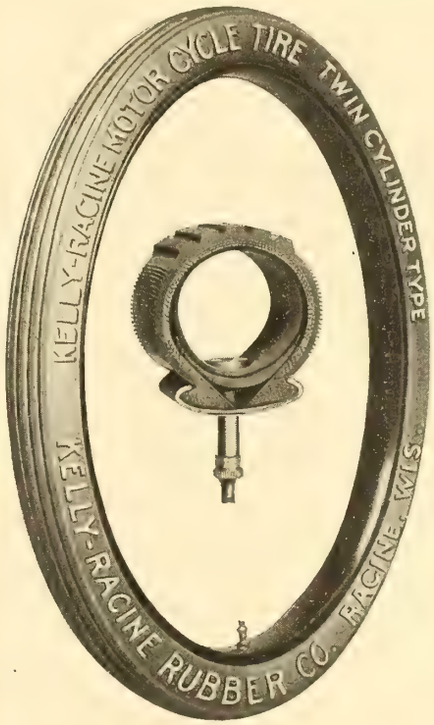
we are now running our factory full time on 1912 Models, will begin delivery on November first, and are now closing 1912 agency contracts.

THREE MODELS FOR 1912

R-S Single, Service Model	**$225**
R-S Single, Tourist Model	**$250**
R-S Twin, Model T-12	**$290**

The Tourist is the successor of the 1911 Single with all the features that made that machine the leader in 1911 still further developed and perfected. Among these exclusive features we note two distinct brakes, two oiling systems, real shock absorbing seat post, adjustable foot rests, two compartment gasoline tank, combination hand and foot operated belt control, ball bearing motor with interchangeable mechanically actuated valves, removable steel luggage carrier and tool box. Motor 30.45 cu. in., 4 H. P., Bosch magneto, flat belt drive. **Price $250.**

The Service Model is, as its name implies, built for hard service without some of the comforts and conveniences of the Tourist model, but with all the equipment of magneto singles of other makes, with the additional features of ball bearing motor and shock absorbing seat post. Motor 30.45 cu. in., 4 H. P., Bosch magneto, flat belt drive. **Price $225.**



The R-S 7 Twin is identical in frame and equipment with the Tourist model but provided with a 61 inch, 7 H. P., twin motor, chain drive and the most powerful brake ever put on a motorcycle in addition to the usual hub brake. Motor 7 H. P., Bosch magneto, chain drive. **Price $290.** With multiple disc free engine clutch, **Price $300.**

Kelly-Racine Twin Cylinder MOTORCYCLE TIRES

Built for Business

Absolutely Non-Skid

For Heavy Duty and **Long Service**

This tire is a compound of pure Para rubber, the finest grade of Sea Island cotton and BRAINS. It is built on regular cores, the same as motor car tires, and the same kind of a tire-machine, thus insuring absolute uniformity of construction.

We are believers in the motorcycle business and we are contributing to its advancement in offering to it the finest kind of tire equipment that experience, skill and the resources of the most modern tire plant in the world can produce.

The Kelly-Racine Rubber Co. is closely identified with the motorcycle industry and will specialize in its requirements.

We recommend without reservation the Kelly-Racine Twin Cylinder Motorcycle Tire.

KELLY-RACINE RUBBER COMPANY, Racine, Wis.

It's Consistency That Counts

About a year ago a 4 H.P. single cylinder EMBLEM MOTORCYCLE established a 100 miles world's record for belt driven motorcycles on a dirt circular track—in competition against machines twice the power. The time for that 100 miles—made by L. S. Taylor—was 111 minutes. **That record has never been broken.**

"IN THE LONG RUN"

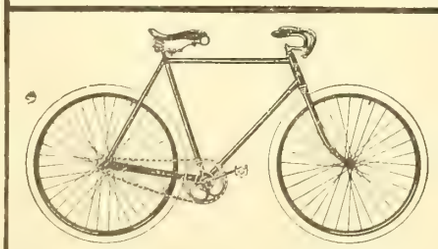
On Sunday September 17th, 1911, the EMBLEM MOTORCYCLE again demonstrated its staying qualities—ITS CONVINCING CONSISTENCY—by winning the 100 miles Free-for-all race at Columbus, O.—in gruelling competition against some of the fastest machines and nerviest riders in America. Not only did a belt drive Emblem win this race, but its rider, George Evans, broke the former world's record of 105 minutes. Evans covered the 100 miles in 102 minutes 9 2-5 seconds. Another Emblem finished fourth after losing 10 minutes through a punctured tire.

Such consistent performance is assured every rider of an Emblem Motorcycle. Dealers are assured satisfied customers. We are closing 1912 territory. Better write today.

EMBLEM MANUFACTURING COMPANY, Angola, Erie County, N. Y.

Member Motorcycle Manufacturers' Association

How to Satisfy Your Customers and Make Money



The successful bicycle dealer realizes more fully today than ever before the *absolute necessity* of selling a bicycle having exclusive, distinctive features, tried and proved. (*Satisfied Customers*). A bicycle his competitor cannot duplicate in name or quality (*Sells at a Profit*). THIS IS THE TIME TO CLOSE IT

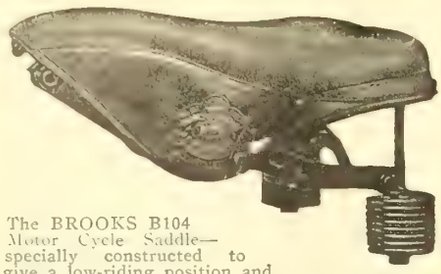
Make It a Big Order for Pope Motorcycles

The rush for Pope Motorcycles is now on and things are humming in our big plant at Westfield, Mass. Pope Quality at the Pope Price has shown dealers the way to big sales.

Let us book you for a big, broad motorcycle business. Don't putter along with a limited sale of high-priced machines. Line up with the changed conditions and get in on the big profits.

The Pope Motorcycle Is a Great Success

quite aside from the fact that it undersells all of its predecessors and offers more for the money than any other machine on the market.



It is in every way worthy of the name Pope and with our endorsement, you may be sure of satisfied customers. We have heard from hundreds of pleased dealers.

Our Traveling Men Are Now on The Road

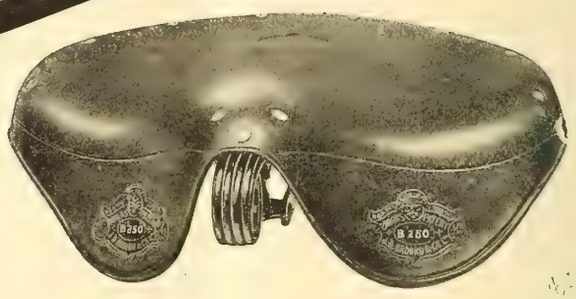
and one of them will call for your order, but should he be too long in coming, don't wait. Write us direct regarding the best motorcycle proposition ever made to dealers.

The Pope Manufacturing Company

HARTFORD, CONNECTICUT

The BROOKS B104 Motor Cycle Saddle—specially constructed to give a low-riding position and made either with plain or padded top.

In the World of Wheels there is no name with a higher reputation than that of



BROOKS

and—

The simple act of comparison between the saddle that bears it and the others, will immediately reveal the BROOKS superiority. Remember, the original and only genuine compound-spring saddle—the BROOKS—is the only saddle that can embody the BROOKS Compound Springs, which springs entirely absorb vibration within themselves and ensure an absolute immunity from the common fault of bouncing—other springing systems may have some virtues, but they invariably fail in the matter of that compensating action so essential to the rider's ease and comfort— And what think you will your customer think of that?

J. B. BROOKS & CO., Ltd., 73 Criterion Works, Birmingham, England

Distributing Agents for U. S. A.—THE D. P. HARRIS HARDWARE CO., 48 Warren St., New York

The BROOKS B250 Motor Cycle Seat—designed for machines of the non-pedalling type. Made either with plain or padded top.

"Pretty Soft!" Yes, indeed. That's the way they are intended to be. Those big, generous, easy rubber cushions, with deep corrugations are a distinguishing feature of the

HERE IT IS!

HAVERFORD "BIG FOUR"

To appreciate the sensational nature of this 1912 announcement, dealers and riders have only to go over the specifications even superficially. The 1912 HAVERFORD "BIG FOUR" will enable dealers to sweep the market in their territories, because it is the greatest value that has ever been offered or even promised.

With Bosch magneto and Schebler carbureter, for

$175

Getting directly to the facts, so that you can judge for yourself, the HAVERFORD "BIG FOUR" at $175 has the following features:

THE MOTOR is "long stroke," in accordance with the most advanced motorcycle practice. It is 3¼-inch bore by 4-inch stroke, and develops more than a full 4 horsepower. It is roller bearing and has an aluminum crank case. It is vertically mounted and in every way accessible.

IGNITION is by Bosch high tension magneto, the most expensive and the most satisfactory magneto that is obtainable.

CARBURETER is the Schebler Model "H," the Schebler being the type of carbureter used on the most powerful automobiles. The Model "H" has been shown to be as perfect a motorcycle carbureter as can be obtained.

TRANSMISSION is by flat, double-thick, endless leather belt, 1¾ inch wide, with spring tension hand-operated idler, having ball bearing belt pulley.

SPRING FORK has leaf spring suspension, the most popular and comfortable suspension ever devised for motorcycles. The fork itself is of the truss pattern, insuring maximum strength. Four leaf springs are provided, with new clip to prevent rebound breakage.

SADDLE is the Persons "Champion." The Persons reputation in saddle making is well known, and the "Champion" model is the Persons biggest and best.

WHEELS are 28 inches in diameter.

TIRES are 28 x 2½ inch, studded tread.

CONTROL is from the handlebar grips through levers; right side is throttle, left side is spark. The handlebar has 3-inch rise and 14-inch back sweep, and has Rough Rider long rubber grips.

GASOLINE CAPACITY, 1½ gallons.

OIL CAPACITY, 1½ quarts.

LUBRICATION by force feed pump.

GUARDS, three sections, extra wide, enameled; detachable at the rear; leather splasher flap on the front.

STAND is attached to rear jaws. Swings up and latches automatically when not in use.

WHEELBASE, 54 inches.

GEAR RATIO, 5 to 1 with flat belt.

WEIGHT, 160 pounds.

TOOLS include pump, wrench, screwdriver and tire repair outfit contained in metal tool box.

FINISH, Royal Blue.

SPEED, 5 to 55 miles per hour.

PRICE, $175.

Prompt action is what will best serve in getting the agency for the HAVERFORD "BIG FOUR" in any given territory. We are closing the 1912 agencies now, and we are commencing deliveries now. Furthermore, we are protecting every one of our agents on deliveries, and will take no more agents' contracts than we can fulfill. This means that promptness is vital to the agent who wants to handle this splendid $175 "Big Four." Retail buyers who want their machines right away and have no agents in their territory as yet, can obtain the HAVERFORD "BIG FOUR" for $175 f. o. b. Philadelphia, properly packed and crated for shipment according to their instructions. The terms are one-fourth cash with order, the balance C. O. D. or sight draft attached to bill of lading.

THE HAVERFORD CYCLE COMPANY, 825-827-829 Arch Street, Philadelphia, Pa.

BRANCHES—411 Market Street, Philadelphia; Buffalo, N. Y.; Washington, D. C.; Newark, N. J.; Atlantic City, N. J.

Thor Service

There may be other motorcycles manufactured in the country that the producers claim will give as good service as the Thor IV, but do they? That is the question.

It isn't what a motorcycle can do, but what it really does that counts in a business like this, or in any other business for that matter. Service is the biggest thing in the world, whether you want a gallon of gasoline or a pound of sausage, and Thor Service is guaranteed.

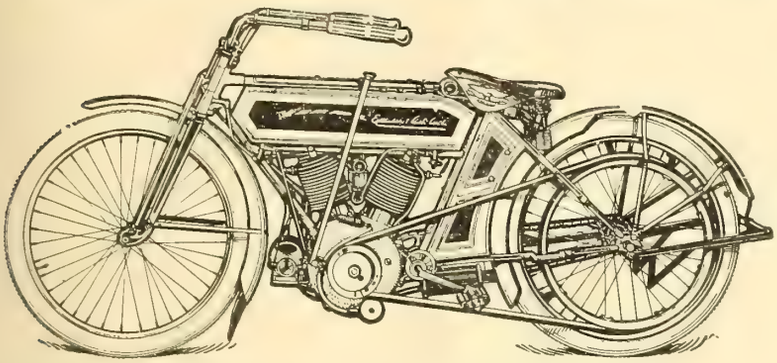
The business graveyard is full of broken promises, words of honor, promised co-operation, agreements to deliver. Hell is paved with good intentions that never made good.

Only the man who has the motorcycle that does just what he says it will do is entitled to hold his head up and say, "I am entitled to your business; I sell Thor and guarantee it to make good."

Thor Motorcycles are making good in all parts of America from the far Northwest to the Everglades of Florida.

If you, Mr. Reader, doubt this, give us a chance to make good. We have the motorcycle that in a reliability contest, if it doesn't win, it has to be beaten. We build this Thor IV with the best material and the finest factory equipment in the land, run by regular high class mechanics. The result is sure, a high grade motorcycle that does give Service. All that any motorcycle can do is run and the Thor IV does this more consistently than any other.

It is an admitted fact that the Thor IV costs considerable more money to manufacture, but the final result is worth it. We are proud of our work and want you to know it.



If you are a live hustling fellow and think you could sell a high grade motorcycle in your community write us today. Time soon passes and time is money to the Thor dealer. Get a hustle on now and let's hear from you regarding the Thor Agency for 1912.

The Thor catalogue is a guide to every motorcyclist. Send for it.

AURORA AUTOMATIC MACHINERY CO.

A CHAMPION RIDES A CHAMPION

1912 Excelsior, De Rosier Riding, Cuts Champion's Own Record

De Rosier, the world's champion motorcyclist, road a 1912 Excelsior at the Riverview Park Motordrome, Chicago, on Sept. 17, and slashed two seconds off his own world's record. A gradual process of elimination convinced the world's most famous motorcyclist that the 1912 Excelsior was the ONLY machine worth considering.

Here's what the Excelsior has done this season:

On August 19 it cut 3 mile record to....2:02⅖
On August 19 it cut 5 mile record to....3:28⅖
On August 26 it cut 1 mile record to....0:40⅕
On August 26 it cut 2 mile record to....1:24
On September 2 it cut 2 mile record to....1:22⅖
On September 17 it cut ⅝ mile record to....0:23⅕

Above records made in competition

The 1912 Excelsior is the best general service machine on the market. De Rosier's record proves that its amazing speed possibilities make it the logical machine for you to buy.

Twin Cylinder, Magneto, Formerly $310, now....$250
Single Cylinder, Magneto, Formerly $250, now....$225
Single Cylinder, Battery, Formerly $225, now....$200

PITTSFIELD

Motorcycle Spark Coils

Have Never Been Equalled

MADE very different from other spark coils, the Pittsfield have always stood alone in both service and durability. They are wound in the most careful manner by machinery especially made for the purpose, and the wonderfully effective insulation makes the coils absolutely moisture proof.

The solid insulating compound with which Pittsfield coils are impregnated holds the windings securely and vibration has no effect whatever upon them.

Motorcyclists who use these coils are not troubled with misfiring in their cylinders. **Equip with a Pittsfield Spark Coil and notice the improvement in your ignition.**

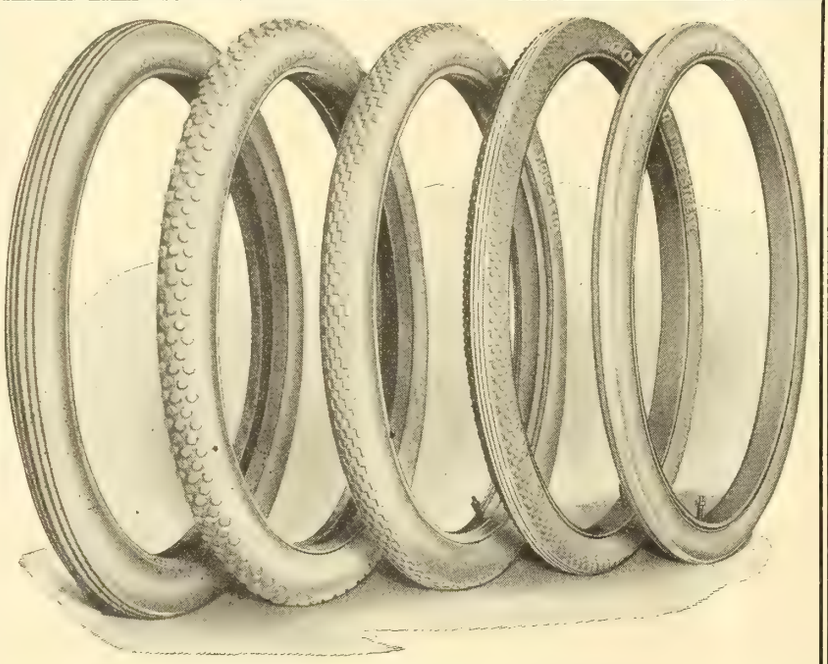
Swift Happenings Labor Day
Goodyear Motorcycle Tires Make Big Showing

Races all over the country won by these top notch tires. Most of the victories due to the magnificent endurance and speed-supremacy of Goodyear BLUE STREAKS. Studded Treads also make big showing.

History is repeating itself in rapid-fire succession.



What Goodyear Motorcycle Tires did on Decoration Day, they **repeated** on Labor Day when Goodyear BLUE STREAKS, the fastest racing tires in the world, showing a clean pair of heels to every other make, **won practically every big event in the country.**

We have embodied within this ad a **mere handful** of the **tell-tale telegrams.**

In substance, these telegrams tell the Goodyear story as completely as though spread through an inch thick volume.

They tell of **Maximum Speed**—of a flexible resiliency found equaled in no other tire. This is due to the no-cross-thread weave of the Goodyear Fabric, and the rubber which is the best that can be produced.

They tell of **Maximum Strength**—the result of treads **thicker** than all other treads, tires **larger** than most others, hence with a larger shock absorbing area, tire building **methods** far in advance of those used in common tire construction.

Five Great Motorcycle Tires

1—Goodyear CORRUGATED TREAD TIRES—for average give and take road. 2—Goodyear STUDDED Tread Tires—for mud, sand, snow and ice. The great endurance run tire. 3—Goodyear NON-SKID Tires—the ideal slippery pavement tire. 4 and 5—Goodyear BLUE STREAK RACING TIRES. Hold all world's records. Read below a few Labor Day achievements.

A Few September 4 Achievements

Indianapolis, Ind. State Championship won by Baker, who breaks 5 mile record on ½ mile track. **Blue Streaks**, of course.

Baltimore, Md. First and Seconds in all events at Bennings Park won by Blue Streaks and Studded Treads.

Portland, Maine. **Blue Streaks** make new 5 mile records in Old Orchard Track.

Seattle, Wash. 100 mile race won by regular stock tires.

Detroit, Mich. Blue Streaks win 3 first, 1 second.

Lima, Ohio. Matthews, equipped with **Goodyear Blue Streak** Motorcycle Tires, won all important events at Lima and Kenton. Same tires for all races.

Tampa, Fla. **Blue Streaks** win 3 out of 6 races.

Savannah, Ga. Shrivalle and Hodge win first prizes in twin and single cylinder classes. Both motorcycles equipped with **Goodyear Blue Streaks.**

. See next week's ad for Underhill's big 1,140 mile no-tire-trouble grind from Chicago to Morris Plains, N. J., on GOODYEAR MOTORCYCLE TIRES.

And they tell of higher grade, more conscientious **workmanship**—that of **past-masters** in the tire-building art, men who have been building auto tires for over 13 years, hence **know the best methods.**

For Goodyear Motorcycle Tires are in reality small Goodyear **Auto** Tires. They are built by the **same** process, by the **same** experts and from the **same** high grade materials that combined in making the Goodyear No-Rim-Cut Auto Tire what it is today—conceded to be the most successful auto tire in existence.

Yet with all this EXTRA speed, strength and endurance you don't **pay** extra **for** it; because Goodyear Motorcycle Tires cost no more than any standard make tire.

Since in other standard tires you **pay** the price of Goodyear **Quality,** why don't you be sure of **getting** it by insisting on Goodyear **Tires?**

One for every road condition. See description above. For complete details—

Send for "Tires of Old War Horse." It's **FREE.**

COLORED LIGHTS TO INDICATE SPEED

California Inventor Gives New Twist to Old Scheme and Is Optimistic as to Its Performance.

Although many varieties of speed indicators employing the warning principle of harsh sound or red light have been tried and found wanting, new inventions along this line continue to pour into the patent office. The latest of these is the product of the brain of C. A. Short, of Los Angeles, Cal., and shows the speed of an automobile or motorcycle by a system of lights.

There are three lights, a white, a green and a red. By adjusting the indicator at time of installing the white light will shine immediately the automobile or motorcycle is in motion, and will remain lighted until the machine reaches the minimum speed limit of eight miles an hour. At 8 to 12 miles an hour the green light will show, after 12 miles an hour the red light will burn. The red light will burn until the car is going more than 20 miles an hour, when no light will show.

Mr. Short believes his invention will solve the speed question. "I hope," said Mr. Short, "to convince every motorist that he should equip his car with one of these speed indicators for his own protection. It is absolutely reliable and cannot be tampered with, once it is attached to the car.

The indicator was shown to Chief of Police Sebastian last week and that official was much interested in it. The globes on the electric lights will be of ground glass and can easily be distinguished during the day. Mr. Short demonstrated the practicability of the invention to Miss S. C. Geary, secretary of the Automobile Club of Southern California.

Two New Branches for Chas. E. Miller.

Charles E. Miller, manufacturer of motorcycle supplies, of 97-103 Reade street, New Orleans, has added two more branches to his already extensive list by securing quarters at 135 Central avenue, Albany, N. Y., and at 2782 Broadway, New York City. The latter will be opened about October 1st and the one in Albany as soon as the building is completed. These branches will carry an extensive stock and be able to fill orders promptly for their immediate vicinity, thereby saving time and express charges for the purchasers.

Merkel Reduces Prices on 1911 Models.

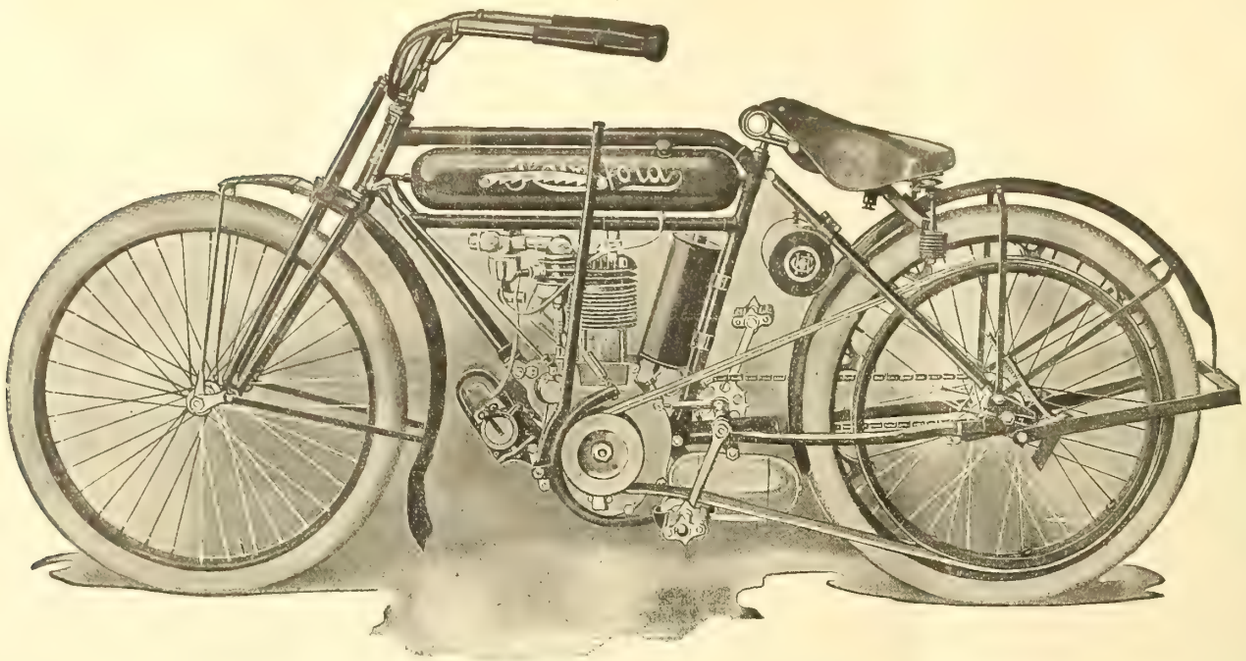
Reductions of $25 on all models of 1911 Merkel motorcycles are announced by the Miami Cycle & Mfg. Co., Middletown, O. The revised list figures on the various models now are as follows: Four horsepower single, $225; six horsepower twin, $275; seven horsepower twin, $300. Magneto ignition is included in the new prices.

New Motorcycle Company for New York.

For the purpose of manufacturing and dealing in bicycles and motor cycles the Haverford Cycle Co. of Manhattan has been incorporated under the laws of New York state with a capital stock of $250,000. The incorporators are R. Goldman, A. Forshay and H. Neubardt.

Jerseyites Incorporate in New York.

Motorcycles and automobiles will be handled by the Buick Co., Jersey City, N. J., which has been incorporated in that state with $10,000 capital. The incorporators are B. S. Mantz, L. H. Gunther and John R. Turner.

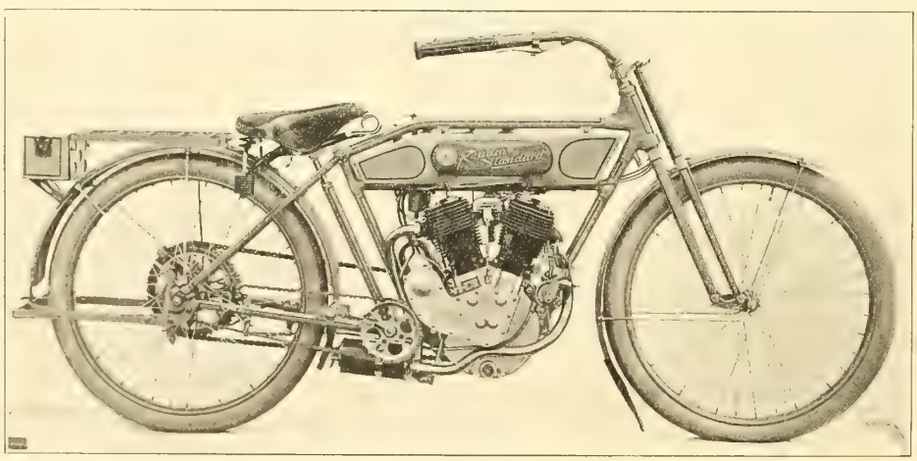


R-S RETURNS TO CHAIN DRIVE

And Again Builds Twin Cylinder Motorcycles—Belt Retained on Singles—Full 1912 Line is Announced.

Returning once more to the ranks of the builders of twin motors and users of chain drive, while also retaining its present type of singles with flat belt drive, the Reading Standard Co., Reading, Pa., announces that its 1912 line will consist of three models, viz.: a seven horsepower chain drive undergeared twin, and two four horsepower flat belt drive singles, the latter being of the same general pattern throughout and a perpetuation of this year's model. The twin is the leader of the line naturally and is brand new throughout. It embraces many of the features of the single cylinder machine and also presents some new and radical departures from previous R-S practice.

Except for the motor and detail changes made necessary by the use of chain drive, the twin in general is a replica of the single. The motor is rated at seven horsepower and is a doubling up of the single, the cylinders being of the same size, 3 11/32 x 3 15/32. The displacement is 60.90. Cylinders are set at 45 degrees and the valves all are mechcanical, set side by side in pockets, an original R-S feature. Ball bearings carry the main shaft and in general design the motor resembles the present single engine.



As in the single the Bosch magneto on the twin is located back of the rear cylinder and driven by a train of enclosed gears. This magneto location and driving arrangement has qualified for retention after a sea-

THE NEW HAVERFORD "BIG FOUR"

son's usage and, furthermore, is claimed to have the endorsement of Bosch engineers.

In the use of undergeared chain transmission the R-S company takes a radical step. The undergears are of the sun and planet type, and are enclosed in the motor base. They are carried on large ball bearings. A single chain transmits power from the motor to the rear wheel, the drive being through a large rear compensating sprocket on the rear hub. By the use of large sprockets the chain load is decreased, as also is its speed and its life lengthened correspondingly. Provision also is made for the attachment of a multiple disk clutch on the large gear shaft. This device lists at $10 extra.

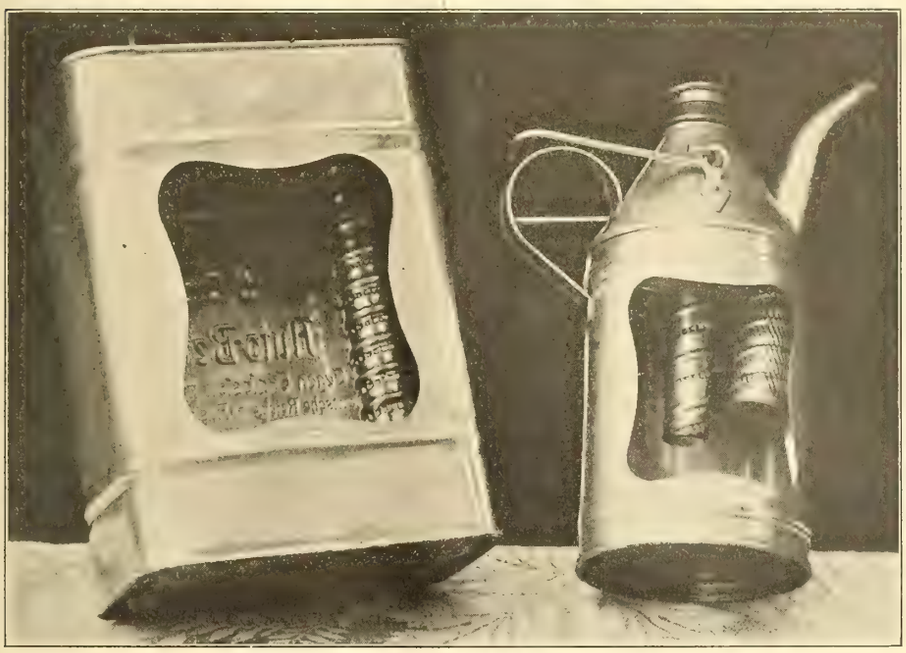
THE 1912 READING-STANDARD TWIN

Very few changes have been made in the singles. The current model is carried over and offered in two patterns differing only in equipment. The new features of the 1912 singles are detail modifications in the motor, a lowering of the shock absorbing seat post slightly more than one inch, giving a lower saddle position, a lengthening of the hand idler permitting a wide range of belt tensioning and a modification of the belt control lever permitting its operation either by hand or foot. The shoe of the auxiliary brake acting on the inner face of the rear belt pulley has been lengthened, practically doubling the power of this brake. Experience having shown that many riders were disposed to use the rear luggage carrier and tool box for passenger work, these parts have been strengthened to sustain this unusual strain for which they were not intended. In the change all load has been removed from the rear guard and braces.

The leader of the single line will be styled the Reading Tourist and will embody in entirety all the new features of the model. The other single is designated as the Reading Service model and will be a duplicate of the Tourist save that it will not include the auxiliary brake, auxiliary oil feed, foot rests and luggage carrier. The elimination of these features naturally will serve to lighten the machine and also make it more attractive in price.

The Tourist model will list at $250 and the twin at $290, or $300 with clutch.

Haverford Brings Out a "Big Four."

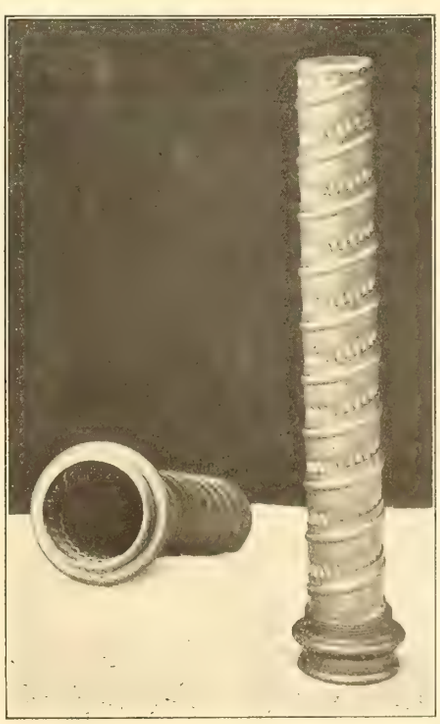


Having met with more than ample success in the marketing of a smaller model at $185 with magneto equipment, the Haverford Cycle Co., which has its home in Philadelphia, Pa., but which maintains branches in Buffalo, Washington, Atlantic City and Newark, has brought out a "Big Four" Haverford motorcycle for 1912, selling for $175, and in every way larger and more completely equipped than its predecessor. Featured in the equipment are Bosch high tension magneto, Schebler carbureter and studded tires of whatever brand the rider chooses. The engine, which is vertically mounted on an aluminum crankcase, and which is equipped with roller bearings, has a bore of 3¼ inches and a stroke of 4 inches, giving practically 33 cubic inches displacement, and is rated at 4 horsepower, although the claim is made that its capacity is considerably in excess of this.

Flat belt instead of V-type belt is used for the transmission, the belt being 1¼-inch in width. A hand lever on the left side controls the ball bearing idler for the belt, the idler having a spring tension. As against 26-inch wheels on the former model, the "Big Four" has 28-inch wheels, the wheelbase being 54 inches. The specifications further include a leaf spring fork; grip control; Persons "Champion" saddle; automatic stand, and a full equipment of tools.

EXTRACTING FANGS FROM GASOLINE

German Invention Demonstrated in New York Adds to Safety of Handling Fuel—Simplicity of the Device.



Before a gathering of some twenty engineers, chemists and representatives of the press at the laboratories of the Berlin Chemical Co., at 560 West 171st street, New York City, Dr. Edward D. Feldman on Wednesday last gave a practical demonstration of a new safety device for gasoline cans and other receptacles for highly inflammable liquids. The device is styled the "Langrehr," after its inventor, and it comes from Germany with the strong endorsement of the German government, which has ordered all vessels containing inflammable liquids, which are used on the warships, to be fitted with the Langrehr safety device. The demonstration was preceded by a lecture by Mr. Bernhard Zwillinger, Ch.E., in which the subject of safety devices in general and the history of the Langrehr device in particular was set forth.

GASOLINE CANS FITTED WITH THE LANGREHR DEVICE

As is the case with practically all other safety devices against accidental ignition of explosive mixtures or inflammable vapors, the Langrehr invention is a variation of the Davy lamp principle, which consists in placing between the flame of the lamp and the gases or vapors which may come into contact with it a screen of metal. This screen, by its cooling action, reduces the temperature of the combustion gases and prevents a communication of the flame to the bulk of the gas in which the lamp may be placed. In the original Davy lamp this result is obtained by means of a fine wire mesh screen, but in the Langrehr device the place of the screen is taken by a peculiarly constructed tube which is screwed into the can or receptacle.

This tube, as shown in the accompanying illustrations, is formed by rolling a flat strip of metal, smooth on one side and corrugated on the other, in spirals. The corrugations form a series of passages, the aggregate cross sections of which are equal to the cross section of the aperture of the vessel, so that a can may be filled or emptied as readily with the tube inserted as without it. The flat strips have such a large cooling area that the possibility of a transmission of the flame into the vessel itself is rendered practically nil. The lower end of the tube, of course, is closed.

LANGREHR SAFETY TUBE

In order to prove the claims made for the efficiency of the Langrehr device Dr. Feldman showed that a can partially filled with gasoline and fully charged with the dangerous mixture of air and gasoline vapor, would not ignite or explode. He poured gasoline from one can into another, through an open flame, while air was blown into the cans, forming highly explosive mixtures; yet, no explosions occurred, although several of the press representatives fidgeted rather nervously in their chairs during this part of the demonstration.

Merry to Sell Flanders in Los Angeles.

On October 1st the firm of Edwin F. Merry, of San Francisco, Cal., will open a branch salesroom in Los Angeles, Cal., located at 900-902 South Main street. They will carry and distribute the Flanders motorcycle, the entire line of Pope bicycles and a complete stock of bicycle and motorcycle sundries. Mr. Fred Breeze, who for the past nine years has been manager of the Wm. H. Hoegee Co.'s bicycle and motorcycle department, will be in charge of the branch.

Sisson Has No Trouble in 1,000 Miles.

Mr. Sisson, one of the salesmen of the Continental Rubber Works of Erie, Pa., using a Harley-Davidson machine, has covered over 1,000 miles, from Erie, through Northern Ohio, up to Michigan, over into Indiana, and to St. Louis, and has had no engine, tire or tube trouble on the entire trip. Sales Manager W. J. Surrie states that he considers this a remarkable showing for both the machine and tires.

Toronto Concern Has "Bargain Day."

The T. Eaton Company, of Toronto, Canada, recently held a bargain sale of Premier motorcycles. Prices were reduced from $275 to $175, with the result that 12 machines were sold in a single day and the stock cleared out. This company intends to devote more attention to the Reading-Standards.

Flanders Interest New Yorkers.

E. C. Kicherer, 206 West Seventy-sixth street, New York City, Metropolitan distributer for Flanders motorcycles, now is showing samples and demonstrating the Flanders "4." A large number of the local motorcyclists already have inspected the latest aspirant for their favor.

Flanders Agency Opens at Toronto.

The Motorcycle & Equipment Co., 192 King Street West, Toronto, has opened up the first Flanders' agency for the Dominion of Canada. This company, of which Geo. Bain, one of Toronto's racers, is head, has secured the Ontario agency for the new machine.

MANUFACTURERS CONDEMN THE MUFFLER CUT-OUT FIEND

But Most of Them Claim the Cut-Out an Advantage on Some Occasions — Opinions of Men in the Trade and Sport — Increasing Demand for Proper Legislation.

The agitation against the use of the cut-out waxes warm and all agree that the open muffler is the greatest hindrance to the general popularity of motorcycling.

S. Lacy Crolius, of the Harley-Davidson Motor Co., made the following statement recently:

"The Harley-Davidson company has always been very much opposed to the use of the cut-out in the cities and towns. We have done everything possible, and particularly here in our own town, to persuade our own riders to keep their mufflers shut. Our Mr. Wm. S. Harley and Mr. Walter Davidson have appeared before our common council here a number of times to express their views in regard to suitable legislation to prevent the use of open mufflers, both on motorcycles and automobiles.

"They now have the satisfaction of knowing that their efforts have not been in vain, for at this very writing there is up before the common council a resolution such as suggested by Mr. Harley and Mr. Davidson, and it looks as though nothing short of a landslide could stop its pasasge.

"This resolution, if it is passed and becomes an ordinance, provides that no automobile or motorcycle or motor driven vehicle can be operated on any street, alley or public highway within the limits of the city of Milwaukee unless equipped with some suitable muffler or silencing device, and that such device is in use. The city fathers may even go farther than this. They are also talking of placing a ban on the nuisance occasioned by the smoking of automobiles, due to excessive lubrication. Let us hope that this idea is formulated into an ordinance also and put into effect.

"One more thing. Sometimes laws are enacted which are not enforced. But not so with the ones above mentioned. The present Milwaukee administration can be counted on to carry out these laws to the very letter. We are only too glad ourselves that the city fathers have listened to reason and that they have not taken things into their own hands before this and placed ridiculous or even impossible handicaps on the motorcycle owners. They were only too glad to discuss in detail the arguments pro and con as taken up by them with Mr. Harley and Mr. Davidson.

"And it is due almost entirely to the efforts of these two men that Milwaukee is to have a safe and sane regulation of motorcycles and to have it enforced before some over-worked alderman should intercede and carry into effect some ridiculous ordinance which would handicap the sensible motorcycle rider from enjoying his mount.

"As for the writer himself, he has had his cutout fastened shut for about a year. Has never opened it even in the country and has never had reason to want to open it. We have seen discussions in the motorcycle papers from time to time regarding the open muffler fiend, and it has been suggested that the manufacturers could take things into their own hands by doing away with the cut-out entirely on the machine. But this is not practical. We have found by actual experience and observation that when no cut-out is provided, the riders have actually taken their exhaust pipes off the machines entirely, letting the exhaust gas right out into the atmosphere direct from the engine. This, of course, was even worse, and we believe that the motorcycling fraternity in general ought to be thankful that more laws have not been passed to put the open muffler boob out of existence before.

"Believe us, we are in favor of a quiet machine all the time and have endeavored in our own product to make it the quietest motorcycle in existence."

In addition to this statement made by Mr. Crolius, Mr. Arthur Davidson says:

"I believe the motorcycle muffler without a cut-out would be an impossible thing. We have had quite a little experience along these lines and we have also seen some of the others. We say it will almost be an impossible thing for the reason that nearly every motorcyclist thinks he has a little more speed and power with his muffler open, and when they get out into the country, no one has any particular objection to their opening it, but if you do not give them the cut-out they are going to drill holes and take out the baffle plates and merely make an excuse out of their muffler.

"This is not a thought that we have but an actual experience, and, while we are trying to fight the open muffler 'fiends' just as hard as anybody, do not believe we can do it by taking the cut-out away from them. They will manufacture one to suit themselves.

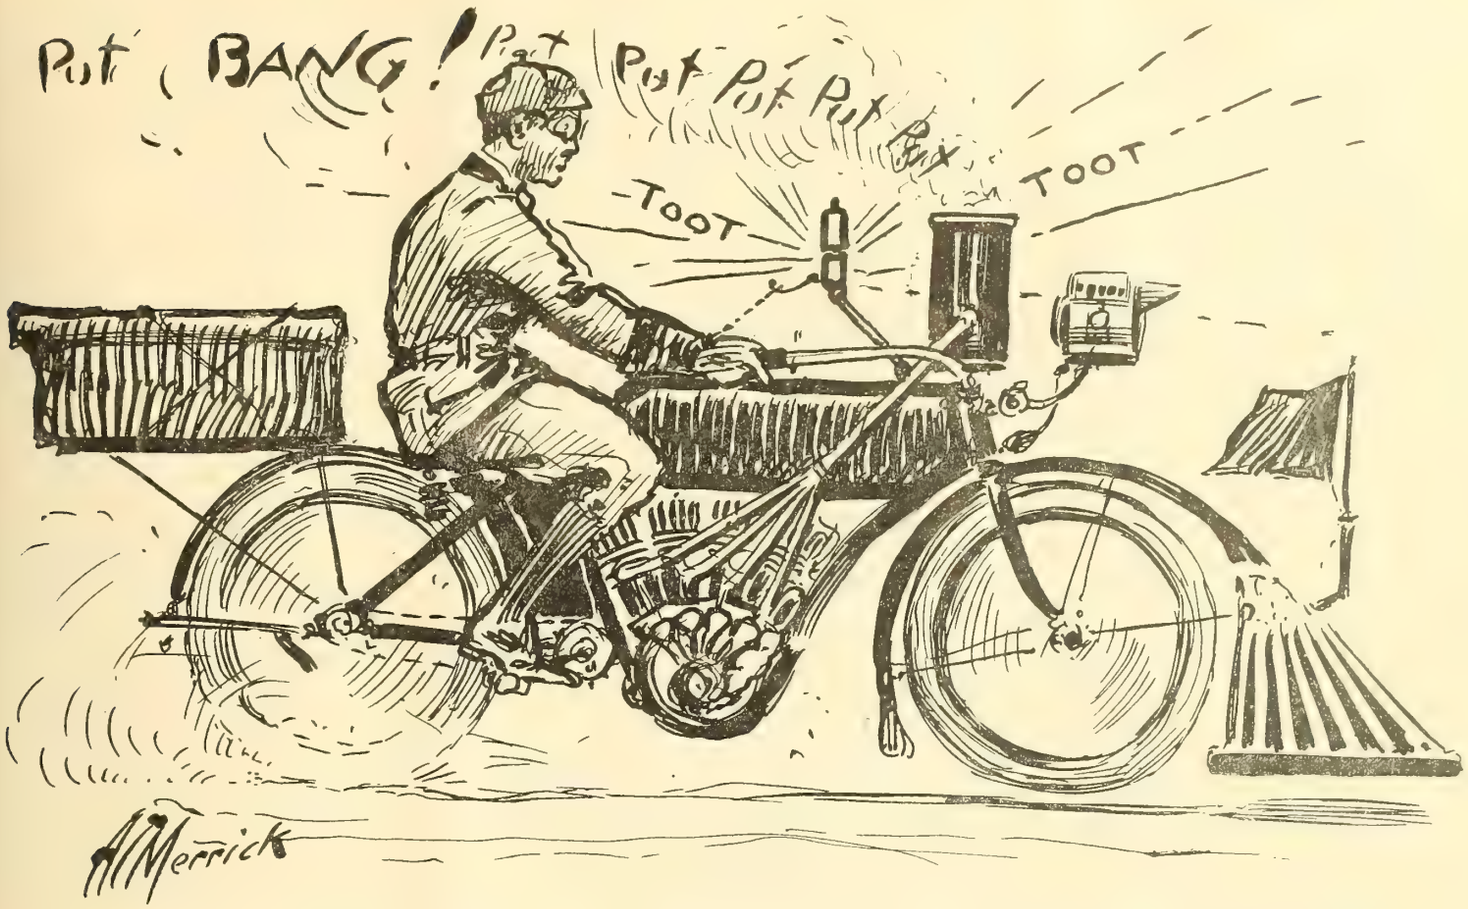
"Do not know what the general stand on this is, but we are going to continue using the muffler cut-out, but are going to preach keeping the muffler closed, at least in the cities, and wherever possible we are going to try to force the mufflers to be kept closed by legislation.

"This is our idea of the solution of the muffler 'fiend.'"

W. G. Schack, president of the Emblem Mfg. Co., says:

"There does not seem to be any question as to the unsatisfactory feeling caused by some motorcycle riders in riding their motorcycles through city streets with open mufflers. This is entirely unnecessary and uncalled for and a practice we would like very much to see discontinued, as we feel that a few riders using open mufflers for city riding do considerable injury to the use and sale of motorcycles and are very aut to cause a prejudice in the minds of would b epurchasers.

"There undoubtedly are times and occasions when an open muffler is of advantage to both the engine and the rider of the motorcycle, but these occasions are invariably found out in the country climbing some steep grade, and we are frank to say that while we are very much opposed to the open muffler for city riding, we would hardly care to remove same from our machines, owing to the fact that there are occasions when the use of the open muffler is essential to both the machine and the rider."



The following is from the Minneapolis Motor Cycle Co.:

"We agree with you that if the cut-out could be abolished altogether, it would prove a stimulus to the motorcycle trade. We believe that if motorcycle manufacturers could get together and agree to equip machines without the cut-out, that it would not be long before a very noticeable increase in business would be apparent.

"We incline to the opinion that the misuse of the cut-out by a certain class of riders, especially in large cities, will result in enactment of laws to do away with this feature, which is certainly harmful to the trade in general."

Says K. R. Jacoby, president of the Miami Cycle & Mfg. Co.:

"I cannot too strongly commend your stand in this matter, feeling satisfied that the use of this cut-out on motorcycles has done more than anything else to retard the progress of the industry. Through their use people have begun to regard the motorcycle as a nuisance, and if a stop can be put to the use of the cut-out, it would undoubtedly result in great benefit to the motorcycle business.

If you like to run with open muffler—turn your motorcycle into a locomotive with a few alterations and be happy!

"The possibility you speak of, however, of these cut-outs being left off of all future models would, the writer believes, be of very little benefit, due to the fact that it is very easy for the rider to have this put on himself. A great many cities at the present time are drawing ordinances against the use of the cut-out on both motorcycles and automobiles, and the writer thinks a campaign along the line of having this legislation take place will secure the right result."

"The explosion of the open muffler on a smooth running motor is music to the average motor enthusiast, whether on a motorcycle or other gasoline propelled vehicle. The real principle of our being, however, should not be overlooked, that of our encroaching on the rights of others," says F. I. Willis, former president of the F. A. M.

"When a motorcyclist goes down a crowded thoroughfare with an open muffler, or through the residential streets in the small hours of the morning, or past a country meeting house on Sunday morning, passing the country residents on their way to church, scaring horses, as well as generally disgusting the community on account of these terrific explosions, we are encroaching on the rights of others.

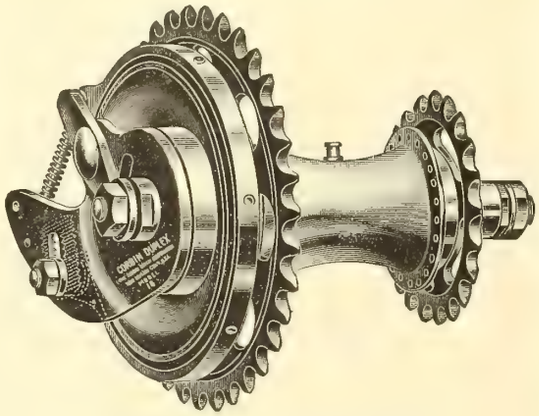
"The motorcycle riders as a class are gentlemen of high order. None of them would offend their fellowmen in the home or in public places, but the excitement of the motor is apt to make us overlook that right and respect that we owe the public. It would be better to discontinue the muffler entirely, that it would offend no one, rather than take chances on any of us using the muffler as the right that may belong to us."

C. R. Wagner of the American Motor Cycle Co., says:

"We are heartily in accord with the eliminating of cut-outs on motorcycles, especially in cities, as the writer believes it gives the general public a wrong impression of the motorcycle. We have been considering for some time eliminating this feature in our future product, but have been waiting to ascertain how this would appeal to the majority of riders, as we thought there might be a possibility that it would effect the selling of our machines. We believe you are starting a move in the right direction and assure you of our best wishes."

J. L. Sauer, chairman of the F. A. M. Legal Action Committee, says:

"I would first refer you to the announcement recently issued by the F. A. M. National Committee on Legal Action. This announcement, unanimously approved by the members of the committee, makes plain our attitude toward the rider who achieves notoriety through excessive use of the muffler cut-out. That sort of motorcyclist is worse than a nuisance; he's a plague, and the sport cannot be rid of his ilk too soon.



"The writer has made use of several machines during the past two years and has never had a single occasion to apply the muffler cut-out.

"But it is not within the province of the F. A. M. committee on legal action to dictate to the manufacturers. I can only say that the legislative work of this committee will be made much easier and more effective by the universal disuse of the cut-out. I am satisfied that 90 per cent. of the prejudice existing against the motorcycle is due to the noise it makes when the muffler is cut out, and it is therefore only natural that I should appreciate support from the manufacturers in its most effective form, namely, in their producing machines the design of which would not invite indiscriminate use of the cut-out. Were that generally done I am sure that adverse legislation would not be so frequently met with, and as a direct result, the committee on legal action would not find it so difficult to properly protect the interests of the motorcycle riders in the United States."

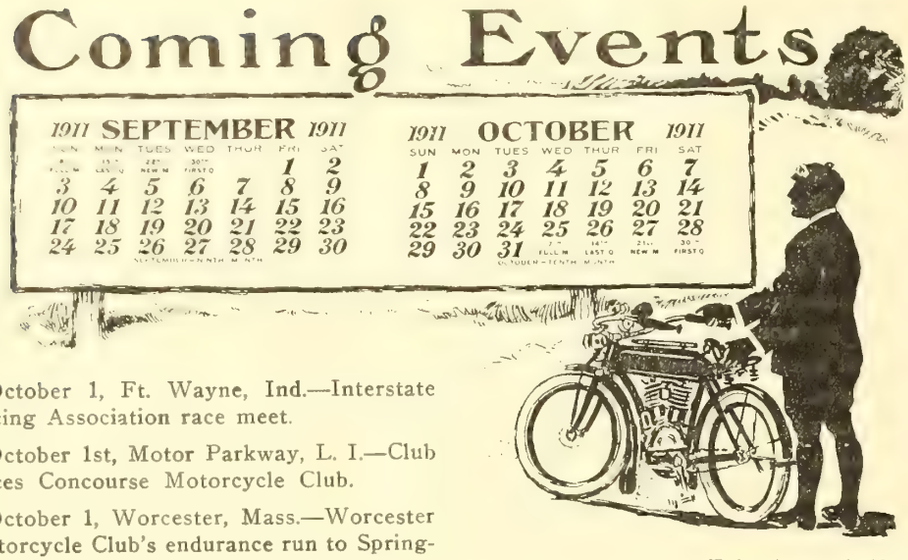
The Handwriting on the Wall.

The Federation of American Motorcyclists—every motorcycle club that has the best interest of the sport as its object—every motorcycle rider that is not a personification of selfishness and desirous of attracting as much attention to himself as possible by making the greatest possible amount of noise, thus making of himself a public nuisance—every manufacturer—every newspaper—and last but greatest of all, the general public, is against the open muffler fiend, and the word fiend is the only one that properly fits the rider that goes through the public streets with his muffler open. Webster defines "fiend" as meaning "an intensely malicious person"; malicious is defined as "having a deliberate intention of injuring others," and any one that goes through the streets with an open muffler knows positively that he is injuring the nerves of the general public—he is injuring the manufacturers, because of the wrong conception of the motorcycle given to the general public by the noise he creates, and he is injuring every one who is desirous of promoting the best interests of the sport, and then he is injuring himself, because he is not only losing the respect of others for him, but he is losing his own self-respect. Another definition of "fiend" is given as "an implacable enemy"—and such is the open muffler fiend—an enemy to the sport; an enemy to every other rider; an enemy to the manufacturers; an enemy to the dealers, and if he would only realize it, his own greatest enemy because of the impression he creates.

With all of this opposition—the F. A. M.; the clubs; the desirable riders; the manufacturers themselves; the dealers; the newspapers and the general public, why does the manufacturer have the cut-out on his machine at all? Some say it is necessary to have the slight increase in power that the cut-out might give. Some years ago this might have been true, but with the powerful machines of today any increase is unnecessary at any time. Another excuse that is given for the cut-out is that it is necessary to open the cut-out in order to tell whether the engine is running steadily or missing fire. If a man is of good hearing he can very quickly tell whether or not his engine is running properly. The third objection to the abolishment of the cut-out is that it is necessary to use as a warning signal. This is absolutely unnecessary, as there are any number of motorcycle horns on the market that can be heard one hundred feet away from the rider above the noise of the greatest traffic, as proven by the great number of automobilists.

With every one against the cut-out, as heretofore named, and the manufacturers themselves, who all claim that they greatly desire to stop its use by the riders through the public streets, no really good reason has as yet been advanced for its retention on the machines, and it seems almost like putting a good quantity of meat before a starving lion and then trying to prevent him from eating it, as to put the cut-out on the machines to be ridden by these noise fiends and then endeavoring to stop its use. It has been said many times before, but a plain truth for the good of all always bears repeating—the motorcycle will never come into its own with the general public—will never become as popular as it should, and will always be considered a public nuisance as long as the muffler cut-out is left on the machines, and hence the sales will not be what they should and both the manufacturer and the dealer will naturally be out of good money and the clubs and the F. A. M. will not have on their membership rolls the great mass of possible desirable riders. The moral is plain: CUT OUT THE CUT-OUT!

Now Its Up to You, Mr. Commissioner!



In refusing a request for a permit allowing a cycling association to hold races on the Coney Island Cycle Path, which has been done many, many times in the past, the Honorable Michael J. Kennedy, Commissioner of Parks for the Boroughs of Brooklyn and Queens, says: "I do not think it wise to have races on public highways." We are exceedingly glad to hear, Mr. Commissioner, that this is your final decision, and it seems that it would almost be a wise move to call a great jollification meeting, for we take it, that as you have come to the conclusion that racing is not wise on public highways, you will join the forces of those who have the good of the greatest number at heart against the few, and do everything in your power to have the Speedway, on a public highway known as the Ocean Boulevard, where trotting horse races are constantly held—**on a public highway, Mr. Commissioner**—(paid for by the assessments on public citizens)—stopped, and that public highway again thrown open for the use of the general public, thus doing away with the necessary risking of life and limb of every bicycle and motorcycle rider going down the Coney Island Cycle Path, caused by the necessity of automobilists crossing it.

Futile Talk of "Reinstatement."

It is high time that some of these professional motorcyclists who want to be returned to the amateur class cease telling their friends and the newspapers as well that they will apply to the Board of Directors of the F. A. M. for such reinstatement, and that the chairman of the competition committee has agreed to recommend such action. Such talk is preposterous and highly ridiculous to those who are well informed in such matters, for the competition rules state very plainly that "no professional shall be reinstated as an amateur except by unanimous vote of the members of the F. A. M. present at a regular meeting."

The Board of Directors has no power to make such a reinstatement, and it is doubtful if the chairman of the competition committee has agreed to make any such recommendation.

Coming Events

October 1, Ft. Wayne, Ind.—Interstate Racing Association race meet.

October 1st, Motor Parkway, L. I.—Club Races Concourse Motorcycle Club.

October 1, Worcester, Mass.—Worcester Motorcycle Club's endurance run to Springfield, Boston and return; 200 miles.

October 1, Newark, N. J.—New Jersey Motorcycle Club racemeet at Olympic Park half-mile track.

October 1, Providence, R. I.—Rhode Island Motorcycle Club's record run; third and last of series; to Narragansett, New London, Worcester and return.

October 5, 6, 7, 9, 10, 11, 12, 13, 14, Birmingham, Ala.—Motorcycle races at Alabama State Fair, mile dirt track; W. D. Gresham, 1912 Fourth avenue, Binghamton, Ala., referee.

October 7, Providence, R. I.—Regular fall business meeting of F. A. M. New England District, in Verdani Hall, 8 p. m.

October 7 and 12, Westfield, N. J.—Motorcycle races at Fair Acres half-mile track; C. E. Holgate, Newark, promoter.

October 8, Detroit, Mich.—Detroit Motorcycle Club's race meet.

October 8, Providence, R. I.—Providence Motorcycle Club's triangle run from Providence to Boston, to Worcester, to Providence.

November 20-25, London, England—Annual Olympia motorcycle and bicycle show.

January 6-20, New York City—Twelfth annual automobile show in Madison Square Garden; motorcycle section first week.

January 20, New York City—Fourteenth annual ball of the Century Road Club Association, Eastern Division, at Alhambra Hall, Seventh avenue and One Hundred and Twenty-sixth street.

CORRESPONDENCE

Dr. Thornley Opposes False Records.

Editor Bicycling World and Motorcycle Review:

"I wish to call the attention of the public, F. A. M. members and riders in general, to a practice that has recently sprung up which is most unfair and unsportsmanlike. I have reference to claims for broken records, both in the advertising and in the news columns. I wish to make no specific charge against anyone, but feel that when a great howl was raised because the lay press published times that were not authentic, and some times inaccurate, that the motorcycle journals at least should be very careful not to give publicity to any claim for broken records until such claims have been accepted in this office.

"I don't think it more excusable that a journal should publish such claims in its advertising columns any more than it should do so in its news columns. A mistake or inaccuracy that creeps into the news columns may be excused on many grounds, but an inaccuracy that is deliberately put into the advertising columns of a journal is put there because it is paid for, and for no other reason."

J. P. THORNLEY, Chairman,
F. A. M. Competition Committee.

[When a publication sells advertising space to a patron the latter pays for the right to make practically any statement that is not libelous, indecent or otherwise of a criminal nature. While they may deplore false or misleading claims or assertions appearing in their advertising pages, publishers have not yet been created the judges or juries to pass on such matters. There is a law covering the point and the course to be pursued by any one possessed of evidence of falsity is clear and wide open. The chairman of the F. A. M. competition committee undoubtedly means well but we fear he has undertaken the wrong tack in attempting to read the press of the world a lecture concerning its duties, and while the Bicycling World and Motorcycle Review accepts it in good part, there may be others who will not do so and who may obtain false notions of the F. A. M. itself which may serve it no purpose. Even medical men and medical journals do not always agree concerning the proprieties of their own profession nor as to the validity of claims which may be made. Possibly if the F. A. M. competition committee passed a rule fixing a penalty for the advertising of a record before it had been officially accepted, the purposes sought would be effectively obtained and thus help publishers being indirect although innocent and helpless parties to the promulgation of false, misleading or extravagant claims made in their advertising pages.—Editor.]

Favors Lower Gears.

Editor Bicycling World and Motorcycle Review.

While looking over the catalogs of the bicycle manufacturers, the writer was impressed with the fact that most of the machines are sent out with a gear far too high for the average rider.

Why does the manufacturer list his bicycle with a gear which discourages ordinary road riding for health and pleasure and restricts sales to a comparatively small number of scorchers and racing men?

Let the rider who has been pushing an 80 or 90 gear up hills and over various kinds of roads change his gear down to a 70, or even 68, and he will find that he can cover greater distances and climb hills with half the effort expended on the high gear and get vastly more benefit and enjoyment from his bicycle. A high gear is necessary to the track or road racing man who has made himself fit by training, but even he could improve his style and sprint by putting in some training on a low gear.

The great Zimmerman won his great races on a machine some times geared as low as 64. Bicycles today do not run any easier than they did 10 years ago or more, hence why not profit by the days of the past?

If the maker would fit lower gears and tell the riders why they should use them he would spread his sales among a larger class of riders and give them a more comfortable and satisfactory mount.

Better still, why not design or import a really practical two or three speed gear that could be fitted at a small additional expense? There are probably close to a million in every day use in England; in fact, most English bicycles are sold fitted with a reliable gear. It has given new life to the trade over there and this is a good time for some one to start things along these lines in this country.

W. T. FARWELL, JR.
New York City.

Davenport (Ia.) Has the Club Fever.

At a sort of informal roundup of the motorcyclists of Davenport, Ia., by R. L. Carson, the nucleus of a permanent club was laid. Carson acted as master of ceremonies and told the riders the advantages of being organized and under the protecting wing of the F. A. M.

DRUMMOND AGAIN BEATS CONSTANT

Newarker Wins Two Events and One Heat of Special Match at Olympic Park—Kluczek Also Wins Two.

Percy Drummond, the Newark (N. J.) whirlwind, again had a shade the better of his speed bout with John Constant, the ten-mile national champion, at the weekly meet of the New Jersey Motorcycle Club at Olympic Park, on Sunday, 24th inst. Drummond led Constant to the line in the miss-and-out, and in the special match between them it was an even break in the two heats that were run. Constant took the first heat at one mile and Drummond gathered the second heat at two miles. In this heat Drummond secured an early lead and held it to the end. Constant in endeavoring to catch Drummond skidded and went over the outer bank on a turn, wrenching his ankle and relegating him to the spectators' section for the rest of the day. The third heat of the match will be run Sunday, October 1.

Drummond also won the five-mile handicap from scratch, with William Pierson second. Watson Kluczek, the old bicycle rider, who now sells motorcycles, shared honors with Drummond, winning both the three and 15-mile handicaps, and took third in the five-mile open handicap. Fred Fink won the private owners' handicap at five miles. The races were snappy and closely contested and the spectators got their money's worth of excitement. Summary:

Five-mile open handicap, 50-inch class—Won by Percy Drummond; second, William Pierson; third, Watson Kluczek. Time, 6:05⅕.

Five-mile private owners' handicap, 50-inch class—Won by Fred Fink; second, William Pierson; third, Carl Segelbach. Time, 6:48⅖.

Special match, Percy Drummond vs. J. U. Constant—First heat, one mile, won by Constant; second heat, two miles, won by Drummond; third heat, postponed.

Miss-and-out open, 50-inch class—Won by Percy Drummond; second, J. U. Constant; third, William Pierson. Distance, four miles. Time, 5:03⅕.

Three-mile open handicap—Won by Watson Kluczek (0:40); second, Fred Fink (0:30); third, Carl Segelbach (1:30). Time, 3:44⅕.

Fifteen-mile open handicap—Won by Watson Kluczek (1:10); second, William Pierson (1:00); third, Carl Segelbach (1:30). Time, 13:35.

Hasha Captures Three First Prizes.

Three firsts in four starts was the high rolling of Edward Hasha in the Tuileries Park motorcycle races, at Denver, Colo., on the 17th inst. The leader of the bill was the five mile fuss between Earl Armstrong and Ray Seymour, in which they passed the lead back and forth on almost every lap. Armstrong got the decision by an inch in a cyclone finish. Armstrong also scored over Hasha in this race. Summary:

Five mile professional—Won by Armstrong; second, Seymour; third, Boyd. Time, 3:45⅕.

Five mile professional—Won by Hasha; second, Armstrong; third, Boyd. Time, 3:45.

Five mile invitation—Won by Hasha; second, Armstrong; third, Boyd. Time, 3:31.

Ten mile open, professional—Won by Hasha; second, Seymour; third, Boyd. Time, 7:23.

Portsmouth (O.) Has Successful Meet.

Hot contests from tape to tape, together with ideal weather and track conditions and a good sized crowd, combined to make the race of the Portsmouth (Ohio) Motorcycle Club, on the 23rd inst., a success. Tide Davenport, the local wonder, was the star of the meet, taking first from scratch in two handicaps and also winning the novelty. Tide did so well in the early races that the officials increased the handicaps on him in the 10 mile event, but he was able to pick up all save one, Homer Brunton. Brunton again took Davenport's measure in the pursuit after a rousing chase which lasted 22½ miles. Starling was the last man retired. Davenport also started in the five mile bicycle handicap, but was an also ran. Buck Sawyer won this event easily from a field of eight. The races were well managed and a band helped to liven things up. Summary:

Three mile handicap—Won by Davenport (scratch); second, Starling (0:05); third, Morgan (0:30). Time, 6:24⅕.

Novelty race—Won by Davenport.

Ten mile handicap—Won by Brunton; second, Davenport; third, Starling.

Five mile bicycle handicap—Won by Sawyer; second, Wykoff; third, Via. Time, 22:33.

Unlimited pursuit—Won by Brunton; second, Starling; third, Davenport. Distance, 22½ miles. Time, 32:00.

Banks Skidded and Fell, But Rose Unhurt.

Dan Whittington won the motorcycle race held at the Boone County Fair, at Ogden, Iowa, on the 14th inst. The spectators were treated to some high tension heart flutters when his only opponent, Charles Banks, skidden on a turn and fell. In the flop a pedal was broken, and stranger still, one of Bank's shoes was torn off, but there were no other casualties.

Rockville Sees a Motorcycle Race.

Harry Wells won the five mile motorcycle race held at the Rockville (Conn.) Fair on the 20th inst., beating John Miller and William Binhauer. Time, 7:30. The race proved a great drawing card.

HARWOOD WINS MARION CENTURY

Goes 200 Laps Without a Stop—Taylor Two Laps Behind—Six Out of Nine Starters Finished.

Going the full route without a stop, G. C. Harwood, straddling a "4" Indian, won the 100-mile race of the Marion (Ind.) Motorcycle Club at the Marion half-mile driving park track on Sunday, 24th inst. L. S. Taylor, on an Emblem, finished two laps behind the winner, and Thurman Constable, on a Harley-Davidson, took third place. The winner's time was 2:17:40, which, be it said to the credit of the club, was not announced as some sort of a "world's record." The others to finish in the order of arrival were A. C. McGovern, Stewart Davis and Raymond Creviston. Nine riders started.

It was a grueling grind throughout the entire 200 laps, with the leadership shifting constantly. There were also a few thrills such as fire and falls, in which mishaps Erwin Baker, of Indianapolis, played the leading role. Just after starting on his 11th mile he went down on a turn amid a great cloud of dust and narrowly escaped being hit by other riders close behind. He was on his feet in an instant and dragging his machine to the outside of the track he restarted. In doing so his carbureter caught fire and blazed up and for a few minutes there was some vigorous throwing of dirt on the blaze by volunteers. Finally the flames were extinguished and Baker got going after losing several laps. Intent on making up his lost ground he did some savage riding for awhile.

In the 72nd mile Baker got into trouble again, seeming to lose control or else taking a turn too fast, for he rode off the track and lost valuable time in getting back. At the same time, tire trouble also beset him and effectually wiped out his chances of winning.

For spectacular work the honors easily were taken by Raymond Creviston, who showed more daring on the turns than any of the others. His machine did not have the speed to hold its own on the stretches, but on the turns he fairly rode rings around the others. Riding a machine borrowed a few minutes before the start, he easily did the most brilliant riding of the day, but was handicapped and failed to finish better than sixth, although he deserved to. A stop for chain repairs cost him 10 miles and he never recovered it. However, he had the satisfaction of leading for five miles.

George Melle was the first man to retire, with a broken connecting rod, and George Evans was the next to leave the battlefield after a collision with Taylor. Evans sustained a broken hand. At the time he was in the lead. In poor physical

shape, Thurman Constable entered the race against the wishes of his friends and despite two stops, managed to capture third place. Tank capacity was a prominent factor in deciding the winner, for Harwood's machine was fitted with special tanks of large size and he carried sufficient fuel for the entire run.

Although threatening weather made it look for a time as if the race would have to be postponed, the club took a chance with the weatherman and won out. There were 1,300 paid admissions and the spectators received plenty of nerve food from the flying riders. The prize list amounted to $130 in merchandise.

Three Perfect in Birmingham Run.

Averaging between 18 and 19 miles an hour over rocky and sandy roads, 10 of the 15 starters in the first reliability run of the Indian Motorcycle Club, of Birmingham, Ala., on Sunday, 17th inst., covered the 157 mile course. Three finished with perfect scores, and the other seven scored 990 points or better. The clean score trio were John Bevell, G. W. Staples and J. L. Brevard, who tied for the silver loving cup offered by Robert Stubbs to the rider making the highest score. A run-off of the tie will be arranged later. The others who finished were the following, S. D. Vann, W. M. Mayes, W. D. Gresham, R. E. Atchinson, Robert Stubbs, T. Derryberry and J. H. Vann. The withdrawals were due to mechanical and tire trouble and illness. The route was over a very difficult course, studded with rocks, hills, sand and rough roads, and a number of creeks had to be forded. Checking stations were established at Gadsden, Springfield (dinner stop), Bessemer and Birmingham. The rules were quite severe, penalties being assessed for such trivialities at the finish as loose nuts or spokes, not to mention more important deficiencies. All of the survivors qualified for gold medals offered for scores of 990 points or better. The running time was 8½ hours. All of the contestants rode Indians.

Puls Finished With Perfect Score.

In the published account of the F. A. M. Lake District Endurance Run, which ended in Chicago on the 9th inst., the fact that George Puls, riding a Harley-Davidson, finished with a perfect score, was inadvertently omitted. Puls finished with a perfect score in this particularly hard run in spite of the fact that his hands were both badly burnt.

Buffalo Acknowledges F. A. M. Courtesy.

In acknowledgement of the framed certificate of appreciation which F. I. Willis, on behalf of the F. A. M. sent to the Buffalo (N. Y.) Chamber of Commerce, as an expression of the Federation's gratitude for the warm welcome accorded it by the municipal authorities and business men of Buffalo on the occasion of its annual meeting there last July, Willis has received from Commissioner Lehmann of the convention bureau of the chamber a very grateful letter. The commissioner, in behalf of the Chamber of Commerce, takes occasion to thank the F. A. M. for its expression of gratitude, and voices assurance of the warm sentiments of friendship which the chamber feels toward the F. A. M. He also states that it is the finest token of appreciation ever tendered to the bureau.

GEORGE A PULS, HARLEY-DAVIDSON RIDER

Press Agent Ought to Read the Rules.

Some more foolish press agent matter is emanating from the Chicago Motordrome in the ostensible challenge of De Rosier and Wolters to ride any other pair of riders, including Frank Hart, Edward Hasha or M. J. Graves, match races. The rules forbid amateurs and professionals competing with each other, and as Hart is an amateur and has no intention of turning "pro," the others should have better sense than to include him in the challenge.

Another "Vacationist" on an Excelsior.

Louisville, Ky., Sept. 19.—A. S. Eastman, of Chicago, who left that city at 10 a. m. Sunday, 17th inst., reached here at noon today. Eastman, who is a newspaperman, rides an Excelsior twin and is spending his vacation touring this section. He made the trip here by easy stages, stopping at Indianapolis Sunday night. He left there Monday noon and stopped at Franklin that night. He reports that the roads were good except between Chestnut Ridge and Memphis, Ind., where the going was very bad as the creeks were swollen and much fording had to be done. Eastman continued on to Chattanooga, Tenn.

Matchless-Jap Appears at Toronto.

Toronto, Ont., Sept. 26.—Canadian racing motorcyclists are worried not a little over the recent arrival in Toronto of one of the famous Matchless-Jap racers from the Collier factory in England. The machine is a typical racer with very low clearance and mounts a seven-horsepower engine. A long distance gasoline tank is fitted. The cylinders are fitted with ports, and the whole outfit looks very businesslike. In its first try-out on the Exhibition half-mile track the foreigner was clocked for a half mile in 37⅘ seconds.

PROVIDENCE PLANS GREAT DOINGS

Active Rhode Island Club Sets October 7th and 8th as Its Red Letter Days—Some of the Details.

Saturday and Sunday, October 7 and 8, will be red letter days for New England motorcyclists with Providence, R. I., as the stage where the doings will occur and the Providence Motorcycle Club as the stage directors. On Saturday night the regular fall business meeting of the New England F. A. M. District is scheduled to occur in Verdani Hall at 8 o'clock. Both the hall proper and the annex have been engaged and there will be some lively entertainment and good things to eat to help along the digestion of the prosaic business matters.

On Sunday, the eighth annual triangle run of the Providence Motorcycle Club will take place. This now is the oldest motorcycle event in the United States, and is the banner motorcycle event of the year in New England. It takes its name from the shape of the course, which leads from Providence to Boston to Worcester to Providence, a triangular route of 140 miles. This year a slight change has been made in the route and the run will pass through Westboro, Mass., the headquarters of National F. A. M. Secretary G. B. Gibson, who will be on hand to welcome the riders. As in former years, there will be pacemakers to keep down scorching, and checking stations at important towns. The schedule is 15 miles an hour, which is a snap to maintain as the roads are boulevards all the way.

Of course, the run will be held under F. A. M. sanction, and the entry fee has been fixed at $2. Sterling silver medals will be given to riders making perfect scores. Clubs and dealers in New England are strongly urged to support this run, as the Providence Motorcycle Club has an enviable reputation for its business-like management of the triangle runs and prizes always are delivered promptly. It also offers an opportunity to get acquainted with a very agreeable set of riders and to see some of the best roads in this country. B. A. Swenson, 298 Blackstone street, Providence, R. I., has charge of entires.

"Two Charlies" Lead the Indian Tribe.

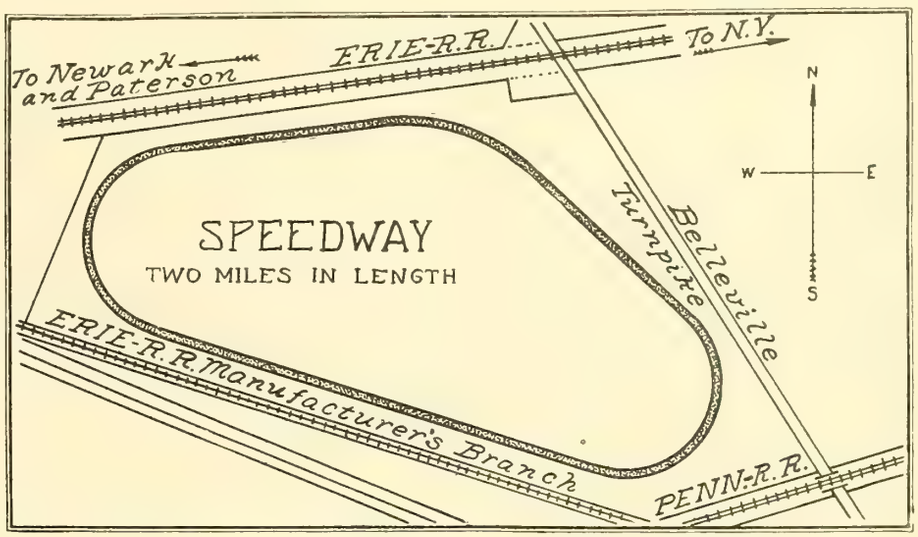
Spencer and Gustafson, of Springfield, Mass., better known as "the two Charlies," paid a little visit to Hartford, Conn., on the 21st inst., and did a few turns of their motorcycle vaudeville speed sketch. They were billed at a mixed automobile meet held at Charter Oak Park, and their work by no means was the least interesting part of the "gasoline show." Cutting the finishes close enough to wake up the 3,500 people present, they "divided" a pair of races between them. The five-mile race was run twice, Gustafson's chain breaking in the first getaway and Spencer having a walkover. In the runover the men see-sawed to the finish, when Gustafson won by a length in 4:47⅗. Later in the afternoon the 10-mile event was staged, and after another see-saw Spencer crossed the finish line a wheel in front. Time, 9:28⅗. George Lewis and Al Nelson, two local boys, rode an interesting five-mile match, Lewis winning by an eighth of a mile in 5:17. Indian machines were used exclusively.

Galesburg (Ill.) Races Prove Interesting.

Three snappy motorcycle races were run in connection with the automobile events at the mile track, Galesburg, Ill., on the 20th inst., and each produced a different winner. Albert Stansbury captured the feature battle, a ten-mile free-for-all, assuming the lead in the fourth mile and never being displaced. Velander, who lost nearly a lap at the start, owing to an obstreperous motor, finally got into his gait and finished second. Velander won the ten-mile handicap from scratch, against a field of four, the limit men having two minutes. Leading all the way and never pushed dangerously hard, Mason captured the five-mile sprint for 30½-inch machines, Linderwood checking in second. Fifteen hundred people enjoyed the afternoon's sport.

Summary:

Five-mile stock, 30½-inch class—Won by Mason (Excelsior); second, Linderwood (Excelsior); third, Luval (Harley-Davidson). Time, 7:17.



Ten-mile free-for-all—Won by Stansbury (Harley-Davidson); second, Velander (Indian); third, Walker (Excelsior). Time, 11:16.

Ten mile handicap—Won by Velander (Indian), scratch; second, Stansbury (Harley-Davidson), scratch; third, Linderwood (Excelsior), scratch. Time, 11:06½.

METROPOLITAN SPEEDWAY IN SIGHT

Movement That Promises Consummation of Oft-Planned Project—Option Secured on Site for Two Miles Track.

Despite the fact that all—and there were not a few—past projects to build a motordome near New York City never got beyond the paper and talk stage, the Metropolitan District at last is in a fair way to have a motor speedway. To finance the project there has been incorporated in Trenton, N. J., the Metropolitan Speedway Association with $1,500,000 capital, ample, it is claimed, to purchase the land and construct the track. Among those identified with the enterprise are a number of Jersey City capitalists and men connected with the automobile trade, including Carl Fisher, president of the Indianapolis Speedway; A. L. Oliver, who is a director in several banks; W. A. Van Keuren, a wealthy Jersey City contractor; Walter M. Dear, of the Jersey City Journal; F. J. Wagner, George Paddock, H. W. Runyan, F. Dunham, Thomas H. Williams, Addison Johnson, Charles E. Collard, Isaac N. Quimby and J. W. Kelly.

MAP OF PROPOSED METROPOLITAN SPEEDWAY

The speedway, which will be the only one of its kind in the East, will be located on the Belleville turnpike, between Jersey City and Newark, and will be reached by both the Pennsylvania and Erie railroads, whose tracks run along two sides of the tract. A plot of 330 acres already has been acquired it is stated. Although the land is in a marshy section, it is said that soundings have shown a solid bottom six feet below the surface, and that there will be no danger of the track settling.

As the accompanying illustration shows, the track will be of original and unique shape, taking the form of a safety pin with a camel hump in one side. This arrangement is said to have the advantage of neces-

sitating but two distinct turns and one very easy turn, the hump turn being claimed to be capable of being taken at almost full speed. The long stretch will be 3,421 feet, and the shorter stretches 1,745 and 1,280 feet respectively.

A grandstand having a seating capacity of 100,000 persons will be built, according to the promoters, with accommodations for doubling the capacity if necessary. It is promised that work on the speedway will begin soon and that it will be ready in September, 1912. While the speedway primarily is intended for automobile contests, it also will be suitable for motorcycle racing.

Touring Popular in and Around Toronto.

This is touring time with the motorcyclists of Toronto, Can. Hardly a day passes without a party of tourists arriving home from a prolonged trip, or perhaps another pair setting out for a long journey. The longest tour of the season was probably taken by H. J. Stillaway on a Brown, who was accompanied part of the way by Don Sutherland (Thor), and W. Stoner (Triumph). Stillaway traveled the well-worn route to Buffalo, where his companions left him; thence to Cleveland and Detroit all alone, returning by the same route. The distance of this trip was approximately 1,200 miles, and the only accident was a broken fork near Erie. Stillaway reports that he saw hundreds of touring motorcyclists on the "National Highway" between Buffalo and Detroit.

J. S. Scott, a student at Toronto University, straddling a six-twin Excelsior, arrived last week from a two weeks' jaunt to New York City and return.

Banfield (Triumph), Tate (N. S. U), Heuston (N. S. U.), and George Bain (Rudge-Whitworth), recently explored a part of Ontario, where motorcycles had never been before. They covered 35 miles out from Toronto in two hours, but the next two hours were consumed in trying to cover a four-mile stretch known as the "Seldom Seen" road. Here they found precipitous hills and deep sand. The riders were "all in" at the finish of this ride and were unable to return home the same day as they planned. They were careful to choose a different route for the return trip and arrived in the city safely the following day.

Marylanders Enjoy Mountain Riding.

Capt. H. Matthew Gault and the members of the Maryland M. C., of Baltimore, took a fine spin into the mountains of Maryland last Sunday. It was the second run of the club to Ridgeville, by way of Westminster and Frederick, the return being made by way of Laurel. Approximately 110 miles were covered. The noon stop was made at Ridgeville, where one of those famous Maryland dinners was served to the hungry and dust-covered cyclers. It is needless to say that they enjoyed it, for it is known that after partaking of the delicacies they hit the pike on the return with such speed that they reached home before knowing it.

Captain Gault expressed himself as being greatly pleased with the run, stating that the roads were in excellent shape and the air cool and bracing for a day's run. A trip will be made every Sunday, weather permitting, from now until the first of the year, and the member who does not miss a run will be rewarded with a silver cup.

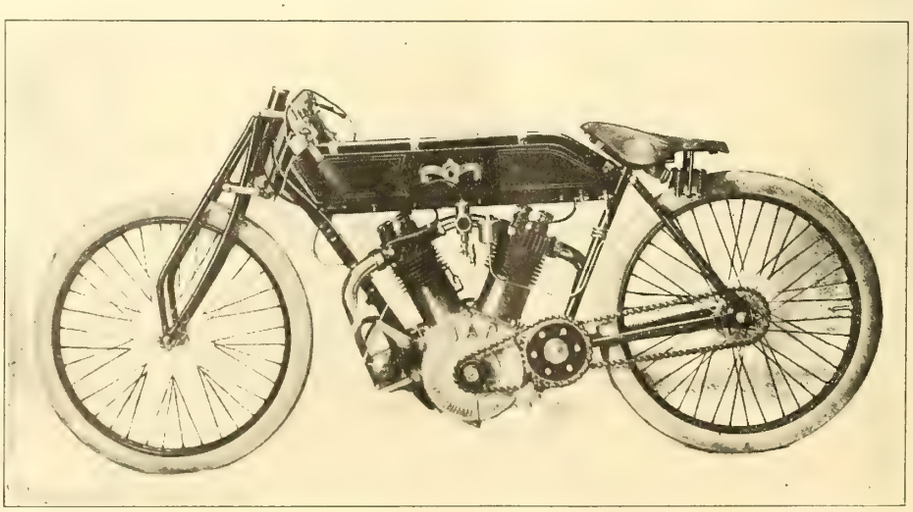
The wife of W. S. Standiford was the only lady on the trip. She road on a tandem attachment on her husband's machine, and so easy was the riding for her that she has decided to go every Sunday.

Ovington Becomes Aerial Postman.

Earle L. Ovington, aviator, ex-president of the F. A. M., and motorcycle importer, again has distinguished himself in bird land by being the first aviator in the country to carry United States mails in a cross-country flight. The feat occurred at the Long Island aviation field on the 23rd inst., when Ovington carried between his knees a mail bag weighing 75 pounds from the field postoffice at Garden City to the postmaster at Mineola. Although Ovington uses a French Bleriot monoplane, it is of interest to note that the machine is fitted with an Indian seven-cylinder revolving motor and Bosch magneto.

Excelsior "Records" Are Not Official.

Chairman Thornley states that all records alleged to have been made with Excelsior machines on the Chicago Motordome, while they may be correct as to time, nevertheless are unofficial, as they have not been accepted by the F. A. M. He states further that no effort has been made to the best of his knowledge to comply with the rules governing record claims by the filing of sworn affidavits of the officials, and also that no sanctions for record trials at Chicago have been granted. This latter point is purely a technical one, however, and probably would not prevent an acceptance of the records claimed if the requirements had been complied with.



Savannah Club Decides to Affiliate.

At the regular monthly meeting of the Savannah Motorcycle Club, held on the 17th inst., it was finally decided to affiliate with the F. A. M., after keeping out of that organization since the club was organized, three years ago. There are now 175 members on the roll and new names are being added constantly. A movement is under way for the club to build a motorcycle race track, securing the funds by popular subscription, and leasing the land necessary. If this plan materializes the club will hold weekly races.

William Koeck Draws Suspension.

As a result of complaints filed against him by Referee C. A. Carpenter, William Koeck, of Oshkosh, Wis., has been suspended indefinitely from competing in F. A. M. sanctioned events for alleged reckless riding at racemeets held at Fond du Lac, Oshkosh and Appleton. He also is given opportunity to submit any defense he may have to offer.

COLLIER'S MATCHLESS-JAP IN CHAIN DRIVE FORM

As predicted by the Bicycling World and Motorcycle Review same weeks ago, C. R. Collier, the English champion motorcyclist, who has become well known to Americans through his races with Jake De Rosier, has converted his famous racing Matchless to chain drive. The accompanying illustration clearly depicts the arrangement of the new form of transmission which is typical of American practice. The countershaft carries a compensating sprocket to ease the shocks of the explosion. The gear ratio is 2⅗ to 1, the rear hub carrying a 26 tooth sprocket. An eccentric adjustment is provided in the countershaft for tightening chains, with a second adjustment at the rear axle. Renold chains are used. The Jap motor it will be noted his overhead valves and a separate oil lead to the front cylinder. The cylinders are 3.6 bore by 3.128 stroke. No ports are fitted.

SMALL CROWD AT GUTTENBERG

Sunday Races do Not Seem to Draw—Lack of Proper Publicity and Advertising Probable Cause.

Renewed efforts to give New Yorkers Sunday motorcycle racing again were made at Guttenberg, N. J., on the 24th inst., when the second revival meet was run before a small crowd, numbering about 250 spectators. For the most part the events either were walkovers or otherwise uninteresting. The meet marked the advent of two new professionals, W. L. Coursen and Al Graves. Coursen signalized his cash debut by winning the five-mile professional easily. Graves won the first heat of this event from Coursen in a rattling finish, and the best of the day. Guterman's machine was not in good form for he proved easy game for Coursen several times during the meet. G. Haas was the only double winner, capturing the private owners and miss-and-out races, both at five miles. T. Maynez won the novice, dragging his machine the last 50 feet after he had been dismounted by his belt jumping, wedging between the tire and frame and tearing the former off. Naturally he had a big lead when the mishap occurred. Summary:

Three-mile novice—Won by T. Maynez (N. S. U.); second, W. Buckingham (Harley-Davidson); third, J. LeRoy (Peugeot). Time, 4:00.

Five-mile professional—Won by W. L. Coursen (Indian); second, L. H. Guterman (Indian). Time, 5:53.

Five-mile private owners—Won by G. Haas (Indian); second, R. Buttlar (Indian); third, Cox (Excelsior). Time, 5:58⅘.

Five-mile mis--and-out—Won by G. Haas (Indian); second, J. J. Cox (R.-S.); third, R. Buttlar (Indian). Time, 5:50.

Five-mile free-for-all—Won by J. J. Cox (R.-S.); second, J. Buckingham (Harley-Davidson); third, T. Maynez (N. S. U.). Time, 6:25.

Ten-mile handicap—Won by H. W. Cox (Excelsior); second, J. J. Cox (R.-S.); third, T. Maynez (N. S. U.). Time, 13:46.

Not Exactly New—But Pertinent!

Barney Oldfield, who in his day has experienced all the thrills which automobile racing offers, both in speed and in smash-ups, apparently felt a new and unknown to him sensation chasing down his spinal circuit when he attended a racemeet at the Riverview Motordrome, Chicago, recently. Here is his opinion of motorcycle racing:

"For real nerve tingling and spine chilling sensations one should witness a motorcycle race as they are staged on the steeply banked saucer tracks.

"I got a glimpse of the sport in Chicago the other night on the track built by Jack Prince. I saw six riders in a 10-mile race, riding elbow to elbow at an average speed of 90 miles an hour. The intrepid fellows wiggled in and out of the flying bunch and shoved and elbowed each other as though they were riding a bicycle along a country road at a snail's pace.

"One fellow suffered a blow-out tire and spilled himself and four others, but none were hurt. I was informed that, aside from picking up a lot of splinters, the riders have never been hurt on the track. I rode a motorcycle before I went into the automobile game, but they have doubled the speed since my day."

And Day by Day the List Grows.

Four more motorcycle clubs now possess the coveted F. A. M. affiliation certificates, making a grand total of 196 affiliated clubs, according to the last weekly report of Chairman Estabrook of the membership committee. The newly affiliated clubs are the following: No. 193, Fond du Lac (Wis.) Motorcycle Club, 12 men; No. 194, Council Bluffs (Ia.) Motorcycle Club, 12 men; No. 195, Davenport (Ia.) Motorcycle Club, 22 men; No. 196, Rock Island (Ill.) Motorcycle Club, 15 men. The first club is 75 per cent. F. A. M. membership, and the other three 100 per cent.

Another dealer working for the F. A. M. cause in James Mills, of Santa Cruz, Cal., mills, reports that there are 25 local motorcyclists and he reckons that he can weld them into a 100 per cent. F. A. M. club. Furthermore, he intends putting his theory to a test, and is not worried as to the outcome.

There is a warm welcome awaiting all motorcyclists who visit the Ashtabula (O.) Motorcycle Co., now, as the members of the firm recently joined the F. A. M., secured the appointment of their establishment as an official repair shop and have hung out the official sign that tells the rider that that shop is O. K. The firm also is interesting itself in the founding of a club and a call will be issued shortly to all riders to attend a meeting at the store to discuss the organization of a 100 per cent. F. A. M. club.

In the opinion of H. E. Walden, of Barnegat, N. J., that place needs a motorcycle club, and he is going to try to bring about such a consummation.

Chairman Estabrook serves notice that the club that wants affiliation certificate No. 200 had better put in a bid quick. There are but three more certificates to be filled out before the double century parchment presents itself for distribution.

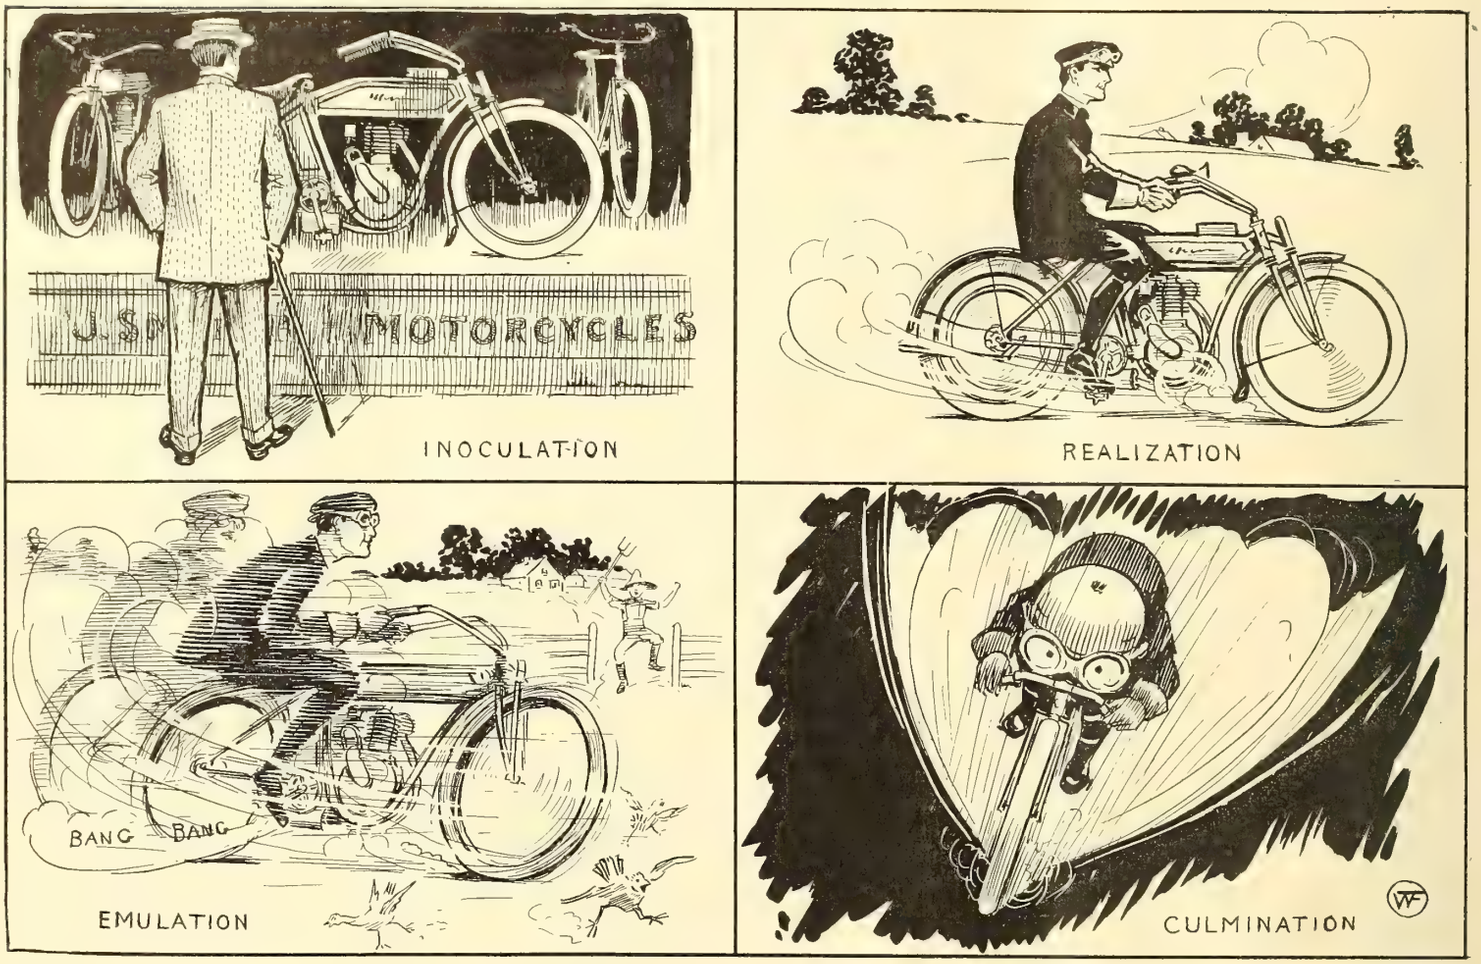
Receipt of a shipment of F. A. M. literature aggregating two and one-half tons has forced Chairman Estabrook to surrender his favorite den and retreat to a spare room. When an organization can order propaganda matter in two and one-half ton lots it indicates the scope and optimism of its membership committee. The literature is ready for distribution to those desiring to pursue F. A. M. missionary work.

CREATING "FANS" AT RIVERVIEW

Spectacular Races on Chicago Track Turn Mild Spectators Into Rampant "Bugs"—De Rosier Still on Top.

"Jake" De Rosier, winner of many motorcycle records in various countries, won two hair-raising contests on Saturday afternoon, the 23rd inst., at the Riverview stadium, Chicago, and thereby enjoyed the honor of capturing the closing events of what has proven the most sensational motor race meeting ever held in this country. Since July 9 motorcycle speedsters of the highest type have met three times weekly before crowds of spectators, taxing the capacity of the motordome, and thousands of mildly interested onlookers have been converted into the most rampant motorcycle "fans."

From the beginning of the season few changes have been made in the list of riders, although some have gone for awhile only to return again. By the time De Rosier had returned from a victorious trip abroad all the other riders had annexed a clan of enthusiastic "rooters," and many desired that the champion should meet defeat. For a time this hope was partially fulfilled, for De Rosier discovered that during his absence improvement had been made in the speed of motorcycles and his machine was unable to maintain the new pace.



Quickly, however, De Rosier placed an order for a fast machine, and for three weeks ending the season "Jake" has given all competitors a real battle for the honors.

One new marvel, Wolters, has been developed by the new stadium, and his name has gone throughout the country, as the sensation of the year. Wolters was fortunate in acquiring the first of the new Excelsior machines which have developed so much speed and the honors which have gone to Wolters should be shared by the concern which made his speed possible.

Relative to the machines in distinction from the riders, three different makes of motorcycles have enjoyed periods of success at Riverview. At the opening of the meeting the Indians ran away from everything on the track. Then came four or five weeks in which the Merkel riders captured a majority of the contests. Then came the new Excelsiors, and with the end of the year the Chicago made machine is holding to its honors. Meanwhile the Thor and other makers are working on speedy machines, and it would seem that all records must fall before many months.

Saturday's races were well contested, De Rosier having all he could do to defeat Wolters and Balke in the opening five-mile professional race, and having no certainty against Edwards and T. Samuelson, both riding Indians, in the final six-mile

THE GRADUAL EVOLUTION OF A MOTORCYCLE SPEED BUG

Illinois Athletic Club sweepstakes event.

William Samuelson won the three-mile consolation, his Indian maintaining a fair margin over the Excelsior ridden by Albright.

The five-mile amateur handicap was won by H. P. Mitchell on an M. M., with the season's favorite, Wenk, riding a Thor, just a few feet back. Summaries:

Five-mile amateur—Won by H. P. Mitchell (M. M.); second, P. Wenk (Thor); third, W. F. E. Williamson (Excelsior). Time, 5:30.

Five-mile professional—Won by De Rosier (Excelsior); second, Wolters (Excelsior); third, Balke (Excelsior). Time, 3:35⅗.

Three-mile consolation—Won by W. Samuelson (Indian); second, Albright (Excelsior); third, Edwards (Indian). Time, 2:17⅖.

Six-mile professional, Illinois Athletic Club sweepstakes—Won by De Rosier (Excelsior); second, Edwards (Indian); third, T. Samuelson (Indian). Time, 4:28⅗.

Making Clear Standpoint of F. A. M.

J. Leo Sauer, chairman of the Legal Action Committee of the F. A. M., has issued the following statement in regard to the policies of that committee:

"The avoidance of unnecessary correspondence may result from a brief statement of the policies of the F. A. M. National Committee on Legal Action.

"In the first place, it should be understood that the federation is not yet in position to prosecute purely personal damage suits unless they provide an opportunity to establish valuable precedents in favor of all riders of motorcycles. Much as the committee would like to fight the case of every member of the F. A. M. injured through the carelessness of others, that is not yet practicable. On the other hand, important test cases to establish the legal status of the motorcycle and of motorcycle riders will be welcomed by the committee.

"The point is simply this: Where the law in any case is established and clear, and where it is simply a matter of producing evidence, the responsibility lies with the individual. Of course, exceptions may be found, and the committee will confer with the Board of Directors in any case which, because of particularly distressing circumstances, may seem to call for F. A. M. action.

"Distinctive from cases in which evidence is everything, there will be instances where the law is either inequitable or oppressive, or where its purposes is not entirely clear. Such cases come within the province of this committee; together with all instances of actual or prospective legislation, state or local, the enforcement of which is or would be damaging to the interests of motorcyclists.

"In this connection, announcement may as well be made now that the committee will lend a hand to help any open muffler or speed fanatics. On the contrary, the committee wishes to place itself on record as in favor of reasonable legislation affecting the sport, and of the enactment and strict enforcement of statutes and ordinances to prevent excessive speeding and the use of the muffler cut-out in cities and towns. The committee understands that the federation does not care to encourage any who are acting against the welfare of other motorcyclists."

Another Motorcycle Club for Baltimore.

The Chesapeake M. C., of Baltimore, has just been organized. The object of the club is to stimulate interest in motorcycling. It has 20 charter members and the first long-distance run will be made shortly to York, Pa. Members of other clubs and independent riders have been invited to go along. The officers of the club are: President, Frederick Kuhl; vice president, W. H. Dietz, Jr.; secretary-treasurer, George W. Coggins; captain, F. Fehrman; first lieutenant, F. Plitt.

When in Doubt as to Your Course: Read These Rules

Rules of the Game.

Section A. Rules for use of the cut-out.

(Note: Many riders are just beginning to wake up to the advantages of the cut-out. A careful perusal of the following hints will doubtless prove of value if due consideration is given them. They will do much to decrease the slight public prejudice which may exist against the motorcycle).

Rule 1. Always open the cut-out when passing a horse that is inclined to be restive. If the animal is managed by a woman or anyone apparently not used to driving, it is all the better. Everybody needs experience, and a runaway is chuck full of that very useful commodity.

Rule 2. When you are riding through a village late at night the cut-out should always be working. People of the rural districts are apt to get too much sleep.

Rule 3. If you ride on Sunday and happen by a country church during service, be sure to jam down the cut-out lever. In hot summer weather the windows of a church are usually open, and the sharp explosions from your open muffler will emphasize in a pleasing yet decisive manner the remarks of the pastor. If you switch the spark off and on rapidly you may succeed in eliciting three or four hearty and enthusiastic explosions from the gas in the muffler. It is hardly necessary to call attention to the valuable interruption of the Sabbath quiet which may be thus occasioned.

Rule 4. When a pedestrian, particularly if it be a woman, hesitates on seeing you approach, at a loss just what to do, never fail to open the cut-out. The sudden noise will tend to clear the brain of the confused individual, and then if there should be an accident you can tell the coroner that you gave full warning. Of course, in passing a pedestrian always shave him as closely as possible, then you can laugh at him when he jumps.

Rule 5. If you are touring and start out early from your hotel, always have the muffler open when warming up the engine. This informs the other guests that you are about to leave, and furnishes a gentle reminder that it is time for them to get up. They will doubtless appreciate your thoughtfulness and courtesy in the matter.

Rule 6. Be sure to open the muffler if you happen to meet a funeral procession. The noise will distract the attention of the mourners, and besides, there is always a chance that the horses attached to the hearse may be frightened into bolting. That would enliven everybody and you might get credit for being a tender-hearted and considerate young man.

Rule 7. Some riders have gone so far as to remove the cut-out lever entirely, leaving the muffler open all the time. Such public-spirited conduct is worthy of the highest praise, yet it is not to be recommended as a steady practice. Certain communities have very strict laws—laws that are enforced, we mean—and you may get into trouble if the means to curb your muffler is lacking at a crucial moment.

Section B. General rules for conduct on the road and treatment of the public.

(Note: See also under section A, rules 1-6.)

Rule 1. When you are touring and stop at a hotel always make yourself as conspicuous as possible. Talk in a loud voice; jolly the waitress if she be pretty, boss her if she be homely; and attract all the attention that you can. To make motorcycling popular we must advertise it more thoroughly.

Rule 2. If you happen to notice a number of summer girls walking in the road ahead, that is your cue to flatten down on the gas tank after the well-known style of professional racers (note A: You can get the correct posture from studying the photographs published in this magazine); open the throttle wide, and let things hum. (Note B: We presupposed that your muffler was already open.) If you are adept enough you may even be able to get a few grease spots from the engine on the girls' white dresses. Such actions as these never fail to impress the fair sex, and after they have wiped the dust from their eyes and clothes all will be sure to agree that you are an awfully nice boy.

Rule 3. When riding through a strange village, provided your number plate is well covered with dust, never go slower than 40 miles per hour. It gives the natives a real treat to see you go by.

Rule 4. If the driver of a vehicle neglects to turn out sufficiently and so forces you into the ditch, don't fail to stop and inquire with deep sarcasm, where in h—l he thinks he's going, and follow this up by demanding if he doesn't know his own dashed side of the road. Quite likely the driver didn't intend to crowd you off and would have apologized if given an opportunity, but it is well to let him clearly see that you know your own rights.

Rule 5. Whenever you hear anyone speak disparagingly of motorcycles or those who ride them, never attempt to show him in a gentlemanly way that he is in error. Talk loudly about the "progress of modern inventions" and the "spirit of the age," not neglecting some reference to "old fogies." This line of argument is very convincing and wins over many followers to the sport.

Rule 6. Always try to kill all the animals you can while on the road, but be careful to pick harmless and innocent victims. Small chickens, puppies, kittens, etc., furnish fine sport with little danger of the rider taking a bad flop. Owners of pets consider it a real privilege to have them killed by motorcycle riders.

Section C: Rules for treatment of fellow-riders.

(Note: Careful attention to these rules cannot fail to give immediate results. Follow them to the letter and you are sure to become the most popular rider in town and be voted a jolly good fellow by all the other boys.)

Rule 1. It is a poor plan to stop and offer help to a rider whom you meet stalled on the road, there is always a chance that you might have to tow him in, or go to considerable trouble otherwise. But if you feel compelled by curiosity to stop, assume a know-it-all attitude and then inquire with an air of superiority as to the cause of his difficulty. If he is so rash as to admit ignorance, smile pityingly upon him and then volunteer the cheerful information that you have never known a machine of his make to give decent service. Don't loaf around too long, or he may ask some fool questions about gasolene engines that you can't answer. Before you leave, advise him to get a machine like yours.

Rule 2. Whenever you meet a chap on the road whose motorcycle looks inferior to the one you ride, always try to get him into a race. If you win you can remark later on in a patronizing way that your engine wasn't half open. If you lose you can offer as an excuse the fact that your machine wasn't running very well. Add that your valves haven't been ground for more than a year and so your compression is no good. Assert that under ordinary conditions you could go by his bunch of scrap iron so fast that an onlooker would think it was nailed to the ground.

Rule 3. If anyone declines to race, by no means consent to plod along beside him. Anchor yourself just in front, so that he gets all the dust you stir up. This is bound to promote the best of good fellowship.

Rule 4. When you happen upon a rider with a mount more than two seasons old, don't forget to show the proper amount of scorn. Have him understand that you consider yourself a superior being, far above his class (pronounced claws).

Rule 5. If there is a motorcycle club in town join it by all means. Always be on deck whenever there's a free feed or a club run on, and be the first to grab the magazines when they arrive, but never, under any circumstances, pay your dues. Make it a point always to knock the way the club officers do their work, and give out the impression that if you were only on the job things would be different.

Section C: Rules for managing and caring for your machine.

Rule 1. When you come upon a sharp turn to the left in the road, always cut across the corner. You may save as much as one-half second by doing this, and your family may be enriched by the amount of your life insurance policy, should you chance to bump against a big husky automobile which is rounding the bend in the other direction.

Rule 2. If you overtake a trolley car and an automobile traveling side by side, it is a clever little trick to slip in between them. The fact that your name is likely to grace the obituary columns of the papers next morning should not deter you from making the attempt.

Rule 3. Never clean your machine on returning from a run. What's the use? It would only get dirty again the next time you take it out. And some riders have the disgusting habit of occasionally going over their mounts, tightening up loose nuts and so on. What's the good of a machine that won't run itself?

Rule 4. As soon as your motorcycle begins to show signs of approaching old age, form the habit of lending it to all the inexperienced persons who are foolish enough to be willing to borrow it. One of them is almost sure to have a smash-up some day, and then you can collect from him, or his sorrowing family, much more than the value of the machine. This will go far on the purchase of a new one.

Rule 5. Never keep your tires properly inflated. When they wear out say that they were rotten and never were any good from the start. Then see if you can't stick the tire company for a new pair.

(Final note: This magazine wishes it distinctly understood that it will not hold itself responsible for accidents resulting from too serious a consideration of the foregoing rules. They are intended to be read, not followed.)

Willis Makes Clean Sweep at Akron.

Dan Willis, the Canton (Ohio) "bearcat," swept the prize table clean at the race meet of the Akron Motorcycle Club at the Fair Grounds track, on the 16th inst., taking six firsts, which were all there were that he was eligible to take. Willis did not have any walkovers and had to fight hard for everything he got. The fights for second were little less interesting, Wagner and Kraft being the chief candidates for second honors. Kraft outrode Wagner and took four seconds, while the latter received some consolation by winning the coveted club championship for 1911.

It was a day of mishaps, and few were the contestants who did not "bite the dust" at least once during the speed battles. The most spectacular and most serious fall of the day was suffered by Herbert Griffin in the club championship. He ran into a stone wall on a curve and was tossed into a river 16 feet below. He was badly bruised about the head, arms and body by sharp stones but his injuries are not dangerous.

A peculiar mixup occurred in the pursuit race. Willis had caught all but Kraft and just was overhauling him when Kraft skidded into Willis and both went down. They got up together immediately and jumped on their machines and continued their scrap, riding neck and neck until Willis finally drew ahead. The track was very rough after recent rains. Attendance, 3,000.

Summary:

Three mile novice, club members—Won by Oakey Weible (Harley-Davidson); second, Herbert Griffin (Harley-Davidson). Time, 4:47⅗.

Three mile open—Won by Dan Willis (Indian); second, Herman Kraft (Thor). Time, 4:20.

Ten mile club championship—Won by Henry Wagner (Harley-Davidson); second, Herman Kraft (Thor). Time, 14:51.

Miss-and-out—Won by Dan Willis (Indian); second, Herman Kraft (Thor). Distance, 3 miles. Time, 4:24⅕.

Fifteen minute race—Won by Dan Willis (Indian); second, Henry Wagner (Harley-Davidson); third, Herman Kraft (Thor). Distance, 10¼ miles.

Five mile open—Won by Dan Willis (Indian); second, Kraft (Thor). Time, 7:33.

Unlimited pursuit—Won by Dan Willis (Indian); second, Herman Kraft (Thor). Distance, 6 miles. Time, 9:12⅗

Ten mile meet championship—Won by Dan Willis (Indian); second, Herman Kraft (Thor). third, Bert Waltz (Thor). Time, 15:08⅕.

Accessory Firm Donates Trophy.

Messrs. John Millen & Son, wholesalers in automobile, bicycle, motorboat and motorcycle accessories, with offices in all the principal centers of Canada, have donated a handsome silver trophy to be emblematic of the 10 mile open championship of Canada. Competition for this cup will start next season. This makes the third perpetual trophy which has been donated to the Toronto Motorcycle Club this summer.

At a meeting of the Gulf District, F. A. M., held at the store of C. W. Fisher, 403 East Broadway, Louisville, Ky., on the 18th inst., with District Vice President J. B. Coblens in the chair, the following district officers were elected: Glen White, secretary; H. P. Miner, treasurer.

HAVERFORD CYCLE'S FOURTH SEASIDE CONVENTION

Once a year the officers and branch managers of the Haverford Cycle Co., of Philadelphia, get together at the seaside, generally at Atlantic City, and have a convention and social "get together." This year the party went to Atlantic City in motor cars from Philadelphia on Sunday, 3rd inst., and on Monday, Labor Day, moved over to Egg Harbor, N. J., where the president of the company, Max Sladkin, gave a champagne dinner. Among those included in the party were: Max M. Sladkin, Mrs. Sladkin, J. H. Smullen, Mrs. Smullen, Miss M. C. Smullen, Edward J. H. Smullen, M. Bunkin, L. J. Kellner, William B. Croszer, B. L. Creamer, C. H. Cross, Mrs. Cross, Miss I. C. Wilson, Miss E. Featherstone, William Vansaun, Charles Hilyard, Charles Hobbs, Louis Warner, Mrs. Warner, Thomas Kilray, Frederick Gaffee, Layton Hill, Frederick Winthrop, Miss D. Lupy and J. Love. The photograph was taken before the dinner.

RACING CYCLISTS REVIVE UNION

Old American Association Brought Back to Life—Macfarland and Fogler Moving Spirits—Relief Fund Suggested.

Answering a call sent out by Floyd Macfarland, practically all of the professional bicycle riders now competing on the eastern circuit held a meeting at Newark on Wednesday, the 27th inst., and revived the old American Racing Cyclists' Union, in which at one time were enrolled all of the professional riders. In recent years interest in it has been permitted to wane, and now that the game has taken such rapid strides forward, especially during the past three seasons, the riders see the necessity to rebuilding their organization.

In addition to various worthy aims with a view to bettering their standing in the sporting world, the A. R. C. U. was accredited a representative membership in the National Cycling Association, the sport's governing body. Frank L. Kramer was the last regularly appointed representative and has acted in that capacity for years. For some time past it has been known that Kramer would prefer to resign that position in favor of some other rider and this was one of the questions immediately considered upon the reorganization.

Floyd Macfarland was selected as temporary chairman and Worthington L. Mitten as secretary. When the nominations for N. C. A. representatives were brought to vote Joseph Fogler of Brooklyn polled the largest vote, having eight more to his credit than John Bedell. Charles Turville, F. L. Kramer and James F. Moran were the other nominees.

Another question considered was the proposition put before the riders by Macfarland as representing the management of the coming six-day race at Madison Square Garden. P. T. Powers, the promoter of the race, through Macfarland, suggested that instead of the stated purses being posted as in past races, the teams ride on a percentage basis. The proposition met with considerable opposition and was carried over until the next meeting on the 4th prox.

A grievance committee was appointed by Macfarland to receive complaints from the riders and to make decisions. The committee consists of Iver Lawson, Menus Bedell, Frank Kramer, Paddy Hehir and Floyd Macfarland.

A relief fund for injured bicycle racing men was suggested, but nothing definite was decided upon. A vote on this matter will be taken at the meeting next week. In a discussion the question of how the fund would be maintained came up. It was suggested that a certain part of the fines imposed upon the riders should be given to this fund, and that the receipts from an annual bicycle meet should be donated to the fund. The committee to decide what injured riders should benefit by this fund, it was suggested, should be members of the local newspaper staffs and prominent business men who are interested in the bicycle game. This it is generally believed would be the only correct way of reaching the truly deserving ones.

Abbreviated Six Day Race for Buffalo.

Buffalo (N. Y.) will have an eight-hour-a-day six-day race during the second week of November. Floyd A. Macfarland is looking after the arrangements insofar as signing up the riders and making up the teams are concerned. In all probability there will be 12 teams to start. They will be composed of the riders in the big bunch now competing at the Newark Velodrome.

There will also be a 10-hour team race for amateurs. It is scheduled for November 12th, the Monday of the week of the professional event. A number of the leading amateurs of the east are making preparations and pairing off for the fracas. Those already entered are Carl Ericson, Paul C. Heidrich and Alvin Loftes.

FROM ONE GENERATION TO ANOTHER

In addition to the six-day race there will be a big card of sprint races on the Saturday previous with a prize list of $300. The prizes in the six-day race will total $2,000. The winning team to receive $500 and the other teams, $400, $300, $200, $150, $125, $100 and $75. The winner of the final sprint each night will receive $10.

Collister Seriously Ill at Cleveland.

George Collister, well known in cycling circles as starter and referee in races during the past twenty-five years in and around Cleveland, Ohio, is seriously ill with little prospect of recovery, at his home. Mr. Collister's connection with the sport gained for him a reputation of national proportions. In business life he is the senior member of the firm of Collister & Sayle, of Cleveland, Ohio, jobbers in supplies for automobiles, bicycles and motorcycles.

KRAMER AGAIN NATIONAL CHAMPION

Wins Highest American Professional Honors for Eleventh Successive Year—Clark Finishes as Runner-up.

Frank L. Kramer, ten times holder of the National sprint championship, by winning the two mile championship race at the Newark Velodrome on Sunday last, the 24th inst., tucked away the title securely for the eleventh consecutive year. There is only one more titular event to be run this season, and the points of the two leaders now stand, Kramer, 72, and Clark, 52. Clark, owing to severe injuries received in the big spill of Wednesday, 20th, was excused from riding on Sunday. He appeared at the track and hobbled around in front of the grandstand with Announcer Bedford, who introduced Clark and made the statement to the spectators that Clark found it impossible to get into condition for the day's races, and he therefore asked to be excused. The management also offered in this connection to pay back at the box office the price of admission to any one in the audience who was dissatisfied.

Notwithstanding the absence of Clark, good racing was the order of the day, and one new record, a notable one, in the two mile tandem race, was set up. Kramer won handily in the championship, with Hehir second, and Goullet and Fogler third and fourth, respectively. The champion was also scored for first after a desperate ride high on the bank in the three mile handicap for professionals, over John Bedell, whom, in the opinion of many persons at the tape, had taken the premier position, so close was the finish.

Donald MacDougall, the young amateur, who recently has been giving such a good account of himself, again showed his class by winning the half mile open and taking second in the two mile handicap for amateurs. In both events the game little Newarker rode all out and fairly wobbled across the tape. Coming over in the handicap, MacDougall was kicking out his last ounce and almost went down before crossing the line, but managed to finish, fairly diving over. Loftes won by a length, Raymond Eaton finished a close third on the pole line, and Anthony Rivello was pinched in between MacDougall and Eaton for fourth; when MacDougall went down he took Rivello with him.

The two mile tandem handicap race for professionals resulted in a victory for Fogler and Root, and the setting up of a truly remarkable record by this pair; they having ridden the distance from scratch in 3:40 with a standing start. The previous record, standing start, was held by Wright and Brodbeck in 3:51⅘, while Kramer and Fogler held a record for the flying start in competition of 3:46⅖. The team of Dro-

bach and Anderson (125) finished second by 10 yards, just winning over Lawson and Hehir, third. Summary:

Two mile National Championship, professional—Won by Frank L. Kramer; second, P. O'S. Hehir; third, Alfred Goullet; fourth, Joseph Fogler. Time, 4:01⅗.

One-half mile open, amateur—Won by Donald MacDougall; second, Alvin Loftes; third, Paul C. Heidrich. Time, 1:06⅘.

Two mile invitation, professional—Won by Menus Bedell; second, Peter Drobach; third, Walter De Mara; fourth, Percy Lawrence; fifth, Jumbo Wells; sixth, Charley Stein. Time, 4:24.

Two mile open, novice—Won by Fred Weber; second, F. Whitley. Time, 4:37⅖.

Three mile handicap, professional—Won by Frank L. Kramer (scratch); second, John Bedell (80); third, Ernest Jokus (200); fourth, Eddie Root (70). Time, 5:54.

Two mile handicap, amateur—Won by Alvin Loftes (scratch); second, Donald MacDougall (40); third, Raymond Eaton (260); fourth, Anthony Rivello (140). Time, 4:02⅕.

Two mile tandem handicap, professional—Won by Fogler and Root (scratch); second, Drobach and Anderson (125); third, Lawson and Hehir (80); fourth, Fred Hill and Lawrence (30). Time, 3:40.

The Elimination Club Century Run.

The Elimination Club run of the E. D. C. R. C. Association was run on Sunday, the 17th inst., leaving Columbus Circle at 9 a. m., arriving at Bayshore, L. I. (45 miles), at 12:15 p. m., which was the dinner stop, with two riders less than were at the start, one of whom was stopped by a puncture and another not caring to go further than Amityville (35 miles). On this stretch three riders lost points and only five reached Bayshore with perfect scores. The route then doubled back to Amityville and Freeport, thence across the Island to Floral Park, and a short stop at Garden City for the aviation meet, after which it was necessary to take to the road to Flushing and Astoria Ferry to the starting place in New York City. The winners of points on the run and the score follows:

G. Bieregel, 6 points; A. Kaiser, 6; H. Baum, 6; J. O'Connor, 6; S. Segal, 6; M. Cigal, 5; W. H. Lexow, 3; A. Greenberg, 1.

Atlas Club Holds Bicycle Race.

On Sunday, 17th inst, the Atlas Bicycle Club of Brooklyn, N. Y., held its first races, counting for points, in the series of five races. Order of finish:

One-half mile handicap—Won by Henry J. Murphy (10); second, Vic Lind (90); third, Jerome Steinert (scratch); fourth, William Cullington (80); fifth, Andy Hausenbauer (25).

Ten-mile handicap—Won by Paul Smith (2½ minutes); second, William Cullington (3½ minutes; third, George Russell (2½ minutes); fourth, James Mangels (3½ minutes); fifth, Arthur Wallott (2 minutes).

CLARK FAILS TO CAPTURE HANDICAP

But Sets Such a Sizzling Pace That He Comes Within ⅕ Second of World's Record—Collins Easily Beats Pye.

Contrary to the announcement made on Sunday, the 10th inst., at the Newark Velodrome, to the effect that but one more Wednesday night meet, that of the 13th, would be run this season, there was one held on the 20th.

The meet of the 20th inst. saw some excellent riding and fast time made in the several events. Kramer and Clark, with Goullet, met in the final of the one mile handicap for professionals, but Lawson got shut out in his heat. The long markers in the final made the going very fast, so fast indeed that the scratch men, Kramer, Clark and Goullet, could not get the bunch before the bell lap, and it was only with the hardest kind of riding and by working with Fogler and Hehir that they succeeded in tagging the rear of the flying bunch. At the bell, Clark put on all steam, Kramer and Goullet were trailing in that order, when the twelfth pole was reached Clark made his bid to pass the six riders out in front. The champion weakened here and sat up, while Goullet went after the "Rocket" high on the bank. They both well earned the third and fourth they succeeded in capturing at the tape. The time, 1:48⅘, is within one-fifth second of the handicap record held by Clark.

Fast time also was made by the amateurs in their mile handicap whirl. Frank Cavanaugh did not ride, as he thinks he was unjustly dealt with in last Sunday's disqualification. Despite the absence of Cavanaugh and his assistance, Loftes rode alone from scratch and won the final by a length from Chester Smith, who had 55 yards. Heidrich (70) was third. Loftes won his heat in 1:57⅖.

The ten mile open for professionals saw some very fast going and numerous spills. Kramer was eliminated at the start by one of his tires exploding. The most serious mixup occurred at seven and one-half miles, when Clark's rear tire exploded, bringing down with him Goullet, De Mara, Iver Lawson and Floyd Krebs. Clark was badly cut and wrenched, as also were De Mara and Goullet, all three requiring assistance to the training quarters. Fogler, Root and John Bedell had a merry old dust-up in the final sprint, finishing by inches difference in that order.

In the motor-paced professional race over ten miles, Elmer Collins easily took the measure of Ernest Pye.

Summary:

One mile handicap, amateur—Won by Alvin Loftes (scratch); second, Chester Smith (55); third, Paul C. Heidrich (70). Time, 2:01⅖.

One mile handicap, professional—Won by Pedlar Palmer (95); second, Charles Stein (75); third, A. J. Clark (scratch); fourth, Alfred Goullet (scratch). Time, 1:48⅘.

Three mile open, amateur—Won by Alvin Loftes; second, Paul C. Heidrich; third, Chester Smith; fourth, Carl Ericson. Time, 6:29.

Ten mile open, professional—Won by Joseph Fogler; second, E. H. Root; third, John Bedell; fourth, Paddy Hehir; fifth, Peter Drobach. Time, 21:30⅘.

Ten miles motor-paced race, professional—Elmer Collins vs. Ernest A. Pye—Won by Collins, by three laps. Time, 13:47.

Live Sparks From the "I.-J." Hammer.

But for one thing, just as many people would be riding bicycles today as ever rode them—pride.

As long as it was a badge of servitude to ride there wasn't much use of combating the prejudice, but there are many signs to indicate that the popular attitude is changing.

In Europe it has already changed. Our French, German and English consuls inform us that everyone, from Royalty down, is now cycling in those countries.

There isn't much hope of getting President Taft on a bicycle, but in all lower and lighter strata of society the bicycle is rapidly winning back its devotees.

The lawyer's green bag across the handle bars is again a common sight. The trim bicycle skirt once more presents its elusive charm.

At our country clubs, clusters of bicycles ornament the lawn.

If the bicycle has not actually come back, it is most assuredly on its way.

C. R. C. A. Announces Handicap Race.

The Eastern Division Century Road Club Association announces a fall 10-mile handicap road race, to be held at Floral Park, L. I., on Sunday, November 12th, for which a Columbia 1911 model racing bicycle will be offered as first place prize to top a list of 20 prizes, while a solid gold watch will be first of the five time prizes.

This will be the third and last open road race to be held by the Eastern division this year. Entry blanks can be secured from George Bieregel, secretary, 1105 Amsterdam avenue, New York City.

The final two races, a one-mile and a ten-mile, which will conclude the championship series of the E. D. C. R. C. Association for 1911, will be held at Freeport, L. I., on the Merrick road, on Sunday, October 8th, 1911. A club run will start from Columbus Circle at 9 a. m. over the Hoffman Boulevard to Freeport, L. I.

Kramer Appears on Moving Pictures.

Frank Kramer, the racing cyclist, is now on the "flicker circuit." He is being shown in Pathe Brothers moving pictures, where he makes quite a hit with the audience.

PURSUIT RACE GOES 22 MILES

Lafayette and Crescent Wheelmen in Grueling Contest at Electric Park, Baltimore—Mixed Races on Card.

It isn't often that a motorcycle club introduces bicycle races at a motor meet, but that is what the Maryland Motorcycle Club, of Baltimore, did at Electric Park on the 12th inst., and it had no cause for regret. In fact, it was a bicycle pursuit race which proved the feature of the card, for it required 22 miles to evolve a winner. No such grueling and sustained pedal pushing ever before had been seen in Baltimore, as this pursuit produced. Two two men teams, representing the Lafayette and Crescent Wheelmen, were the contenders, and the Crescents won at the tape after a two mile sprint.

In the motor events, Fred Tiemeyer was the star, capturing the heat race and the novelty. Gintling practically had the novelty won, having despatched his ice cream cone quickest and gotten away to a good lead, but Tiemeyer came on with a rush and won out in the last 10 yards. Gintling, however, seized the novice race for twins, and Nagongast took the same class for singles.

As a "chaser" to the good speedfest, ex-Captain Fisher, of the Baltimore Motorcycle Club, Howard Fisher, the well known dealer, and Dick Brenner, had a hot session, in which Fisher just managed to win out, after being hard pressed for the whole route. Summary:

Two mile novice, four horsepower stock singles—Won by Harry Nagongast (Indian); second, Sam Ambach (Indian); third, Pratt Cooper (Excelsior). Time, 3:04.

Two mile novice, five horsepower stock twins—Won by Dick Gintling (Indian); second, Julian Hecht (Indian); third, Fred Wilkens (Indian). Time, 2:55.

Two mile heat race, best two in three, four horsepower stripped stock class—First heat won by Gus Heins (Indian); second, F. Tiemeyer (Indian); third, Matt Gault (Indian). Time, 2:44. Second heat won by F. Tiemeyer (Indian); second, Gus Heins (Indian); third, Matt Gault (Indian). Time, 2:43. Final, one mile—Won by Tiemeyer (Indian); second, Heins (Indian). Time, 1:16.

Two mile novelty, 50 inch class—Won by F. Tiemeyer (Indian); second, Dick Gintling (Indian); third, Matt Gault (Indian).

Old men's race—Won by W. S. Fisher (Indian); second, H. A. French (Indian); third, Dick Brenner (N. S. U.). Time, 2:59.

Two mile handicap, bicycle—Won by Edgar Boehm (scratch); second, Lyell Bossom; third, Arthur Boehm. Time, 4:49⅗.

Australian pursuit team race, bicycle—Won by Crescent Wheelmen; second, Lafayette Wheelmen. Distance, 22 miles. Time, 0:57:14.

Paris-Brest Winner is Reinstated.

Heusgen, the winner in the tourist division of the great Paris-Brest-Paris road race which started on the 25th ult. according to published reports, has been reinstated and receives full honors for his victory; the protest lodged against him at the time of the finish and the attendant disqualification having been nullified. Witnesses at the hearing before the Sports Commission proved that the judge who furnished the incriminating testimony with the protest was too intoxicated at the time to distinguish the riders, consequently the charge that Heusgen had followed the pace of one of the fast divisions fell flat and that particular judge will never officiate again.

Italians Plan Races for Columbus Day.

Columbus Day will be fittingly celebrated by the great discoverer's compatriots in and about Greater New York, for on that day will be held a combination athletic and bicycle meet at Dongan Hills, Staten Island, where will be decided the Italian short distance bicycle championship of America, and also four running championships of like title.

The event for the bicycle title will be for one mile on half-mile track, to be run in preliminary heats with two men to qualify, a repeating heat, semi-finals and final. The first prize is a silver cup and championship sash; second, solid gold medal; third, gold filled medal; fourth, silver medal; fifth, bronze medal.

LEIMBACH THE BALTIMORE STAR

Captures Three Prizes in Annual Fall Road Race of Crescent Bicycle Club—Wohrna the Winner.

The annual fall road race of the Crescent Bicycle Club, of Baltimore, was held last Sunday, September 24th. There was a large field of starters and close finishes. The race resulted in a victory for Charles Wohrna of the Carroll cyclers, who had a five-minute handicap, with William Leimbach, of the Crescent B. C., from the 3 minute mark, second. August Leimbach, of the same club, won the first time prize, covering the distance in 23 minutes and 13 seconds.

AUGUST LEIMBACH, TIME PRIZE WINNER, CRESCENT B. C. ROAD RACE, BALTIMORE

The course measured nine miles and was from Middle river to Chase's Station and return. Twenty place and five times prizes were offered with an additional prize to the first member of the Crescent B. C. to finish and another one to the first married man to finish.

William Leimbach, of the Crescent B. C., was the big noise of the race, winning second place prize, third time prize and the special prize to the first Crescent to finish. John Smith, of the Racycle B. C., who finished third, carried off the prize for the first married man to finish. A large and enthusiastic crowd witnessed the race, being distributed along the course, and enjoyed the event immensely, as it only took the riders 10 minutes and 48 seconds to pass a given point.

The summary, showing positions and times of riders at finish, with the handicaps by minutes in brackets:

	Time
1—Charles Wohrna, Carroll (5)	25:05
2—Wm. A. Leimbach, Crescent (3)	23:20
3—John F. Smith, Racycle (4)	24:21
4—Thomas J. King, Unattached (4)	24:22
5—Chas. E. Berigtold, Crescent (7)	27:42
6—John F. Kitz, Highland (5)	26:12
7—Wm. Martell, Racycle (2)	23:42
8—Aug. Leimbach, Chescent (1½)	23:13
9—E. E. Simpson, Racycle (1½)	23:15
10—William Connell, Reading (6)	28:10
11—Jacob Davis, Lafeyette (3)	25:20
12—Chas. H. Thomas, Chescent (1½)	23:53
13—John Kelly, Carroll (4)	26:25
14—John Andres, Chescent (5)	27:27
15—Fred M. Sanborn, Crescent (3)	25:37
16—Winnie Venker, Racycle (5)	27:47
17—Jos. F. Solan, Carroll (3)	27:50
18—Benj. Berkowich, Reading (6)	29:20
19—J. G. Stecker, Unattached (4)	27:36
20—A. Boehm, Unattached (scratch)	24:05
21—Lang. M. Sanborn, Crescent (3)	27:07
22—Thos. W. Baker, Crescent (6)	31:17
23—Geo. Peilstocker, Crescent (5)	30:19
24—W. W. Shaw, Carroll (scratch)	26:20
25—C. O. Reville, Unattached (6)	34:01

Time Prizes.

1—Aug. Leimbach, Crescent (1½)	23:13
2—E. E. Sampson, Racycle (1½)	23:13
3—William Leimbach, Crescent (3)	23:20
4—William Martell, Racycle (2)	23:42
5—C. H. Thomas, Crescent (1½)	23:53

C. R. C. A. Abandons Combination Meet.

At their last meeting, held the 22nd inst., the Eastern Division Century Road Club Association decided to abandon the idea of holding a combination field day as proposed some months ago. The decision was prompted by the report of the committee having the matter in charge, to the effect that there was an apparent lack of co-operation on the part of other clubs in the metropolitan section who had been approached on the question. Consequently the association is arranging for a field day under its own auspices, to be held on Sunday, October 22nd, at the Guttenberg track, New Jersey.

The following list of events are carded and will be started promptly at 10 a. m.:

One-mile open; five-mile handicap; ten-mile miss-and-out; relay race, for teams of four men; and consolation race, all open to invited riders. The events closed to club members will be, novelty race; one-eighth mile slow race; tandem race and match race, two tandem teams versus four riders on single bicycles.

The prizes for each event will be medals; a club shield will be presented to the club whose team wins the pursuit race, and a club flag to the club whose team wins the relay race. The entry fee for these events is 25 cents for single entries and $1 for the teams.

The call has been issued by Captain Segal for a club run, to leave Columbus Circle at 8:30 a. m., to reach Guttenberg track at 9:45 a. m., via the Forty-second street ferry. It is expected that this will draw the largest gathering of cyclists for such a purpose this year, as great enthusiasm is being shown by the members. J. G. Kopsky has been added to the committee to take charge of the club teams, the riders to be selected by the best performance over a given stretch of road.

S. Segal, 100 West Eighty-eighth street, New York City, will answer all inquiries for information.

Long Distance Cycle Relay.

The Dunlop Rubber Co. has decided to organize a relay sporting contest next Easter (April, 1912), in the shape of a relay dispatch race from Adelaide to Sydney, Australia. The event will be run in two divisions—a relay of cyclists to be pitted against a relay of motorcyclists, the ride to be carried on day and night until a dispatch from Adelaide is carried over 1,149 miles of country, and delivered to the military authorities in Sydney. The motorcycle section will probably be handicapped to concede at least 24 hours' start to the cyclists, which means that the first dispatch should be up near Coleraine (Victoria)—some 368 miles away—before the first motorcyclist leaves Adelaide.

Fashionable cycling or how to be happy though hobbled. A suggestion for a new type of two-seater.—Cycling.

The cycle division will be divided into 64 relays, ranging in length from 10 up to 38 miles, two riders being appointed to each sections, so that, all told, 128 cyclists will be required for this part of the undertaking. The motorcycle relays will probably range from 50 to 100 miles in length, depending on the nature of the country to be negotiated, and here again the dispatch bearers will ride in pairs to preclude any possibility of a breakdown in the line of communication. It is estimated that there will be about 20 motorcycle relays, and the best 40 motorcyclists in South Australia, Victoria and New South Wales will be selected for the task.

There is also a probability of the management, including a motor car section. Such an addition would add greatly to the interest of the dispatch ride, and could be included with very little extra expense or organization. From a military standpoint, the addition of motor cars to the event would render the contest of even more importance than if the race is confined to cycles and motorcycles only. The route would only want to be divided into four sections, viz., from Adelaide to Mt. Gambier (303 miles); Mt. Gambier to Melbourne (374 miles); Melbourne to Albury (201 miles), and Albury to Sydney (374 miles), and either one or two cars selected to negotiate each section. It is estimated that the car dispatch would have to concede about six hours' start to the motor cyclists, who in turn would have to allow the cycle brigade 24 hours' start. It is thought that there would be a little difficulty in getting motorists to take the matter up, and the Dunlop company intends approaching Messrs. G. G. White (holder of the Sydney-Melbourne and Melbourne-Adelaide records), H. Dutton and Murray Aunger, to see if they would take up the South Australian section of the course. Messrs. R. S. Falkiner, C. B. Kellow, T. Rand and S. H. Day will be invited to look after the two Victorian relays, and Messrs. "Tony" Hordern and O. Camphin the Albury to Sydney section. Such a team would probably carry the dispatch from Adelaide to Sydney in 40 hours.

To overtake the cycle dispatch before it reaches Sydney, it is anticipated that the motorcyclists will have to maintain an average speed of 25 miles, for the cyclists will probably be scheduled to average for the whole journey 16½ miles an hour, the speed maintained in the big cycle relay ride organized over the same course by the Dunlop Rubber Co. in April, 1909, when the 1,149 miles were negotiated in 69 hours 35 minutes. In that event 375 miles was covered in the first 24 hours and 455 in the second, so that it will be seen that the motorcyclists will have no easy task set them. As a sporting event, the relay match should provide one of the most interesting and instructive contests yet held in Australia. The Dunlop company is confident that the dispatch ride will be eagerly taken up by cyclists and motorcyclists along the route. Gold medallions will be presented by the promoters of the race to all riders taking part in the contest. The route from Adelaide will be via the "Coorong" Desert to Kingston, thence through Mount Gambier, Casterton, Ballarat, Melbourne, Albury, Gundagai, Coulburn and Picton, to Sydney. The Commonwealth military authorities, who took such a keen interest in the 1909 relay ride, are to be applied to for their support and patronage.

Rhode Island Club Run Postponed.

Scheduled for Sunday, 24th inst., the third and last of the series of reliability runs which the Rhode Island Motorcycle Club of Providence has been promoting, was postponed to Sunday, October 1.

"Whitney" Chains Are Built for Strains

Manufacturers who use chains on their machines should get our catalogues and prices before deciding the transmission problem for the coming year. "Whitney" Chains are famous for their strength and wearing qualities. Wherever chains are used the name of "Whitney" is known as the mark of chain perfection. Every "Whitney" Chain has a reputation back of it. A reputation of having been tested in the most trying service and never failing to make good. They are made by specialists, in a factory especially equipped for the making, with years of experience to back them, made from material chosen for quality, regardless of cost. If you are not a user of "Whitney" Chains it will pay you to try one when making replacements and get acquainted with its merits.

FISK BICYCLE TIRES

The New Departure a Popular Tire for Popular-Priced Wheels

THE FISK NEW DEPARTURE, single tube, is a high-grade close-woven fabric tire with special corrugated tread. It is not possible to make a better tire than this for the price. Every user of this tire has received full measure of service.

AMONG the standard bicycles which are regularly equipped with Fisk tires are the following: Iver Johnson, Pierce, Snell, Pope, Yale and Emblem. 75 per cent. of the high-grade and medium-priced wheels manufactured in 1911 will be equipped with Fisk Tires.

STATE your tire needs and we will suggest the proper type of Fisk Tire to exactly fill them. Booklet on request.

A New Prest-O-Lite Motorcycle Gas Tank, Equipped with Gauge, $10

The addition of a gauge makes our motorcycle gas tank similar to our famous automobile tank in everything but size. This gauge shows, at all times, the amount of gas in the tank.

Our tank without gauge, which formerly sold at $10, will hereafter sell for $8. We have arranged with our dealers to take in this tank and exchange it for the new model with gauge, if the user desires, upon payment of the difference in price, $2.

Prest-O-Lite Tanks are now handled by nearly all motorcycle and automobile dealers in the United States.

Investigate Prest-O-Lite

Some of your friends are probably using this famous lighting system.

Ask them if it costs any more to maintain than the troublesome, treacherous generator.

Ask them about its convenience, safety and insurance against accidents. Ask them how much pleasure they find in having 40 hours of brilliant, unflickering, dependable light, turned on and off like a gas jet.

Just one accident due to poor light would probably cost you more than a year's supply of Prest-O-Lite.

But get the genuine. Imitations can be exchanged in very few places. Prest-O-Lite Tanks, when empty, can be promptly exchanged, anywhere and always.

The Prest-O-Lite Co.

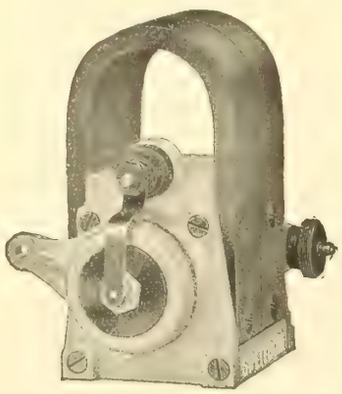
SPLITDORF MOTORCYCLE PLUG

WITHOUT A PEER



Huron, S. D., Sept. 19, 1911.

C. F. SPLITDORF, New York.

Dear Sir:—After using practically every spark plug on the market, I can truly say that your Plug stands without a peer in the field of motorcycling today. The Splitdorf Plug I am now using in my Excelsior 4 has run me 1369 miles without being once removed.

Thanking you for past favors, I beg to remain,

Very truly yours, G. V. ROLPH.

THE SPLITDORF MAGNETO

too, typifies a high and advanced example of ignition engineering skill. It embodies many exclusive features, placing it in a class far in advance of all ordinary types. Short circuiting from mud and water is reduced to a minimum, and perfect and continuous service is assured.

Reliance
(REG. U.S. PAT. OFF.)

In Special Motorcycle Type

A single drop of water will put every spark plug out of business—except one—the "Reliance." Put the Reliance in a glass of water and it continues to spark.

Do you appreciate the full import of this statement? Water is the greatest short-circuiting medium known; if water won't affect a plug, nothing else will. Carbon and soot have absolutely no effect upon "Reliance" Plugs. Its patented electrical action destroys them as fast as deposited.

When you realize that **ninety per cent.** of all plug troubles are caused by **carbon** and **soot** you begin to appreciate why the Reliance should be your first and last choice; you see why those who have once used Reliance troubleless plugs will have no other.

Regular Type $1.00
Magneto Type $1.25

For sale by most dealers; if yours does not carry, write and we will ship prepaid at prices quoted.

"Dare Devil" Derkum shatters
American Road Record on

United States Motorcycle Tires

G & J MORGAN & WRIGHT

When Derkum burned up the road from Los Angeles to San Diego in 195 minutes, he furnished unquestionable proof of the sterling qualities of **United States Motorcycle Tires.**

Over 135 miles of mountain trails, shifting sands and bridgeless streams, his G & J Tires carried him better than 40 miles an hour without an instant's pause for adjustment or repair.

This trouble-proof United States Tire service that made possible Derkum's record breaking dash, is the chief reason that impels four out of every five American riders to use **United States Motorcycle Tires.**

From experience they know them to be unquestionably

the most durable tires in the world.

UNITED STATES TIRE COMPANY

Broadway at 58th Street
New York

Kokomiles save Kokomoney for the Rider and make Kokomoney for the Dealer!

Kokomiles are those myriad miles of satisfactory service that are given by

Kokomo Tires

Again we ask:

"Are you profiting by what we offer you in Kokomo Tires?"

For instance:

Kokomo Defender Special

This popular guaranteed tire is specially designed and constructed for road use. It is made from the best materials obtainable, being carefully built up by hand with pure para inner tube, and, owing to the very high quality of the inner tube used, a puncture is very easily repaired.

Kokomo "New Oxford"

A medium price tire, yet so good in quality that it does not do it justice to call it a medium grade tire. We have built these tires so that in case of puncture they will not be worthless but can be repaired. Also furnished in smooth tread.

Every dealer handling these tires is doing a benefit to his customers and to his own bank balance.

KOKOMO RUBBER COMPANY, Kokomo, Ind., U. S. A.

NORTH, EAST, SOUTH AND WEST

have put the

FLANDERS "4"

to the test.

NO DISAPPOINTMENT

THEY FIND IT TO DO MORE THAN WE CLAIM

When you satisfy a man beyond his expectations you are doing wonders. Yet that is what we are doing with the Flanders "4."

POSTAL TELEGRAPH

NIGHT LETTERGRAM

3 ON KN 48 N.L.Paid. 8.15 A.M.

San Francisco, Calif., Sept., 22, 1911.

FLANDERS MFG. CO., Pontiac, Mich.

Flanders sample received. We wish to extend sincere congratulations on successful culmination of your efforts. The machine far exceeds expectations and will prove sensation of the year. Wire our Los Angeles House exact date you will ship both carloads also how many motorcycles you can ship in October.

EDWIN F. MERRY.

Remember It's the Flanders "4"

$175 With Magneto

What will you do if you have not secured the exclusive sale of the Flanders "4" in your town?

FLANDERS MANUFACTURING CO., Pontiac, Mich.

A New Prest-O-Lite Motorcycle Gas Tank, Equipped with Gauge, $10

The addition of a gauge makes our motorcycle gas tank similar to our well known automobile tank in everything but size. This gauge shows at all times, the amount of gas in the tank.

Our tank without gauge, which formerly sold at $10, will hereafter sell for $8. Any dealer will take in this tank and send it to us to be exchanged for the new model with gauge, if the user desires, upon payment of the difference in price, $2 and transportation charge, plus the usual exchange fee if the old tank is empty.

Prest-O-Lite Tanks are now handled by practically all motorcycle and automobile dealers in the United States.

Investigate Prest-O-Lite

Some of your friends are probably using this splendid lighting system.

Ask them if it costs any more to maintain than the troublesome, treacherous generator.

Ask them about its convenience, safety and insurance against accidents. Ask them how much pleasure they find in having 40 hours of brilliant, unflickering, dependable light, turned on and off like a gas jet.

Just one accident due to poor light would probably cost you more than a year's supply of Prest-O-Lite.

Get the genuine. Imitations can be exchanged in very few places. Prest-O-Lite Tanks, when empty, can be promptly exchanged, anywhere and always.

The Prest-O-Lite Co. 245 E. South St. Indianapolis, Ind.

Branches at Atlanta, Baltimore, Boston, Buffalo, Chicago, Cincinnati, Cleveland, Dallas, Detroit, East Cambridge, Jacksonville, Kansas City, Long Island City, Los Angeles, Milwaukee, Minneapolis, New York, Oakland, Omaha. Philadelphia, Pittsburg, Providence, San Francisco, Seattle, St. Louis and St. Paul.

EXCHANGE AGENCIES EVERYWHERE

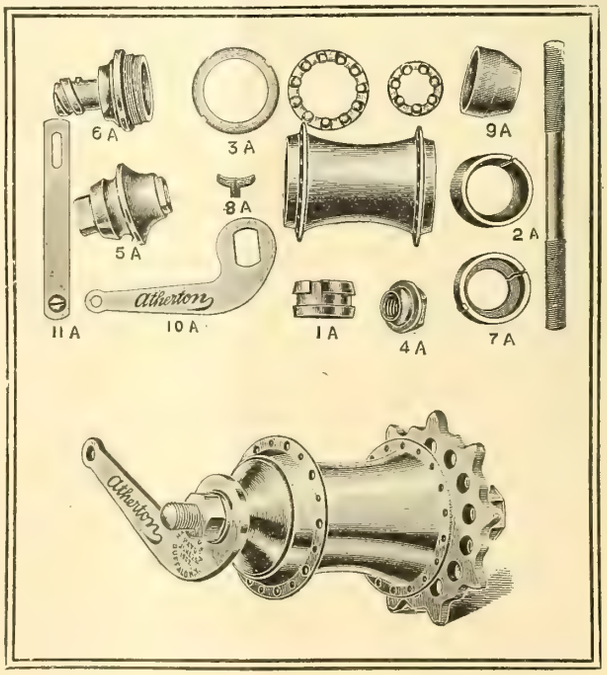
Dimensions: Length, 12 inches; diameter, 4 inches; weight, 7 lbs.

No slip in braking or in forward driving in the

CONCAVE ATHERTON

Coaster Brake for Bicycles

In the 1911 model there are three braking surfaces, giving as much or as little braking effect as the rider chooses.



Two driving points of contact make certain that there is no possibility of slip in the forward drive.

In every Atherton coaster brake there is satisfaction for both the rider and the dealer. It is the brake that affords absolutely free coasting and perfect braking.

Get the up-to-date coaster brake while you are about it.

It stays right!

QUOTATIONS AND DESCRIPTIVE MATTER ON REQUEST

D. P. HARRIS HARDWARE CO., Distributors

48 Warren Street, New York

Licensed Coaster Brake Manufacturers

SPEAKING OF SUPREMACY

That was a fine little performance at Marion, Indiana, September 24. The little 4 H. P.

Indian

Won the 100 Mile Race Without a Stop

Of course that was only one race. But just look back over all the 100 mile races that have been run, and you will find that Indians have won 99% of such long distance events.

Then, recall that the Indian set up a record (a real record) for 24 hours two years ago—and no one has ever thought of attempting to better it. It requires reliability to go 24 hours on a stretch.

Again—just an Indian incident. Two young fellows who own single cylinder Indians decide they would like to go to California. THEY WENT. Left New York July 31. Arrived at 'Frisco September 23. That's the Indian way.

The BROOKS B104 Motor Cycle Saddle—specially constructed to give a low-riding position and made either with plain or padded top.

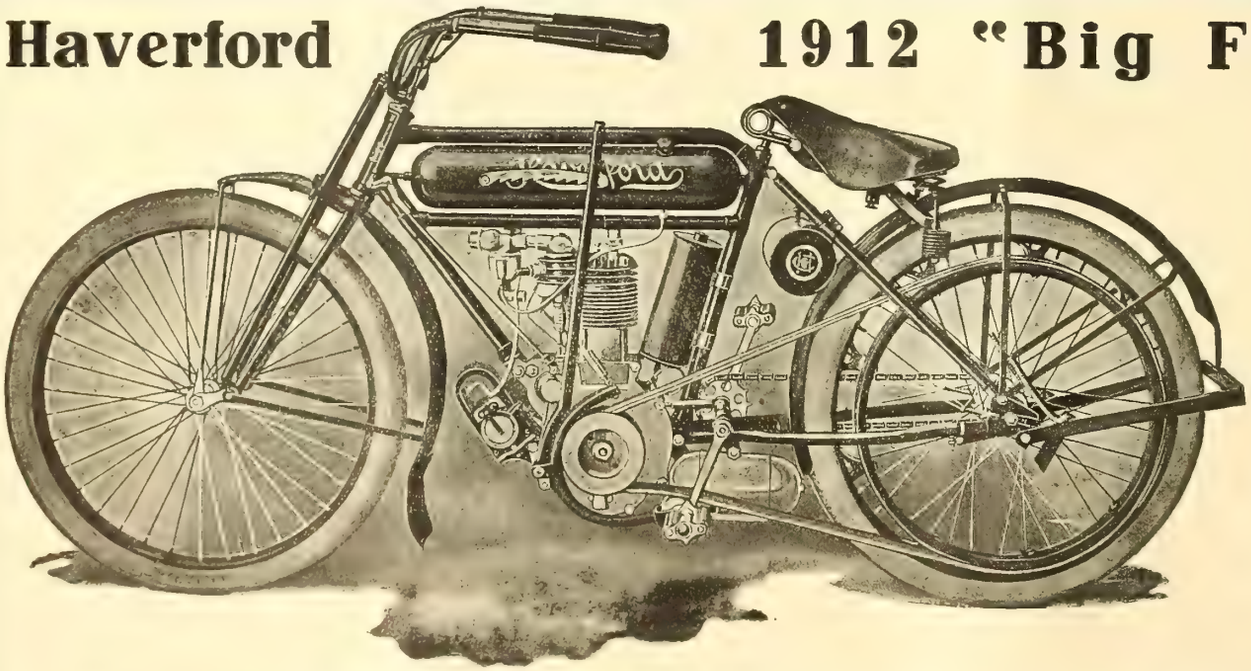
In the World of Wheels there is no name with a higher reputation than that of

BROOKS

and—

The simple act of comparison between the saddle that bears it and the others, will immediately reveal the BROOKS superiority. Remember, the original and only genuine compound-spring saddle—the BROOKS—is the only saddle that can embody the BROOKS Compound Springs, which springs entirely absorb vibration within themselves and ensure an absolute immunity from the common fault of bouncing—other springing systems may have some virtues, but they invariably fail in the matter of that compensating action so essential to the rider's ease and comfort—

And what think you will your customer think of that?



J. B. BROOKS & CO., Ltd., 73 Criterion Works, Birmingham, England

Distributing Agents for U. S. A.—THE D. P. HARRIS HARDWARE CO., 48 Warren St., New York

The BROOKS B250 Motor Cycle Seat—designed for machines of the non-pedalling type. Made either with plain or padded top.

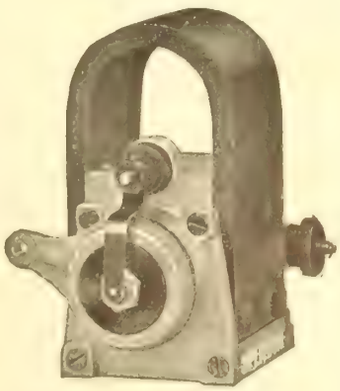
SPLITDORF MOTORCYCLE PLUG

WITHOUT A PEER



Huron, S. D., Sept. 19, 1911.

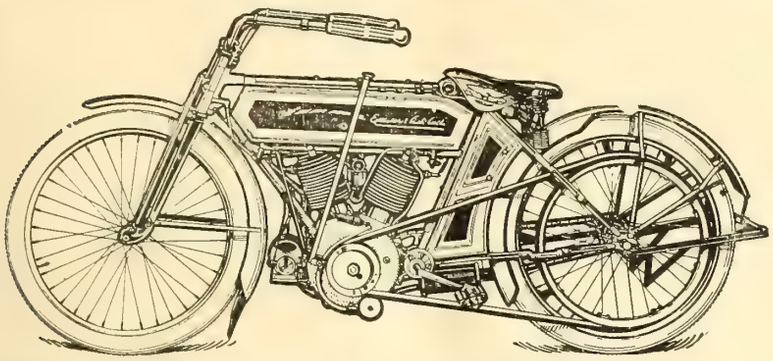
C. F. SPLITDORF, New York.

Dear Sir:—After using practically every spark plug on the market, I can truly say that your Plug stands without a peer in the field of motorcycling today. The Splitdorf Plug I am now using in my Excelsior 4 has run me 1369 miles without being once removed.

Thanking you for past favors, I beg to remain,

Very truly yours, G. V. ROLPH.

THE SPLITDORF MAGNETO



too, typifies a high and advanced example of ignition engineering skill. It embodies many exclusive features, placing it in a class far in advance of all ordinary types. Short circuiting from mud and water is reduced to a minimum, and perfect and continuous service is assured.

A CHAMPION RIDES A CHAMPION

1912 Excelsior, De Rosier Riding, Cuts Champion's Own Record

De Rosier, the world's champion motorcyclist, road a 1912 Excelsior at the Riverview Park Motordrome, Chicago, on Sept. 17, and slashed two seconds off his own world's record. A gradual process of elimination convinced the world's most famous motorcyclist that the 1912 Excelsior was the ONLY machine worth considering.

Here's what the Excelsior has done this season:

On August 19 it cut 3 mile record to.....2:02⅖
On August 19 it cut 5 mile record to.....3:28⅖
On August 26 it cut 1 mile record to.....0:40⅕
On August 26 it cut 2 mile record to.....1:24
On September 2 it cut 2 mile record to.....1:22⅖
On September 17 it cut ⅝ mile record to.....0:23⅕

Above records made in competition

The 1912 Excelsior is the best general service machine on the market. De Rosier's record proves that its amazing speed possibilities make it the logical machine for you to buy.

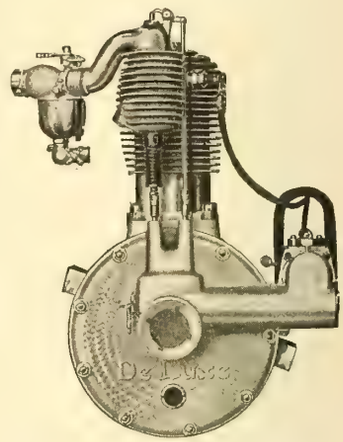
A REVOLUTION IN MOTORCYCLE MOTOR DESIGN

In bringing out our DE LUXE line of motorcycle motors, we have introduced a large number of improvements, and offer these motors as the most advanced now before the trade.

NOTEWORTHY IMPROVEMENTS.

One piece crank shaft.
One part crank case with cover.
Improved cam and magneto drive.
Oil tight motor.
Large Valves.
Simplified design throughout.
Reduced number of parts.
Quiet running motor.
Large Ball Bearings mounted in steel lined pockets.



Equipped with Bosch Magneto.

These improvements in design, together with the high grade materials used in construction, the modern methods of manufacturing applied, and the remarkable performance of these motors in road tests mark a revolution in motorcycle motor building.

Real Money in This Tube for You

YOU are actually losing money if your stock of bicycle supplies does not include NEVERLEAK, the wonderful Tire Fluid that automatically heals punctures on the run without the rider having to dismount. Thousands of dealers are making big money handling

NEVERLEAK TIRE FLUID

which is the only legalized tire fluid sold to-day.

Besides the fine margin of profit that NEVERLEAK pays there is also a big list of premiums that have value written all over them.

It will pay you to investigate. See your jobber about it, or write us direct.

BUFFALO SPECIALTY COMPANY, Buffalo, N. Y.

It's Consistency That Counts

About a year ago a 4 H.P. single cylinder EMBLEM MOTORCYCLE established a 100 miles world's record for belt driven motorcycles on a dirt circular track—in competition against machines twice the power. The time for that 100 miles—made by L. S. Taylor—was 111 minutes. **That record has never been broken.**

"IN THE LONG RUN"

On Sunday September 17th, 1911, the EMBLEM MOTORCYCLE again demonstrated its staying qualities—ITS CONVINCING CONSISTENCY—by winning the 100 miles Free-for-all race at Columbus, O.—in gruelling competition against some of the fastest machines and nerviest riders in America. Not only did a belt drive Emblem win this race, but its rider, George Evans, broke the former world's record of 105 minutes. Evans covered the 100 miles in 102 minutes 9 2-5 seconds. Another Emblem finished fourth after losing 10 minutes through a punctured tire.

Such consistent performance is assured every rider of an Emblem Motorcycle. Dealers are assured satisfied customers. We are closing 1912 territory. Better write today.

Another Great Endurance Test Proves Superiority of Goodyear Motorcycle Tires

These trouble-proof motorcycle tires came through eleven hundred forty miles of mud, ruts and macadam, with original air, no punctures, no tire troubles of any kind. The splendid endurance of Goodyear tires has again been put to the test.

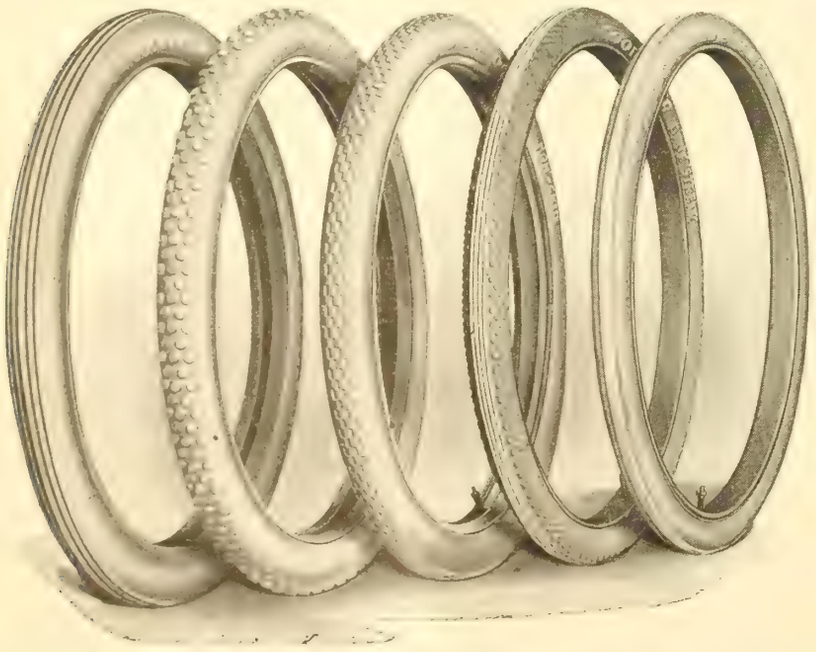
J. G. Underhill rode from Chicago, Ill., to Morris Plains, N. J., a distance of eleven hundred forty miles in six and one-half days, five of which he had nothing but mud, ruts and new macadam to contend with.

GOODYEAR
Stock Motorcycle Tires

He writes that he came through with original air and with tires as good as new.

This forged another link in the long **chain** of events won by Goodyear motorcycle tires. Events that prove the unquestionable superiority of these thick treaded big value motorcycle tires.

And herein lies the kernel of another **reason why** you should **insist** on a Goodyear Motorcycle Tire Equipment and accept no tire "just as good." **For there is none.**



Plus in Service But Not in Price

Goodyear Motorcycle Tires are so resilient yet so durable that they hold all world's records both for speed and for endurance.

Yet they cost no more than the best tires they have vanquished, and they have vanquished them **all.**

The reason is this:

We have been manufacturing **Auto Tires** for over 13 years. The Goodyear No-Rim-Cut Auto Tire is acknowledged by garage men and motoring public as today's most successful tires.

The demand for these tires multiplied six times over in two years. 222,000 of them were sold in six months ending July 1, 1911. The capacity will soon be brought up to 3,800 a day.

The Goodyear Motorcycle Tire is a small edition of the auto tire.

The same machinery, the same skilled workmanship and the same 14 years' experience that perfected one, perfected the other; without great additional expense. Furthermore in the purchase of the raw materials we were able to take advantage of an enormous buying power already established.

Thus you are able to buy these extra service tires without paying extra for them.

Thicker Treads—Better rubber—Stronger fabric—a method of our own of fastening tires to rim in a grip that never can let go—

These are but a few of the patent advantages offered you in these fuss-and-fume proof money-saving tires.

Furthermore you can now choose your tire according to your road. This means an enormous amount of extra service. The tires fit all standard rims.

Send for "Tires of Old War Horse."

A fascinating story of the actual breaking of a record. Chuck full of money-saving tips of tire buyers. Also brings full information about the Goodyear Quintette of Motorcycle Tires. Write tonight.

Ride One of These 5 Great Tires for All Roads—All Rims.

1—Goodyear Corrugated Tread Tires—For the average give-and-take road.

2—Goodyear Studded Tread Tires—For mud, sand, snow and ice travel.

3—Goodyear Non-Skid Tires—For use on slippery city pavements.

4 & 5—Goodyear Blue Streak Racing Tires—Hold all world's records. One tire for dirt tracks, another for cement or board.

Vol. LXIV. New York, U. S. A., Saturday, October 7, 1911. No. 3

NEW INTERESTS IN KOKOMO RUBBER

Hamilton and Willis Purchase Stock in Company—Former Resigns from Continental and Goes to Kokomo.

Announcement comes from Kokomo, Ind., that Fred I. Willis, of the Hersey-Willis Co., Indianapolis, and George H. Hamilton, New York representative of the Continental Rubber Co., of Erie, Pa., have purchased a considerable amount of the stock of the Kokomo Rubber Co., manufacturers of the Kokomo motorcycle and bicycle tires, and at the next annual meeting of the stockholders will be made members of the board of directors of that concern.

It is said that the acquisition of stock by Willis and Hamilton will not affect the general organization of the company further than has been indicated, and that the present officers will continue in charge under the presidency of D. C. Spraker, who has been at the head of the company since it was organized. It is understood that Hamilton has resigned from the Continental company and goes to Kokomo, where he will be actively engaged in the sales department, while Willis will continue his connection with the Hersey-Willis Co. and divide his time between that company and the Kokomo Rubber Co. Special attention will be given to motorcycle tires.

George H. Hamilton, before his connection with the Continental Rubber Co., beginning the early part of this year, was with the G. & J. Tire Co., at Indianapolis, hence Kokomo will not be an entirely new section of the country to him. He will probably remain in New York for several weeks in order to properly settle his affairs before taking up his new duties.

Too Well Known To Be Mistaken.

Through a typographical error in the columns of the Bicycling World and Motorcycle Review last week the address of the firm of Charles E. Miller, dealer in motorcycle supplies, was given as 97-103 Reade street, New Orleans. The firm is probably too well known to necessitate a correction of this mistake, but, however, for the guidance of those who may not as yet have benefited by such acquaintance it might be well to state that the home offices of the firm are located at 97-103 Reade street, New York City. A branch is maintained at 601-603 Baronne street, New Orleans.

Tormey Leaves Aurora Company.

J. S. Tormey, well known Thor traveling man, will sever his connection with that concern to accept a position with the Goodyear Tire & Rubber Co. on the Pacific a week at the Goodyear plant in Akron on his way to the coast and expects to arrive at his destination about the 15th. It will be a case of "come back" for Tormey, for he is a native of the coast and also traveled that territory for the Excelsior Supply Co. some time ago, hence he will not by any means be "a stranger in a strange land."

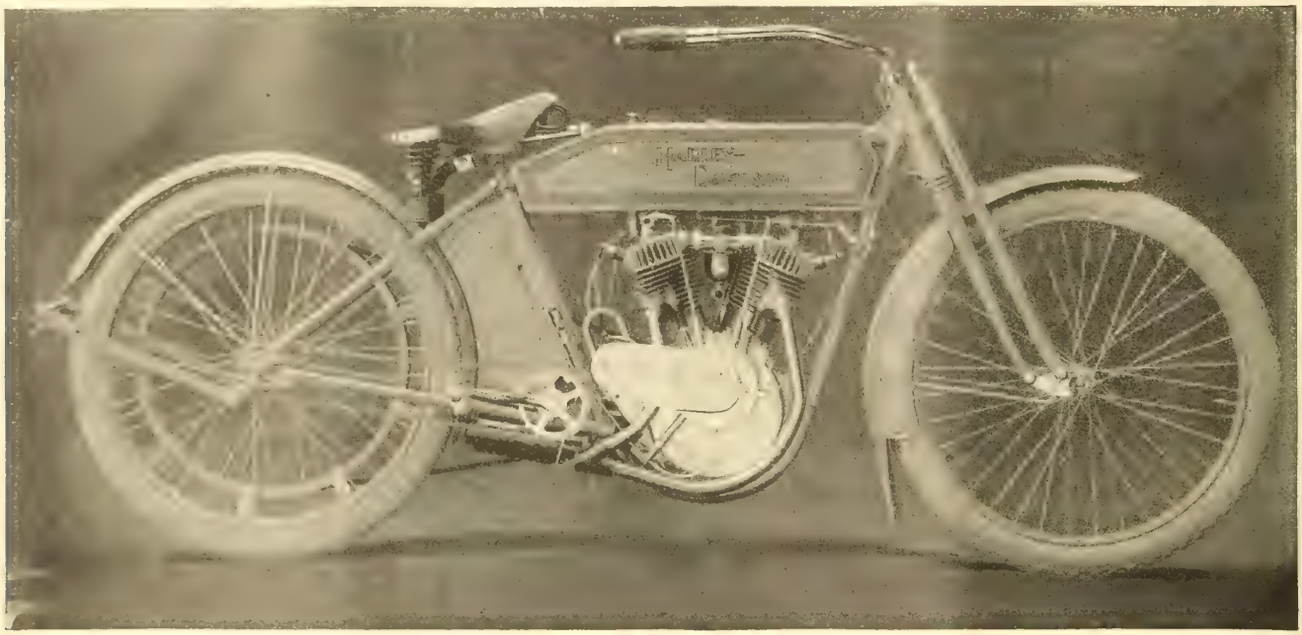
Cox, Pope Manager, on Extended Trip.

J. F. Cox, manager of the bicycle and motorcycle department of the Pope Manufacturing Co., of Hartford, Conn., started on last Thursday for an eight weeks business trip through the West and Southwest. He will visit Chicago, Minneapolis, St. Paul, Seattle, Spokane, Portland, Tacoma, San Francisco, Los Angeles, then through Texas, returning about December 1st.

THE "BIG NOISE" FROM HARLEY

Many New Features in New Models, Including "Free Wheel" and "Ful-Floteing" Seat—Prices Reduced.

Radical new features, contributing materially to greater comfort and flexibility of control, mark the 1912 Harley-Davidson motorcycles, which the Harley-Davidson Motor Co., Milwaukee, Wis., will offer in three models, viz., four horsepower singles with either magneto or battery ignition, listing at $225 and $200, respectively, and a six and one-half horsepower twin, magneto only, which will list at $275. On all models, the new "free wheel," which is a rear hub clutch giving the same advantages as a free engine device, will be furnished for $10 extra.



Sharing honors as the topliners on the list of new features are the "Ful-Floteing" seat and the "Free-Wheel." Both are claimed to be the result of several years of unrelenting experiment in the ceaseless pursuit of perfection and to represent a very close approach to the unattainable standard sought. Taking its name from the remark of a young lady who was asked to try it, and give her opinion after the test, who said: "It just seems as though that seat floats on air; no jar and no vibration"—the "Ful-Floteing" seat is offered as a sure cure for vibration on rough roads.

It is claimed to combine all of the advantages of spring frames, spankers, shock absorbers and other cushioning devices without embracing any of the alleged disadvantages of those constructions. Brutal punishment in the hands of factory testers and outsiders is said to have developed no

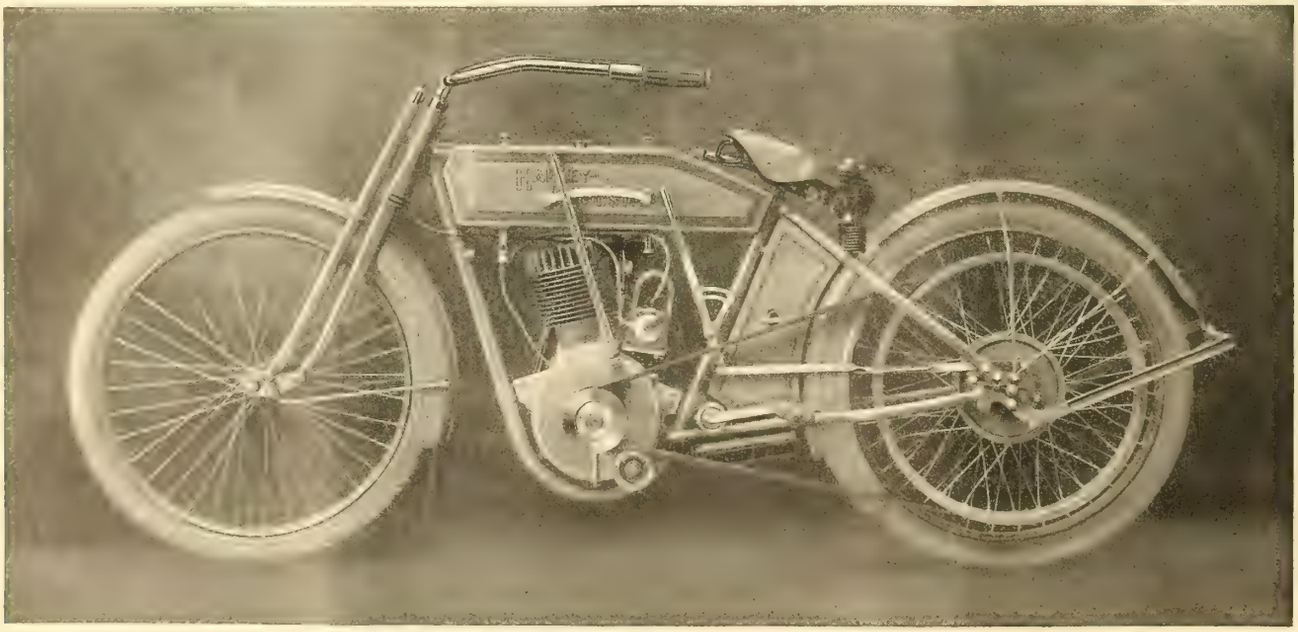
defects in the seat in its present form. In appearance the seat post resembles a spring device, but it is stated that it differs mechanically from spring posts in that the horizontal seat post is hinged to vertical

ness as "'hitting bottom" is said to be unknown, likewise twisting of the seat post, and side-sway is claimed to be impossible. Ample provision for rebound is provided. By the dropping of the top frame tube at

gine clutches. It necessitated radical changes in the rear stays, the designing of an entire new rear hub and the mounting of the rear belt pulley on a separate set of spokes instead of the usual rim lugs, the

1912 HARLEY-DAVIDSON 6 1-2 HORSEPOWER TWIN WITH STANDARD EQUIPMENT, $275

plungers held in suspension between two sets of cushioning devices. The plungers work in the frame tube ordinarily devoted to the seat post.



Among the advantages claimed for this

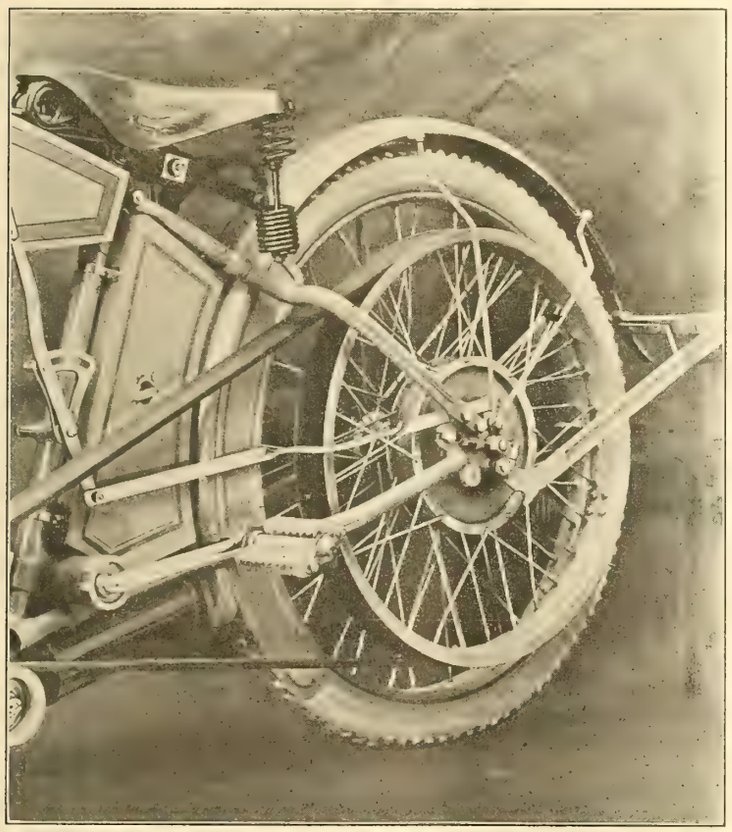
the seat cluster a seat position two inches lower than heretofore was obtained. The rear end of the horizontal seat post also is dropped slightly.

Not as a substitute but as a real improve-

considerable expense involved in these alterations being incurred only because the device "made good" so well that it warranted the changes.

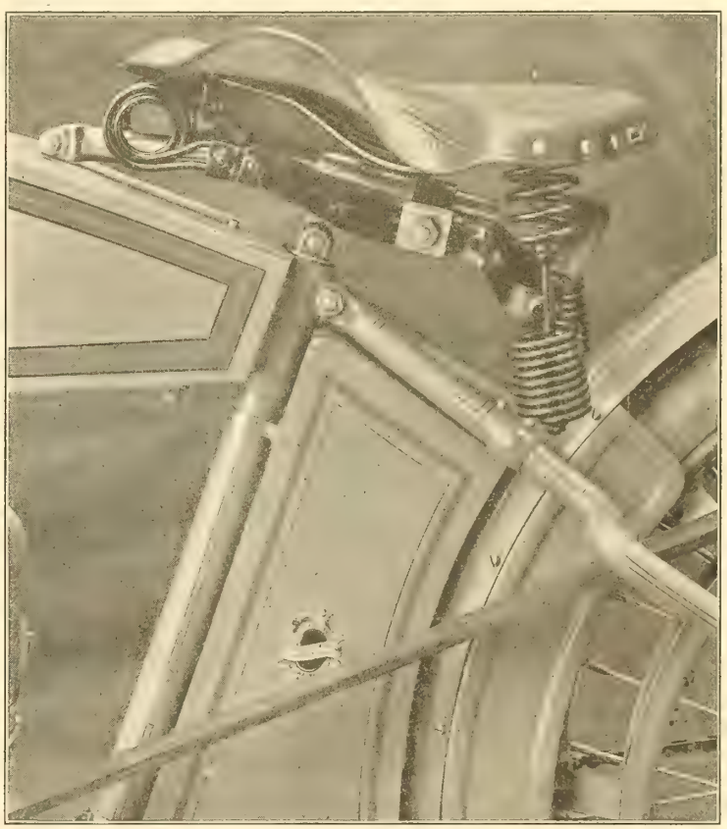
The free wheel mechanism is contained

1912 HARLEY-DAVIDSON 4 HORSEPOWER SINGLE WITH FREE WHEEL, $245



device are that "it rides like a boat"—its action being compared to that of a well sprung motor car passing over a rise or depression, when the chassis rises or drops, as the case may be, while the body and passengers remain undisturbed. With the "Ful-Floteing" seat such unpleasant-

ment over the free engine clutch, the "free wheel" is offered. Like all other Harley-Davidson features, it has undergone crucial testing before it was adopted, and only then because it earned it. The free wheel represents a development along a new line after experiment with all sorts of free en-



in an enclosed drum mounted on the left side of the rear hub, and its operation is controlled by a hand lever working in a sector which is mounted on the seat mast tube. The well known Harley-Davidson type of idler is retained. By the location of the clutch mechanism in the rear wheel,

sufficient room is available for making the friction surfaces of ample size for the working stresses, in contrast to the limited space available on motor or countershafts. The friction surface of the free wheel clutch is said to be from five to seven times as large as on the ordinary clutches.

Other advantages of the free wheel clutch, as claimed, are that it permits of a higher belt speed, thus transmitting more power than in a clutch where the belt moves slower. Also the hub clutch in combination with the independent suspension of the rear pulley acts as an additional flywheel, and requires, it is said, less power to overcome the inertia of the rear wheel.

THE "FREE WHEEL" DEVICE

THE "FUL-FLOTEING" SEAT

This feature is claimed to eliminate the necessity of racing the motor when operating the clutch on a single cylinder machine, and racing of the motor never does an engine any good.

Through the momentum of the fast moving belt and the revolving rear pulley, it is claimed that when the clutch is withdrawn, the engine does not tend to race but can be throttled down unusually slow, reducing the tendency to overheat when free engines are turning over fast. The mounting of the clutch in the rear wheel also affords a more protected position in case of falls or other accidents. Not the least attractive feature of the device is the claim that in engaging it it does not have to be "nursed" in for fear of stalling the motor but can be engaged without hesitation. That simplicity has not been lost sight of is apparent in the fact that in removing the rear wheel only one more nut than heretofore has to be loosened.

Lesser changes which apply to all models are a heavier frame head, now providing double reinforcement at this vital point, a slight change in the rear stand, drop forged reinforcement of the axle jaws of the rear stays, preventing any twisting of the stays by a severe pull of the brake arm, a new brake arm fastening, front mud guard side shields to catch mud and water, particularly on corners, relocating the tank filler nozzle further forward, new type of piston and improved balancing of the connecting rod in the motor, a lower and further forward saddle position, an eccentric hanger permitting wider range of belt adjustment, a larger and more complete tool equipment and improved finish. Imported wire replaces the piano wire formerly used in the controls. The Bosch magneto is used exclusively for this type of ignition system.

Changes applying specifically to the twin, while numerous, are in the nature of refinements rather than new and radical adoptions. Simplification of the inlet valve operating mechanism has given greater power and speed, and also eliminated rocker clicking. In fact, emphasis is placed on the degree of silence which has been attained in the 1912 twin. The inlet push rods have been made adjustable for wear, and take-up springs placed under the rockers. Motor changes include an improvement in the lower connecting rod bearing, as well as new type pistons and balanced conecting rods. The belt width has been increased to two inches. Increased motor flexibility also has been obtained.

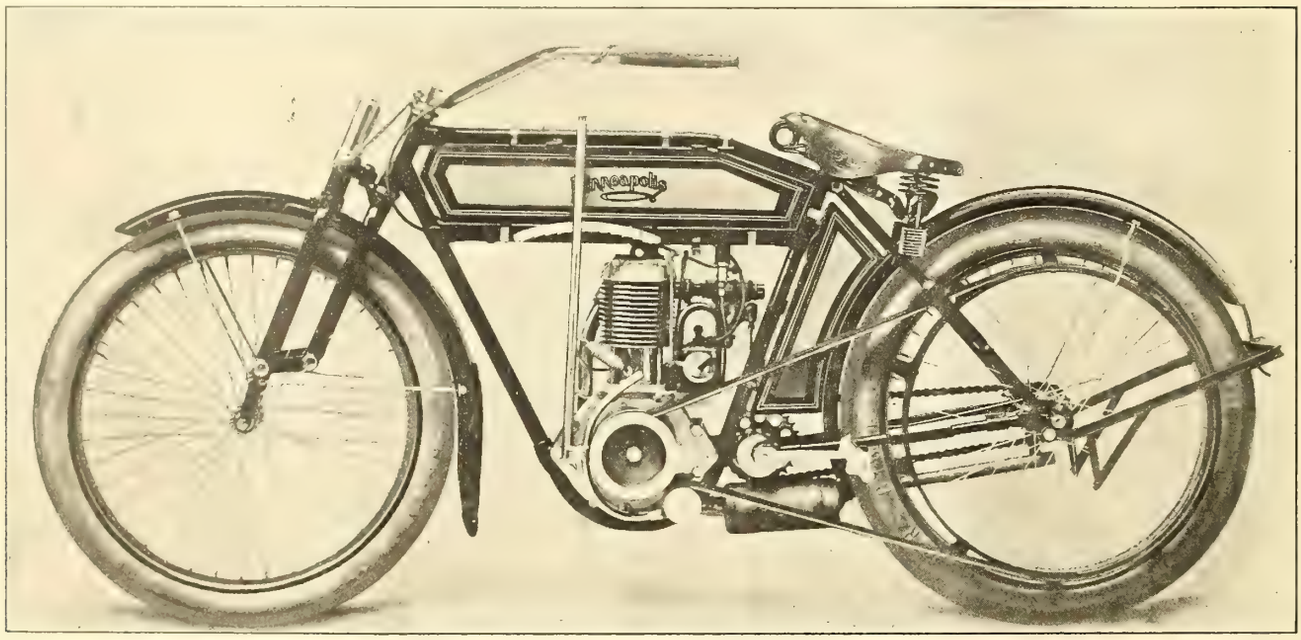
Easy Starting With New Bosch Magneto.

"Not because it required it but to help the motorcycle manufacturers get their machines to start easier, although the real fault lies with the carbureters, there will be a slight change in our 1912 motorcycle magneto," says Advertising Manager A. H. Bartsch, of the Bosch Magneto Co., of New York City. "The change," he went on, "will consist of an addition to the armature, and will enable machines to be started and run on a slower armature speed than heretofore. The continued popularity of the Bosch magneto among motorcyclists is evidenced by the fact that we already have in hand for next year contracts enough to keep us going to the limit."

Haverford Incorporates in New York.

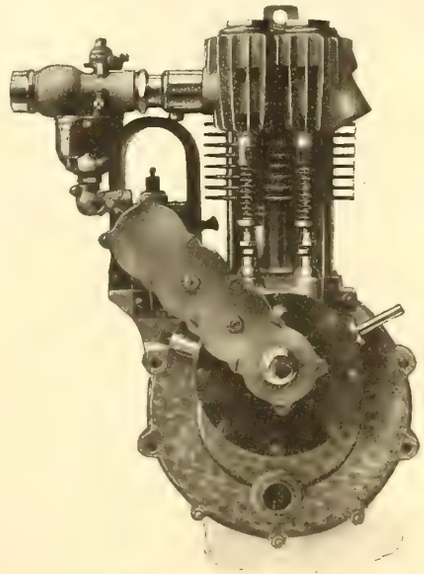
The business of the Haverford Cycle Co., of Philadelphia, Pa., with branches in New York, Buffalo, Washington, Atlantic City and Newark, has grown to such an extent that Mr. Max Sladkin, the moving spirit of the concern, has deemed it wise to incorporate the company under the laws of the State of New York, with a capital stock of $250,000. The company, which has recently placed on the market a new "Big Four" motorcycle, will carry on a most aggressive selling campaign for the new model, as well as their extensive bicycle line.

MINNEAPOLIS WITH CHAIN AND BELT



Two Big Five Singles for 1912—New Model Has Flat Belt With Idler—Chain Model the Same as Heretofore.

Two models, one belt and one chain, both employing the well-known Minneapolis unit power plant, and save in transmission, being of the same general construction, will constitute the 1912 line of motorcycles of the Minneapolis Motorcycle Co., of Minneapolis, Minn. The chain model is a perpetuation of the present machine of that type, while the belt model is a brand new creation, and marks the surrender of the last exclusive chain drive motorcycle manufacturer to the demand for the belt drive.



With the difference in type of transmission, together with the obvious fact that the belt model will not include the two-speed gear used on the chain machine, both machines otherwise practically are from the same mould, and a description of one will apply to both. Like its mate, the belt model is rated at five horsepower, and mounts a single cylinder engine, 3½ x 3¾, with mechanical valves alongside. A one inch Schebler carbureter feeds the motor, and a Bosch magneto starts the rumpus in the cylinder at the proper time. Magneto ignition is standard and exclusive equipment, a policy which hastens the complete extinction of the battery system for ignition.

For carrying the power to the rear wheel, a two inch flat belt is used, and an idler gives a "free engine" effect. The frame and fork are continued on present lines, the frame being of the full loop type, with rear slope on the top bar to permit low saddle position. The wheelbase is 55 inches, and 28 inch wheels shod with 2½ inch tires constitute the rolling stock. Reinforced tanks, capable of holding two gallons of gasoline and two and one-half quarts of oil, are fitted.

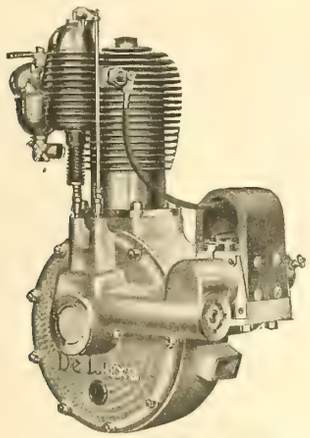
Changes in the chain model include the substitution of saw blade steel in place of fiber for clutch discs, the option of 26 or 28 inch wheels, and the improvement in appearance by the addition of pea green panels on the tank and tool box. Non-fluid grease replaces oil as a transmission lubricant, the former having been found more suitable for the purpose. The grease is said to furnish sufficient lubrication for six months without attention. Of course the unit power plant, in which the motor, clutch and two-speed gear are combined in a single housing, a distinctive and exclusive Minneapolis feature, is retained.

1912 MINNEAPOLIS 4 HORSEPOWER WITH BELT DRIVE

THE MINNEAPOLIS MOTOR

NEW MOTORS FROM INDIANAPOLIS

DeLuxe in Singles and Twins With Shaft Drive Magneto—A Nine Horsepower Twin, Too.



Embracing such up-to-date features as annular ball bearings, one-piece crank shafts, mechanical valves, enclosed shaft magneto drive, "clean" design and high-grade materials, De Luxe motorcycles in four sizes, four and five horsepower singles and seven and nine horsepower twins, have been placed in the market by the F. W. Spacke Machine Co., of Indianapolis, Ind. Free engine clutches and two-speed gears also are furnished for any size motor in the line, and the engines are built for either chain or belt transmission. General design and features typical of the line are shown in the accompanying illustration of the four horsepower single cylinder motor. The cylinder and head is an integral casting, with valve pockets on the side. Valves are mechanically operated by a rocker arm. The valves are larger than those used in average motors of the sizes mentioned.

Inlet valves are made of nickel steel throughout, while exhaust valves have nickel steel stems electrically welded to cast iron bands. This construction is claimed to accentuate freedom from valve breakage and also from pitting. Between the valve chamber and cylinder an air chamber is provided, increasing the cooling efficiency. Crank shafts are one-piece forgings, this construction having claimed for it the advantages of rigidity, no tendency to spring and consequent elimination of any cramping or misalignment of the bearings. The crank shafts are carried on unusually large annular ball bearings,

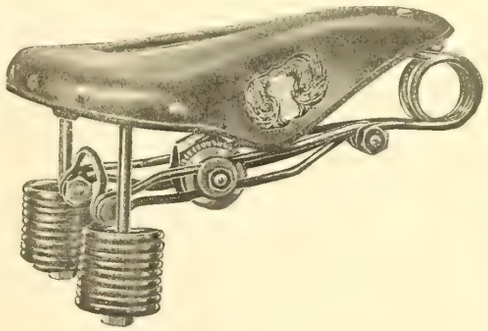
mounted in steel pockets, this mounting insuring, it is said, a satisfactory support of the shaft and fit of the bearing in the crank case. Crank shaft and wrist pin bearings are stated to be twice the usual size.

For ignition a Bosch magneto is used, and the driving arrangement is a departure from standard practice. The drive is by gears and enclosed lay shaft, the magneto being located back of the cylinders and taking its drive off the main shaft through the cam case. The gears are of alloy steel, hardened and ground, and all bearings also are ground. It is claimed that this construction permits of easy accessibility for adjustment or timing, and also simplifies and gives a quieter magneto drive by reason of the elimination of the usual train of gear wheels.

The crank case construction also is different from standard. While a two-piece casting, the case is not split vertically in the center, but the central section and left

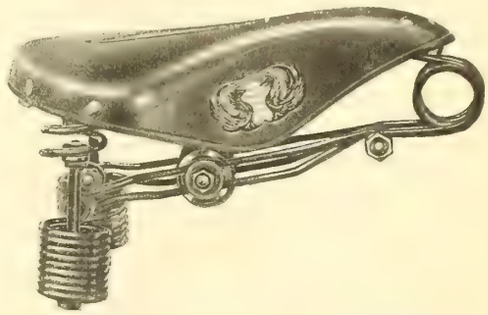
THE SPACKE MOTOR

side are cast integral, and the right side is a detachable plate, with a ground joint on the attaching faces. This ground joint is claimed to eliminate oil leakage, while the form of construction is offered as improving the rigidity of the motor and the sustained alignment of the bearings. The cover plate is attached to the case by nuts screwing on studs sunk in the rim of the case. An oil window is provided on the right side of the motor base. In the design simplification also has been kept in mind, and it is said that the number of parts is less than that required in average motors. Part of this accomplishment is evident in the absence of nuts, bolts and other mechanical gew-gaws scattered over the exterior of the motor.



High efficiency is claimed to have been obtained from all motors, and also silent running qualities. The nine horsepower motor is a special model.

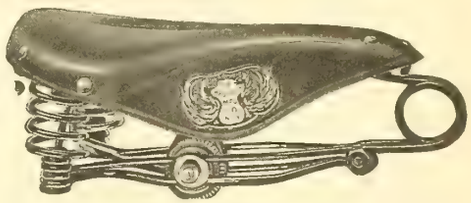
The firm of R. I. Appleton & Co., 15 Aire street, Leeds, England, has informed the American Consulate that it is prepared to consider agencies for American manufactures suitable as side lines to the cycle trade.



MESINGER LINE'S NEW OFFERINGS

Saddles in Types to Suit All Fancies—Progressive Alterations and Additions With Notable Features.

Bristling with special features as embodied in several new models, the 1912 line of the H. and F. Mesinger Manufacturing Co., including saddles for bicycles and motorcycles, has just been announced. The saddle line for both is most complete, there being no less than 13 models for bicycles with a separate attachable set of springs to be applied to any wood base saddle, and eight models for the motorcycles.



MODEL "U" SUPERB, SIZE 10½ x 7½

MODEL "A" SUPERB WITH SPRINGS

THE RACER KING, SIZE 11 x 6½

MODEL "U" SPECIAL, SIZE 10½ x 7½

Both suspension and padded, or cavalry, types are used in both lines and almost every conceivable variety and combination of springs is supplied, giving a range of choice that will suit the most exacting.

Of the new models for bicycles, the new Racer King is one of the more noteworthy. Its slim, narrow shape, with extremely narrow pommel and curved arched cantle, gives it a decidedly racy and light appearance, and coupled with the fact that it is made of the highest grade of materials throughout to secure durability and service with a minimum of weight, it will no doubt meet the approval of that class of cyclists for which it is especially designed.

The model "V" Special, with a top 10½ inches by 7½ inches, is another of the new members, and discloses a well designed spring system with which is incorporated the universal tilting clamp, permitting adjustment to any position. The model "V" Superb is the same top and suspension and truss system, with the addition of the well known extension springs of the type used on motorcycle saddles. The model "A" Superb is equipped with compound springs and has an ample seating surface measuring 11½ inches by 8 inches.

The entire line of bicycle saddles has been remodeled and every feature brought out to conform to up-to-date ideas. To insure the full elasticity of the tops of the suspension types, the rear cantle lays against the under side for only one-eighth inch; a clever and very substantial method of constructing the suspension rods eliminating the necessity of the large flat surface heretofore considered necessary for the strength of the cantle. This new construction is carried out on all of the suspension types, and in addition they have full reinforced tops of graceful elegant design with narrow pommels.

Estimates and Predictions on 1912 Output.

The Goodyear Tire and Rubber Co. states that predictions based on information furnished by motorcycle manufacturing concerns all over the country show that approximately 45,000 of these machines will be built in this country during the year 1912. Just how many motorcycles will actually be in use in the United States when these are distributed can hardly be estimated, but the figures would run well into the 100,000 column.

In all 32 companies will contribute to this output, but the most of these are only "dabbling" in the business in a small way, and of the 45,000 machines all but about 1,000 will be made by 12 firms.

The tire equipment of this output is no small factor in the motorcycle industry, and 11 of the largest manufacturers have already closed contracts with the Goodyear Tire and Rubber Co., they claim, covering approximately 15,000 pairs of tires. This means that at least one-third of all motorcycles made in this country will leave the salesroom equipped with Goodyear tires.

Notice has been filed with the Secretary of State of Indiana of the dissolution of the Kokomo Motorcycle Co., of Kokomo.

Crawfordsville, Ind., Sept. 6th, 1911.

The Corbin Screw Corporation,
New Britain, Conn.

Gentlemen:

SAY! Talking of brakes reminds me of this summer when I was out with an old Pal of mine.

He was riding a ------, and his clutch sleeve was constantly slipping. I gave him the "Ha-Ha" and told him to get one that never wears out.

"What have you got?" he says.

"Corbin, of course."

"Don't they slip?"

"No."

"Well, I'll have one,"----and he has.

When you say "Corbin," she is there with the goods. Well, if you can make your brake any better, either for bicycle or motorcycle, I'd like to see it.

You may send me booklets, transparencies, circulars, hangers and catalogs, and I'll assure you that they will not be thrown away or illegal distribution made.

Yours truly,
ARTHUR C. TILNEY.

To Facilitate Matters Our Patrons Should Address us at P. O. Box 649.

NEW YORK, OCTOBER 7, 1911.

"Live" Vs. "Dead" Motors in Races.

While the ruling issued by the chairman of the Competition Committee as regards "live" or "dead" motors on standing starts in future races will throttle any possible sporting litigation on that point henceforth, it appears that in the test case just decided the rumpus raised largely was due to the fact that the machine which was protested won the race, and because it was allowed to start with its motor running other contestants "went up in the air," claiming that the start with a "live" motor had given the winner an advantage which contributed to his victory. It does not seem that the importance of the case warranted the amount of fuss made over it, and yet if there were any higher courts in the F. A. M. it is quite probable that further appeals would be taken.

Viewed from a broad and impartial standpoint it is difficult for us to see how a rider of a machine without pedals and pushed off with his motor running free has any advantage over a rider pushed off with his engine at a standstill. In fact it seems to us that even allowing him a "live" motor the former rider is at a disadvantage owing to lack of pedals. In theory there is an advantage in that the rider with the "live" motor knows absolutely that his motor will run, while the rider of the "dead" machine is taking a chance, very small as a matter of fact, but a chance nevertheless, as to whether or not his motor will start

Practically speaking, however, conditions are reversed by the fact that in a standing start race, even though a rider gets away with a "live" motor, there are big odds in favor of his stalling when shifting the clutch or speeds, and even should he escape this misfortune he cannot hope to get under fast headway as quickly as the rider who has no clutch to fuss with.

Hardly a racing man but will agree that he can get away quicker with a direct drive machine than with one which has a clutch and transmission, and quick starts often determine the winner. Furthermore, the machine which was disqualified carried more weight than any of the others, and had the rider stalled his motor he would have been unable to restart as easily or as quickly as the others.

Summing up, it seems to us that the winner conceded more to the others than they did to him, that he won fairly and that the protest was not good sportsmanship. The referee seems to have given all the contestants an even break and his decision should have been sustained.

Best Solution of Canadian Tangle.

For the best interests of all concerned, the very best solution of the Canadian situation with regard to the control of motorcycling in that country seems to be the plan now being talked of by the Canadians themselves, to organize a motorcycle governing body of their own and consummate a working agreement with the F. A. M. While the offer of the F. A. M. to exercise a guardianship over Canadian motorcycling, and organize a Canadian district under the same form of government as the districts in this country, was an unselfish and friendly one, extended purely with the motive of enabling the Canadian motorcyclists to "find" themselves and bring order out of chaos with regard to the regulation and supervision of the sport, the offer in many quarters was regarded with deep distrust and suspicion by the Canadians.

They saw, or thought they saw, in this tender of assistance, a subtle attempt to secure control of Canadian motorcycle affairs, which, if obtained, never would be relinquished, and would mean that forevermore Canadian motorcyclists would be under the domination and yoke of their American brethren. That impression naturally did not make a hit with the Canadians, and they vowed that they never would consent to such an agreement.

It would be suicidal for the F. A. M. to attempt to assume jurisdiction arbitrarily over the Canadians, for it never would be able to control the situation in that country, and there is nothing to indicate that the F. A. M. ever intended any such move. Its friendly offices, as contained in the action taken at Buffalo, simply were misunderstood by the Canadians.

As indicated elsewhere in this issue, steps already have been taken looking to the organization of a Canadian motorcycle association, and its birth in the near future clearly and accurately is forecasted. That such a foverning body is sadly needed is made evident by the chaotic condition of affairs which have existed throughout the Dominion the past season. Motorcycling in Canada now has reached a stage where it is absolutely necessary for a governing organization to assume control of the situation and administer the affairs of the sport. A crisis has been reached, and unless some capable and trustworthy motorcyclists of the Dominion who have the best interests of the sport at heart, take the reins in hand and set up an association that will be strong enough to command respect and allegiance and to assert itself, the sport will suffer seriously from the lack of a controlling head to curb the irresponsibles and the rival cliques and clans that are running things as they please.

There are numerous motorcycles clubs throughout Canada, many of them strong in numbers and influential, and if they will combine forces and assist in the founding of a national organization, their will must prevail. It rests with the Canadians themselves whether they will enjoy the benefits that American motorcyclists enjoy through the existence of the F. A. M., or whether they prefer a continuance of the present demoralizing state of affairs. The indications are strong that they do not want any more of the latter, and that they soon will adopt our way of letting a national body run their sporting events.

HAWTHORNE AND POLLOCK COMBINE

Bridgeport Company Buys Heavy Interest in Canadian Concern—Results of the Amalgamation.

For several months there has been brewing a plan for a closer trade relationship between the Hawthorne Mfg. Co., Inc., of Bridgeport, Conn., and the Pollock Mfg. Co., Ltd., of Berlin, Ontario, Canada. The Hawthorne Mfg. Co., Inc., is now a large stockholder in the Berlin company and the latter is preparing to manufacture under the direction of the former the full line of its products, under which may be mentioned the "Old Sol" line of lamps for bicycles, motorcycles and carriages, the Hawthorne four cylinder hand air pump, American suction cleaners, phonograph supplies, etc., etc., all under the patents, names and designs controlled by the Hawthorne Mfg. Co., Inc.

The net results of this amalgamation of the two corporations will be that the Canadian consumer will be able to secure at retail all the goods made by the Hawthorne Mfg. Co., Inc., at almost if not the same price as paid by the consumer in the United States.

Mr. E. A. Hawthorne, president of the Hawthorne Mfg. Co., Inc., is now in Berlin arranging for the complete re-equipment of the Pollock Mfg. Co., Ltd., with new and special machinery required to manufacture the diversified line of the Hawthorne Mfg. Co., Inc., and to school the heads of departments in the Canadian factory in their various mechanical and administrative duties. Mr. Arthur B. Pollock, president of the Pollock Mfg. Co., Ltd., is arranging to start within a few days on a selling trip, which will take him from the Maritime Provinces of Canada to the extreme West Coast, visiting all points on the way.

Berlin, Ont., is the manufacturing city of Canada, having 22 furniture and seven rubber goods factories, with a number of other factories, in which is manufactured almost every kind of merchandise. The Pollock Mfg. Co., Ltd., owns its own factory and several acres of ground along the tracks of the Grand Trunk Railroad main line and about midway between Buffalo and Detroit, which gives every facility for prompt and rapid shipment.

Contemplated changes in designs and plans for the extension of the "Old Sol" line have been completed. The lamps and generators furnished in the past have met with such a welcome that new models have been added to round out the former line and to satisfy all the ideas and whims, as well as the pocketbook of the user.

First in importance is the new tail lamp, attachable to the rear mudguard. This lamp is supplied complete with bracket at $1.50. Another offering will be a separate generator outfit, the lamp part and generator of the No. 3 lamp separated. This is added in response to quite a call for such a lamp, and the makers feel certain that it will receive a midespread welcome. The No. 3 lamp has been used by many for carriage work. This lamp is now arranged with the lamp part attached at its side to the side of the generator and equipped with a rear red light and a special band and socket to fit a carriage finger. This same equipment is arranged for use as a separate generator outfit.

Consequent to the tremendous growth of the bicycle business, there is need of a new lamp. This condition was met in part with the "Old Sol" bicycle lamp No. 6, retailing at $4, but the price was a little high to exactly suit. The new bicycle lamp is now ready to market; it will be known as "Old Sol" bicycle lamp No. 10, price $2.50. It is said by the makers to be remarkable value for the money. The light given exceeds that of any other bicycle lamp and most motorcycle lamps, and the accessibility of all its parts, ease of operation and uniform dependability will be a revelation to the users.

Every "Old Sol" lamp and generator, before being finally passed by the inspectors, is tested with carbide and water, burning its own gas. This is true not only of the high priced models, but will be equally true of the new bicycle lamp, thus assuring the purchaser of only tested goods when he selects the "Old Sol."

E. C. Godfrey, formerly connected with the automobile supply business, has entered the employ of the Hawthorne Mfg. Co., Inc., and will cover territory in the interests of the "Old Sol" line of lamps for bicycles and motorcycles.

Smith Joins Iver-Johnson Staff.

George C. Smith, well known in the east as a traveling representative of the Reading Standard bicycle and motorcycle lines for the past six years, and for seven years previous to that with the Pope Manufacturing Co., has severed his connection with the Reading Standard Co. and will take up duties in the same capacity with the Iver Johnson's Arms and Cycle Works in their New England territory.

Roberts Becomes Troxel Sales Manager.

H. T. Roberts has resigned his position as sales manager of the Thor and will now be connected with the Troxel Mfg. Co., Elyria, O., in assisting Secretary Brandt in managing the well-known saddle business, paying particular attention to the sale of motorcycle saddles.

Harris to Handle Brooks Saddles.

The D. P. Harris Hardware Co., 48 Warren street, New York, has been appointed United States distributor for the Brooks saddles, manufactured by the J. B. Brooks Co., Ltd., of Birmingham, England.

THREE MORE JOIN N. Y. M. D. A.

Instalment Sales Occupy Attention of Meeting—Amendments to Agreement Are Adopted.

Several new members, the acceptance of one of these at least greatly enlarging the field of operations, also a larger scope allowed in the instalment sales plan, marked the regular bimonthly meeting of the New York Motorcycle Dealers' Association, held on the 2nd inst, at Stoetzer's Hotel, Brooklyn. Following the reading of the minutes of the previous meeting, Mr. C. E. Black, treasurer of the Motor Finance Co., reported that his company to date had handled approximately ten sales for various members, also that the company was very well satisfied with the deal so far, and further were considering investing a larger sum than was at first intended. Mr. Black offered several amendments to the existing agreement, which met with general approval and were adopted, being considered as greatly improving the sales plan and making the proposition more attractive to dealer and prospective purchaser alike. The amendments were as follows:

"Uniform terms on quotations to all and by all. One-third of catalog price of machine as initial payment and $5 per week subsequent payments; an additional 10 per cent. above list price; the company will finance the motorcycle instalment sales of out-of-town members within a radius of 50 miles of New York; the company agrees to finance the sales of used motorcycles valued at $100 or more; the company specifically agrees to finance no instalment sales except for those dealers who are bone-fide members of the association; the company agrees to improve in every way possible as the proposition develops the general plan, and if possible offer greater inducements to the prospective buyers."

The admission of George Sorenson to membership bespeaks a much greater range than was originally considered. Another new member received was William Vaughn, the hustling Long Island City dealer. Another Brooklyn dealer was also admitted in the person of the veteran, John Pflieger. After suggestions and discussions for the general welfare of the organization the meeting was adjourned to meet October 23.

Schickel Incorporates in Connecticut.

Norbert H. Schickel, of New York City, inventor of a two-cycle motorcycle, which was exhibited at the Chicago show last winter, has become incorporated at Stamford, Conn., under Connecticut laws, as the Schickel Motor Co., with $10,000 capital. The objects of the corporation include the manufacture of automobiles, motors, airships, etc.

NO SOLACE ON THIS PAGE FOR MUFFLER CUT-OUT FIEND

The Country's Press Takes Up Crusade Against Open Muffler — Editors Denounce the Habit and Some Try an Appeal to Rider's Better Nature — California Poet Joins the Condemnation Chorus.

The newspapers in all parts of the country have taken up editorially the open muffler question from time to time, and the following are but a few extracts:

The City Council of Chicago has passed an ordinance compelling the owners of motorcycles to muffle their machines, stilling the gatling-gun-like explosions, than which no noise of the city is harder to bear. Most, if not all, machines are equipped with mufflers, but the construction is such that with the muffler on the speed is reduced. So most owners tear through the streets and along country roads, their machines making a noise not to be compared to anything under the sun unless it be a machine gun, and spouting smoke and kicking up the roadway in the faces of those who may be compelled to fall in behind.

It is a fact that the ownership of a motorcycle seems to bring on a desire "to burn up the road." The temptation is too great to be overcome, in the majority of cases, and thus the motorcycle becomes a nuisance beside which the noises of an old-fashioned Fourth of July are indeed low toned.

The thing to do is to curb the speed tendencies of the motorcycle owners. If this be done it is likely the muffler will be more generally used. The motorcyclist has the same rights to the road as the owner of an automobile, a horse-drawn vehicle or a traction engine. But he has no more and he should remember the fact, when the inclination comes to dally with the law of gravity and to make his path hideous with noises that shock the nerves and jar the tympanum.—Springfield (O.) Sun.

Since it is practically impossible to keep the motorcycles off the streets of Chicago, the council has helped a little in muffling their abominable outbursts of unnecessary noise. The progress of a motorcycle, and especially along the residence streets, suggests nothing less than an explosion of fireworks on an insane Fourth.

Anything that will tend to restrain the motorcyclist, to curb his dangerous and reckless speed and abolish his pistol-shot explosions and nerve-racking clatter, will be a grateful assertion of needed authority.

The passage of the ordinance was a necessity. Its quick and rigorous enforcement will be a blessed relief to an over-tortured community—Chicago Examiner.

You can tell a gentleman by the way he rides his motorcycle. If it is run quietly, he is a gentleman. If the cut-off muffler rips and snorts, he is a low-brow. It never fails.—Columbus (O.) State Journal.

The following editorial, headed "An Earnest Pleas to Motorcycle Riders," appeared in the Los Angeles Examiner on September 18th:

"On the statute books of the City of Los Angeles is an ordinance providing for the operation of gasoline engines with the mufflers closed. In this ordinance especial mention is made of automobiles and motorcycles and specific punishment is provided for the running of the machines without silencers or with the muffler "cut-out" open.

In Los Angeles there are approximately 4,000 motorcycles and 13,000 automobiles. Of this great number it is safe to state that 90 per cent. of the automobilists operate their machines with due regard for the law and for the convenience of fellow citizens. On the other hand, it is not stretching the truth in any respect to state that fully 90 per cent. of the motorcycle riders prefer to run about the city with mufflers wide open and with the engines disturbing the quiet of the community for a mile in all directions.

"This was notably true in three sections of the city on Sunday morning and afternoon. On Crenshaw Boulevard, between Pico and Washington streets, more than 1,000 motorcycles and possibly three times as many automobiles passed in review of home owners during the day. Approximately two in ten of the motorcyclists passed along the paved street in an orderly and quiet manner, with mufflers closed and machines under full control. On the other hand only two in every hundred of the automobiles could be heard as they glided past the house on their way toward or homeward from the beach.

"At Wiltshire Boulevard and Vermont avenue—and other of the good roads to the nearby beaches—a similar condition existed. Here a slight grade is to be found and notwithstanding the modern motorcycle has power to spare, a majority of the riders seem to prefer to open the muffler and permit the machine to make all the noise possible. Some automobilists are prone to do the same thing, but such are the exception, not the rule.

"Sunset Boulevard is another favorite drive of the autoist and motorist where the open muffler nuisance is much in evidence and for no apparent reason.

"Manufacturers of both automobiles and motorcycles have succeeded after much effort in reducing the noise of gas engines to a minimum. This has been done in such a manner as not to interfere materially with the power of the machines. Running with an open muffler is an unnecessary evil, as well as a violation of the law.

"The Examiner believes in the utmost freedom of movement of vehicles of all types. It is and always has been opposed to a too rigid restriction in the use of the streets. It is not, however, in sympathy with the open-muffler fiend. On the contrary, it believes that the property owners have an inalienable right to enjoy the peace of their homes without the disturbing annoyance of rapid-fire gas engine explosions. It would therefore urge upon owners, especially of motorcycles, the wisdom of regarding the rights of others and keeping the mufflers in good working order and closed.

"It would be an easy matter to draw the attention of the police to localities where this nuisance is most frequent and no doubt many arrests and fines would follow. It should not, however, be necessary to use a club to make men intelligent enough to operate these machines realize that they are violating the law. Motorcycles have been unpopular in the past because of their noise. Those riders who insist upon riding with mufflers open are only adding to the already strong sentiment against their machines.

"Keep your mufflers closed."

Open Mufflers Help Depopulate California.

I'll tell in this ditty
Why I left the city,
My tale all your pity
Will surely invite.
I once lived like you, sir,
Upon an avenue, sir,
Where gas-bikes rolled through, sir,
By day and by night.

I even yet wonder
How I stood up under
Their confounded thunder
As long as I did;
I sold out and hiked it
Where nobody biked it,
Turned farmer and liked it,
The rustics amid.

"In these regions creamy,
Sure, life will be dreamy,"
I said, "this will free me
From turmoil and roar."
Alas for that notion,
Like waves of the ocean
This cycle commotion
Still streams by my door.

Now I'm going where a
Gas-bike cannot scare a
Poor man; to Sahara,
I'm off on the fly.
In wide, sandy spaces,
With dark, desert races,
In some green oasis,
I'll live till I die.

Speed as Well as Safety and Service

NON SKID

TRADE MARK

vania VACUUM CUP

Bicycle Tires

Though only three months on the market, these tires have achieved great popularity and are stocked by the leading hardware and sporting goods jobbers throughout the country.

The raised rubber cups moulded on these tires absolutely prevent skidding on wet or slippery pavements or in mud. The cups "hold the road" better than any known form of non-skid and provide better traction. This safety and increased traction power admit of increased speed. The cup-shaped knobs render these tires exceptionally long wearing. They last.

The exceptional quality of materials used in the manufacture of Vacuum Cup Bicycle Tires enables us to give with each an unqualified season's guarantee. Each tire carries our yellow guarantee tag.

Made by an Independent Company with an Independent Selling Policy which ensures satisfaction to the user and a fair margin of profit to jobber and dealer.

We are prepared to furnish the jobbing trade, on request, with electrotypes, catalog description and envelope inserts.

PENNSYLVANIA RUBBER CO., Jeannette, Pa.

Coming Events

October 5, 6, 7, 9, 10, 11, 12, 13, 14, Birmingham, Ala.—Motorcycle races at Alabama State Fair, mile dirt track; W. D. Gresham, 1912 Fourth avenue, Binghamton, Ala., referee.

October 7-8, Detroit, Mich.—Detroit Motorcycle Club's reliability run.

October 7 and 12, Westfield, N. J.—Motorcycle races at Fair Acres half-mile track; under the auspices of C. E. Holgate, Newark.

October 8, Detroit, Mich.—Detroit Motorcycle Club's race meet.

October 8, Bridgeport, Conn.—Bridgeport Club reliability run.

October 8, Providence, R. I.—Providence Motorcycle Club's triangle run from Providence to Boston, to Worcester, to Providence.

October 12, Van Wert, O.—Motorcycle races on half mile dirt track.

October 14, Reading , Pa.—Reading Motorcycle Club race meet at Fair Grounds track.

October 15, Guttenberg, N. J.—Closing motorcycle meet at Guttenberg mile dirt track; open.

November 20-25, London, England—Annual Olympia motorcycle and bicycle show.

October 21, Atlanta, Ga.—Motorcycle races on Atlanta Speedway.

October 21, Pottstown, Pa.—Motorcycle races on mile dirt track.

January 6-20, New York City—Twelfth annual automobile show in Madison Square Garden; motorcycle section included in first week.

January 20, New York City—Fourteenth annual ball of the Century Road Club Association, Eastern Division, at Alhambra Hall, Seventh avenue and One Hundred and Twenty-sixth street.

CORRESPONDENCE

Hart's Version of Toronto Incident.

Editor Bicycling World and Motorcycle Review:

In the issue of Bi-World and Motorcycle Review of September 16th I notice an article in relation to the race meet at Toronto on the 9th inst., in which there are two points very liable to be misleading. In the first instance it states that the writer was present and was party to allowing F. A. M. members to ride an unsanctioned race. In reference to this will state that outside of my opinions in reference to the right of the F. A. M. to arbitrarily require sanctions covering Canadian meets, I acted in no official capacity whatsoever, nor was there any F. A. M. rider there over whom I had any control direct or otherwise. The only one over whom it might be even suggested that I had any influence was William Staudt, who was for some time connected with this company, and therefore rode more or less under my jurisdiction. Staudt is now, however, and has been since September 1st, an employe of the T. Eaton Company and a resident of Canada.

I was asked in an offhand way, and so far as I at the time understood, in no way for publication or for an official statement from my position as a member of the Competition Committee, what I should do in the event of Staudt being disqualified by the F. A. M. and afterwards wishing to ride in this country. I simply stated that if Staudt was so disqualified and at any time came back to the United States in the employ of the Reading Standard Company I should put his case before the committee, making the contention that the F. A. M. had not as yet established authority over Canadian contest affairs, and that from my personal viewpoint the action at Buffalo was an invitation to the Canadian motorcyclists to enter the F. A. M. and not an arbitrary assumption of authority.

Of one thing I feel very certain, that it is necessary for us to take that position if we ever wish to bring the Canadian riders within the organization. From what I have seen of the Canadian situation I feel very positive that if they ever join hands with the F. A. M. it will be a voluntary affiliation on their part and not an arbitrary assumption of authority on the part of the F. A. M., and while I feel that the wording of the action taken at Buffalo was somewhat faulty, I believe that was the spirit of the resolution passed.

The other point is a mention made of Staudt's effort to break the track record on a "Big Reading Standard," and that he was thrown through his inability to handle the powerful machine on that track. This is misleading in that it would indicate that the machine was either a big twin or an over-sized single. It was in fact really the opposite. It was a regular 1911 stock four horsepower single cylinder motor, provided with auxiliary exhaust ports and placed in a regular 1911 frame, except that it was provided with 26 inch wheels and chain drive. If the machine was too powerful for him to handle on the track it was due solely to the quality of the motor, not to excessive size.

We would be pleased to have you set us right before your readers on the above points. Yours very truly,

READING STANDARD CO.,
By F. B. Hart.

Cooley Seriously Injured in Race.

A. R. Cooley, well known throughout Greater New York, and a popular member of the New England Wheelmen of that city, met with a serious accident on Sunday the 1st inst., while competing in one of the races in the club's championship series. The race was being held on Pelham Parkway, in upper New York, and the finish line was near the crossing of East Chester Road. Coming to the tape Cooley jumped to the lead, going over several yards in advance; immediately after crossing the tape and while yet sprinting, he collided with a motorcyclist crossing the parkway. Apparently neither saw the other and the force of the impact was such that both were thrown heavily to the ground; the motorcyclist was slightly injured, while Cooley, who hit the machine at right angles, sustained a fractured skull and, it is feared, internal injuries. According to latest reports received from the Fordham Hospital yesterday (Friday), Cooley was slightly improved, although his condition was yet very serious.

Date Set for G. N. Y. C. A. Meeting.

In response to a call issued by the president, there will be a meeting of the Greater New York Cyclists Association on Tuesday, the 10th inst., at 9 P. M., in the assembly room at 1213 Fulton street, Brooklyn. Matters of importance to all cyclists and motorcyclists of the metropolitan district will be considered; among them being the final reports of the various sub-committees of the Labor Day parade, the completion of plans to make the organization of a permanent character and the discussion of various suggestions for advancing the interests of all concerned in both branches of the sport.

EIGHT FINISH IN WORCESTER RUN

All-Around Ability and Cleverness Decide Winners of Third Endurance Contest —Gauthier Takes Speed Honors.

Brains mixed with mechanical ability saved perfect scores in several close pinches in the third endurance run of the series conducted by the Worcester (Mass.) Motorcycle Club on the 1st inst. Nine riders started and eight finished, the solitary withdrawal being caused by carbureter trouble. There were two classes, singles and twins, with two ties in the former and three in the latter from previous contests. The course was from Worcester to Boston and return, and then to Springfield and back to Worcester, a total of about 200 miles.

Although there was a long string of mechanical troubles, the ties remained at the finish of the run. The start was made at 7 a. m. on the first leg to Boston. E. L. Gauthier took the speed honors, being first at all controls, including the finish. The first perfect score was endangered when A. C. Gowing was hung up just outside Worcester with ignition trouble, and only three minutes to spare. He lost his spark and for a long time couldn't find it. Disdaining to pedal in to the control, which he had time to do, he kept on fussing for the cause of the trouble, being assisted by several club members who heard of his trouble and came out to offer advice. Finally he took one of the batteries in his hand, held a broken wire on it and steering with the other hand rode in just in time to save his score. He was allowed half an hour extra and two minutes extra on that for watch variation, under the rules, and used up pretty near his full allowance repairing the damage.

The other case where the tie nearly was broken was with F. L. Kidder in the twin class. Kidder's brake suddenly went wrong coming in from Springfield, and as he was moving fast at the time he went off the road, being unable to slow down for a turn, and brought up in a private yard. However, Kidder then was in a worse predicament, for he did not know how to fix the pesky brake. Fortunately for him a "good Samaritan" in the person of I. C. Coombs came along just then and told Kidder how to make a repair, which the stranded one did in short order and hurried along to make up time. He also saved his score, thanks to Coombs.

Coombs lost his muffler coming in from Springfield, but was in too much of a hurry to stop. He looked around to see a man run out and pick it up, but he dropped it pretty quick and commenced blowing his fingers vigorously. The muffler was slightly warm. Roy Dow, who was riding his first run, took a turn too fast on the Boston road and shot up a pair of steps in a church yard. His pedals were broken. Russell Coes and Howard Clark acted as checkers on the road, and were the last out of all controls.

The men who finished were as follows: Twins—Russell Coes, E. L. Gauthier, I. C. Coombs, W. G. Cornwell, F. L. Kidder. Singles—Roy Dow, H. L. Clark, A. C. Gowing.

Visitors Humbled at Zanesville, O.

Local riders cleaned up the visitors from Newark and Coshocton at the motorcycle meet conducted by the Zanesville (O.) Motorcycle Club at the Fair Grounds on Sunday, 24th ult. Garrett and Williams did most of the "cleaning," the former taking three firsts and the latter two. Seven hundred people were among those present. Williams really was the star, for with a four horsepower machine he made Garret with a "T" hustle to win.

The summary:

Three mile open, four horsepower class —Won by Williams; second, Kussmaul; third, Keeley. Time, 4:22¼.

Three mile open, four horsepower belt drive class—Won by Heidenreich; second, Hayes. Time, 5:02½.

Five mile open—Won by Garrett; second, Williams; third, Malone. Time, 7:00⅗.

Five mile pursuit—Won by Williams. Time, 7:16½.

Five mile open—Won by Garrett; second, Williams; third, Malone. Time, 4:20.

Five mile open, four horsepower belt drive—Won by Childers; second, Heidenreich; third, James.

Five mile favorites—Won by Garrett; second, Malone. Time, 7:18.

Amazons to Battle at Columbus, O.

Columbus, O., Oct. 2.—On Sunday afternoon, October 8th, on the one mile dirt track at the Columbus (O.) Driving Park eight women will compete in six races that will go down as the first contest of its kind in the history of the sport. The races are being held entirely independent of the Columbus Motor Club, and are not sanctioned by the F. A. M. The races are to be held primarily to decide which riders will meet Miss Lillie Williams, of Los Angeles, Cal., next winter for the world's championship. The entrants are Misses Dollie Adelman, Dora Ludwig, Bertha Davis, Lucile Adelman and Mary Soderblom, of Columbus, O.; Viola Culp, Elwood, Ind.; Seda Leslie, Akron, O., and Stella Masters, of Michigan City, Ind.

All of these women are expert riders. Miss Dollie Adelman at a race meet held here in July went an exhibition mile in 1:12. Both Miss Culp and Miss Leslie are said to have numerous victories over men competitors to their credit, and who have seen them say that those two members of the fair sex can run away from most of the male amateurs.

CANADIANS TO FORM A FEDERATION

Majority of Riders Are in Favor of Self-Governing Association—Chaotic State of Canadian Sports.

Toronto, Oct. 1.—Briefly summed up the Canadian situation with regard to affiliation with the F. A. M., from a Canadian standpoint, is: The great majority of riders in the Dominion are very much in favor of the formation of a self-governing association, with a working agreement with the American federation. Practically every argument that can be advanced leads to this same decision, and it is expected and fervently hoped by the Canadian motorcyclists that the proposed Canadian body and the F. A. M. will be on good speaking terms before another season rolls around.

Steps have already been taken to form the Canadian federation. A general meeting has been called to take place at Toronto some time in December or January, when it is expected the project will become a reality. Several reasons have hastened the Canadians in their ambition to have a recognized government. From a racing standpoint the clubs and the dealers want to see the American cracks racing in Canada, both for the advertising and sport-boosting proclivities. Then again some are afraid that the F. A. M. will step in and form rival organizations with which to fight the existing clubs. And most important of all, Canadians badly need a recognized authority to whom to look for guidance.

The third principal reason is by far the most serious. The present season in Canada has seen a wonderful development in the game, but at the same time the absence of a controlling hand has been particularly noticeable. In Toronto, where the game is the most advanced, a generous supply of "bosses" has been very much in evidence, and as a result ill feeling has cropped up. Petty jealousies have been aroused and in other ways the sport has been spoiled. Dissension has broken out and it is doubtful whether things could last much longer under present conditions. Thus the level-headed ones are hurrying to organize the Canadian federation and are hoping that the F. A. M., with all its experience and numerical strength will lend aid.

The time is ripe for action. Indeed it is compulsory that corrective steps be taken at once or the sport will suffer. The racing end is all right, but the administration is weak. The fact of the matter is that all thoughts have been given up to the racing, and while track stars were being developed nothing was being done in the way of sustenance for motorcycling. Among other things little encouragement has been given to endurance runs or tours.

THE CYCLE SQUADS OF THE ITALIAN ARMY

A DIFFICULT PASSAGE

RECONNOITERING

Briefly, it will be impossible for the F. A. M. to assume jurisdiction in Canada. In no other line of sport does an American governing body control the Canucks, whether it be athletics, rowing, bicycling or the turf. At the same time, in order to save the motorcycle sport assistance from American headquarters is highly necessary. The signing of a "treaty" would benefit all parties concerned, but in the event of annexation on the part of President Hamilton and his grand organization, Canada would be the proverbial "white elephant."

Considering the population of Canada, there are many clubs in Canada, but they do not receive the encouragement that is owing to them. The Canadian motorcycle world is like a castle without a foundation, but the ship will soon find its rudder if the boys on both sides of the line get together.

Bennet Stars at Hutchinson Meet.

High winds accompanied by blinding dust made the day anything but propitious for a good crowd at the motorcycle meet held at the Fair Grounds, Hutchinson, Kan., on the 27th ult., but in spite of this handicap there was a fair attendance. Wells Bennett, a local boy, was the star, winning two races, including the 10 mile "championship." The summary:

Two mile, private owners—Won by Snyder (Indian); second, Banta (Merkel); third, Buckman (Indian). Time, 2:59⅕.

Three mile stock, free-for-all—Won by Warner (Indian); second, Weishaar (Indian); third, Young (Harley-Davidson). Time, 4:08.

Three mile stock, fully equipped—Won by Weishaar (Indian); second, Young (Harley-Davidson); third, Warner (Indian). Time, 4:07⅗.

Five mile, free-for-all, singles—Won by Wells Bennett (Indian); second, Warner (Indian); third, Weishaar (Indian). Time, 6:25⅘.

Ten mile championship—Won by Wells Bennett (Indian); second, Warner (Indian); third, Wilson (Harley-Davidson). Time, 12:35⅗.

Two mile team relay—Won by Warner and Horner (Indians); second, Bennett and Weishaar (Indians); third, Buckman and Swiggart (Indians). Time, 3:29.

Five mile match—Won by Weishaar (Indian); second, Warner (Indian); third, Wilson (Harley-Davidson). Time, 6:25⅕.

Mile time trials—Weishaar (Indian), time, 1:14⅕; Warner (Indian), 1:14⅗; Wells Bennett (Indian), 1:16; Wilson (Harley-Davidson), 1:17⅗.

Concourse Club Races on Parkway.

With one event still to be run, rain rang down the curtain on the annual Motor Parkway races of the Concourse Motorcycle Club, of New York City, Sunday, 1st inst. About 50 riders and their friends turned out for the races, which were held over a five mile section of the parkway with bituminous macadam, between Jericho entrance and Meadowbrook Lodge. It costs motorcyclists 50 cents per day for the use of the parkway, so the races brought about $25 extra into the parkway treasury. Profiting by past experiences everyone either brought a lunch or shared somebody else's, for the nearest hotel is three miles away, and the Long Island air is a great appetizer. Lunching was rather a dry affair until a car came along flying the Concourse colors. When it pulled up Jerry Foley, trusty keeper of the Concourse treasury, club house and about everything else the club possesses, debarked with some suit cases loaded with liquid joy. The races were the real, pure amateur thing, and while no world's records were broken, some exciting finishes were produced. J. B. Niles took the leading honors by winning two events, beating J. McClellan by close margins. The summary:

One mile 30½ inch class—Won by Levkowitz; second, Harburger. Time, 1:16⅗.

One mile 50 inch class—Won by A. Smith; second, A. Heinig. Time, 1:13⅕

One mile 61 inch class—Won by J. B. Niles; second, J. McClellan. Time, 1:06⅗.

Five mile, 30½ inch class—Won by V. Nidely. Time, 5:38⅖.

Five mile, 50 inch class—Won by A. Heinig. Time, 5:27.

Five mile, 61 inch class—Won by J. B. Niles; second, J. McClellan. Time, 5:50⅕.

Another Pair to Cross the Continent.

It no longer is fashionable to cross the continent alone on a motorcycle. The novelty has worn off that stunt and now it is the proper thing to go in pairs. The first pair of riders who started from New York recently arrived in San Francisco, and now another pair is going over the same route. The latest transcontinental team to announce itself is Jay B. Budworth and Everett Revere, of Newark, N. J., who will start from New York on the 15th inst., bound for San Francisco. They will take along a moving picture machine to preserve for posterity some of the things they see, including the bad roads. Unlike any of the other transcontinentalists, the Jerseyites are going to start without any money, and earn their grub and lodging by doing odd jobs.

Chicago "Motor Cop" is an Athlete.

Although motorcycling is not regarded as an athletic sport, that it does not injure one's athletic prowess has been proven conclusively by J. J. Dineen, a member of the Chicago motorcycle squad, who won the track and field championship of the police department for the second successive time in the annual police-firemen-letter carriers athletic meet on the 16th inst. Dineen won five events and was placed third in another, scoring a total of 26 points. The police won the meet by a big margin, chiefly due to Dineen's marks.

MUDDY TRACK SPOILS WARD MEET

Famous Toronto Sports Event Marred by Spills and Loafing—Motorcycle Events Had To Be Postponed.

Toronto, Oct. 3.—The Ward marathon and sports held on the Exhibition two-lap track at Toronto, Canada, on Saturday, September 30, was robbed of most of its thrills by the necessary postponement of the two motorcycle races, which had been included in the long program of events. The track was in a fearfully muddy state, following a prolonged shower, and it was with some difficulty that the bicycle riders could be induced to start in their contests, which included the ten mile Dominion championship and a three mile handicap. There were 45 entries for these races, but only 15 men faced the starter, and, as expected, there were spills innumerable. In the three mile event two spills happened simultaneously, half a dozen riders going down into the mud. The handicap race went to Scotty Wilson, with Will Smith in second place, Wilson just beating the latter by inches in a grueling stretch drive to the tape. Gus Hogben, of Hamilton, Canada's half mile champion, was a close third. Time, 10:55.

The bunch loafed and did everything else in the ten mile grind, as it was hard going on the slippery surface. The officials ordered every man in the race to pace a lap, but still this did not help much, so that the ten miles was not done in less than 29:55. In this event Walt Andrews, the well-known crack, had no trouble in showing the others to the line, the "Big Train" coming with a rush in the last 150 yards, and winning out from Herb McDonald and Scotty Wilson. These were the final bicycle track events of the Canadian season.

Although the track was too dangerous for motorcycle racing, Joe Golden, who was breaking into the gasoline game from the bicycle ranks, decided to try out the oval on a four horsepower stripped Indian. By daring work on the corners he was able to ride a lap in less than 36 seconds, which, incidentally, is the fastest half mile of the year for the Toronto track in spite of the fact that twin-sevens have been chasing each other around the oval all summer. Golden received an ovation from the stand when he dismounted from his wheel. After Golden's performance the other riders wanted to race, but the officials of the meet had called off the events, and crowd and racers were alike disappointed.

Trio-Cup-Trial Winners Are Honored.

Presentation of prizes to trio trial winners, accompanied by some oratory, then refreshments, followed by some light vaudeville, helped to make the "housewarming" of the Motorcycle Touring Club of New York, Affiliated, on Monday night, 2d inst., quite a lively affair. The club jester got off some humor at the expense of the members, which "took" quite well, and the remainder of the evening was passed with yarn spinning, resulting in several becoming honorary members of the Ananias club. Finally somebody remarked that it was time to go home, and all took the hint. About 30 were present. The club quarters have been refinished and a long lease taken. A pool table has been ordered, and it is expected that the club will develop cent. to above list price; the company will some experts during the winter.

F. A. M. DECIDES ON MAIL VOTE

1911 Delegates Will Be Asked to Vote on Proposed Amendments to Article V of By-Laws.

In accordance with article XI., section I. of the constitution and by-laws referring to amendments, the Board of Directors of the F. A. M. has decided that it is advisable to take a mail vote of the delegates to the 1911 National Assembly of the F. A. M. on amendments to article V of the by-laws covering one-quarter rebates to the districts. Notice is hereby given that after 30 days such a mail vote will be taken on the following amendments:

"To amend section 5 of article V of the by-laws by striking out the fourth sentence to the effect that the national treasurer 'shall forward to the treasurer of each respective district one-quarter of all membership fees received from each district and shall obtain receipt for all such remittances,' so that this section, as amended, would read: 'The national treasurer shall receive all moneys and shall keep proper books of account as shall be provided for by the board of directors. He shall pay out no money, unless otherwise specifically stated, except on the written approval of the president and two other members of the board of directors, or of a majority thereof. He shall forward quarterly to the president and the secretary a certified itemized report of all receipts and disbursements, and shall render a report at each annual meeting. His accounts shall be audited preceding the annual meeting by a committee of three appointed by the president from the general membership. He shall give bond in such sums as may be determined by the board of directors. The expense of said bond shall be borne by the national organization. All books and records kept by the treasurer shall be turned over to his successor, after being duly audited by the committee appointed for that purpose.'

"Also to amend article V. by adding section 6, to read as follows:

"'The national treasurer shall pay, from the national treasury, the expenses of each district upon the receipt of vouchers approved by the district vice-president and treasurer. Provided, however, that all dis-

trict expenditures be authorized by the district vice-president, and that he incur no greater expense than $50 without first obtaining the permission of the national president; provided, also, that the national president authorize no greater district expense than $100, except upon a majority vote of the board of directors.'"

"In sending you the enclosed amendments, which the directors of the F. A. M. think it advisable for the delegates to vote upon," says President G. H. Hamilton, "I wish all of our members to understand why it is desirable to put into effect the new system suggested for financing the districts.

"Owing to the new districts that were established at the last meeting of the National Assembly in Buffalo, Dr. Gibson has experienced considerable trouble in trying to straighten out the finances of the old districts and apportion the funds according to the new districts.

"The amendments are offered not only with a view of simplifying the handling of our finances, but with a view of taking care of the requirements of each district as conditions may demand. There should be no question in the mind of any member who is familiar with business methods but that all moneys should be retained by the national treasurer and all remittances made from the national treasury.

"This is the only business-like way to handle our finances, and as the directors have given the subject careful consideration I trust that when the amendments are put to a vote that they will carry without any opposition.

"Under the plans provided by the amendments the districts are not deprived of financial support, but are placed in a position where their requirements will be taken care of by the national treasurer.

"The same principles suggested for the F. A. M. as for any large mercantile corporation, that is where any large expense is to be incurred, the matter will be passed upon by the board of directors.

"I am simply making this explanation so that all of our members will understand that the directors are simply endeavoring to improve conditions and put into effect a plan that will benefit all of the districts."

Fletcher, Lorain's Own, Repels Invaders.

Visiting pot hunters had a few crimps put in their aspirations at the motorcycle race meet at the Lorain (O.) county fair on the 20th ult., when Fletcher, a local boy, took four of the seven competitive events. Davis, of Altoona, Pa., took two firsts, and Herbert Huntsbery, of Cleveland, took the other. Huntsbery also gave a mile time trial. Close finishes stirred the crowd of 5,000 to high enthusiasm.

Summary:

Three mile novice, stock—Won by Davis (Harley Davidson); second, Draper (Excelsior); third, Somer (Indian). Time, 4:29½.

Ten mile open—Won by Huntsbery (Merkel); second, Fletcher (Excelsior); third, Willis (Indian). Time, 13:26⅘.

Five mile stock—Won by Fletcher (Excelsior); second, Friedenstine (Excelsior); third, Huntsbery (Merkel); fourth, Willis (Indian). Time, 6:55.

Miss and out—Won by Fletcher (Excelsior); second, Friedenstine (Excelsior); third, Huntsbery (Merkel). Distance, three miles. Time, 3:30⅗.

Ten mile open—Won by Fletcher (Excelsior); second, Friedenstine (Excelsior); third, Huntsbery (Merkel). Time, 13:06⅗.

Fifteen minute stock—Won by Davis (Harley-Davidson); second, Fletcher (Excelsior). Distance, 10⅛ miles.

Unlimited pursuit—Won by Fletcher (Excelsior); second, Friedenstine (Excelsior). Distance, 16½ miles. Time, 23:07½.

One mile against time—Huntsbery (Merkel). Time, 1:19.

THE PONTIAC MOTORCYCLE CLUB

Another Tack on Guttenberg Revival.

Promoter Henry Shaffer, of the Guttenberg (N. J.) "Motordrome," having gotten "in bad" with the "powers that be" in motorcycle racing, because of the loose way in which he conducted race meets, and the fusses which occurred as a result, all of which combined to make it pratically impossible for him to secure any support for his meets, as demonstrated by his recent efforts, he has persuaded some of his friends to come to his aid and lend their names and efforts to try and resurrect racing at the old track on the Hudson. Accordingly, E. F. Korbel and Jerome T. Shaw, two New York newspapermen, have taken hold, and under the impressive title of the "Metropolitan Motor Racing Association," have established a "feeler" meet for Sunday, 15th. If this meet is a success, the "association" indicates that it will run regular meets at the track next year. Support is being solicited from the local dealers and riders, and among the entries already claimed are those of Frank Hart, the amateur champion, and the trio of local professionals, Al. Graves, L. H. Guterman and W. L. Coursen. As a special feature Ralph De Palma will give exhibitions in a Simplex car. Seven events, two of them professional, and five amateur, are carded. The "association's" offices are at 1777 Broadway, New York City.

Pontiac Has a Motorcycle Club, Too.

With a big motorcycle factory in its midst it is eminently fit and proper that Pontiac, Mich., should have a motorcycle club. At a meeting of local riders on the 23d ult., the Pontiac Motorcycle Club was formed with 20 members, and 11 applications were acted upon. Interesting talks on motorcycling topics were given by Messrs. McEldowney and Sherman, of the Flanders Mfg. Co., and a flashlight of the gathering was taken. The club now is prospecting for suitable quarters and has expectations of recruiting its membership to 75 or 100 men in the near future. At present the club meets in the Administration building of the Flanders Mfg. Co., and the meeting notices are of an unusual sort, being on drafting blue prints, with a sketch of a motorcyclist and a girl riding tandem and supposedly on their way to a meeting which promises something good.

Davenport Club Puts "O K" on Officers.

At a previous meeting chosen temporarily to fill the offices of president and secretary, respectively of the Davenport (Ia.) Motorcycle Club, Dr. W. F. Hunt and R. R. Carsons have now been elected permanently to those chairs.

LOSES "LIVE" MOTOR APPEAL

Competition Committee Sustains Chairman in Disqualifying Jacobs—New Rule for Future Races.

In the matter of the appeal of the New Era Auto Cycle Co., of Dayton, O., to the F. A. M. Competition Committee as a whole, from the decision of the chairman in overruling the referee and sustaining the protest lodged against the victory of I. F. Jacobs, riding a New Era in a motorcycle race at Springfield, O., on Labor Day, on the ground that he was allowed to be pushed off from a standing start with his engine running, and that this privilege was unfair to the other contestants, the chairman announces that the result of the mail vote of the committee is 3 to 1, sustaining the chairman, all members voting except the chairman. Therefore Jacobs' disqualification stands and first prize goes to the second man.

In connection with the case, which is the first of the sort that has required official arbitration, the chairman announces that hereafter the rule in regard to standing starts will require that all riders, machines and engines be at an absolute standstill at the push off. As the New Era machine has no pedals, but is fitted with a clutch and two-speed, permission to be pushed off with the motor running was sought from the referee and granted by him. The argument offered was that the machine could not be pedaled, and therefore was handicapped as against the other pedal quipped machines, and that a push-off with a "live" motor only evened things up.

However, the chairman holds that the primary purpose of the Competition Committee is to promote square dealing, and that the allowing of Jacobs to start with a "live" motor was not fair to the other contestants. He holds further that the lack of pedals made the New Era unsuitable for standing starts, but that it is not the function of the committee to make special rates or interpret the existing rules to fit any particular machine which may have unusual features of construction, even though such machine be catalogued as stock. He holds further that it is the function of the committee and the chairman in considering appeals to adhere as closely as possible to the present rules, and that the committee does not consider it good policy to create new rules or interpretations to fit special cases, although it claims such discretionary power.

Manager Sink Makes Fine Showing.

Managerial responsibilities did not weigh heavily enough on the shoulders of versatile John Sink, of Indianapolis, Ind., to prevent him winning some of the races he conducted at Vincennes on the 24th ult. He captured a 15 mile match and the time trials. The track was in fine shape and several local records were stated to have been broken. Postponed from the preceding Sunday on account of rain, the meet drew a good crowd, but several events had to be scratched owing to the non-appearance of riders booked. A conflicting meet at Marion affected Sink's little speed party. There was one big thrill when Cecil Albright rammed a fence post and demolished his machine. Albright suffered a broken kneecap, wrenched back and cuts and bruises. The summary:

Five mile, private owners—Won by V O. Scantling. Time, 6:15⅗.

Five mile open, 50 inch class—Won by Ray Hostetter. Time, 7:05⅖.

Fifteen mile match—Won by John Sink. Time, 20:23.

Half hour open—Won by Ray Hostetter. Distance, 21⅛ miles.

Mile time trials—Sink, time, 1:16⅖; Hostetter, 1:21; Bouchie, 1:28.

Pursuit Race Becomes a Marathon.

An Australian pursuit race which went 26 miles to a draw proved the topliner in the race meet of the Dubuque (Ia.) Motorcycle Club at Nutwood Park, on the 17th inst. It was a professional event with three starters, Mitchell, Fawcett and Meiscell, each placed one-third of a mile apart. Fawcett soon was nailed, leaving the other pair to fight it out. Neither was able to catch the other, however, and in the 26th mile they were flagged, being exactly one-third of a mile apart as at the start. The race was a draw and first money split.

Four amateur events also provided some thrills. Honors were more evenly distributed, three men being returned as winners. The feature number in this class was the ten mile club handicap for a club challenge trophy, to be won three times to become the permanent property of a holder. Imhoff, a scratch man, had the speed, and overhauled the field steadily, catching the limit man at eight miles. Imhoff also captured the three mile novelty, in which rapid soda water absorbing ability was a prime requisite. Summary:

Three mile novelty—Won by Imhoff; second, Parks. Time, 5:00⅖.

Five mile professional—Won by Mitchell; second, Yonkers; third, Fawcett. Time, 5:48½.

Unknown distance—Won by McCeney; second, Imhoff; third, Parks. Distance, eight miles. Time, 9:20.

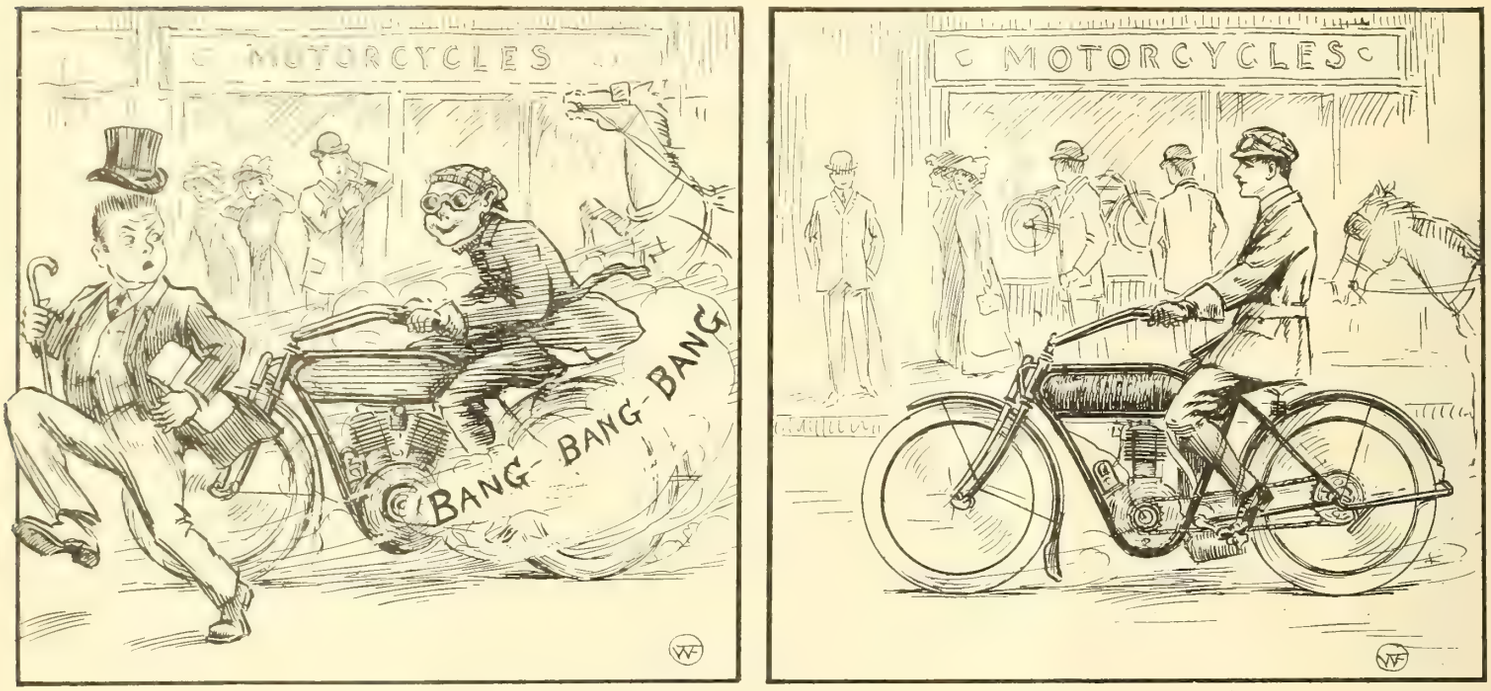
Fifteen minute race, professional—Won by Mitchell; second, Yonkers; third, Meiscell. Distance, 13 miles.

Five mile open, amateur—Won by Parks; second, Miller; third, Williams. Time, 6:50.

Ten mile handicap, amateur—Won by Imhoff (scratch); second, Miller (1:30); third, Curtiss. Time, 13:44½.

Australian pursuit, professional—Draw between Mitchell and Meiscell. Distance, 26 miles. Time, 0:30:00.

SWENSON WINS HIS OWN CUP



And Then Gives It to Another—Makes Only Perfect Score in Strenuous Providence Run.

Making the only perfect score in a field of 17 starters, B. A. Swenson, "Old Warhorse," of Providence, R. I., won his own trophy in the final contest for it, conducted by the Providence Motorcycle Club on Sunday, 1st inst. Like a good sport, though, Swenson, in accordance with his announced intention before the start, in case he should win it, gave the cup to the second man, E. G. Luther, who had a total score of 2,998 out of a possible 3,000. S. Higgins finished with a score of 2,965, giving him third place, and John Kay, one of the leading comedians of the Eastern F. A. M. tour, earned fourth place with 2,923 points. An unusual feature of the run was the fact that at the start there were 10 men tied, and as it was to be the deciding contest for the trophy it was made doubly hard by being run in two sections.

Although he competed purely for the fun of the thing, because he rather would mix into any sort of a motorcycle road event than eat, Swenson did some great work in the final contest. The total distance was 204 miles for the double course, and his time was 300 minutes, or just five hours. As he had trouble on the road it is apparent that he had to "ride some" to make the showing which he did. Trouble came to him between short distance controls, where a delay of any sort meant tall riding to make up time.

Ten miles from Providence he had a rear puncture, but by hurriedly pumping it up two or three times and finally limping in on the rim to the control he saved his score. Once more the jinx overtook him near Providence on another occasion and this time it was an exhaust valve. Instead of making the replacement on the road he plugged along to the control on one cylinder, and after arriving there with plenty of time to spare made a replacement in eight minutes. To the interested crowds gathered at the controls, for the run attracted considerable attention, it was a mystery why Swenson had lots of time to spare at controls, whereas the others just had time to check and be off, and often were late.

Riders were allowed to reach controls as early as they pleased, but could not check out until the expiration of the time scheduled, and lost one point for each minute late. The schedule was 25 miles an hour, which just naturally meant keep moving, as controls were 15 miles, and in two instances only 12 miles apart. The roads were good with the exception of a famous four mile sand stretch, which knocked holes in some scores.

WHICH IS THE GREATER BOOSTER FOR MOTORCYCLING? MORAL—CUT OUT THE CUT-OUT

The first leg of the run started at 7 a. m., the 10 men who tied being started five minutes apart, so that each man would have to pick his own way. All contestants wore numbers on their left arms and the management was up to the usual Providence club standard. Part of the course lay through the southern and southwestern section of the State, in a region of abandoned farms and away from steam or electric lines. So hard was the morning run that several of the riders who completed it, some with perfect scores, declined to start in the afternoon, saying that they had had enough. Each run was alloted four hours, or eight in all.

At Wakefield members of the Wakefield Motorcycle Club rendered good assistance in checking and filling tanks, Archie Brown, the local Indian agent, having plenty of supplies on hand for the occasion. Luther, Swenson's closest rival, lost his perfect score almost within sight of the finish, and came in looking heartbroken. His machine stopped suddenly about seven miles outside of Providence, and the few minutes he lost in looking for the trouble he was unable to make up owing to speed regulations in the city. What the trouble was he was unable to learn, as the machine started all right, and lays the delay to a temporary contact of the handlebar magneto cut-out. His near tears were changed to smiles when he learned that he would get the cup anyway, and that Swenson would take second prize.

The other riders in the order of standing were A. R. Magee, A. Carlson, C. A. Anderson, C. W. Raybill, J. Leddy, C. H. Westcott, A. V. Howe, M. Ross, N. D. Burt, C. Frazier, L. P. Whitcher and G. Fleurant. All the men rode Indians. Each contest was scored on a basis of 1,000 points for perfect, the total score of each man representing the sum of his points in all three runs.

Acrobatic Stunts at Dayton (O.) Meet.

Mud holes and puddles, due to heavy rains for two days previous, rendered the Fair Grounds track at Dayton, O., slippery and dangerous for the meet on the 16th ult., and as a result there naturally was some real sensational acrobatic work by the riders. In one race Ivan Jacobs turned a double somersault as a result of a skid on a turn, but came through with nothing worse than a sprained ankle and rode in the other events. However, the real thrill of the day was furnished by Teubner and Hart—they most always manage to do this anyway—when, while riding neck and neck Teubner struck a hole and took a 20-foot head-on slide down the track. Lucky Hart escaped and kept right on, while Teubner also had his luck with him and, immediately remounting, took second. His pluck made him a big favorite with the crowd.

Of the seven events Hart took three and Teubner another, Hart being eliminated from the latter by a broken valve. Pfeifer won the novice and a five mile private owner, and Forrer won the private owner pursuit after riding four and one-half miles. In the open pursuit Hart caught Don Klark at seven and a half miles.

The summary:

Five mile, trade riders—Won by Teubner (Merkel); second, Jacobs (New Era). Time, 6:43⅗.

Three mile novice—Won by Pfeifer (Thor); second, Jones (Merkel). Time, 4:57⅗.

Five mile, trade riders—Won by Hart (Indian); second, Teubner (Merkel); third, Klark (Indian). Time, 6:29⅖.

Five mile stock, private owners—Won by Pfeifer (Thor); second, Jones (Thor); third, Haynes (Thor). Time 8:00.

Ten mile, trade riders—Won by Hart (Indian); second, Teubner (Merkel); third, Klark (Indian). Time, 12:45.

Private owners' pursuit—Won by Forrer (Indian); second, Mast (Merkel); third, Pfeifer (Thor). Distance, 4½ miles.

Trade riders' pursuit—Won by Hart (Indian); second, Klark (Indian). Distance, 7½ miles.

Transcontinental Team Reaches Goal.

Establishing a "two man" motorcycle record from coast to coast, William Maryauskas and Joseph Baltusis reached San Francisco, Cal., on the 23rd ult., after being 55 days out from New York. They left New York on July 31st, intending to make a leisurely trip across, and covered 4,075 miles. It is the first time that two riders have made the full trip together, the nearest approach to it having been in 1906, when George Holden accompanied by L. J. Mueller the greater part of the way on his record trip. The riders who just have finished the trip rode Indians fitted with United States tires, and Stewart speedometers. Both men and machines stood the trip in good shape and were in fine condition at the finish. They reported the worst roads between Nebraska points and Reno, Nev. They will locate in one of the cities of northern California, where they expect to open a repair shop.

AND LO! ANOTHER PAUL REVERE!

Edward Young Mounts Steed of Iron and Saves Many Lives When Dam Breaks at Austin, Pa.

How a bicyclist was largely instrumental in the saving of many lives by carrying the warning of the approaching catastrophe down the valley in advance of the oncoming flood of water at Austin and Costello, Pa., was thrillingly and graphically depicted in many of the large city dailies in the first reports sent out from the scene of the calamity. While the town of Costello, which lies down stream from Austin, was almost completely destroyed, the loss of life was but two. Those escaping undoubtedly owed their deliverance to the presence of mind and the efforts of Edward Young, a workman in the Standard lumber mill, in Austin, and whose home is in Costello. He heard the roar of the flood while it was still a half mile away, and his first thought as he saw the wall of water was of his wife and little ones at home, three miles from the mill. He measured the torrent's speed with his eye, then, coatless and hatless, jumped on his bicycle and sped for Costello.

Down the three mile valley he pedaled with the roar ever swelling behind him. He shouted a warning as he sped past isolated houses, whose occupants fled to the hill tops. Two minutes in the van of the flood he dashed into Costello, shrieking his message and Costello, almost to a man, fled.

Young gained his home, burst into the house, shouted to his wife and between them they carried their children to safety.

Dawson Wins Two Atlas Handicaps.

Arthur Dawson by winning both club events on Sunday, the 1st inst., secured the lead in the points score of the handicap series of the Atlas Bicycle Club, Brooklyn. He now leads by one point. The deciding race at three miles will be held the 15th inst.

The summary:

One mile handicap—Won by Arthur Dawson (40); second, George Steiner (120); third, Charles Hausenbauer (60); fourth, William Cullington (100); fifth, George Russell (110).

Five mile handicap—Won by Arthur Dawson (scratch); second, Paul Smith (50 seconds); third, William Kirchner (1 minute 15 seconds); fourth, H. Murphy (scratch); fifth, George Russell (50 seconds).

George Collister Claimed by Death.

George Collister, of the firm Collister & Sayle, Cleveland, O., and one of the best-known dealers in the East, died at his home in that city Tuesday last, 3rd inst. Bright's disease aggravated by a tsroke of apoplexy which he suffered about two months ago caused his death. Collister was one of the many bicycle pioneers who early gravitated into the automobile business. At all times he was an active man, who usually was present wherever there was "something doing," and because of the fact few retailers were more widely known in either the bicycle or automobile trades. When the L. A. W. was a power, Collister was one of its strong arms, taking an active part in the management and officiating as starter or referee at many of the numerous bicycle race meets of the middle West. For many years he was a delegate to the National Assembly and served on the racing board and on several other national committees. When he became interested in automobiles, unlike so many other bicycle pioneers, he did not discard the bicycle, which remained a conspicuous and important feature of his firm's business.

F. A. M. September Increase Nearly 600.

Five hundred and fifty-seven motorcyclists joined the F. A. M. in September, according to the report just issued for that month by Secretary Gibson. This increase is at the rate of nearly 6,700 a year. In the gain by States, Ohio leads with 71, and California comes next with 59. The other States, in the order of their standing, are as follows: New York, 57; Illinois, 55; Iowa, 38; Indiana, 31; Tennessee, 29; Connecticut, 27; Texas, 20; Wisconsin, 20; Colorado, 20; New Jersey, 19; Pennsylvania, 16; Florida, 13; Washington, 11; Kansas, 11; South Dakota, 9; Minnesota, 8; Rhode Island, 5; Massachusetts, 5; District of Columbia, 5; Canada, 5; Oregon, 4; Arkansas, 3; Missouri, 3; Michigan, 2; Utah, 2; Nebraska, 2; Virginia, 1; Maryland, 1; South Carolina, 1; Alabama, 1. Total, 557.

Renewals for the month totaled 120, distributed by districts as follows: Atlantic, 43; Lake, 34; New England, 17; Southwestern, 10; Central, 9; Gulf, 4; Pacific, 2; Peninsular, 1.

The district gain in members is shown in the accompanying table:

District.	Affiliated.	Unaffiliated.
New England	39	3
Atlantic	64	33
Peninsular	34	9
Gulf	23	1
Lake	131	37
Central	74	6
Southwestern	76	7
Pacific	12	3
Canadian	5	0
Total	458	99

Gliddenites to See Motorcycle Races.

As part of the celebration arranged for the Glidden automobile tourists during their stay in Atlanta, Ga., motorcycle races will be held on the Atlanta Speedway. It is proposed to hold the first races on the 21st inst., and it is stated that several stars will appear.

ACME WHEELMEN AT GUTTENBERG

Full Membership Turns Out for a Club Run—Eberhardt Wins Both Events on the Track.

Turning out practically the full membership, the Acme Wheelmen of New York City, held their regular club run on Sunday, the 1st inst, to Guttenberg, N. J. On the mile track located there were run two bicycle races, open to members, a two mile and eight mile flat race. The two mile event was prolific of much jockeying throughout. At three-eights of a mile to go Edw. Spillane and John De Bruyn tried to get away, when they secured a lead of 10 yards; they were not equal to the task, however, and Art Eberhardt, Hal Kaiser and Rich Jones sailed by, finishing in that order at the tape in 5:40.

Again in the eight miles was there considerable jockeying, and several attempts to get away were made by different combinations, in which J. Schmidt, R. Jones and E. Spillane figured, but their ambitions were nipped in each instance, principally through the watchfulness and gap-closing efforts of Eberhardt and Kaiser. At the quarter post, following a stalling move by Kaiser, R. Ford slipped through on the inside for a 20 yard gain, and again Eberhardt was on the job, pulling the bunch up and overhauling Ford five yards from the tape. Eberhardt won by a length over R. Jones, who led H. Kaiser over by the same distance. Time, 22:01.

Big Crowd Sees Lebanon (Pa.) Races.

Dashing riding by William Lineaweaver at the motorcycle races at the Fair grounds at Lebanon, Pa., on the 23d ult., netted him four of the six events, and scoring second in the novice race, this being the only break in what would have been, had he won, a clean sweep in all the races to which he was eligible on his first appearance in competition. As it was, he was easily the bright particular star of the meet. Over 2,000 people were present and liked the sport so well that another meet will be held this month. Two hundred dollars in prizes were distributed. The summary:

Five mile novice—Won by Smith; second, Lineaweaver; third, Moyer. Time, 7:03.

Ten mile, private owners—Won by Moyer; second, Walmer. Time, 14:38⅘.

Ten mile, trade riders—Won by Lineaweaver; second, Eisenhauer. Time, 15:37⅘.

Fifteen mile, trade riders—Won by Lineaweaver; second, Smith; third, Becker. Time, 21:15⅕.

One mile, time trials—Lineaweaver, time, 1:14; Williams, 1:30⅕.

Half hour open, trade riders—Won by Lineaweaver; second, Smith; third, Eisenhauer. Distance, 23.4 miles.

GOULLET LEADS ALL PROFESSIONALS

Australian is Far Ahead of Kramer in Total Points—Fogler and Clark Are Also Riding Strong.

Although the professional sprint championship for the season is now safely in the possession of Frank L. Kramer, there yet remain several race meets to be run at the Velodrome and a number of professional events therein through which the all-around points table may yet be considerably changed.

Alfred Goullet has a comfortable lead at present, but now that the championships are to end with tomorrow's meet Kramer can be expected to get busy in the handicaps, and with Fogler also riding strong, Goullet may yet find it necessary to keep busy to head the list at the close of the season. The table at present is as follows:

	1st	2nd	3rd	4th	Pts.
1—Goullet	20	10	5	11	151
2—Kramer	19	5	5	0	122
3—Fogler	8	17	9	7	116
4—Clark	12	8	8	4	104
5—F. Hill	9	6	8	7	86
6—J. Bedell	5	4	9	6	61
7—M. Bedell	4	5	9	5	58
8—Palmer	5	4	4	5	55
9—Root	3	7	5	3	49
10—Krebs	3	5	8	2	48
11—Mitten	3	3	7	6	44
12—Wells	4	2	4	5	39
13—Fenn	3	3	4	4	36
14—Lawrence	1	5	3	5	31
15—Macfarland	3	2	3	3	30
16—De Mara	1	3	3	8	28
17—Jokus	2	2	3	2	24
18—Schwab	1	2	4	4	23
19—Hehir	0	5	3	1	22
20—Drobach	2	1	0	2	15
21—Mackey	1	1	3	1	15
22—Anderson	2	0	0	1	11
23—Stein	0	2	1	1	9
24—Magin	0	2	1	2	10
25—Crebs	1	1	0	0	8
26—Carmen	1	0	2	0	8
27—Halstead	1	1	0	0	8
28—Billington	1	0	1	0	7
30—Morton	0	1	0	2	5
31—Rupprecht	0	1	1	0	5
32—B. Hill	1	0	0	0	5
33—Schiller	0	0	1	1	3
34—Reeber	0	1	0	0	3
35—Lawson	0	1	0	0	3
36—Kessler	0	0	0	1	1
37—Keefe	0	1	0	1	1
38—Pye	0	0	0	1	1
39—Eaton	0	0	0	1	1

Two Six Day Races for Australia.

Australia is to have two six-day races early in 1912, one in Sydney and the other in Melbourne. Both events are being promoted by the J. D. Williams Cinematograph Co. The races will be organized along the same lines as those held annually in Madison Square Garden, New York City, and will go the regulation six day's journey of 142 hours.

Handsome prizes are to be offered and will include a number of special prizes. From first to third the money per team approximates respectively $3,750, $1,000 and $250. To the Australian team breaking the Moran-Macfarland record of 2,737 miles 176 yards is offered $500. A prize guarantee fund of $8,000 will be posted.

R-S Devotees Try Triplet Team.

The regular run of the Reading-Standard B. C., of Baltimore, was held last Sunday to Bay Shore and Sparrow's Point. The club tried out its new triplet team and the trio went over the twelve mile course to be used by the Racycle B. C. in its coming race. The triplet was manned by Captain Louis J. Seigel, B. Berkowich and William Coddell. As soon as they get in the best condition they intend to issue a challenge to other triplet teams in Baltimore. Quite a number of the members of the Racycle B. C. and the Crescent B. C. went over the twelve mile course, some of whom will participate in the race.

"Teaming" To Be Feature at This Race.

On Sunday, the 1st inst., there was carded at the Newark Velodrome a five-team match race, two men to a team, and three other events for the professional; two races for the amateurs, a novice race and a match race for the "gas ponies" ridden by Charley Turville and "Daredevil" Hunter. The entire program resulted in a clean sweep for one Jupiter Pluvius. Owing to the apparent lack of appreciation by the fans, Manager Chapman declared "no contest," and announced that the same program would be run off next Sunday, the 8th inst.

New Officers for Grand Rapids Club.

At the regular meeting held the 22nd ult., the Western Michigan Cycle Club of Grand Rapids, Mich., held its annual election of officers, with the following results: Daniel Smith, president; Claire Newman, vice president; A. Lindberg, secretary; Roy O. Dennison, treasurer, and Robert Sproat, road captain.

Walthour Now Champion of Europe.

Bobby Walthour showed a clean pair of heels to his German competitors in the "championship of Europe" race of 100 kilometers (62 miles), at Breslau, Sunday, the 17th ult., when he won handily in 1:23:12; second, Gunther; third, Scheuermann; fourth, Linart.

Changes in F. A. M. Committee.

E. K. Buffington has resigned as chairman of the Transportation and Facilities' Committee of the F. A. M., and Winfield Graham, of Buffalo, has been appointed to fill the vacancy, while Arthur Davidson, of Milwaukee, joins the committee.

Rain Prevents Springfield (Ill.) Races.

The motorcycle races which were to take place at the Illinois State Fair at Springfield on Friday and Saturday, September 29th and 30th, had to be postponed on account of rain.

CHESAPEAKE CLUB SHOWS AMBITION

Only a Few Weeks Old, Plans to Hold Long Distance Run—Crescents Report Century Mileages.

Two of the officers of the newly organized Chesapeake M. C., of Baltimore, went on a 250 mile ride last Saturday and Sunday. They were E. F. Roof and George W. Coggins, and their destination was the home of Roof at Hancock, Md. They left on Saturday morning and were back home late Sunday evening. They had an enjoyable time and reported the roads in good condition. The other members of the club went down to Laurel last Sunday, covering a short distance of about 35 miles. The club is making quick progress and expects shortly to be able to take its initial long-distance run to York, Pa.

At a meeting of the Crescent B. C., of Baltimore a few days ago the captain made his report, containing the standing in the century mileage contest for the year. Charles H. Thomas still holds the coveted first position, with William A. Leimbach as the runner-up. Thomas' individual report for the month of August includes a double century, which is the first on record since August, 1908, and the third to be ridden since the organization of the Crescents. The total for Thomas, 35,334 miles and 86 centuries, is a record breaker and surpasses by far any previous report up to this time of the year.

Several changes are noted since Captain Huber made his last report, Doc Sanborn having nosed Mommer out of fourth place and Huber displacing A. J. Baker from seventh position.

The standing to date is as follows: Charles H. Thomas, first; William A. Leimbach, second; August T. L. Leimbach, third; Fred M. Sanborn, fourth; Fred E. Mommer, fifth; Langdon M. Sanborn, sixth; J. Fred Huber, seventh; Alfred J. Baker, eighth; George Pulstocker, ninth; C. Edward Berigtold, tenth; John W. Trost, eleventh; Thomas W. Baker, twelfth; Fred S. Plitt, thirteenth; Charles Baquoi, fourteenth; Frank Fertitta, fifteenth.

Singles to Race at Reading Meet.

The Reading (Pa.) Motorcycle Club is to hold a sanctioned race meet at the Reading Fair grounds' half mile track on October 14th. Only four horsepower machines will be allowed, but all the events are open.

French Cyclists Pay $1,618,200 Fees.

There are to-day over 2,697,000 cyclists in France, due no doubt to the incentive found everywhere in that country in the shape of practically perfect highways. Cyclists are required to pay an annual license fee of about 60 cents.

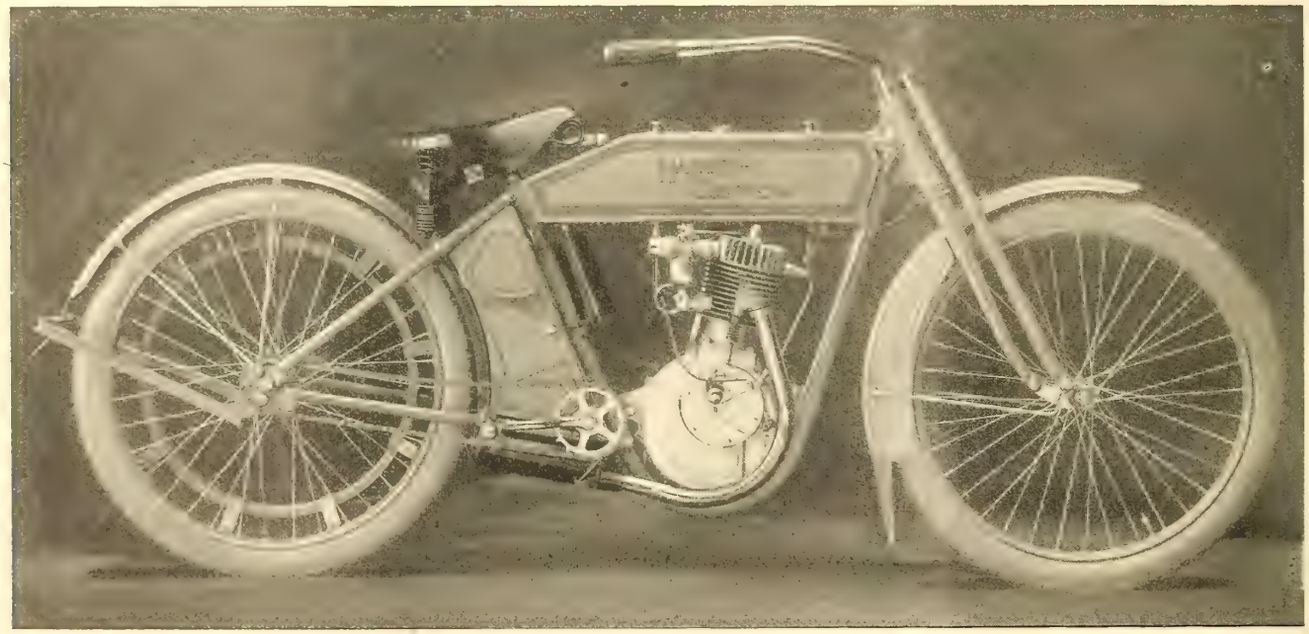
1912 Harley-Davidson

THE only Motorcycle with a Ful-Floteing seat and the smoothest working Free-wheel control ever devised. The latest and greatest inventions of William S. Harley the world's foremost Motorcycle designer and engineer

1912 MODELS AND PRICES

4 H. P. Single-Cylinder Battery Model with Ful-Floteing seat **$200**

4 H. P. Single-Cylinder Battery Model with Ful-Floteing seat and Free-wheel control . **$210**



4 H. P. Single-Cylinder Magneto Model with Ful-Floteing seat **$225**

4 H. P. Single-Cylinder Magneto Model with Ful-Floteing seat and Free-wheel control . **$235**

6½ H. P. Twin-Cylinder Magneto Model with Ful-Floteing seat **$275**

6½ H. P. Twin-Cylinder Magneto Model with Ful-Floteing seat and Free-wheel control . **$285**

The Harley-Davidson and what it means to

Single-Cylinder Battery Model with Ful-Floteing Seat, $200

Remove the springs from an automobile and then drive it over rough roads. The sensation will be similiar to that of riding an ordinary motorcycle. In both cases you have only the resiliency of the tires and the springs in the seat to absorb the shock. That this would be insufficient you will readily grant. Designers and those intimately acquainted with motorcycles have known this for years. Devices, contrivances, and experiments galore have been foisted onto an anxious, waiting public. That they were immature, inefficient makeshifts at the best, is conclusively proven by their lack of sales. The need was there, however. A need most generally and urgently voiced.

The Harley-Davidson Motor Company realized this need, and through their Mr. William S. Harley and his experimental force, began a series of exhaustive experiments which, finally after four years of continued effort, have resulted in the perfection and adoption of what will be known as the Ful-Floteing seat. In the course of these experiments Mr. Harley built and thoroughly tested out, under all conditions, eight spring frames, one after another, only to discard them all. All of these showed a vast improvement from the point of comfort over the types and models now in use. But the constant working of the parts while in use on the road, soon wore them enough to make them rattle and clatter. Along with this nerve-racking noise came the disagreeable and dangerous side sway of the rear part of the frame, which is found on all spring-frame models. This, with the dangerous rebound when traveling over very bumpy roads, caused Mr. Harley finally to condemn the spring frame as undesirable and one that offered almost as many disadvantages as advantages.

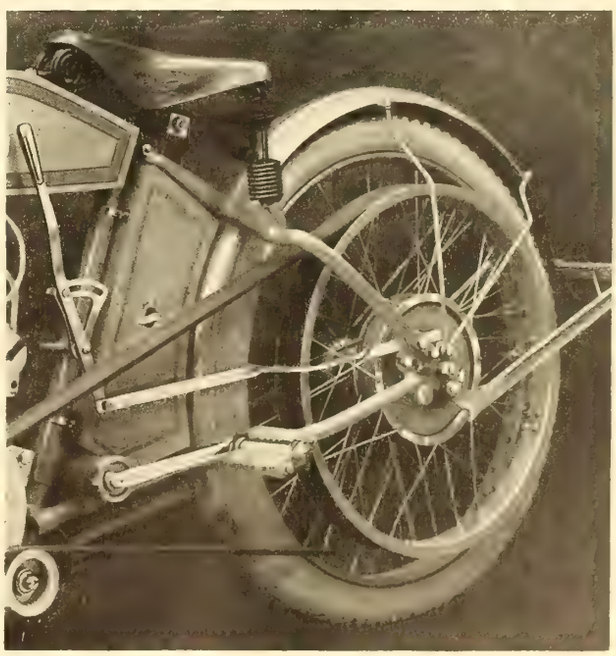
This was very forcibly impressed upon Mr. Harley, who, on one of his trips of investigation, attended a prominent hill-climb. One of the riders came up the hill on a twin-cylinder, spring-frame machine, and upon striking a rough spot in the road was thrown clear over the handle-bars before he could again regain control of the machine. This was due to the action of the spring frame. Understand, this discarding of the spring frame did not come until month after month of continued experiment, and the building of model after model had proven beyond a question that perfection along this line was impossible. The underlying principle was diametrically wrong. Most of these models showed vast improvement over present type of spring frames, but the improvement was not radical enough to warrant the expenditure of the thousands of dollars which a change in model and the consequent change in the forms, dies and machines always necessitates. Now, understand, all this was some years ago.

It had taken considerable time and a good deal of money to find out that the spring frame would not do the business, and that it was at best only a temporary makeshift which must be constantly repaired and worked on to keep it in practical working order. Some of the faults did not develop for thousands of miles, but they existed, nevertheless, and that was sufficient to place them out of the question for a Harley-Davidson.

Ful-Floteing TRADE MARK seat, what it is, the rider and the dealer

The Harley-Davidson Motor Company never has and never will foist onto the public a comparatively untried or questionable innovation of any character. It is a matter of great pride with this Company that each and every innovation has proven eminently satisfactory and been continued on subsequent models.

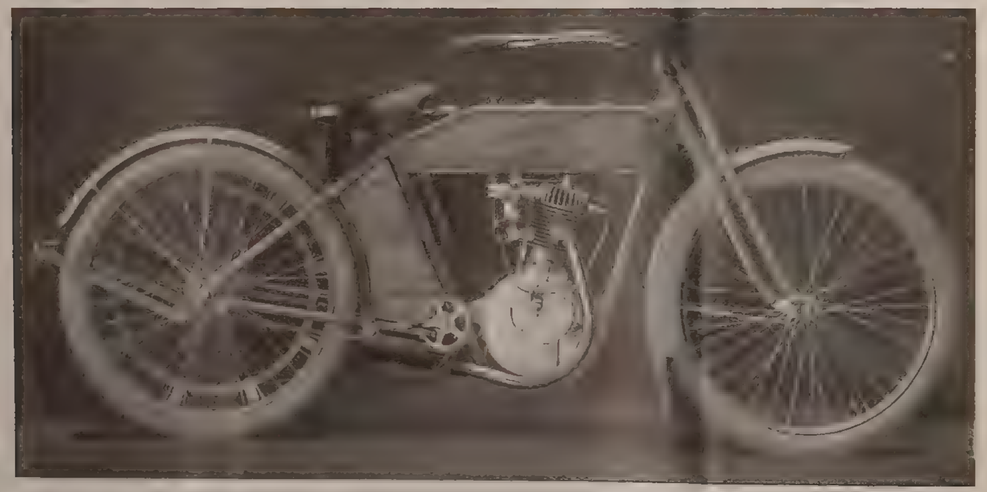
After discarding the spring frame, Mr. Harley next took up the question of spankers or so-called shock absorbers, investigating and trying out all such attachments to be found on the market, only to find that its very design, which, of course, necessitated of its being attached to existing machines, made it a mechanical impossibility to give this device a wide enough range of action to take care of the work which would necessarily be placed upon it. Mr. Harley's experiments so far had merely served to collect and emphasize the faults of the present types of spring frames, spankers, shock absorbers, and other so-called comfort devices. This gave him as a basis of future experiments the obstacles which he must overcome. From this he knew that any device which he might construct, if it were to be truly successful, must do away entirely with the dangerous and disagreeable side sway, and moving parts that would wear, rattle or break. It must do away with the vicious rebound, ever tending to throw the rider. It must do away entirely with the objectionable high saddle position, made necessary by many of these would-be comfort devices. It must have a cushioning device of ample proportion to prevent "striking bottom" when going over exceptionally bad stretches or road, crossings, railroad tracks, etc. Above all, it must be practical, efficient and durable.



Then began another series of experiments and elimination of different ideas which finally resulted in the patenting of the principles, two years ago, that are today embodied in the Harley-Davidson Ful-Floteing Seat. Following these principles, model after model was built, each with some improvement, and tested out thoroughly. This resulted in the adoption of the present type. We could see no fault with this type, but the Harley-Davidson Company cannot afford to take any chances. Therefore, several of these Ful-Floteing Seat Models were made and given over to the testers of the factory with instructions to "beat it." Day after day, and week after week, with rider after rider, these machines were put through tests ten times as severe as any endurance run or road race ever held, through mud, sand, over stones, bumps, crossings and over every conceivable form of road these devices were tested.

About a block from the factory was a piece of vacant property which was being filled. Wagon load after wagon load of gravel and cinders had been dumped upon this property. The only path was that made by the empty wagons driving over the mounds on their way back to the road. This was a favorite wind-up for every tester. Every "Doubting Thomas" who has been permitted to ride these machines had been directed to this field. Today, the Harley-Davidson Ful-Floteing Seat is an acknowledged success, worthy of its name, for it furnishes to the Motorcycle Public, a motorcycle with the lowest seat position ever attained, being fully two inches lower than that of previous Harley-Davidson models—side sway is an impossibility—the rebound is more than provided for—striking bottom is unheard of, and twisting of the seat impossible. No longer is a rider a human hammer pounding out broken saddles, broken hubs or denting rear rims. Rim cuts, stone bruises, blow-outs and punctures become as rare on the rear wheel as they have been on the front since the general adoption of spring forks. In fact, the action of this seat is so drastically different from anything previously on the market as to make true description almost an impossibility.

The rider of one of these machines goes by you over a cedar block or cobble stone pavement, and you note that the back wheel, like the wheel on an automobile, rises and falls or vibrates with the unevenness of the road, but the rider travels on an even line. It sounds almost too good to be true. Candidly, we don't expect you to fully believe all the qualities which we claim for this greatest of additions to the joys of motorcycling. All we can say is wait. Reserve your judgment until you have ridden a 1912 Harley-Davidson. Then, believe what you know and you'll spread the good word. To the rider, this means 100 per cent. better roads everywhere. It means that to cross railroad tracks, and high street car crossings, are no longer like taking an unexpected step downward in the dark. It means that no road is too rough to "beat it." A mighty strong statement, but in due time the Harley-Davidson itself will prove it to you. It means that no longer is the limit of a day's or week's journey marked by the limit of the rider's physical endurance, but rather by his desires. In fact, it furnishes the one long-sought-for addition to Motorcycling, it doubles the joy and will double the popularity of the sport in general.



These statements may sound strong to you, Friend Reader, but bear this in mind, if we cannot substantiate each and every statement that we have made, if this device is not all and more than we have claimed for it, we are the losers, not you, for few, if any, motorcycle riders of today buy on hearsay, or because the manufacturer has said his article or output was the best.

To the dealer this Ful-Floteing Seat, which will be a part of every 1912 Harley-Davidson, combined with the reduced price (see page 1) means increased sales and easier sales, but above all, Harley-Davidson sales for Harley-Davidson dealers.

Free-wheel Control complete with Operating Lever

The Harley-Davidson Ful-Floteing seat, what it is, and what it means to the rider and the dealer

Single Cylinder Battery Model with Ful Floteing Seat, $200

Remove the springs from an automobile and then drive it over rough roads. The sensation will be similiar to that of riding an ordinary motorcycle. To the dealer this Ful-Floteing Seat, which will be a part of every 1912 Harley-Davidson, combined with the reduced price (see page 1) means increased sales and easier sales, but above all, Harley-Davidson sales for Harley-Davidson dealers

Free-wheel Control complete with Operating Lever

The Harley-Davidson clutch practical for single

Single-Cylinder Magneto Model with Ful-Floteing Seat and Free-wheel Control, $235

For over a year the question of whether a free-engine clutch was desirable on twin-cylinder machines has been argued pro and con. Both sides of the question had its adherents, and both sides of the argument had merit. The prevalent type of clutches were, however, generally conceded, even by the clutch producers themselves, to be impractical on single-cylinder models. Realizing this fact, motorcycle manufacturers and dealers demonstrated clutch attachments on twin-cylinder models, as you will recall. The few unfortunates who purchased single-cylinder models with the "speed her way up and let 'em in easy" clutches, realize today that these clutches were ill adapted to single-cylinder machines.

Away back in 1906, before there were any motorcycle clutches on the market, we built and installed on some thirty odd experimental machines a type of free-engine clutch, very similar to the prevalent models of today. Although these experimental clutches had many advantages over prevalent types of today, they also had some of the faults and did not measure up to the required Harley-Davidson standard. Experiments were continued, and multiple disc clutches running in oil, grease and graphite, dry cone and disc clutches with metal to metal, metal to fibre and other composition faces were built, tried out, and abandoned. All of them required racing of engine to prevent stalling when running free, and extreme racing of engine when getting under way again. They would not run smooth, had to be very slowly and carefully applied, and most of them would grab and stall the engine nearly half the time on single-cylinder models. Consequently, they were abandoned and experiments continued.

About two years ago, when Mr. Harley became convinced that the principles underlying that type of clutch were radically wrong, he began experimenting with a free-wheel control which led up to the building of experimental models similar to our present adopted type. The action of, and showing made by these models, made it at once apparent that he was on the right track, and experimental machine after experimental machine was built and turned over to the Testing Department, with instructions to abuse these free-wheel devices, burn them up, and wear them out, if possible. It took thousands of miles and month after month, of the most grilling use and abuse to convince Mr. Harley that his latest model was no longer an experiment, but the most successful type of free engine ever made.

We say type of free engine, for the Harley-Davidson Free-Wheel Control, properly speaking, is not an engine clutch, but a rear-wheel control, located in and controlling the speed of the rear wheel. The advantages of this type of clutch are many. First of all, it permits the using of contact surfaces large enough to take proper care of the stress placed upon them. This is impossible with a clutch placed upon the engine or countershaft. In fact, the contact surfaces on the Harley-Davidson Free-Wheel Control are from five to seven times as large as those on other prevailing types of clutches.

Free-wheel TRADE MARK Control the only cylinder machines and why

It is a well-known fact among scientific men and mechanical engineers that a belt of a given size will transmit more power when traveling at a high speed than it will when moving slowly. With a Harley-Davidson Free-Wheel Control, we have this high belt speed which is not present when the clutch is located on the engine. Again, because of this high belt speed and the fly wheel-like action of the rear pulley which is mounted independently of the rear wheel, and on a separate set of spokes, it takes materially less power to get the rear wheel proper into motion through the clutch when mounted in the rear wheel than if mounted on the engine. In the latter case the engine has to overcome the inertia of the belt and the rear pulley and get these into motion in addition to the rear wheel itself. In other words, on a Free-Wheel Control, even on a single-cylinder model, the injurious racing of the motor necessary when throwing in the clutch with all other devices, is done away with.

On the present prevailing type of free engine it is a well-known fact that if one were to run the engine on the stand with the clutch in it would be possible to operate the engine at a much lower speed than if the clutch were disengaged, the rear wheel acting, as it were, as an additional fly wheel. This is not true with the Harley-Davidson Free-Wheel Control, as when the clutch is thrown out, the momentum of the revolving rear pulley, combined with the high belt speed, serves to maintain the motion of the engine from explosion to explosion, and permits of much slower running of the engine. You can readily see that this does away entirely with the overheating and consequent injury to the engine when standing or running through crowded districts with the clutch disengaged most of the time. Furthermore, this Free-Wheel Control is so designed as to be semi-automatic and can be almost instantly engaged. It does not require the nursing and easing in, common to the ordinary type of clutch.

With the Free-Wheel Control, the drums or working parts in the rear wheel are out of the way in case of an accident or spill, which is not the case with other free-engine devices.

Although it costs us nearly three times as much to build this clutch as it would to build the ordinary type of multiple disc, or dry cone or disc clutch, we are furnishing it, if desired, on all models, at an additional cost of $10.00. We have made this price so low and out of all comparison to its true value merely to insure the installation of this clutch on all Harley-Davidsons where clutches are desired.

Heretofore we have discouraged the equipment of Harley-Davidsons with any of the various type of clutches available, as we believed they were injurious to the machine and materially lessened their length of life.

Some more 1912 Refinement

The frame head is heavier than heretofore and now doubly reinforced.

A slight change in the stand has been made.

The axle ends of the rear stays have been reinforced inside by drop forgings. This does away entirely with any possibility of the bending of these stays in case of extreme use of the coaster brake. A new arrangement is used for fastening the coaster brake arm.

The front mud guard has been fitted with a shield (see illustration), which does away entirely with the splashing of mud or water on the belt or rider when turning corners, etc.

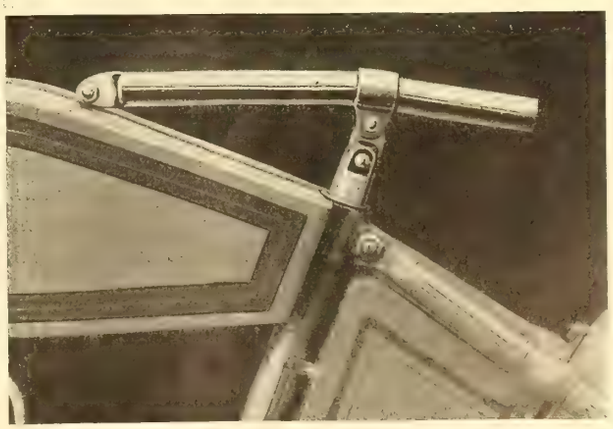
Tank fillers have been moved forward several inches.

The motor on the 1912 model is fitted with an improved type of piston and a better balanced connecting rod.

The saddle position is lower and farther forward. This gives the new Harley-Davidson the lowest and most comfortable saddle position ever attained on any motorcycle.

An eccentric crank hanger has replaced the fixed type formerly used. This permits of a wider range of belt adjustment.

A larger tire pump, twice the size of that furnished with former models, a larger bicycle wrench, and the addition of several S wrenches, together with other tools, and a complete tire kit, make up a more complete equipment than heretofore.



Even more money is being spent on the finish of the 1912 models than ever.

The Piano Wire formerly used in our controls, has been replaced by an imported product of five times the tensile strength. This imported wire is nearly three times as expensive as the product formerly used, and its adoption is merely in compliance with the Harley-Davidson Factory principle, namely, "use the best available material regardless of price."

We are again equipping all our Magneto models with Bosch Magnetos. This is the highest priced Magneto on the market, costing over 50 per cent. more than many of the other available types. The use of a cheaper magneto on our magneto models this year would have resulted in a saving of nearly one hundred thousand dollars for this factory. Do you think for one minute that we would spend this amount of money if we did not deem it necessary? A good magneto is an addition to any machine, but a poor one is a handicap.

The above mentioned saving possible in Magnetos illustrates very plainly one of the many ways the cost and consequent selling price of motorcycles could be materially reduced. But when a manufacturer begins to cheapen material and equipment in order to lower selling price, he actually cheapens the true value of the machine five dollars for every dollar so saved. It might be well right here to say that the actual cost and quality of materials used in the 1912 Harley-Davidson has been increased, not decreased. The manufacturing cost, however, due to an increased output, larger purchases in materials, and improved types of machinery, has been very materially decreased.

Our manufacturing cost in 1912 will be less than has heretofore been possible in any Motorcycle Factory. This is due to the fact that in 1912 we will manufacture more motorcycles than have ever been turned out by any motorcycle manufacturer in any one year. We would candidly say to every rider and dealer, if you can find a better machine than the 1912 Harley-Davidson, buy it. We do not believe you can. We know you will never find it in a machine with a lower selling price.

Ful-Floteing Seat Post with Saddle removed. Top of Plunger exposed

The Harley-Davidson clutch practical for single-

Single-Cylinder Magneto Model with Ful-Floteing Seat and Free-wheel Control, $245

For over a year the question of whether a free-engine clutch was desirable on twin-cylinder machines has been argued pro and con. Both sides of the question had its adherents, and both sides of the argument had merit. The prevalent type of clutches were, however, generally conceded, even by the clutch producers themselves, to be impractical on single-cylinder models. Realizing this fact, motorcycle manufacturers and dealers demonstrated the "speed her way up and let 'em in easy" clutches, realize today that these clutches were ill adapted to single-cylinder machines.

Away back in 1906, before there were any motorcycle clutches on the market, we built and installed on some thirty odd experimental machines a type of free-engine clutch, very similar to the prevalent models of today. Although these experimental clutches had many advantages over prevalent types of today, they also had some of the faults and did not measure up to the required Harley-Davidson standard. Experiments were continued, and multiple disc clutches running in oil, grease and graphite, dry cone and disc clutches with metal to metal, metal to fibre and other composition faces were built, tried out, and abandoned. All of them required racing of engine to prevent stalling when running free, and extreme racing of engine when getting under way again. They would not run smooth, had to be very slowly and carefully applied, and most of them would grab and stall the engine nearly half the time on single-cylinder models. Consequently, they were abandoned and experiments continued

About two years ago, when Mr. Harley became convinced that the principles underlying that type of clutch were radically wrong, he began experimenting with a free-wheel control which led up to the building of experimental models similar to our present adopted type The action of, and showing made by these models, made it at once apparent that he was on the right track, and experimental machine after experimental machine was built and turned over to the Testing Department, with instructions to abuse these free-wheel devices, burn them up, and wear them out, if possible. It took thousands of miles and month after month, of the most grilling use and abuse to convince Mr. Harley that his latest model was no longer an experiment, but the most successful type of free engine ever made.

We say type of free engine, for the Harley-Davidson Free-Wheel Control, properly speaking, is not an engine clutch, but a rear-wheel control, located in and controlling the speed of the rear wheel. The advantages of this type of clutch are many. First of all, it permits the using of contact surfaces large enough to take proper care of the stress placed upon them. This is impossible with a clutch placed upon the engine or countershaft. In fact, the contact surfaces on the Harley-Davidson Free-Wheel Control are from five to seven times as large as those on other prevailing types of clutches.

Free-wheel Control the only cylinder machines and why

It is a well-known fact among scientific men and mechanical engineers that a belt of a given size will transmit more power when traveling at a high speed than it will when moving slowly. With a Harley-Davidson Free-Wheel Control, we have this high belt speed which is not present when the clutch is located on the engine. Ful-Floteing Seat Post with Saddle removed Top of Plunger exposed

New Twin-Cylinder Model

Embodying several important changes

Twin-Cylinder Magneto Model with Ful-Floteing Seat, $275

A number of changes have been made in the new Twin-Cylinder Model. The inlet valve operating mechanism has been simplified and a change in the cam and rocker arms has done away with the clicking noise which was noticeable at high speed.

These changes have also made the machine faster and have given it more power at all speeds.

The inlet valve push rods are now made adjustable and fitted with spiral springs, which do away with any chance for noise in the overhead rocker arms.

The 1912 Harley-Davidson Twin is **dead quiet**—the liveliest and most flexible machine we ever built.

A new type of piston and balanced connecting rods mark the changes in the reciprocating parts, while an improvement has been worked out in the lower connecting rod bearing, which, in a twin-cylinder machine, is probably called upon to do more work than any other one part of the motor.

A wider belt—2 inch takes the place of the 1¾ inch belt used heretofore.

Summed all up, the 1912 Harley-Davidson Twin, incorporating, as it does, the important changes and improvements noted above, cannot help but appeal to the experienced rider who demands excessive power and speed. It is a machine complete in every sense of the word, and leaves nothing to be desired by the man who has set his mind on this particular type. The twin, like all other models, is, of course, equipped with the Ful-Floteing seat.

HARLEY-DAVIDSON MOTOR CO.

107 C STREET MILWAUKEE, WISCONSIN

New York to Newburgh-Ramapo Valley and Return--

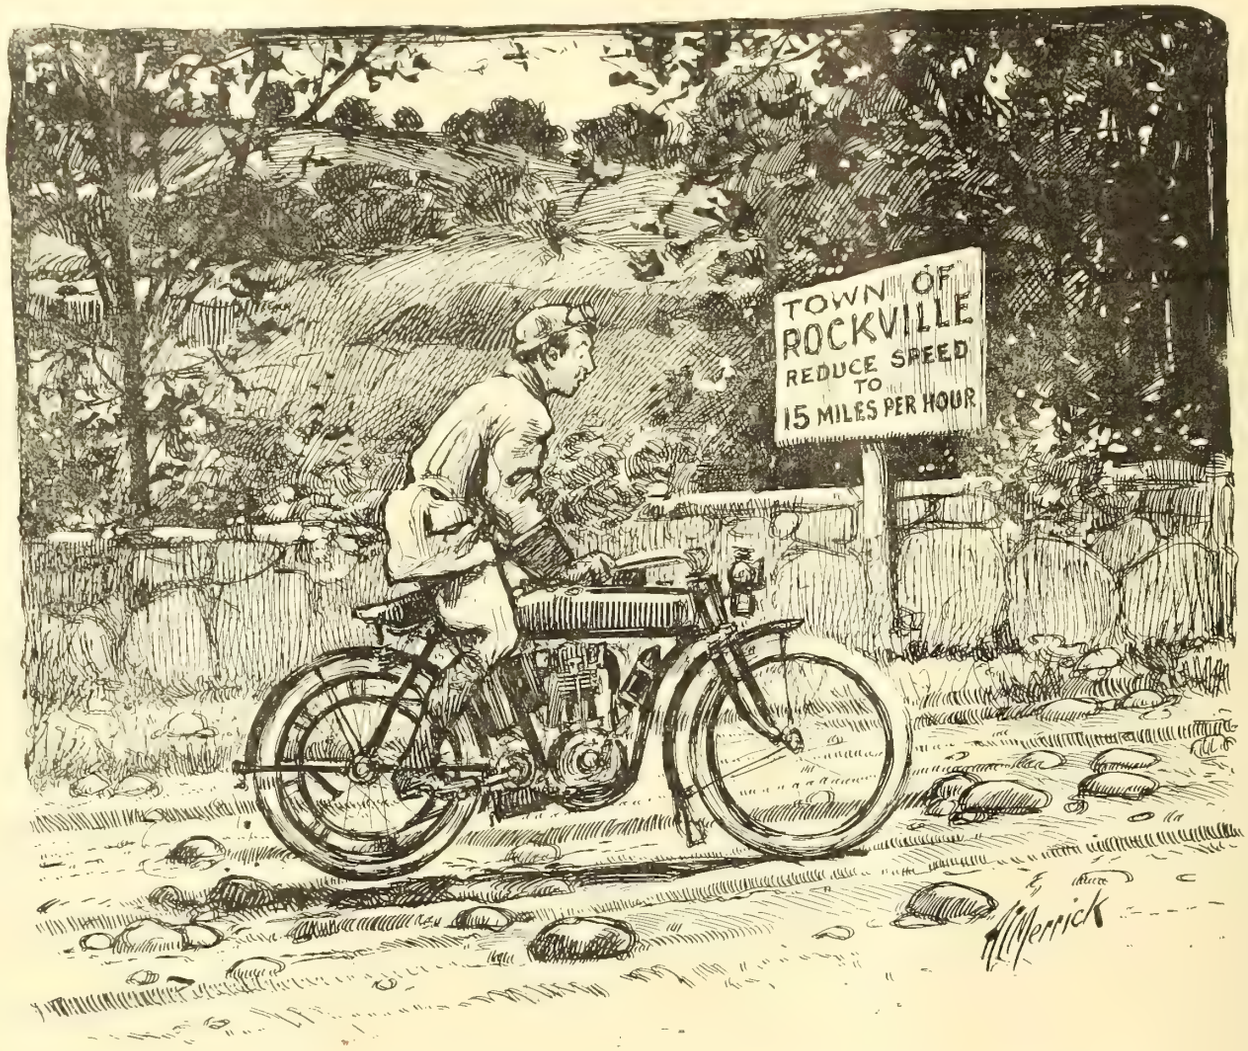
Indian Brook Fountain ②

Croton River Bridge ①

After leaving Vails Gate ③

Near Highland Mills ④

In the Ramapo Valley ⑤



"S" turn - approaching Ramapo ⑥

At Spring Valley ⑦

FOR an all day tour the route up the east side of the Hudson and back through the Ramapo Valley is interesting. The short section beyond Peekskill is in poor condition, but can be navigated with liberal use of the free engine. With this exception the roads are good. The State road below Newburgh and through the Ramapo Valley is particularly fine.

From Columbus Circle follow the usual route through Yonkers to Tarrytown (27 miles), straight through to Ossining (33 miles). At monument turn left down steep hill. Cross Croton Bridge. Follow trolley into Peekskill (44 miles). Straight ahead across Main street, along North Division street, then keep to the left down long grade, across bridge to foot of Nelson Hill. At top of hill the poor road begins. At cross road, which leads to Garrison, turn right, follow to Cold Spring (55 miles), turn to left down business street to Fair street, then right along river past Storm King to Fishkill Landing (60 miles). Ferry to Newburgh; then up steep hill one block to trolley line, then with trolley on Grand street to Mill street, where turn to left for Vails Gate (5 miles). Fork in road, KEEP LEFT. From this point the road is easily followed through Highland Mills, Arden, Tuxedo to Suffern (34 miles).

Follow main road through Suffern, several blocks to triangle (Church and stone wall); keep to left straight through Spring Valley (42 miles) to Nyack (57 miles). Ferry to Tarrytown. Up grade to Broadway; turn to right for New York (27 miles). Total distance of run, 144 miles.

"'Fifteen miles an hour'! This is where I'm mighty glad to keep well inside the village law!"

Cycle Controversy Causes Comment.

The recent uproar over teaming and the consequent referee's decisions at the Newark Velodrome where bicycle racing holds forth twice weekly, before thousands of fans, just as partisan and as rampant as any who ever followed the cycling or any other game, has been provocative of much comment and inquiries in the local press. Instances of which and the answers thereto by the sporting editor of the Newark News are given in the following:

Well, what do you say! So we have more kicking at the Velodrome! I'm shaking hands with myself all week and showering all kinds of compliments upon myself for resisting the great allurements of the "hummers" that were run off at the new historic track. These "all on edge men" are great. I mean the star riders. I'll tell you what, the New York six-day races was all I needed to enlighten me. You can't blame these men. Riding is their livelihood, and why not make it pay, even if the crowd must be buncoed.

What about the crowds? They are easy and good-natured. They'll come back for more, so what's the difference. And as for the promoters, I'd be in favor of erecting a monument to their memories. Hasten the time when the opportunity shall present itself. But there, I'm getting sanctimonious. I'm getting nervous.

The human race is dishonest (me, too). A cycle race isn't always honest. The only race I ever saw with a claim to honesty was a mill race, and even that's not on the level—but it does its best to find it. So, in the face of all these considerations, let us not blame the deadheads at the Velodrome if they do dig their graves. Board of referees! What's that? Wasn't Bardgett murdering the game swift enough? Some sprint, eh? I'll write you more collectively some other time. So good-bye now.

Yours, SLOPS.

[Well, if that's the way you feel, it is better to get the load off your stomach.]

Will you kindly give me some particulars as to the careers of Alfred Goullet and Joe Fogler, and their habits. I have been told that Goullet was a former Newarker, whereas I had supposed him to be a native Austr as I had supposed him to be a native Australian. How long has Jackie Clark been riding under contract with the N. C. A. and are his habits such as would tend to make his racing life a lengthy one, rather than a short and merry one? Also, is it true that Champion Frank Kramer is a confirmed woman hater? Any information you can give me in regard to the above will be appreciated. Please don't publish my name in your reply. Yours truly, G. R. S.

[You are too inquisitive. If you really desire all the information you seek, write to the persons in whom you seem to be so much interested. Can't blame you for desiring your name withheld. Fogler is a terrible bad boy. I understand that he drinks coffee for breakfast, and worst of all, he is a friend of a fighter by name of Jim Stewart. Information about the private lives of the other riders you seek can be obtained at any library.]

The motorcyclist who has a

NEW DEPARTURE

Internal Expanding Band

COASTER BRAKE

in his rear wheel will tell you —

It never fails to operate satisfactorily.

It is the most reliable part of his machine.

It has more power than he ever really needs — he can stall his engine with it.

It is strong to the point of indestructibility.

It has proven it's success.

Among all the motorcyclists who attended the big Buffalo F. A. M. meeting and whose machines were equipped with New Departure Coaster Brakes all reported the brake as giving excellent service and fulfilling all claims made by it.

Kokomiles save Kokomoney for the Rider and make Kokomoney for the Dealer!

Kokomiles are those myriad miles of satisfactory service that are given by

Kokomo Tires

Again we ask:

"Are you profiting by what we offer you in Kokomo Tires?"

For instance:

Kokomo Defender Special

This popular guaranteed tire is specially designed and constructed for road use. It is made from the best materials obtainable, being carefully built up by hand with pure para inner tube, and, owing to the very high quality of the inner tube used, a puncture is very easily repaired.

Kokomo "New Oxford"

A medium price tire, yet so good in quality that it does not do it justice to call it a medium grade tire. We have built these tires so that in case of puncture they will not be worthless but can be repaired. Also furnished in smooth tread.

Every dealer handling these tires is doing a benefit to his customers and to his own bank balance.

KOKOMO RUBBER COMPANY, Kokomo, Ind., U. S. A.

But when you see the Flanders, gee, you'll be sore.

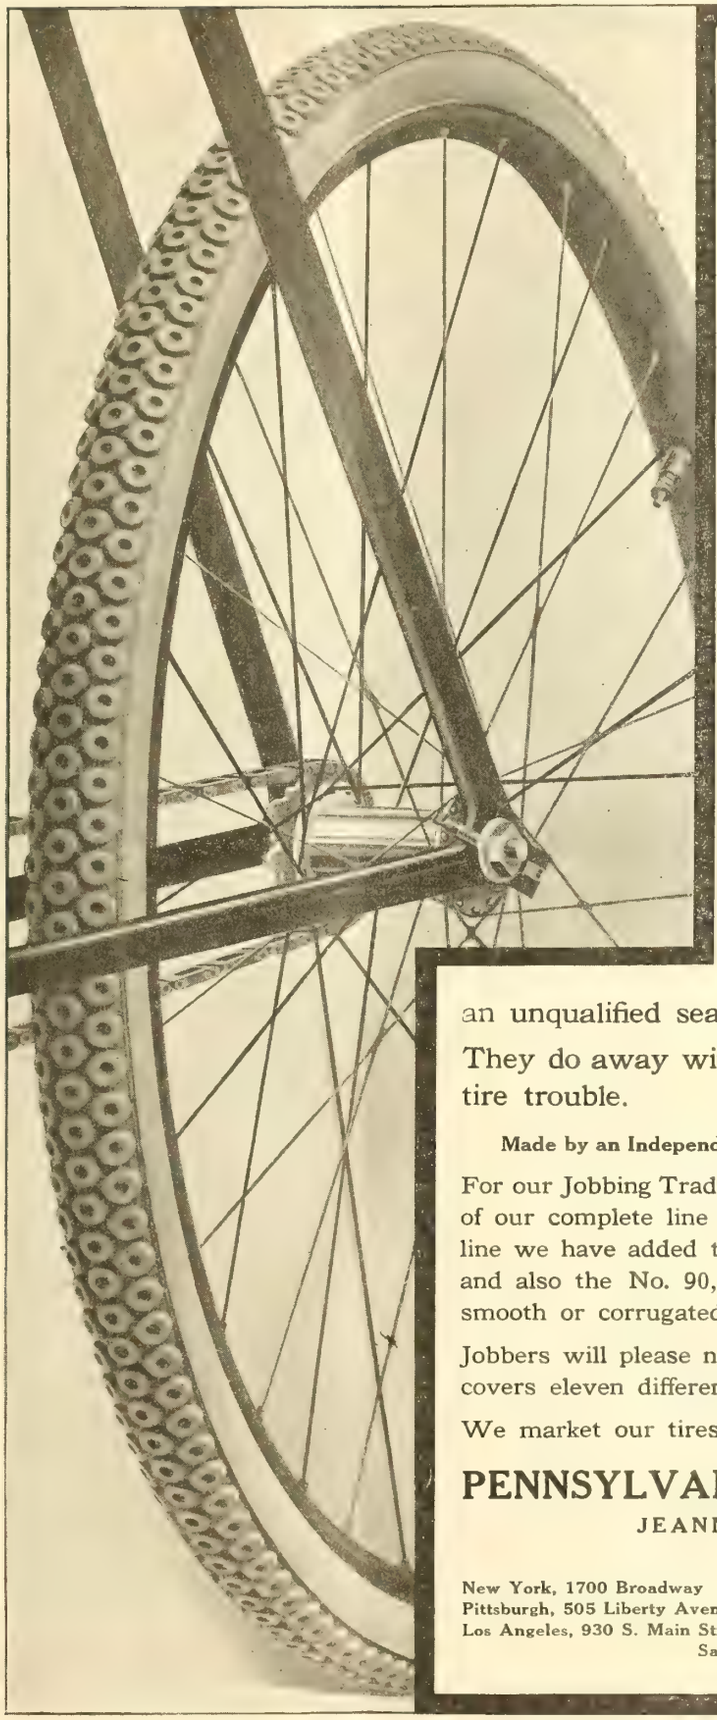
NIGHT LETTER

1 ON KN 45 N L Seattle, Wash., Sept., 30, 1911.

Sales Manager, Flanders Mfg. CO.,
Pontiac, Mich.

My new demonstrator arrived today and am receiving congratulations from dealers of other makes of machines on your neat, powerful and well-built machine. After trying it out with extra passengers was more than surprised at the quiet running of motor and above all, its easy control and the way it operates through sand and mud. How soon can you ship a carload.

Ellis Williams.



FLANDERS "4"

MOTOR-CYCLE $175 WITH MAGNETO

An Eye Opener **A Money Getter**

Business comes easy with this proposition. You note we don't knock. We don't have to.

Flanders Manufacturing Company
PONTIAC, MICHIGAN

These tires carry an *Unqualified Season's Guarantee* and absolutely prevent side-slipping.

Pennsylvania VACUUM CUP Bicycle Tires

They exert a *vacuum hold* on wet and slippery pavements. Skidding in any direction is impossible. The triple row of cup-shaped knobs is molded on a tread of regular thickness, which means extra long service. Puncturing is extremely rare.

These tires are so well made and of such fine material that we give an unqualified season's guarantee with each.

They do away with the greatest of bicycle worries—tire trouble.

Made by an Independent Company. Sold by Independent Dealers.

For our Jobbing Trade, season 1912, we have samples and prices of our complete line of Bicycle Tires. To this popular-priced line we have added the new Vacuum Cup Tires quoted above and also the No. 90, a special high-grade tire made in either smooth or corrugated tread.

Jobbers will please note that our line of Bicycle Tires for 1912 covers eleven different grades.

We market our tires exclusively through the jobbing trade.

A CHAMPION RIDES A CHAMPION

1912 Excelsior, De Rosier Riding, Cuts Champion's Own Record

De Rosier, the world's champion motorcyclist, road a 1912 Excelsior at the Riverview Park Motordrome, Chicago, on Sept. 17, and slashed two seconds off his own world's record. A gradual process of elimination convinced the world's most famous motorcyclist that the 1912 Excelsior was the ONLY machine worth considering.

Here's what the Excelsior has done this season:

On August 19 it cut 3 mile record to.....2:02⅖
On August 19 it cut 5 mile record to.....3:28⅖
On August 26 it cut 1 mile record to.....0:40⅕
On August 26 it cut 2 mile record to.....1:24
On September 2 it cut 2 mile record to.....1:22⅖
On September 17 it cut ⅝ mile record to.....0:23⅕
Above records made in competition

The 1912 Excelsior is the best general service machine on the market. De Rosier's record proves that its amazing speed possibilities make it the logical machine for you to buy.

Pope Bicycles

FOR THE SEASON OF 1912

FOR the past two years, the Pope bicycle business has shown remarkable gains. The enormous volume of sales for 1911 greatly exceeding that of 1910, was most gratifying to us and to our dealers who profited by it. It has been a record year for both of us.

Prospects for Pope Dealers Fine

¶With the opening of the 1912 selling season, the industry continues in the most flourishing condition and the increasing demand for high grade machines is making itself felt in no uncertain way. Don't let it catch you napping. Be ready to meet it fairly and squarely with high grade machines of POPE quality—machines that cannot be equalled elsewhere.

Our 1912 Models the Best Yet

¶We feel confident that the changes in our product for 1912 will render our machines absolutely perfect. Among other things a decided improvement has been made in the tire equipment and better saddles are being furnished all along the line. The 1912 improvements are fully set forth in the handsome catalogues which will be ready for distribution soon.

Place Your 1912 Orders Early

¶Orders for 1912 are now being booked for early delivery by our traveling salesmen, but don't delay your order by waiting for our man to call, mail it to us today.

The Pope Manufacturing Co.

THE PARTS WE MAKE OF STANDARD TUBING

"STANDARD" SEAMLESS STEEL TUBING

¶You will undoubtedly be surprised to know that 75% of the motorcycles and bicycles that pass you have frames and parts made of

Standard Seamless Steel Tubing

¶No other branch of industry requires a similar product of so great strength, accuracy, density and possibilities of finish as do manufacturers of these two wheeled vehicles.

¶Their reasons for employing Standard Seamless Steel Tubing are therefore obvious, inasmuch as they are at all times on the lookout for new materials and methods to improve their product.

¶To better acquaint you with their reasons we shall show from time to time various machines, telling you their salient features, of which in all cases Standard Tubing is the most prominent.

CAN YOU BEAT IT?
Goodyear Blue Streaks Make NEW Record

100 miles in 102 minutes 9 2-5 seconds reeled off by these whirlwind racing tires. New world's record for 100 miles on dirt track made. Tires as good as new. Hundreds of motorcyclists flocking to Goodyear Standard as result of these races.

On Sunday, September 17, George E. Evans, at the Columbus, Ohio, Driving Park, won the big event of the day.

Evans rode 100 miles in 102 minutes, 9⅖ seconds, thus establishing a new world's record for 100 miles on dirt tracks.

Below we show a picture of the man, the machine and the tires that helped to lower the record—**Goodyear Blue Streak Motorcycle Tires.**

Another desperate test of endurance! A trying dirt track! A tire killing grind of a hundred miles at close to a mile a minute! Yet these famous motorcycle tires came through intact, without puncture or blowout, without the studs on the treads even showing signs of wear. Can Goodyear Endurance be questioned?

Why You Should Insist on Goodyears

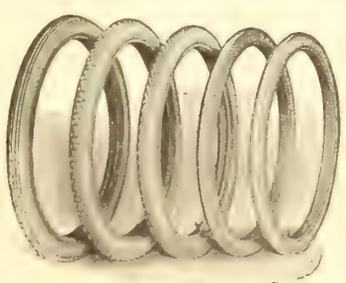
Goodyear Motorcycle Tires render most service at least cost. They are the **most desirable** tires.

Their perfection follows as a matter of course. They are constructed along lines proved most practical by years of successful automobile tire building experience. The same skill that put such service into the now famous Goodyear No-Rim-Cut Auto Tire has done the same for the equally famous Goodyear Quintette of Motorcycle Tires.

Best Materials

Goodyear Motorcycle Tires are built of the fittest materials that money can buy.

The rubber is new, live, of highest quality. Hence Good resiliency—SPEED.



The fabric, too, is different from that commonly used. It possesses **unusual tensile strength.** Instead of being **closely** woven, Goodyear fabric is so woven that later on in the rubberizing process every thread is **thoroughly embedded in rubber.**

That means all the threads are separated. So they can not rub together, cause internal friction, reduce strength and subject the tire to danger of blowouts.

Most Service

means increased mileage and decreased expense—for Goodyear Tires cost no more than tires with thinner treads.

Hundreds of riders are insisting on Goodyear Tire Equipment just because of this extra tread thickness and its lesser liability to puncture.

The Goodyear Quintette

Save Tire Troubles and Expense

by specifying one of the Goodyear Quintette of Motorcycle Tires. One for every road condition. Each built by master tire-builders.

1—**Goodyear Corrugated Tread Tires**—For the average give-and-take road.

2—**Goodyear Studded Tread Tires**—For mud, sand, snow and ice travel.

3—**Goodyear Non-Skid Tires**—For use on slippery city pavements.

4 & 5—**Goodyear Blue Streak Racing Tires**—Hold all world's records. One tire for dirt tracks, another for cement or board.

Send for "Tires of Old War Horse"

A fascinating story of the actual breaking of a record. Chock full of money saving tips of tire buyers. Also brings full information about the Goodyear Quintette of Motorcycle Tires. WRITE TONIGHT. You'll have book by return mail.

THE BICYCLING WORLD and MOTORCYCLE REVIEW
Founded 1877

Vol. LXIV. New York, U. S. A., Saturday, October 14, 1911. No. 4

ALLOTMENT OF SHOW SPACE

To Be Made by Manufacturers Committees Probably the Coming Week—Chicago Prospects Disappointing.

As previously reported exclusively in the Bicycling World and Motorcycle Review, the Motorcycle Manufacturers' Association has been allotted space in the twelfth annual automobile show at Madison Square Garden for the first week, beginning January 6th. The space allotted is on the balcony, 27th street side, directly opposite where the motorcycle division was located last year.

The agreement between the show management and the Motorcycle Manufacturers' Association will be the same as last year and the members of the Association will receive first consideration in the allotment of exhibition spaces and will be treated on an equal basis with the members of the Association of Licensed Automobile Manufacturers in the distribution of any profits. Applications for spaces were sent out during the past week and the allotment will be made between the 18th and 24th of the month by the show committee of the Motorcycle Manufacturers' Association, probably assisted by Mr. M. L. Downs, of the show management.

The situation in regard to the Chicago show, however, will prove a great disappointment to the motorcycle manufacturers, as the management of the Western show states that it will be entirely out of the question to give the motorcycles space during the first week, and owing to the many applications received from the automobile people, the best space that can be provided for the motorcycle manufacturers in the second week's show, will be in the basement of the Coliseum. It is possible that arrangements can be made with the automobile accessory manufacturers to allow the motorcycle manufacturers space in the gallery of the armory for the second week.

It will be definitely decided at the meeting of the Motorcycle Manufacturers' Association, to be held in Buffalo during the coming week, whether or not the association members will exhibit at the Chicago show, and whether at the Coliseum basement or the Armory gallery.

Exports of American Cycles Increasing.

The monthly reports of exports continue to show a steady increase in the value of cycles and motorcycles exported from this country. For the month of August there was an increase of $16,482 over the same period for last year; the value in August, 1910, being $54,641, and in August, 1911, $71,123. For the eight months ending August 1st the value of cycles and motorcycles and parts, except tires, amounted to $655,987, against $486,683 in 1910, an increase of $169,304; and in 1909, $516,732, an increase of $139,255. Imports amounted to $5,905 in August, 1911.

Colonel Pope Sails for Europe.

Colonel George Pope, of the Pope Mfg Co., and E. J. Lobdell, of the American Wood Rim Co., sailed for Europe on Tuesday, the 3rd inst, to be gone about five weeks.

Splitdorf Locates Branch in London.

Charles F. Splitdorf, the well-known New York ignition specialist, has established a London branch at 41 Great Portland street, W. C.

WILLIS VICE-PRESIDENT OF KOKOMO

Elected at Meeting of Directors Held on Tuesday—Hamilton Sales Manager—Extensive Plans in View.

Fred I. Willis, secretary of the National Association of Cycle Jobbers, and former president of the Federation of American Motorcyclists, was elected vice-president of the Kokomo Rubber Co., Kokomo, Ind., and George H. Hamilton, president of the F. A. M., the sales manager. Both men have been prominent in the rubber business of the country and are among the leaders in the upbuilding of the F. A. M.

The Kokomo Rubber Co. is one of the largest in the country and has a capital of nearly $750,000. The plant covers eight acres and employs 300 men. Its products are distributed throughout the world. Mr. Willis and Mr. Hamilton recently acquired stock in the company and were present at the reorganization meeting of the stockholders October 10th. Heretofore the output of the company has been exclusively bicycle, motorcycle and vehicle tires, but in a short time the new officers expect to begin the manufacture of automobile tires also.

All officers of the company are well known in the bicycle world. Mr. Willis has been secretary-treasurer of the Hearsey-Willis Co., of Indianapolis, for several years, and has been associated with Henry T. Hearsey in the business for 18 years. Mr. Willis now becomes vice-president of the company and is succeeded by Robert H. Colburn, of Atlanta, Ga., as secretary-treasurer. Mr. Hamilton was formerly the New York representative of the Continen-

tal Rubber Co. Previous to that he was sales manager for the G. & J. Tire Co.

Except for the changes made in the officers of the company by the election of Mr. Willis and Mr. Hamilton, no other changes will be made. D. C. Spraker will continue as president, D. L. Spraker as treasurer and George W. Langdon as secretary. D. L. Spraker has traveled extensively representing the company and it is largely through his efforts that its product is so well known.

Activities of the Pierce Tribe.

Five of the Pierce Cycle Co. traveling men have started on their circuits and report that the indications for good business was never brighter than at the present time.

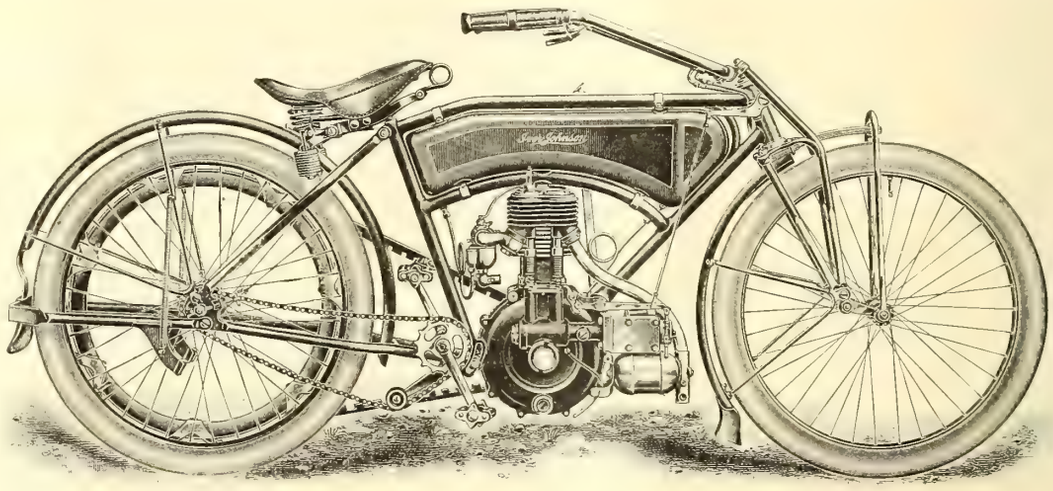
F. R. Bunker & Bros., of Tacoma, Wash., have taken the agency for Tacoma, Portland and Seattle, and will sell Pierce bicycles and motorcycles exclusively, operating three stores under the name of the Pierce Motorcycle Sales Co.

Edward Van Almkirk has taken the exclusive Pierce agency for Rochester, N. Y.

Exclusive agency arrangements for 1912 are continued as heretofore in Buffalo, Scranton and Ogdensburg, and the company reports that arrangements are now pending for many others. They also report that the factory operations have been so perfected that the Pierce interests will greatly increase during the next year, and an extensive advertising campaign is planned.

Motorcycles Prominent in Connecticut.

Motorcycles cut quite a respectable figure both numerically and financially in the annual report of the Secretary of State for Connecticut, for the fiscal year just closed. From October 1, 1910, to October 1, 1911, 1,858 motorcycles were registered, bringing in fees of $1,515.15. The average registration fee was 83½ cents. During the same period 1,479 motorcycle operators' licenses were granted, the revenue from this source amounting to $2,758. The total income from motorcycle registrations and licenses was $4,273.15.



Flanders Agency for Toronto.

The Flanders company has closed a distributing agency with the Motorcycle and Equipment Co., 192 King street West, Toronto, Ontario. William G. Schaeffer, formerly superintendent of the R-R factory and now operating the Penn Cycle Co., after personally inspecting the Flanders "4" decided that it was a good buy and has secured the agency for Berks county, Pennsylvania. The new connection is expected to prove of great benefit to both parties.

IVER JOHNSON LINES ANNOUNCED

Fourteen Models of Bicycles—New Motorcycle With Many Striking, Exclusive Features Makes Initial Bow.

With a line unapproached for completeness and evident attention to detail, the 1912 catalog of the Iver Johnson's Arms and Cycle Works, Fitchburg, Mass., is filled with good news for both dealer and consumer. Not only are there more distinct models of bicycles than have been exhibited for a number of years, but also the equipment and range of options are of highest grade and most extensive variety.

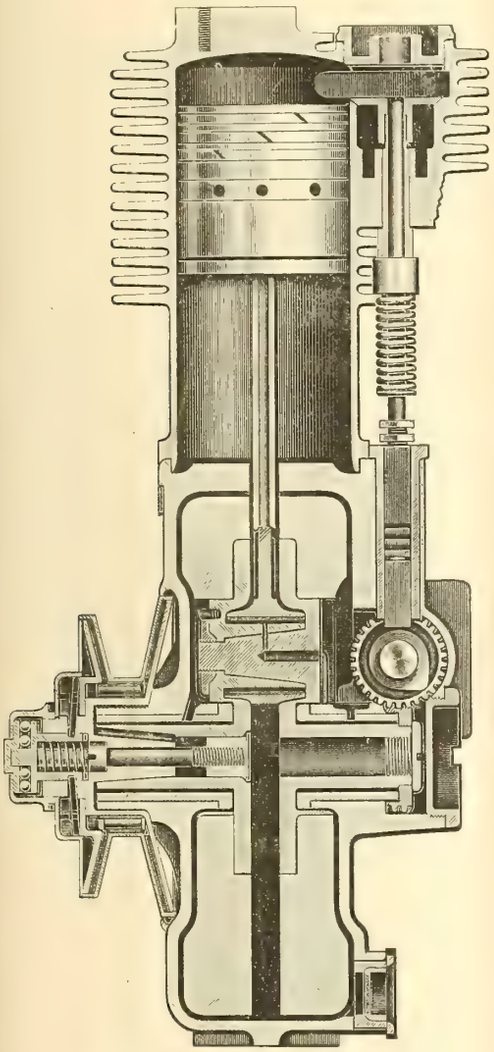
THE ONE IVER JOHNSON MODEL

The one model of motorcycle is also well up to the high standard of excellence maintained by this house and in addition has several radical and exclusive, although thoroughly tested, new features embodied in its design and construction.

To the bicycles have been added a heavy service model of their popular truss frame design. It is equipped regularly with front and rear mud guards, extra heavy 1¾ inch tires, wide hubs and tandem spokes and rims, with motorcycle pattern saddle and pedals. The handle bars are of special design, with reinforced drop forged stem. A roller chain is used.

The ever increasing demand for children's wheels is answered by the addition of two juveniles, making a total of six models in the smaller sizes, ranging from 18 inch frames with 26 inch wheels to the new I. J. "Midgets," having 14 inch frames and 20 inch wheels

For the rider requiring an exceptionally light equipment of the highest grade obtainable is provided the Iver Johnson Special Racer. Brooks saddle, Renold chain, special racing hubs, detachable front sprocket and 1⅛ inch tires are regular equipment; a change in frame sizes from former years in this model is also provided, 21 inch is regular and 23 inch optional. The special racer may also be had in the regular diamond pattern if preferred to the truss frame.



All handle bars are now made in their own factory, as are handle bar posts, seat posts, frame and crank forgings, etc. Saddles in many instances are of the motorcycle type, assuring a maximum of comfort, and the range on tires, coaster brakes and pedals is in variety and quality fully equal to any offered at any period of the industry.

The long expected and anxiously awaited Iver Johnson motorcycle as finally completed comes in for a generous share of the catalog space. There will be but one model of the power propelled two-wheeler, but it bristles with new ideas and is replete with apparent marked advance, especially in the power unit construction. The frame is of the truss type, of course, with arched truss tube; the crank case is made integral with the frame. The motor is also attached at the top to the truss tube by means of a through bolt. Tubing is 1⅛ inch 14 gauge and all frame connections and fork crown are of vanadium steel.

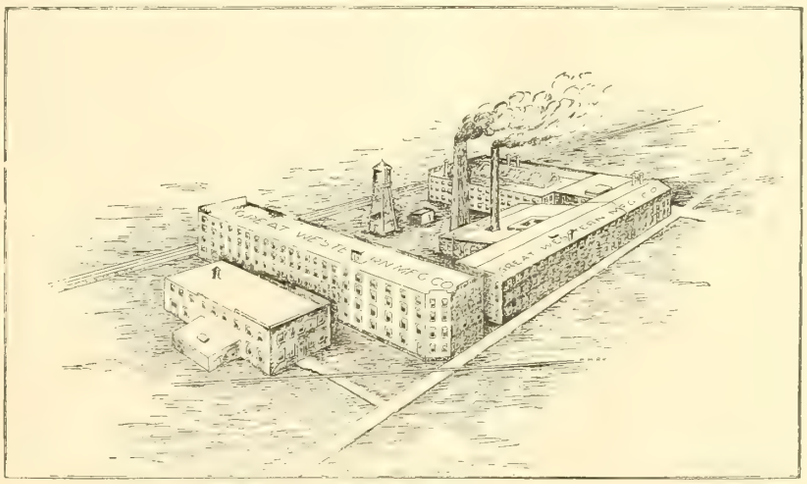
The motor details exhibit many features that will undoubtedly contribute to an exceptionally long life of this important member. The cylinder is cast integral with the head. The crank case is of aluminum and due to the fact that there are no plates bolted on to cover gear cases, etc., it is claimed to be absolutely oil tight, the extra long bearings and screw cap coverings to the three necessary openings in the case argue well for the much deserved resultant cleanliness.

The bore is 3¼ inch and the stroke 3¾ inch. The three rings on the piston are returned after having been sprung into position, insuring perfect fit. It is in the crank, magneto drive and free engine clutch that are made the most radical changes from accepted practice. A glance at the accompanying illustration will show that the crank construction is exceptionally strong. The taper projection on one side

fits into that of the other side, reaching entirely through, with a double locked nut on the end. Each projection extends beyond the ends of the hub of the connecting rod and also by an ingenious process of recessing beyond the hub bearings of the flywheel shaft. The flywheels are securely fastened to the hub members, being counterbored and firmly riveted. The crank construction is one that no amount

SOME "I-J" DETAILS

of pressure can spread nor from any cause can the flywheels get out of line. Flywheel shafts and crank pin are of tough soft steel, with superhardened sleeves running in phosphor bronze bearings. The magneto drive is exceedingly simple. But one pair of spiral gears are used; both cams for operating the valves, the spiral gear and magneto drive shaft are of one piece, thereby eliminating a number of parts. The valve lifters are of special design and are provided with means to take up end wear.



The valves are extra large of same size, mechanically operated and are in separate pockets, easily accessible and readily removed. By an unique design the valve stems are protected against the deleterious action of flame and carbon. Chrome nickel steel is the material used in the valves.

The clutch outwardly has the appearance of an ordinary pulley, with the addition of a smooth cap and a button-like end of a pin that extends out beondy the cap about three-eighths of an inch. This pin is operated by a lever working on the cam principle, which presses the pin in and releases the engine. Internally the pulley runs free on roller bearings and has a cone on each side, lined with detached friction fabric. A spring maintains the contact of the cones or plates with the pulley. No screws are used in the clutch and it is claimed that when necessary a variable speed may be obtained as desired by slipping without danger of burning the fiber disks.

The spring forks are of the truss type, with four leaf springs. Vanadium steel ball-bearing links extend from the fork ends to the hub axle. The tank is two-piece pressed steel, with telescoping joint running lengthwise and reinforced with a two-inch steel ribbon, assuring non-leakage, and is of such shape that it can be entirely drained of all contents. Grip control of the outside rod type, with compensating telescope and ball-and-socket joints is employed. Control is so arranged to permit of absolute freedom of steering with no change of adjustment. All equipment is of highest grade and includes Goodrich tires, Persons saddles, Corbin hub, with band brake, Bosch magneto and Schebler carbureter. Wheel base 56 inches, weight 190 pounds. Wheels either 26 inch or 28 inch. Price $250.

New Building for Great Western.

More than doubling their manufacturing capacity, the Great Western Mfg. Co., La Porte, Ind., has just completed its new

PLANT OF GREAT WESTERN MFG. CO.

addition. The new building is 189 feet long by 50 feet wide, with four floors, is of concrete and brick construction and virtually fireproof.

The new building is designed to house the light manufacturing, assembling and shipping departments. Private tracks and the New York Central freight lines at the rear, handling two cars at once, and a side track, with room for one car, from the Pere Marquette, at the front of the building gives a capacity of three cars in service at one time on the new building.

A new power plant also has been installed and the factory rearranged. One floor will be used for the press department, one entire building for the screw machine work and the top floors of the main building for the bicycle and frame departments.

As arranged it will permit the carrying on of a separate unit of manufacturing in the main factory and separate units of assembling and shipping in the new building. The new building has a floor space of 40,000 square feet; that of the main building is 200,000 square feet.

As completed the plant is one of the largest and best equipped devoted exclusively to the manufacture of bicycles and bicycle parts, having a daily capacity of a carload of bicycles and 5,000 component parts. Extended plans for the expected increase in business for the coming year have been made, and include an extended advertising compaign.

Prices on Bicycle Wrenches Reduced.

The Billings & Spencer Co., of Hartford, Conn., announces that beginning November 1st the list price of Model '97 bicycle wrench manufactured by them will be reduced in the black finish from $6 to $5 per dozen, with the nickel at $7. Net prices formerly maintained are withdrawn and the list prices will be subject to the same discounts as offered on the line of A to E wrenches inclusive.

News from the Flanders Camp.

Benjamin F. Howard, formerly with the American Motor Co., has resigned his position with that company and takes up important duties in connection with the sales department of the Flanders.

George H. Squier, who has so ably handled his position with the Aurora Automatic Machinery Co., will on October 15th take up a position with the Flanders Mfg. Co. as salesman.

Crawfordsville, Ind., Sept. 6th, 1911.

The Corbin Screw Corporation,
New Britain, Conn.

Gentlemen:

SAY! Talking of brakes reminds me of this summer when I was out with an old Pal of mine.

He was riding a ------, and his clutch sleeve was constantly slipping. I gave him the "Ha-Ha" and told him to get one that never wears out.

"What have you got?" he says.

"Corbin, of course."

"Don't they slip?"

"No."

"Well, I'll have one,"----and he has.

When you say "Corbin," she is there with the goods. Well, if you can make your brake any better, either for bicycle or motorcycle, I'd like to see it.

You may send me booklets, transparencies, circulars, hangers and catalogs, and I'll assure you that they will not be thrown away or illegal distribution made.

Yours truly,
ARTHUR C. TILNEY.

NEW YORK, OCTOBER 14, 1911.

"The Public Be Pleased."

More than usual significance is to be found in the resolutions passed by the F. A. M. New England District, condemning the muffler cut-out, and pledging itself to do all in its power to eliminate the open muffler abuse. The action cannot well fail to make a favorable impression on both the press and the public, and to show them that the motorcyclists themselves, at least the better class, are just as anxious to abolish the noise as the public is to have it abolished. The disapproval of the cut-out by the district also offers convincing evidence to the man in the street that motorcycles are not necessarily noisy, but only involuntarily so.

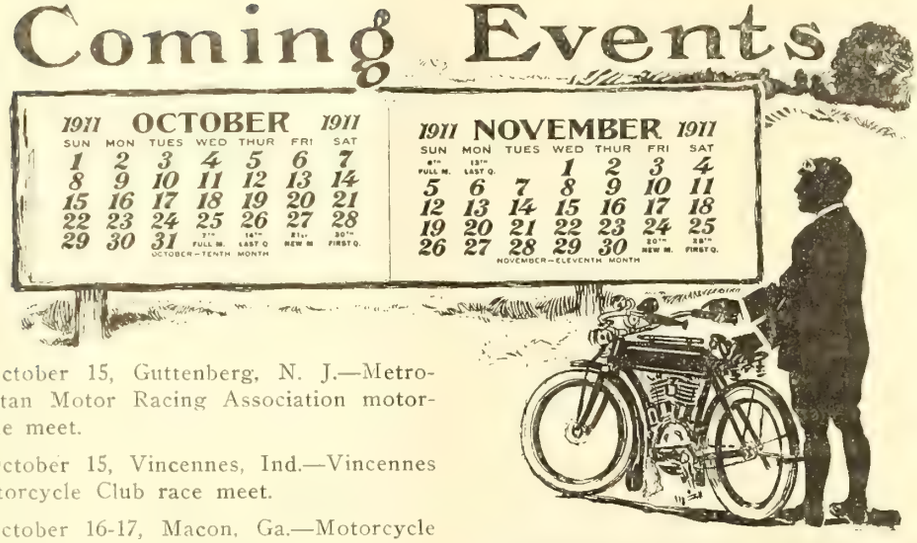
With what grace the motorcycle clubs in the New England district accept the mandate issued to them by the meeting, calling for the passage of similar resolutions decrying the cut-out, and providing for the fining and dismissal of offenders, remains to be seen. Undoubtedly some clubs will treat the resolutions with contempt or as a joke, but seriously, those clubs which profess to have the best interests of the sport at heart, and practically all clubs so claim, will do well to use their best efforts to stop the use of the cut-out. It would be better to fine or expel an offending member or two if necessary, for the moral effect on the others.

It is not conceded that a cut-out is at all necessary on a high powered machine, nor on a low powered one which has an efficient muffler. The cut-out is an inheritance from early days when mufflers were very inefficient and every atom of power in the engine was required. That day has passed. Certain manufacturers have claimed that their mufflers have been brought to such a state of high efficiency that the back pressure is negligible, and that the cut-out makes a difference of but two or three seconds in the speed, if any. In the face of such assertions there is no necessity for a cut-out, and if some designers can devise a muffler with such high efficiency, others can.

A cut-out does not make or mar the sale of a motorcycle with the average rider, but it does mar many a sale with the great green public who do not know that the noise is not necessary. Therefore the public antipathy toward motorcycles on account of the noise is killing sales and consequently taking money from the manufacturers and the dealers. It is a case of "having given the baby a tin rattle to play with, and now wanting to take it away from him because he is making too much noise." Very naturally "baby" threatens to howl if deprived of his "toy."

If motorcycles were not fitted with cut-outs, the great majority of riders would not bother to put them on. Undoubtedly quite a number of noise lovers and "speed fiends" would, and others would drill holes in their pipes and mufflers, but even so, this class would be in the great minority, and after once realizing that not only the public but their own riding brethren were against the cut-out, many would stop using it.

Public opinion is an irresistible force, as witnessed by the great change of heart which has come over the heretofore "public be damned" corporations, and if the riders themselves do not stop the open muffler abuse, it will be stopped effectually by legislation, as sure as the sun rises in the East.



Show a motorcyclist that a cut-out does not give him any more power or speed and he will not care a fig about it. Therefore show him an efficient muffler, for an inefficient one is the sole excuse for putting a cut-out on a machine. A cut-out, while desirable for getting the full "beat" of the motor for tuning up, is not essential. The "beat" can be had, if it must be, by temporarily uncoupling the exhaust pipe from the muffler, or engine. There is more than one manufacturer who willingly concedes that a cut-out is not necessary, but he puts it on "because the other fellow does." That is a sure sign that if several manufacturers agreed to leave the cut-out off, the others would in time follow suit, for all of them are striving for silent machines.

The practical solution of the cut-out question is just one of two things: Either leave them off the machines at the factory, or else legislation prohibiting their use. If the first way out is not taken, the second will be. The United Cyclists' Association, meeting in New York recently, appointed a committee to prepare a bill for presentation to the Legislature, and this will probably make it unlawful, if passed, to have the muffler cut-out on the machine. Other cities and States will follow suit. Hence, why should an unnecessary, unlawful attachment be placed on the motorcycles by the manufacturer? A word to the wise manufacturer is sufficient. "The public be pleased"—and motorcycle sales will be doubled.

An Unnecessary Risk.

There are altogether too many accidents being caused by motorcyclists carrying passengers, usually girls, on the handlebars. In the first place, it is a very dangerous perch, for it interferes both with steering and the vision of the operator of the machine. This abnormal weight up front also makes the machine "topheavy" and very liable to skid on wet streets and car tracks. Then again the position is not a comfortable or graceful one for a girl, or anyone else for that matter, and is not popular with the public. In fact, many cities have passed ordinances prohibiting this sort of thing as a result of accidents, and many more are preparing to follow suit. A tandem attachment is the only proper place to carry a passenger on a motorcycle, and those who perch themselves in front of the operator are taking great risks.

Coming Events

October 15, Guttenberg, N. J.—Metropolitan Motor Racing Association motorcycle meet.

October 15, Vincennes, Ind.—Vincennes Motorcycle Club race meet.

October 16-17, Macon, Ga.—Motorcycle races on mile dirt track.

October 20, Frederick, Md.—Motorcycle race meet on half mile dirt track; H. A. French, Baltimore, promoter.

October 21, Pottstown, Pa.—Motorcycle races on mile dirt track.

October 21-22, Sacramento, Cal.—Sacramento Motorcycle Club race meet.

October 22, Guttenberg, N. J.—Annual bicycle carnival of the Century Road Club Association, Eastern Division. Rain date October 29th.

October 23, Atlanta, Ga.—Motorcycle races on Atlanta Speedway.

November 12, Floral Park, L. I.—Ten mile handicap road race, Century Road Club Association, Eastern Division. Rain date November 19th.

November 5, San Antonio, Tex.—San Antonio Motorcycle Club race meet at International Fair.

November 20-25, London, England—Annual Olympia motorcycle and bicycle show.

January 6-20, New York City—Twelfth annual automobile show in Madison Square Garden; motorcycle section included in first week.

January 20, New York City—Fourteenth annual ball of the Century Road Club Association, Eastern Division, at Alhambra Hall, Seventh avenue and One Hundred and Twenty-sixth street.

Bicyclist and Motorcyclist Invited.

Meeting in response to a call which stated that among other matters of importance to be considered would be that of completing the details of permanent organization, the Greater New York Cyclists' Association, on Tuesday, the 10th inst., more than fulfilled that object when, in addition to adopting a constitution and by-laws in which broad and far-reaching purposes were outlined, there was put in motion a well defined sentiment to so widen the scope of the association as to make it one of national proportions. That the effects of the Labor Day parade, under the association's auspices, are deeper than is indicated on the surface, was evident by the presence of many members of the one time great cycling clubs of the metropolitan section; that enthusiasm of the productive sort has been aroused shows unmistakably in the unanimously expressed opinion of all present, together with their avowed determination to make it so, that the organization can and should be as powerful in sport circles as any during the much talked of "palmy" days of cycling.

Pursuant to the progressive policy desired, first and foremost the localizing effect of the title was removed by altering the name to that of United Cyclists' Association. The proposition of incorporating at as early a date as possible met with instant favor, and will be put through in the near future.

The purposes and objects of the association, as taken from the constitution, are: "To protect the interests of bicyclists and motorcyclists. To encourage the use of bicycles and motorcycles and to promote the general interests of both. To ascertain, protect and defend the rights of bicyclists and motorcyclists. To assist in good roads movements and to demand proper maintenance and prevent the destruction of all paths now in existence. To offer, encourage and develop means of social intercourse amongst bicyclists and motorcyclists."

In order to render effective and to actively operate the several important features in the foregoing, various permanent committees were provided for in the constitution; such as, Legal Action, Social, Membership, Racing, Parade and Press. As adopted, the constitution and by-laws apparently provide for practically every situation that may arise insofar as concerns the use of both bicycles and motorcycles for either sport, pleasure or business.

Immediately following the adoption of the constitution and by-laws, nominations were declared open and resulted as follows: For president, J. A. Hall; vice-president, A. H. Patterson; secretary, W. R. Stroud; treasurer, V. J. Lind; for the board of trustees, five to be elected, one for a term of three years, one for two years and three for one year, the following were nominated: Dr. J. P. Thornley, Julius Bindrim, "Happy Days" Pitman, D. M. Adee, Alex. Schwalbach, George Uniss, Sylvain Segal, George Hausenbauer, Henry Heyer, C. L. Simms, O. P. Varick and Robert Lawson. The nominations were held open until the next meeting.

Plans to at once begin the development of the purposes of the association were discussed, with the idea of outlining the duties of the different committees. Among other matters coming under the control of the social committee, it was definitely decided to tender a dinner to the visiting motorcycle and bicycle manufacturers during motorcycle show week in New York City, probably on Wednesday, January 10th. Details were all completed providing for the usual entertainment of the members after the close of each regular meeting. A smoker was arranged for as the entertainment feature of the coming meeting.

The agitation just launched throughout the country against the motorcycle muffler cut-out came in for an animated discussion, which resulted in the association passing the resolutions suggested by the Bicycling World and Motorcycle Review, announcing unequivocally its condemnation of the practice of a comparatively few motorcyclists, who, by persisting in the promiscuous and unnecessary use of the open exhaust, create much adverse opinion in the public mind against motorcyclists generally. As provided for in the resolutions, a committee consisting of W. R. Stroud, A. H. Patterson and Julius Bindrim, was appointed to prepare a law to be presented at the next session of the New York Legislature, to prohibit and penalize the use of the open muffler. Incidentally, the United Cyclists' Association is the first organization in the State of New York to take up this matter in so decisive a manner.

The secretary was instructed to procure membership application blanks and to have the same ready for immediate distribution. It was decided to hold the charter list open for a short length of time, the date of closing of the same to be determined in the near future. Application blanks and any information may be had by addressing the secretary, W. R. Stroud, Room 914 Tribune Buildling, New York City. Until a permanent meeting place is provided for, the meetings will be held alternately in Manhattan and Brooklyn boroughs of Greater New York. Meetings will be held regularly on the first and third Mondays of each month; the next, on Monday, October 16th, 9 p. m., at 1213 Fulton street, Brooklyn.

New England District, F. A. M., Condemns Use of Cut-Out

Radical Resolutions Receive Unqualified Support at Providence Meeting — District Reorganized and Officers Elected — Centralization of Funds Fully Discussed — Detailed Reports Read.

Action that cannot but be far reaching and influential in altering the opinion of the public and the press to be more favorably disposed toward the sport of motorcycling and its devotees was taken by the delegates at the fall business meeting of the F. A. M., New England district, held at Providence, L. I., on Saturday, 7th inst., by the unanimous passage of resolutions proposed by the Bicycling World and Motorcycle Review and published on another page, scathingly condemning the use of the muffler cut-out "as the greatest hindrance to the sport of motorcycling." The meeting also pledged itself to do all in its power to abolish the use of the cut-out, urged all clubs under its jurisdiction to appeal to the legislative bodies of their respective States to enact laws prohibiting the use of the cut-out, and instructed all clubs in the district to adopt similar resolutions, containing provision for the fining and dismissal of members found guilty of using cut-outs.

It was the first meeting of the district held since the national F. A. M. convention at Buffalo, when the old Eastern district, among others, was cut up into smaller sections to make the administration of district affairs easier, and increase their efficiency. The New England district now comprises the New England States exclusively, a compact territory, in which members from all States in the district conveniently can attend the district meetings.

As the district was unorganized, the terms of the old officers having terminated with the dissolution of the Eastern district, an election was held for the purpose of filling the offices of vice-chairman, secretary and treasurer. The district vice-president W. F. Mann, of Boston, having been elected at Buffalo, of course, continues in office. The election resulted as follows: C. A. French, Pawtucket, R. I., vice-chairman; F. S. Morse, Keene, N. H., secretary, C. H. Westcott, Providence, R. I., treasurer. Vice-Chairman French succeeds Vice-President Mann as vice-chairman, Mann previously having succeeded to the office of vice-president for the unexpired term through the resignation of ex-Vice-President C. C. Wilber, of Keene, N. H., owing to ill health. The Buffalo convention continued Mann as Wilber's successor. The secretary and treasurer were re-elected.

It was 9 p. m. when Vice-President Mann called the meeting to order in Verdandi Hall, with about 40 delegates present. Four or five others came in during the proceedings. The vice-president complimented Providence as showing the greatest amount of interest and always furnishing the best attendance at any of the district meetings, and expressed the opinion that it was the logical place for the meetings to be held. Among those present were ex-Vice-President Wilber, looking much improved in health, and National Secretary Gibson, who ran down from Westboro. Secretary Morse read the minutes of the summer meeting held at Boston in June, and they were accepted as read.

Reports of officers then were called for. Treasurer Westcott reported a balance of $399.20 for the old Eastern district, which he had turned over to National Treasurer Gibson, in compliance with the action of the Board of Directors calling in all funds in the hands of the district treasurers, after the reapportionment of the districts by the Buffalo convention. Therefore the New England district, in company with the others, now has no funds in its treasury, but National Treasurer Gibson stated that he would honor all requisitions from district treasurers for payment of properly authorized bills.

Gibson explained that in the new apportionment of districts an unforeseen situation had been created in regard to an equitable distribution of district funds, and that until a suitable plan had been evolved for this distribution which would be fair to all, it was thought best to place all funds in the hands of the national treasurer, although the old districts are credited with the amounts turned over by them and they can draw on those amounts for meeting obligations within prescribed limits.

State Commissioner Swenson, of Rhode Island, reported a steady growth of new F. A. M. members in that State, and that in a short time when his business slowed up a bit he would take a few days off and bring his records up to date. F. A. M. interests have been well looked after in his territory during the season. The report was accepted.

Vice-President Mann, who also is State commissioner for Massachusetts, reported a fair increase in F. A. M. members in that State for the year and hopes to get the section well organized soon and turn matters over to a commissioner to adminster.

E. L. Buffington, who just has retired from the chairmanship of the Transportation and Facilities Committee, spoke of the advantages which F. A. M. official repair shops offered tourists to get work done at reasonable prices, and that it was the aim of the committee to pick out men with the proper ability and equipment to render good service at fair rates.

There was considerable discussion concerning the withdrawal of funds from the district treasuries by the Board of Directors, and for a time the misapprehension prevailed that the district's money was tied up, and that it could not spend any of it without permission from the national officers. Treasurer Gibson, however, cleared up this point, and stated that for the present the centralization of funds was best for the organization, inasmuch as there was a possibility of a district appropriating more than its share of the funds, as no one knew as yet just how much each district was entitled to. He thought that eventually after a reapportionment each district again would have its own funds back in its own hands. He stated that at present there is a balance of over $1,000 in the national treasury. Advantage is taken of all discounts. He said that the present membership is nearly 13,000, of which 8,000 are active, the remainder being either "dead," lapsed, withdrawn or changed place of residence, but were carried in the hope of obtaining renewal where possible. Renewal notices are sent out in the month previous to expiration of membership, and he was glad to state that about two-thirds of the expiring membership were being renewed. After a general discussion of the question of centralization of funds, E. L. Buffington offered a motion that it be the sense of the meeting that it record its approval of the action of the F. A. M. Board of Directors in calling for the turning over of all district funds to the national treasurer, subject to requisition by the respective districts, pending a reapportionment. The motion was carried. The district treasurer will do the district bookkeeping for the present.

The open muffler question then was brought up by E. L. Buffington, who offered a set of resolutions condemning the use of cut-outs, the salient points of the articles being embodied in the opening of this report. Secretary Gibson said that the abuse of the cut-out has caused more adverse motorcycle legislation than any other feature connected with the machines. B. A. Swenson related a story of a motorcycle cop, who liked the noise and took the cut-out lever off his muffler so that it was open all the time. Swenson said further that the cop claimed that by this trick he was not amenable to the law, as "he had no cut-

out and there was nothing to close the hole with." The general sense of the meeting was in favor of abolishing the cut-out, and the resolutions as suggested by the Bicycling World and Motorcycle Review were adopted.

B. A. Swenson then offered a motion that a committee be appointed to arrange some sort of contest for next year to be conducted by the New England District. Secretary Gibson approved the motion and offered an amendment that the chair be empowered to appoint a committee of three to make arrangements for the contest. The motion in amended form was passed enthusiastically without dissension. Vice-President Mann will name the committee later, and it will report at the summer meeting in June next. The nature of the contest, the date and all details will be left in the hands of the committee, but it is probable that the contest will take place in August.

Of recent years the Providence Motorcycle Club has endeavored to contribute to the success of the district meetings by scheduling a road run to occur the day after the fall business meeting. This plan has worked well, for it has given riders an opportunity to attend both the meeting and the contest, but because of the fact that the contest primarily was a club affair, its scope and success naturally were limited to some extent, although it developed into the leading motorcycle road event of the year in New England. By having such a contest run by the district instead of a local club, it is figured that the attendance at business meetings and at the contests run in conjunction with them would be larger. Workers for the success of both events would be available throughout the district, and any trade jealousies that might exist toward the efforts of a local club affair would be eliminated from district affairs, inasmuch as the personal element would be less prominent.

C. A. French, the vice-chairman-elect, called attention to the fact that the district had no constitution or by-laws, the old articles used by the Eastern District having "died" with the district, but that the New England district was working under the lapsed rules. He then offered a motion that a committee be appointed to draft a new constitution and by-laws for the New England district. E. L. Buffington offered a substitute motion that the meeting adopt for the district the old Eastern District articles. This motion was carried. French then offered a new motion that the chair appoint a committee of three, the chair to preside over such committee, to make any necessary changes or additions to the constitution and by-laws just adopted, said committee to report at the next meeting. The motion was carried and the chair appointed French and Buffington to serve on the committee.

Swenson then was called on to make a few remarks regarding the triangle run of the Providence Motorcycle Club to be held on the day following. He said that on account of a week of rain, ending with a particularly heavy downpour for hours on Saturday, several riders from out of town had been prevented from coming in for the run. He said the roads undoubtedly would be pretty "soupy," and he would leave it to those present, many of whom were entered for the run, to decide whether or not it should be held or postponed. On a rising vote it was overwhelmingly decided that the run be held as scheduled, showing that the New Englanders are not afraid of muddy roads when medals are at stake.

In regard to the Buffalo tour Swenson stated that F. A. M. certificates would be given later to all on the Eastern tour whom he had certified as completing the tour within the rules. He also said that some hard feeling had been caused owing to the fact that he had declined to certify some riders who undoubtedly had completed the tour, but had left the main party and cast their lot with individuals seeking notoriety, and who had taken men away from the tour itself and brought them into Buffalo ahead of the party. He said that the Buffalo tours had created more interest in motorcycling and had started more riders touring on motorcycles and seeing the country than any motorcycle event ever before held in the United States. He himself had positive evidence of this in the great number of tourists who had visited his store since the conclusion of the Buffalo tours, and the stories of them had spread around.

No further business coming before the meeting a motion to adjourn was carried at 11 p. m., and the members filed into the ante room, where the Providence Motorcycle Club had provided a Dutch supper. While the meeting was in progress Swenson had passed cigars—not loaded ones, but bona fide weeds—and for a time the puffing was so vigorous that it was almost impossible to see across the hall. It was after midnight when the jolly crew filed out of the hall to snatch a few winks before 5 o'clock calls should rouse them to don their riding togs and slide in the saddle for the eighth annual triangle run of the Providence Motorcycle Club.

Motorcyclists Pace Cross-Country Runners

Motorcyclists were used for pacing cross-country runners by the Bradhurst Field Club, Inc., New York City, in its first cross-country run on the 1st inst. The pacemakers belonged to the Motorcycle Touring Club of New York, Inc. This probably is the first recorded instance of the use of motorcycles for this purpose.

Three Day Run Planned by Captain Gault.

Captain H. Matthew Gault, of the Maryland M. C., of Baltimore, is planning a three or four day run for those members of the club who desire to get away from the city for a few days. Just when he will pull it off has not been determined, and it will depend a good deal on what arrangements he can make. He is hoping that quite a few of the boys will take a sufficient interest to participate in the cross-country jaunt. He has decided upon a tentative route, which will take the motorcyclists to Staunton, Va., by way of Hagerstown, Md.

Nearly 300 Motorcycles in Redlands.

Redlands is maintaining her proud boast that she is the center of motorcycledom on the coast. Chief of Police Wallace the other day issued his 290th license for motorcyclists. This means that one out of every 38 persons in Redlands is the owner of a power cycle, and one out of every 14 owns a motor car.

The motorcycle has become remarkably popular in Redlands during the past year. The machines are selling now at the rate of one daily and they are used for commercial purposes as well as pleasure. The horse and wagon have been displaced for delivery purposes in the meat markets and some of the grocery stores are using motorcycles exclusively, while all are using them for hurry orders and soliciting. Many contractors are using them in their work, while zanjeros of the water systems, picking superintendents in the orange groves and others who have large territory to cover, have adopted them. Local newspapers have adopted them for delivery purposes on suburban routes and have found them a success. The owners of the machines have more than $75,000 invested in them.

Cups, Trophies and Coin at San Antonio.

Cash prizes to the value of $300, as well as a dozen or so cups and trophies will be the spoils for the victors in the big motorcycle meet which the San Antonio (Tex.) Motorcycle Club is arranging to run at the International Fair on November 5. The State is being scoured for the best amateurs and professionals, and the biggest speed carnival ever held in the State is promised.

Uhrichsville Motorcyclists Climb Fast.

Two motorcycle classes were included in the automobile hill climb at the Uhrichsville (O.) fair on the 29th ult. C. Anderson, riding a Yale, won the single cylinder class in 20 seconds, beating Howard Amos, on an Indian, by half a second. Amos won the free-for-all easily with a twin Indian, going the route in 16 seconds over a dangerous course.

Big Bait Hung Up at Sacramento.

Five hundred dollars in prizes will be given by the Sacramento (Cal.) Motorcycle Club at its race meet in connection with the Greater Sacramento Annexation Jubilee on the 21st and 22d inst. The Chamber of Commerce donated the money.

Nineteen Have Perfect Scores in Providence Triangle Run

Eighth Annual Contest a Mud Party—Black Cat Among the Casualties—Saving a Score with Half Dollar Piece—How the Tailenders "Passed" the Pacemakers.

Bad Nauheim, Marienbad and some more of the "swell" German health resorts, where plutocrats and other crats who can afford it, go to take the mud baths, water cures and other tortures for "what ails them," have nothing on the slime baths, soupy ooze showers and road massage, that old Jupiter Pluvius administered to the contestants in the eighth annual triangle run of the Providence (R. I.) Motorcycle Club on Sunday, 8th inst. The contrary old superintendent of Nature's water works got a hint early in the week that several of the riders who were going in the run had not recovered from the effects of the Eastern Tour to Buffalo, so he decided that he would fix up a course of treatment for them that would make 'em as fit as a fiddle, although the process might be a little strenuous. It was. The old critter turned on all his faucets in the Providence-Boston-Worcester pipe system early in the week and fairly drowned out the roads.

However, New England motorcyclists who browse in the territory mentioned are of the "all roads and weathers sort," so J. P.'s preparations for a slide and skid session did not feaze them any. They voted to hold the run and not disappoint the celestial waterboy in his anticipations of some fun after all the trouble he went to. So 21 of the 24 entrants showed up in Exchange Place early Sunday morning prepared to "do or die." When the battle was over and the roll was called, 20 had "did" and one lone man had "died," not on account of the mud, but because he fell and broke his handlebar. But here is better news. Nineteen of the noble 21 who charged the deadly mud and water, won perfect score medals.

Because of the rain, the run did not attract as many entrants as last year. Three of the entrants who failed to start lived out of the city and were prevented from arriving in time for the start, while others from Boston, Worcester, and other smaller places in that district, and even from as far away as Syracuse and Albany, sent word that they were stalled by bad roads. Most all of the out of town riders got in the day before, having planned to take in the New England district meeting Saturday night.

Among these arrivals was pink cheeked Russell Coes, of Worcester. Russell's folks have been making wrenches—good ones, too—for 77 years or thereabouts. Russell glided into Providence on an Indian "7" two-speed, late Saturday afternoon, togged out in olive green oilskins that glistened like the finish of a new automobile and shed mud and water like a good oilskin should. Consequently Russell was as "dry" as a W. C. T. U. meeting, as far as "duds" were concerned.

As has been related elsewhere, the district meeting did not dissolve until after midnight Saturday. Now Russell did not acquire his pink cheeks by keeping late hours, and when the meeting approached the last lap he had quite a little sand in his eyes.

When the meeting finally faded, Russell was ready to sleep in any old place. He acquired this happy habit on the Buffalo tour, by the way. Now Russell was invited to share a nice, comfy bed in the Crown Hotel, with ye scribe, but he preferred to put up at Swenson's wigwam for the few winks of sleep that were to be his portion. So they taxied—sure, they have taxi's in Providence, with meters, too—out to South Providence. Swenson told Russell that he could sleep in the enameling oven in the shop, where it would be nice and warm. This listened sweet to Russell and he hit the tin—yes tin, not hay, for there's no hay in enameling ovens—at 1:30 a. m.

When Swenson came down at 5 a. m. he found Russell holding down an arm chair near the front door. Russell was wide awake but quite chilly, but he opined that it was warmer there than in the oven. Everyone reported as having had a good snooze even though it was a short one. That is, everyone but two, Howard Clark and Ernest Gauthier, fellow townsmen of Coes, who turned up at the store shortly after Swenson came down. They had been doing the "night rider" stunt, leaving Worcester at 2 a. m. It was a beautiful moonlight night, so bright in fact that they extinguished their lamps. They also found the mud more interesting than proved later, but they kept this fact to themselves.

IN FRONT OF THE SOLDIERS MONUMENT, PROVIDENCE, AT THE FINISH

Shortly after six o'clock Sunday morning, Exchange Place began to echo with the barking of singles and twins, and the Baltimore "grub garage" on the south frontier of the square doubled its average Sunday morning business.

As usual, E. A. Swenson was master of ceremonies, and he lined the men up in fours, and attended to other details. Secretary Gibson was on hand to see the getaway, as he was referee of the run, and district secretary Fred Morse also turned out. There also were a handful or two of early rising, or perhaps late retiring, citizens, who played the role of "innocent bystanders," Every rider carried a number on his left arm and a schedule card giving all controls, towns, mileage and time due. The first four men away acted as pacemakers, and the rules prohibited anyone passing them unless they were disabled. The riders got away at minute intervals after 7 a. m., in squads of four.

WORCESTER CONTROL—A SAMPLE OF THE MUD

After being bumped on Belgian blocks for a few miles, the riders encountered their first mud outside Pawtucket. And it was choice and rich. Some of the men hit the big puddles full tilt and swept every drop of water out of them and across both sides of the road in sheets. Some more danced around in the soup and went down, but were up before the count of 10. There were no casualties along here save that J. J. O'Connor (Indian), ran over a black cat, not because he wanted to but because he had to to keep out of the ditch. The "nigger" had been flirting with the wheels for several yards and finally got under them. Thereafter "J. J." was looking for trouble, but the hoodoo did not strike.

Sunday broke clear and crisp, and the fragrant air laden with a frosty tang and the perfume of the leaves, woods and fields, made riding a delight if one were well protected from chill and mud. There was a light frost during the night, as disclosed by tin roofs and bridges in the morning before the sun warmed up.

Until Wrentham, 21 miles out, the first checking point, was reached, there was plenty of mud, and slides and falls were the order of the day. The record in this line was made by T. J. Conroy (Indian), a new rider, who broke so many pedals that he was late at Boston. However, he made up his lost time later and finished inside the limit. E. G. Luther, winner of the Swenson cup the week before, acted as checker at Wrentham, the rider's number and motor number being taken. This was the procedure at all checking points and controls.

After leaving Wrentham, asphalt and tarred roads were found practically all the way to Boston, the first control, and all but Conroy got in with plenty of time to spare. Riders were permitted to come in as early as desired, but could not leave until the time at which they were due to arrive. Three hours were allowed for the 48 miles to Boston, and nearly all made it in two, or two and a quarter hours. The control was at Park Square, as in former years, and quite a crowd gathered while the riders were assembled there. The Merkel contingent from Boston stopped at W. F. Mann's store and filled tanks before coming to the control. At the control, Donald Pope, the young Holden protege, who starred at the Springfield Stadium on Memorial Day, but who was not in the run, came around with an Excelsior twin that had been converted to chain drive. In view of the recent performances of this machine at Chicago, the rebuilt rig attracted considerable attention among the riders.

The Boston checkers don't deserve any bouquets, for they lost the checking sheet after the men had left for Worcester. C. C. Kimball, a chauffeur, picked it up in the street, and finding Swenson's name and address on it, very kindly mailed it to him. For this Swenson extends thanks to the accommodating Bostonian.

At 10:05 a. m. the motors were kicked over for the second lap to Worcester, 48 miles away. Now going out of Boston most of the riders got off the official route and cut the course. If the referee cared to enforce the rules none of these "course cutters" would get medals, but the incident will be overlooked. It was involuntary, anyway, for the most part, for few of the riders knew the roads around Bawston, and depended on following the "other fellow." In this case the "other fellow" cut the course to stay on the boulevards and avoid the bad mud in Watertown, and the others followed because they didn't know any better. Those few who stayed on the official course and went through Waltham and Watertown, had a mighty interesting time. Watertown lived up to its name on this occasion if never before, and the mud really was formidable. So formidable, in fact, that the pacemakers and others who struck it, switched over from one side of the road to the other, and sampled the traveling on sidewalks, rail fences, car tracks, bridge railings and any old thing in preference to that mud. Among the star stunts pulled off in this gumbo was that by A. K. Braman (Indian), who turned completely around and stopped, headed toward Boston. Then he turned right round again and went on.

Next year there probably will be checking stations established at Waltham and Northboro, to prevent any course cutting in this section. About 15 or 20 miles out, the pacemakers caught up with the "course cutters" and gave them a scare, for the "short route" fellows thought that the pacemakers were way ahead. They learned then that they had cut the course and got a scare thrown into them by being told that they would be disqualified for cutting the course. There were some wry faces until the offenders learned that the violation would be overlooked this time.

At Northboro the riders left the main road and made a three or four mile detour to Westboro, where a control was established at Secretary Gibson's offices. He had F. A. M. pennants out, and as a reward for climbing the flight of stairs to his office to check, he presented each man with an F. A. M. scarfpin, and wished him good luck for the rest of the trip. He also gave the men an "around-the-plant-in-three-seconds" trip through his offices, together with a rapid fire description of his system, stenographic and stock departments. All very interesting.

Several of the riders came in munching apples, having stopped at an apple orchard a mile or so out. Westboro did not make a favorable impression on the riders, because there was a long, juicy stretch of mud just before reaching Gibson's. There were the usual high jinks in this hog wallow, which extended right up to Gibson's door. After checking it was a case

of double track back to the main road, and burn up the 10 miles to Worcester's control.

All got into Worcester way ahead of time as usual, that is, all but Conroy, who still was trying to catch up with the main party. The control was at the usual place, Franklin Square, and G. F. Clark, the Indian agent, acted as checker, assisted by John McDowell, also of the wigwam. Coes got a warm reception here from his friends.

Now it is a very ancient fact that it takes money as well as gasoline, oil and other things to make a motorcycle go. However, this fact was demonstrated from an entirely new angle when H. F. Hildreth (Merkel) arrived. Hildreth got in on time, thanks to using his brains when he ran into trouble after leaving Boston. He discovered a brand new way in which it takes money to make a motor go. His oil window was smashed by a fall, and as he didn't have another he was in high funk for awhile. While wondering how he would plug that hole his hand rested on a half dollar in his pocket, and getting an inspiration simultaneously, withdrew the silver piece and tried, with little confidence in the experiment. But the instant he tried it his face lighted with joy, for it fitted, and Hildreth had that half dollar "subbing" for an oil window in jig time. He rode happy thereafter. It undoubtedly was the star piece of road ingenuity which the run developed.

To be consistent, there was a big mud wallow at the Worcester control, but a hard patch on the side proved an oasis. At Worcester the word was passed around that the last leg to Providence was in "fierce" condition and that everyone would "get theirs." Therefore it was with considerable trepidation that the riders started on the final lap of the run. Worcester, by the way, was the dinner control. The usual crowd also was on hand to see anything and everything that was to be seen free.

As soon as they got off the city streets and on the open road, only a mile or so out of Worcester, the riders commenced to "get theirs." The road from edge to edge was a solid mass of water of unknown depth and in places the soil was soupy or mushy. In any event it was skittish going and all took to the trolley tracks where possible. There were big holes between the rails, however, and those who took them fast got some tremendous vibrations up their spinal columns.

It was along here that Captain Higgins, of the club, and one of the pacemakers, took a real nasty spill while trying to make a running mount after stopping in the mud. He fell flat, but escaped with nothing more serious than a broken pedal and the accumulation of a little more mud on his person. These stretches were frequent for a few miles, and kept down the pace but were by no means unridable. The clutches were great in the mud. Finally dry roads were encountered and then the pace jumped again. The roads, however, were rougher than on any other part of the course, and short mud patches were frequent. Before Woonsocket, a checking station, was reached, Morris Ross (Indian) fell and broke his handlebar, already weakened by the shock of many previous falls. This put him out of the run, making the first and only retirement of a contestant.

Swenson came into Woonsocket right behind the pacemakers with a flat tire. Of course, all hands were way ahead of time, and the checker had not yet arrived. Swenson went through an exhibition of "off-fixed-on again" before the checker showed up. Conroy (Indian) who had been behind all day, caught up with the schedule here. The final dash to Providence then began, and the advance guard reached Exchange Place at 3:03 p. m., just 57 minutes ahead of time. Others came in rapidly at short intervals, and at 3:30 a photograph of the finishers was taken. Nearly all got in the picture, there still being a few stragglers left out. J. H. Moore was the last man in at 3:57.

Wherever the riders stopped a crowd immediately gathered, and asked if it was a "race" and "who was winning." The motor car parties along the road also manifested unusual interest in the run, and in many cases inquired what was going on. It was to a query of "What is this, a race?" that Swenson shouted back, "No, it's the Glidden Tour." At the finish in Providence, the crowd seemed to be under the impression that "a race" was about to begin, and asked as to where the riders were going and what they were "racing" for.

As a result of trying to get out of Providence too quick, after he had finished the run, W. F. Mann, of Boston, got snared in a trap by the police. Mann and several of the Boston riders were "flyingmerkeling" through a police trap in Hope street, when a motorcycle cop went after them. The officer passed the other riders in pursuit of Mann, who was leading, and at first the riders throught that he was looking for a speed scrap, so they also "let out a few links." Finally they "got wise" and kept right on until they got safely out of reach of the cop. He overhauled Mann and requested him to return and interview the sergeant. The only thing that saved the others from being nabbed was that they kept right on going while the cop was busy with Mann.

Glenn Crandall, of Boston, was the comedian of the run. Crandall, who is no bigger than "a pint of cider," rode a Thor "4" and he is "some rider." He had "cut-up" streaks which sent him off the road and across country, through gutters, and performing all sorts of gyrations. His antics amazed and worried the motor car drivers, who probably thought he had a bad "mental short circuit." Crandall, by the way, is one of the "mud larks" of the 1910 national endurance contest, and finished near the top.

The total distance was 140 miles, with a 15 miles an hour schedule. Nine hours were allowed, but most of the riders made the course in six hours actual riding time. The awards will be silver medals for perfect scores, and bronze survivors medals. How the men finished is shown in the table below.

This Club to Be a Bit Exclusive.

Owners of Merkel motorcycles in Dayton, O., have formed a social club to be known as the Flying Merkel Club. The membership will be limited naturally to riders of that make of machine, and the club will devote its efforts to the social entertainment of its members. It will not compete with any other club. At the meeting which was held at the cottage of one of the members in Idylwild, a summer park, temporary officers were chosen, and "experiences" were related. Just before departing from the rendezvous the riders unwisely opened their mufflers by way of celebrating the birth of their club and awoke the echoes of the park with a volley of explosions

SUMMARY OF THE PROVIDENCE RUN

C. H. Westcott, Providence, R. I.	4	Indian	Perfect
E. L. Buffington, Providence, R. I.	5	Indian	Perfect
S. Higgins, Providence, R. I.	5	Indian	Perfect
W. F. Mann, Boston, Mass.	7	Merkel	Perfect
B. A. Swenson, Providence, R. I.	5	Indian	Perfect
A. K. Braman, Newport, R. I.	7	Indian.	Perfect
C. H. Frazier, Pawtucket, R. I.	4	Merkel	Perfect
T. J. Conroy, E. Greenwich, R. I.	5	Indian	*Late
A. Houle, Providence, R. I.	4	Indian	Perfect
G. F. Fleurant, Woonsocket, R. I.	4	Indian	Perfect
M. Ross, Providence, R. I.	5	Indian	†Out
E. Gauthier, Worcester, Mass.	7	Indian.	Perfect
R. R. Coes, Worcester, Mass.	7	Indian.	Perfect
H. L. Clark, Worcester, Mass.	4	Indian	Perfect
G. G. Crandall, Boston, Mass.	4	Thor	Perfect
S. Mover, Malden, Mass.	7	Merkel	Perfect
H. F. Hildreth, Somerville, Mass.	6	Merkel	Perfect
J. M. Hanchett, Boston, Mass.	4	Merkel	Perfect
J. J. O'Connor, New York City	4	Indian	Perfect
J. H. Moore, Providence, R. I.	7	Indian.	Perfect
J. D. Kimmond, Boston, Mass.	4	Merkel	Perfect

*50 minutes late at controls. †Broken handlebar.

ARMSTRONG AN UNCROWNED "KING"

Denverites Give Him Title for Defeating Hasha—Ten Track Records Broken.

By defeating Hasha, Seymour and all the lesser warriors who essayed to meet him on the battlefield, Earl Armstrong was invested with the title of "king of the Western motorcyclists" at the Tuileries track, Denver, Colo., on the 24th ult., and now is occupying the "throne." How long the new "king" who dethroned Hasha will reign is very uncertain, for motorcycle "kings" are enthroned and dethroned overnight these days. Armstrong seemed to have his Excelsior in great form, for he trimmed everything and everybody, but his most notable accomplishment, in the eyes of the 5,000 spectators, at any rate, was his defeat of Hasha and Seymour in a five miles race after a fierce struggle. The race was decided in the second mile, when Armstrong assumed the lead and never was headed. Hasha and Seymour stayed to the finish, which was alleged to have been Hasha's first offense at finishing other than as a winner, but at any rate he declined to ride any more that night, and his match with Armstrong was scratched.

Armstrong also won the Colorado sweepstakes, at 10 miles, and was stated to have broken all local track records from one to 10 miles during the evening. He covered the distance in 7 minutes 5 seconds, with Ray Seymour, on an Indian, second, and Boyd, also on an Indian, third. Swartz was substituted for Hasha in a match with Armstrong, but the latter simply toyed with him. When Armstrong decided that he would not win any more events during the evening the others had a chance. Renel won a five miles invitation in a blanket finish from Boyd, King and Swartz, and Boyd won a match with Swartz. The summary:

Five mile open—Won by Armstrong (Excelsior); second, Hasha (Indian); third, Seymour (Indian). Time, 3:26.

Ten mile, Colorado sweeptsakes—Won by Armstrong (Excelsior); second, Seymour (Indian); third, Boyd. Time, 7:05.

Five mile match, Armstrong vs. Swartz—Won by Armstrong.

Five mile invitation—Won by Renel; second, King; third, Boyd.

Five mile match, Boyd vs. Swartz—Won by Boyd.

When They Can't Win 'Em They Steal 'Em.

American amateur motorcycle champions seem to be particularly unfortunate in the matter of holding on to their hard won silverware. First, Walter Goerke, while laid out with a broken leg last spring, was cheered one day by the receipt of the "glad" news that nearly all his prized cups, aggregating several hundred dollars in value, had been stolen from the store of a dealer to whom he had loaned them for exhibition purposes. Goerke to this day never has seen or heard of them nor does he expect to. Now Frank Hart has had a taste of the same misfortune. Hart has had his $700 worth of cups, representing a part of this season's winnings, on exhibition at the New York branch of the Goodyear Tire & Rubber Co. for several weeks. On the 23rd ult., some one got into the store, which is at Broadway and Sixty-fourth street, and carried off all of Hart's silverware, including the big Bosch championship and Standard Welding cups, which he won at Buffalo. The thieves also carried off some tires and ransacked all the desks in the store. Hart walked into the store last week to take home his prizes and learned that they had been stolen. The company had kept it quiet in the hope of getting some clue to the thieves, but silence has not produced any results from the "gum shoe" men as yet. The cups were not insured.

Motorcyclists Outshine Aviator.

The motorcycle races by amateur riders at the big aviation meet at Nutwood Park, Dubuque, Ia., September 28th and 29th, were pronounced more exciting than those run on the same track by a number of the best-known professionals in the country a short time ago. The cycling races preceded the flight of Aviator Beachey in his aeroplane. Edgar McCheney, whose recent racing achievements have placed him among the foremost riders in Iowa, made the mile course on his Indian motorcycle in 1 minute and 5 seconds in the face of a pelting rain, with the track so wet there was perpetual danger of skidding at the turns. This brought him into temporary possession of the cup of the Dubuque Motorcycle Club. He will be obliged, however, to defend the possession of the trophy in two more contests this fall, since three successive victories are required to insure permanent ownership.

The races were witnessed by over 3,000 spectators from many points in Eastern Iowa, despite the fact that the skies showered down rain practically the whole day. A thrilling feature of the afternoon's program was a race between Aviator Beachey and five motorcycles. The aeroplane passed over the goal two hundred yards in the lead.

Stolen Machine Found Abandoned.

The Motosacoche stolen from Mr. J. W. Gibson, the president of the Toronto Motorcycle Club, early this season has turned up. The report was heard that an abandoned machine was lying in a barn near Thornhill, Ontario, which is sixteen miles from the city, and upon investigation it was found to be the missing motorcycle. It had been in the farmer's possession for six weeks.

NEW YORKERS LEAD AT OLYMPIC

Buckingham Takes Two Firsts—Champion Hart Furnishes Thrills—Constant Defeats Drummond.

Although he had a faster machine, Percy Drummond, of Newark, N. J., was beaten by J. U. Constant, of Brooklyn, N. Y., the 10 mile national champion, in the final heat of their match at Olympic Park, Sunday, 8th inst. Drummond drew a good lead at the start, and it looked as if he would make a runaway, but Constant did some great work, which offset the gains that Drummond made in the stretches. Constant won out by a very close margin, Drummond hanging onto his rear wheel to the end. The distance was three miles. The result of their four meetings is that Constant has won two, lost one and fell in another, the latter being claimed by Drummond.

The meet, which was held by the New Jersey Motorcycle Club, was the best that has been put on at Olympic Park this season, as far as a star bill was concerned. Frank Hart, the amateur champion, also was on hand and, strange to say, was beaten, and stranger still, the shutout occurred in a handicap, in which Hart had 90 seconds allowance. He is a more familiar figure on scratch. Hart started in this race with a machine which had "gone stale," which accounts for his accepting a handicap and being beaten withal. Constant did some fine work in this race, the feature event of the meet. Joseph Buckingham, also of New York, was third.

Hart managed to capture a five mile handicap for non-winners from scratch, while Buckingham took a four mile handicap and the novelty race. William Pierson, winner of the private owners' handicap, was the only Newarker to figure among the winners, the New Yorkers capturing all other events. Hart's spectacular riding was the big thrill producer of the meet. The summary:

Five mile handicap, 50 inch class, non-winners at Olympic Park this season—Won by Frank Hart (scratch); second, Joseph Buckingham (0:45); third, Carl Segelbach (0:45). Time, 6:10.

Five mile handicap, 50 inch class, private owners—Won by William Pierson (0:25); second, Fred Struckmeyer (1:00). Time, 6:20.

Four mile handicap, 30½ inch class—Won by Joseph Buckingham (scratch); second, Watson Kluczek (scratch); third, William James (scratch). Time, 5:37⅘.

Novelty race, 50 inch class—Won by Joseph Buckingham; second, Fred Struckmeyer; third, Andrew Dupont. Distance, 1½ miles. Time, 2:00.

Three mile match, J. U. Constant vs. Percy Drummond—Won by Constant. Time, 3:39.

Fifteen mile handicap—Won by J. U. Constant (scratch); second, Frank Hart (1:30); third, Joseph Buckingham (1:40). Time, 19:02⅕.

Toronto Club Through With Racing.

To offset the tendency of overdoing motorcycle racing the Toronto Motorcycle Club has decided to issue no more sanctions for races this year. To further bind the riders a special ruling has been passed that any riders taking part in an unsanctioned event will be suspended for one year. All summer every society or club putting on a meet has included a motorcycle race or two on the program and the club has been willing to allow its riders to compete upon the payment of the $2 fee.

The club held a successful run to Niagara Falls and return on Sunday, October 8th, 25 riders taking part. The first reliability run of the club will be scheduled for Sunday and Monday, October 29th and 30th, the latter date being Thanksgiving Day in the Dominion of Canada. The point of destination will likely be London, Ontario, some 200 miles from Toronto.

On Thanksgiving Day, October 30th, the Motorcycle scout corps of the Canadian militia will report for duty at the annual sham fight near Toronto. This will be the first time that a motor two-wheeler has been called upon to take part in the maneuvers, and it is expected the "gatling guns" of the Toronto M. C. members will be enough to turn the tide of battle.

It is possible that a couple of invitation motorcycle contests will be run off on the holiday in connection with an automobile racing meet at the Exhibition two-lap dirt oval at Toronto.—W. M. G.

Wolters Came, Saw and Conquered.

News of "Joe" Wolters's homecoming to Denver, Col., caused an exodus of most of the stars who have been having things their own way there, and when Wolters arrived for the Tuileries meet on Sunday, 2d inst., there were few of the men on other teams to meet him. Hasha, Seymour and others had decamped. With a small field Wolters naturally had things his own way and lost but one event, in which Armstrong showed him the way to the tape. In the other events Armstrong was a consistent second, so it is just possible that Wolters let Armstrong win one event as a consolation. Wolters also clipped a fifth of a second off the local mile record, the new figures being 40⅘ seconds. The summary:

Ten mile open, professional—Won by Armstrong; second, Wolters; third, Fleckenstein. Time, 7:22.

Five mile handicap—Won by Wolters (scratch); second, Armstrong (scratch); third, Fleckenstein (one-third mile). Time, 3:30½.

Five mile sweepstakes, professional—Won by Wolters; second, Armstrong; third, Schwartz. Time, 5:12⅖.

Five mile open, professional—Won by Wolters; second, Armstrong; third Fleckenstein. Time, 4:32⅗.

Five mile match, Fleckenstein vs. Schwartz—Won by Fleckenstein. Time, 3:50.

One mile against local track record of 41 seconds—Wolters (Excelsior). Time, 0:40⅘. (Track record).

Toronto Club Must Pay High Rental.

The authorities at Toronto, Canada, were not slow to see that the Toronto Motorcycle Club was in on a good thing with its race meets, and in future the use of the Exhibition half mile track will cost the club the modest sum of $100 on each and every occasion upon which a meet is held. A chair rental will also be charged. Up to the present time the club has secured the free use of the grounds. After specializing on race meets for a whole summer, the members of the club decided to hold something more sociable, and accordingly planned a club run to Guelph, a small center 73 miles from the city. Thirty-seven riders turned up for the ride, which took place on September 24th, and the outward bound trip was done in two and a half hours. The only accident happened to Captain Alex McLean, who lost five spokes when his chain snapped. On the return leg of the journey several of the members, including Herb Kipp, the Indian artist, could not resist the temptation of a little race, and so covered the 73 miles in 1 hour and 55 minutes. An innovation was the participation of two ladies in the run, side cars being the means of conveyance.

Decorated Motorcycles in Trenton Parade.

Motorcycles had a division all to themselves in the floral motor parade at Trenton, N. J., on the 4th inst. Four prizes were awarded to the following riders: First, Levi Holmes (Harley-Davidson), pair tires; second, M. Manglebaum (Excelsior), cigars; third, James Fenton (Harley-Davidson), 10 pound cake and 10 quarts of ice cream; fourth, Daniel Radice (Merkel), gauntlets. The machines were tastefully decorated and attracted considerable attention. Without a doubt Fenton was more pleased with his prizes than any of the others, and what a feast he and his friends must have had! The Central Jersey Motorcycle Club had charge of the motorcycle division in the parade.

Sticky Mud Fails to Stop Bowman.

Extended tours on motorcycles have really become an everyday occurrence, but the performance of Hart Bowman, of Lincoln, Neb., deserves more than ordinary attention. Leaving his home town on Friday, September 22d, he reached Chicago at noon on the following Tuesday. At Omaha he met Volney Davis, who is on his way to the Pacific Coast, and Davis endeavored to persuade him from continuing, saying that the wet weather had made the roads altogether too difficult to ride. Notwithstanding this discouragement Bowman continued on his way, but he found the going fully as bad as had been represented. In many places the streams were so deep that the water came above the wheel hubs, and on a number of occasions the water was thrown up by his wheel and the driving rain got into his carbureter to such an extent that he was obliged to remove it and pour the water out. On one day he performed this operation four times.

The sticky clay of Iowa made the going particularly bad, and it was a frequent occurrence to have his hind wheel so clogged with mud that it could not be turned.

Leaving Chicago on Wednesday evening, September 27th, Bowman made Springfield at 6 p. m. on October 3d. Besides the time spent in Chicago he stopped over one day in Cleveland and was obliged to lay over half a day in Le Roy, N. Y., to dry out his magneto, which had become saturated with water.

When coming into Rochester Bowman was attacked by a bulldog, and in making a quick turn to avoid the animal he ran over a collie dog, which, unobserved, was making a counter attack from the other side. The result was a bad spill for Bowman, who was knocked unconscious and spent three hours in a hospital. He learned he was the second rider to have trouble with this particular collie, the other party sustaining a broken arm, but from all reports the collie is still making trouble.

Over such treacherous roads it is not surprising that Bowman sustained many falls, but besides broken pedal pins and a bent handle bar no damage was done to man or machine, except in the spill in Rochester, and both arrived in Springfield in fine condition.

Sixteen Join Providence Motorcycle Club.

Nine new members and two new members and five applications for membership is the record of the Providence (R. I.) Motorcycle Club for the last two meetings respectively. Scarcely a meeting passes but new members are elected or applications received and as a result the club is the largest and most prosperous in New England.

De Palma Caught by Fleet Two-Wheelers.

Ralph De Palma, the automobile racer, and former motorcycle racer, paid a compliment to the motorcycle police of Jamaica, L. I., who arrested him for speeding the other day after a chase of a mile and a half, by stating that it was the first time a motorcycle was able to overtake him. De Palma was on his way to the aviation meet when the officers spotted him. He tried to shake them off, but they hung on and finally overhauled the fugitive. De Palma was served with a summons to appear in court.

CUT-OUT CAMPAIGN BEARING FRUIT

Resolutions Against Its Use, Passed or in Contemplation by Clubs Throughout Country—Support from Makers.

That the campaign against the use of the muffler cut-outs on motorcycles is receiving nation-wide attention is evidenced by the number of letters received at the office of the Bicycling World and Motorcycle Review from manufacturers, dealers and riders, endorsing the action against the cut-out fiend, and further by the newspaper notice in the news and editorial columns regarding the agitation. The Bicycling World and Motorcycle Review has sent out during the past ten days nearly 300 copies of resolutions condemning the use of the cut-out and calling for the various clubs throughout the country to appoint committees to prepare for presentation to the various legislative bodies proper laws against the open mufflers on the public streets. These resolutions were passed unanimously, after much favorable comment, at the meeting of the New England District, Federation of American Motorcyclists, held at Providence, R. I., on Saturday evening, October 7th, and on Tuesday evening of this week the United Cyclists' Association, the new national organization of motorcyclists and bicyclists, ootk similar action at their meeting, held in Brooklyn, N. Y. The resolutions passed at the latter meeting assured even more actual results by the fact that they called for the appointment of a committee to prepare and see that a favorable law against the open muffler was passed at the earliest possible moment, and such a committee was appointed. Many of the F. A. M. affiliated clubs and other organizations have already passed similar resolutions and the newspaper comment on this action has always been praiseworthy. The resolutions in full are as follows, with the blanks where the names and cities of the various organizations are inserted:

Whereas, we, the members of the ——— Club, affiliated with the Federation of American Motorcyclists, stand for the improvement of motorcycling in every phase and the protection of motorcyclists, and

Whereas, we consider that the use of the muffler cut-out on motorcycles is the greatest hindrance to furthering the sport, causing at all times a wrong impression to be given the general public and causing motorcycling in general to be considered as a nuisance, and

Whereas, we realize that unless the Federation of American Motorcyclists shall, of their own accord, present to the various legislative bodies throughout our country a suitable law against the use of the cut-out, particularly in the streets of our cities, that these legislative bodies will themselves prepare a law which might be, instead of a help, a hindrance to the general sport, be it

Resolved, that we, the members of the ——— Club in the city of ———, State of ———, on this ——— day of ———, 191[1], request the Legal Action Committee to prepare a proper law on the aforesaid subject and take means to have this law enacted in the various legislative bodies, and be it further

Resolved, that we condemn most strongly the use of the cut-out, consider it unnecessary and will do everything in our power to prevent its use hereafter, and be it further

Resolved, that the various clubs, of which we are representatives, be requested to take similar action by having a copy of these resolutions presented and passed at a regular meeting and that every member of said clubs being found guilty of using the cut-out, upon the first offense shall be fined by the club, and upon a second offense, dismissed from its membership; and be it.

Further resolved that a copy of these resolutions be inscribed on the minutes of this meeting and sent to the various trade and newspapers.

The following letters and comments speak for themselves:

Editor Bicycling World:

Sir—By all means let's "cut out the cut-out," as you put it. But don't you think it can be done without asking our City Fathers to make laws on the subject. In my experience of 28 years with riding bicycles and motors, it seems to me that when Aldermen, Councilmen and legislators start making laws that they don't know when to stop, with the consequence that they go too far. It is difficult enough now to observe all the street and crossing rules of the city. And the fines are extreme for a motorcyclist to stand. So I say let's try to control our motors without more laws.

It is not necessary for most motorcyclists to open the cut-out to "time" his motor or adjust the carbureter. When adjustments get so bad that one cannot get it right without a cut-out, by all means disconnect the exhaust pipe at engine and do it right in less time.

So to my mind the solution of the thing is for the manufacturers to cut out the cut-out on touring machines. Don't give a baby a rattle and then ask him not to rattle it. Often there seems to be no increase in speed with cut-out open, as noted on speedometer. Indeed, with many machines the motor has been noticed to go faster with cut-out closed, because of the suction effect created by long exhaust pipes. If enough of us ask the manufacturer to omit the cut-out I think he will do it.

The fellow who takes out the inside of his muffler is the exception. He has "tinkeritis" and will be over it in a year.

Thanking you for your efforts for silence I am sincerely,

CHARLES E. MINNEMEYER.

The Wagner Motorcycle Co. makes the following statement:

"We are thoroughly in accord with the general movement tending toward the abatement of the open muffler nuisance. We have read with interest the editorial in the Bicycling World, September 16th issue, and while our views in regard to this subject coincide entirely with yours, nevertheless we hardly feel that it would be possible to omit the muffler cut-out entirely on future models.

"As explained by one manufacturer, the use of the cut-out is practically necessary at times in making carburetor adjustment and in detecting a skip in the motor at high speed, but we do believe that by suggestions, editorially and otherwise, and by the co-operation of the manufacturers with the F. A. M. in their efforts in this direction the riding public may be educated to the point, and that shortly, where they will appreciate that the use of the cut-out, except for the purposes intended by the manufacturer, shall be considered not only a public offense, but a display of ignorance on the part of the rider and an example of his total disregard of the sentiment of not only the non-riding public, but the great majority of the vast army of his fellow riders."

W. A. Johnson, sales manager of the Pierce Cycle Company, says:

"We wish it were possible to entirely eliminate the muffler cut-out. Unquestionably it is destructive to the best interests of motorcycling. As manufacturers we are placed in a position of being compelled to supply the cut-out because of the clamor of the dealers and riders. We do not consider that the increase in the efficiency is at all necessary in our model. If the riders would use the cut-out for its legitimate purposes no great objection would be brought against it. Every self-respecting motorcyclist should refrain from using the cut-out in traveling through the cities or villages, or even in the country, unless they have strict use for it.

"If the present abuse of the cut-out continues there is no question but that all manufacturers will combine to eliminate this feature from motorcycle construction. One of the first concerns to eliminate the cut-out would be the Pierce Cycle Co."

New Always-in-Sight Location for Watch.

Frank Kerr, the well-known Toronto Indian rider, has found the best place of all for a watch on a motorcycle. His machine bears a large automobile lamp and upon the back of this headlight Kerr soldered a metal pocket, into which he slips his timepiece. The ticker is thus ever before his face.

CALIFORNIA'S BIG BARBECUE

1,500 Motorcyclists Gather at Cresta Blanca—Boost 'Frisco for 1915 F. A. M. Meet.

Northern California turned out the largest motorcycle gathering in its history on Sunday, 24th ult., when members of the San Francisco, Oakland, Stockton, Sacramento and San Jose Motorcycle clubs, 1,500 strong assembled at Livermore and Cresta Blanca for their first annual reunion and barbecue. There were over 1,000 machines in the gathering, and tandem parties were numerous. Strangely enough, there was but one lady motorcyclist in the huge gathering, Mrs. F. E. Karslake, of San Francisco. That is, one who rode a machine alone. There were many other members of the fair sex present, but they were tandem passengers. In fact almost half of the machines had "two up."

The San Francisco club turned out 400 strong, the Oakland also duplicated this showing of their brethren across the bay, and those two clubs rode in a body to Mission San Jose, where they were joined by the San Jose riders, over 200 in number. The remainder were contributed by the Stockton and Sacramento clubs and riders from other smaller towns. The riders rode into Livermore four abreast, the long pageant being unlike anything ever before witnessed in that section. The town flagpole in Main street was the rendezvous, where the motorcyclists formed in a hollow square and panorama pictures were taken.

At Cresta Blanca an elaborate banquet was prepared, but unfortunately the food supply ran short and many had to go hungry until they returned to Livermore. After the barbecue races had been planned on the main street, but owing to the late arrival of several riders who had entered many of the events were called off. Two races were run, a 14 mile club race, which was won by A. Sharkey, of the Oakland Motorcycle Club, on an Excelsior twin, in 18:49, and a single cylinder class over the same course, in which E. Martin, also of the Oakland club, was returned the winner. Difficulty in keeping the course clear interfered with the riders and prevented faster time being made. The prizes for the scratched events will be used for future race meets.

Great enthusiasm was manifested by the motorcyclists over the novelty of the affair and greater plans are contemplated for next year's gathering. The reunion was the idea of G. H. Robinson, captain of the San Francisco Motorcycle Club, who was elected colonel of the carnival. His assistants were the following club captains: E. C. Kehl, Oakland M. C.; W. J. Rundle, Stockton, M. C.; C. R. Reed, San Jose M. C.; R. E. Hawtrez, Sacramento M. C. One of the prime objects of the reunion was to earn recognition for San Francisco's bid for the F. A. M. meet in 1915, during the Panama-Pacific Exposition. At Livermore the Monarch Oil Refining Co. erected a supply station and filled tanks gratuitously. During the afternoon and evening the visitors enjoyed dancing in the local opera house.

Marylanders Go Chestnutting.

The members of the Maryland M. C. of Baltimore are extremely fond of chestnuts. This being so they gathered together last Sunday morning and, led by Captain Gault, went off on a run into the Green Spring Valley, where it was rumored the succulent nuts were to be found in profusion. When the crew reached their rendezvous they were taken in tow by Duke Richardson, who pointed out the trees and complacently watched while the motorcyclists skinned the trees bare. They then took to the road again and were home early in the afternoon with bags of chestnuts to show to their relatives and admiring friends. The prize offered for regular attendance at the Sunday runs tended to bring out a good crowd.—C. F. Y.

Rain Washes Detroit Card.

After rain had caused their postponement the weather man again turned his marine artillery on the Michigan State Fair at Detroit on the closing day, 27th ult., and necessitated the calling off of the motorcycle races scheduled.

HOT TIMES IN SUNNY ALABAMA

DeRosier and Stubbs Fight at Birmingham —Balke and Hasha Gather the Money.

Chicago having no further attractions for them now that the motordrome has put up the blinds until next spring, DeRosier, Balke, Hasha and Mitchel are doing the country visiting the State fairs and picking up any easy change that they are able to separate fair committees from for the privilege of seeing the "world's daredevil motorcyclists" in action. This quartet turned up in Birmingham, Ala., last week for the Alabama State fair, which opened on the 5th and coninued to the 14th inst.

PART OF THE 1,500 MOTORCYCLISTS AROUND THE TOWN FLAG AT LIVERMORE

Birmingham is the stamping ground of Robert Stubbs, the Southern idol, and naturally "Bobby" was on hand to defend his laurels. He not only defended them on the track, but off the track as well, and the end is not yet. DeRosier had poor luck, his machine refusing to start on several occasions, but whenever he did get going he managed to win easily, save on one occasion.

On the first day, Thursday, 5th inst., a five mile professional, with two preliminary heats at three miles was run. Balke and Hasha clashed in the opening heat, and Balke had a gift, as Hasha's machine was away off form. There was more action in the second mill, with DeRosier, Stubbs and Mitchel as the combatants. DeRosier beat Stubbs by a small margin, and

Mitchel was third. In the final DeRosier was left at the tape, and Balke won in a canter after leading Stubbs all the way.

Friday, 6th inst., saw even better racing, a 10 mile bout between Balke and Stubbs being the feature. Balke led all the way and Stubbs beat Mitchel. In a three mile preliminary Balke beat Hasha, and in a similar event DeRosier again was left at the post, Stubbs and Mitchel fighting it out. Stubbs forced a lead, but Mitchel tried hard to close the gap and there was some desperate fighting to the finish, Stubbs winning by half a second.

Hasha got down to business on Saturday, 7th inst., and won his heat and the final of the five mile event. He beat Balke in the three mile preliminary, leading all the way, although Balke always was close behind. The second heat brought together DeRosier and Stubbs. DeRosier got a bad start, as usual, but managed to get under way and then picked up Stubbs and won easily. The final between Hasha, Balke and Stubbs promised to be a hair raiser, and it was, but in an unexpected way. Hasha left his old team mates way in the rear and won hands down, Balke beating DeRosier for second. During the race a football game was in progress in the infield and while Balke was coming down the stretch one of the players ran in front of him. Balke shut down to avoid a collision, but it made no difference, for Hasha already had the race won.

The real fireworks of the meet, however, occurred on the 6th, after the races. Naturally since DeRosier and Balke switched to the Excelsior, there is no love lost between them and their old Indian racing pals. The trouble started, it is alleged, by derogatory remarks made by Mrs. Stubbs to DeRosier when he was coming off the track after being unable to get his machine started. DeRosier, so runs the story, "got hot under the collar" over what he claims were insults by Mrs. Stubbs, and called Bobby to account later. The upshot was that the pair mixed it good and plenty, and Jake got the worst of it.

DeRosier alleges that five of Stubbs'; friends helped him and someone used a blackjack or brass knuckles on him and nearly fractured his skull. It is hinted that Jake is going to bring suit against Stubbs for assault and battery. He was reported to have said that the whole fracas was cooked up to scare him and Balke out of the notion of continuing their Southern tour. He also is alleged to have said that Referee Gresham was taking Stubbs' side and that birmingham was an "Indian town," where no other riders could get a square deal. As previously remarked it is quite plain "that the end is not yet." The summary:

Thursday, October 5th.

Five mile professional—First heat, three miles. Won by Charles Balke (Excelsior); second, E. Hasha (Indian). Second heat, three miles. Won by Jake DeRosier (Excelsior); second, Robert Stubbs(Indian); third, Arthur Mitchel (Thor). Final, five miles. Won by Balke; second, Stubbs. DeRosier stalled at start Time, 4:41.

Friday. October. 6th.

Three mile professional—Won by Balke (Excelsior); second, Hasha (Indian). Time, 2:49.

Three mile professional—Won by Stubbs (Indian); second, Mitchel (Thor). DeRosier stalled at start. Time, 2:32½.

Ten mile professional—Won by Balke; second, Stubbs; third, Mitchel.

Saturday, October 7th.

Five mile professional—First heat, three miles. Won by Hasha (Indian); second, Balke (Excelsior). Time, 2:37½. Second heat, three miles. Won by DeRosier (Excelsior); second, Stubbs (Indian). Final, five miles. Won by Hasha (Indian); second, Balke (Excelsior); third, DeRosier (Excelsior). Time, 4:25.

This Should Boost the F. A. M.

Attractively illustrated, and "a live wire" typographically and editorially, the new F. A. M. booklet just prepared and issued by the chairman of the membership committee, setting forth the objects of and advantages of membership in the organization, is a powerful argument that should be a factor in recruiting many new members. The booklet is of handy vest pocket size, contains 24 pages of "meaty" F. A. M. facts, and is printed on good paper. Chapters with clear and interesting illustrations are devoted to racing, touring, good roads, clubs and official repair shops. The workings of the legal action committee also are defined and a full list of national and district officers is given. A request to the chairman of the F. A. M. membership committee, Bangor, Me., will bring the booklet on the jump.

"One Machine" Events Disapproved.

Concerning alleged attempts of race meet promoters to program events favoring some special make of machine, and to get these "jokers" by the F. A. M. Competition Committee, Chairman Thornley says:

"I wish to call the attention of promoters, riders and the trade to what I consider a most contemptible effort that is being made all over the country to violate the rules and precedents of the F. A. M., and to put the Competition Committee in a most unsavory light. I have reference to a persistent and continued effort that is being made to have one or more events or time trials in various meets restricted to single cylinder under 50 cubic inches. This is an unfair discrimination in favor of one make of machine, without proper opportunity being given other manufacturers to meet such conditions.

"While the F. A. M. is glad and willing through its competition department to advertise the sport of motorcycling and the industry in general, it is unalterably opposed to advertising any special make of machine. If the F. A. M. chooses to establish a class for single cylinder machines under 50 cubic inches I would have nothing to say and would have the right to say nothing, but as long as the rules are as they are I feel it is my duty to put a stop to this thing wherever it shows up.

"Nevertheless it is a continual source of annoyance to have to scrutinize every entry blank that is sent into this office for fear that something of the sort may escape my notice. I try to be fair to myself, and like to have square dealings with square people, and while I am perfectly willing to scrutinize entry blanks for inadvertent errors, I feel that it is asking a little too much of me to be required to continually scrutinize entry blanks as though I were dealing with a lot of lawless sharpers."

Columbus After F. A. M. Meet.

Columbus, O., wants the 1912 F. A. M. meet. To that end the Columbus Motorcycle Club has appointed a committee of 12 to see the local Chamber of Commerce and business men and solicit their aid in bringing the meet to that city. The city is the capital of the State, has over 600 riders, a fine dirt track and a live club. The club committee already is preparing campaign literature telling why they want the meet, and this will be sent to all clubs in the State, together with a request that they lend all assistance possible to help bring the meet to Columbus. Motorcyclists who were in Columbus on the 1902 F. A. M. endurance run, which stopped in the capital city over night and who have taken in the club's race meets testify that it is a real lively town that makes a fellow regret to leave it, and in consequence there are many who have enjoyed Columbus hospitality, who want to see it get the meet for 1912.

New Blood Tries to Save Aberdeen Club.

Reorganization of the Aberdeen (S. D.) Motorcycle Club has been effected, and considerable new blood infused into the administration of its affairs, through the election of new officers, as follows: Oscar Olson, president; E. Oderkirk, vice-president; G. E. Petrick, secretary; John Harrison, treasurer; Peter Burkhardt, captain; Donald Dent, first lieutenant; Carl Anderson, second lieutenant. The "vim" meeting was an enthusiastic one, and from all signs the club promises to be among the "live ones" henceforth. The club also voted to affiliate with the F. A. M.

Enter the Owego Montorcycle Club.

Motorcyclists of Owego, N. Y., have formed the Owego Motorcycle Club. The officers elected are the following: William Hallstead, president; Willis Sayre, vice-president; J. A. Franz, secretary; William E. Strong, treasurer; Willis Snyder, captain.

Bicycle Road Race for World's Olympic Games

Amateurs of All Nations Invited — America's Opportunity — Riders' Prospects — The Need of Support from All Loyal Followers of Cycling — Now's the Time — What's the Answer?

The official program of the Olympic games at Stockholm, Sweden, next year has been issued, and along with a general athletic competition it shows there will be an event for bicyclists. The race will be on the road for a distance of 200 miles around Lake Malar. Each competitor must be registered as an amateur, with a controlling body having an alliance with the Union Cycliste International. Insofar as concerns cyclists of the United States, the National Cycling Association is that affiliated controlling body.

The race will be partly individual and partly team race, scoring in both divisions will be done simultaneously. The contestants will start singly at intervals of three minutes. The maximum number of competitors allowed to each nation is twelve. Prizes in the individual competition will be gold, silver and bronze Olympic medals for first, second and third, respectively. Every non-prize winner whose time does not exceed that of the winner by 25 per cent. will receive a special diploma of merit.

The team competition will be so arranged that the best four from each nation will be considered to form a team, and the total time of the four shall decide. Nine riders may be entered by each nation in the team competition; six to start, three to be held in reserve and the score of four to count in the determining the order of finish. The winning team will receive an Olympic diploma and each member a silver gilt Olympic medal. To each member of the second team a silver Olympic medal, to the third team individual bronze Olympic medals.

Entries close June 7th, 1912. Start of the race, 2 a. m. Sunday, July 7th, 1912.

Now that the program for the quadrennial recurrence of the world's Olympic games next July, at Stockholm, Sweden, has been announced, it is fit and timely that all those interested in the sport of cycling in this country give their serious consideration to the question of the formation of a bicycle team to represent the United States in those games.

The executive committee of the American Olympic Committee has started energetically on the campaign to secure the $50,000 required for the expenses to have this nation properly represented in all branches of sport. Each sport's controlling body is enlisted in the endeavor to finance their respective teams, and in addition public spirited contributions to the general fund are being received from men prominent in financial and business circles.

Heading the list is the subscription of $1,000 by Colonel Robert M. Thompson, president of the American Olympic Committee, also president of the New York Athletic Club; J. Pierpont Morgan, $500; the Amateur Athletic Union, $1,000, and the Metropolitan Association of the A. A. U., $500. Julian W. Curtiss, treasurer of the Olympic Committee, also stated that he had received from Everett C. Brown, of the Chicago Athletic Association, and Edward E. Babb, of the Boston Athletic Association, letters to the effect that both of these clubs would take up actively the question of contributions to the fund.

When preparations were in progress for the Olympic games last held in London, during July, 1908, interest in the cycling team was sadly lacking, and it was only with the most strenuous efforts during the final few weeks that a team of two men was provided for and sent. That America was represented in the bicycle races was due almost wholly to the untiring energy of Harold J. Dibblee, a New York enthusiast, who had no other interest in the matter than his love for the sport.

With a foresight born of his former experience, Mr. Dibblee has again taken up the matter and has suggested that a subscription list to provide, in part at least, for the expenses of a bicycle team, be started and promoted in the columns of the Bicycling World and Motorcycle Review.

According to figures at hand it may be safely estimated that about $250 per man will be required. In all probability it will not be necessary to raise the entire amount, as some assistance will be given from the general fund. Nevertheless the earnest efforts of all connected with the sport should at once be engaged in the furtherance of any plan devised to support this patriotic demonstration to the country and the world at large, that cycling is indeed returning, if not already firmly replaced and steadily increasing in popular favor in the United States.

The conditions and provisions under which the forthcoming race will be run are such that will be particularly favorable to riders from this country. Practically all possibility of adverse teaming will be eliminated. It was virtually the overwhelming odds in favor of the much larger teams against which it competed and the lack of preparation that contributed so largely to the displacement of the American team in the finals at the London games.

The last events were run solely on the track, while the coming race will be on the road and will be run in such a manner that all will have an equal chance. Riders in this country have always been the leaders in long distance competitions, such as six-day races, and though the distance in prospect, 200 miles, is rather more than is traveled in amateur competition in this country, the fact remains that time and time again have our long distance professionals, who have risen from the amateur ranks, defeated the pick of all other countries.

The rapid increase in recent years of road racing and the remarkable times recorded in all sections of the United States would tend to strengthen the opinion that the question of ability is one of secondary importance. As to determining the representatives it is suggested that a series of local try-outs be held by the various clubs and a plan is now under consideration to be evolved later for elimination trials to take place during the early spring of next year. Correspondence is invited for publication, embodying suggestions for plans to assist in promoting the subscription list.

Seashore Dealer Stirs Enthusiasm.

To announce his return to the bicycle sport and to let the "natives" see that the bicycle is very much alive, as he puts it, Charles Augustus Van Doren, the Atlantic City (N. J.) "live wire," promoted a race with start and finish in front of his store on Atlantic avenue. Two and one-half hours was the time allowed in which to complete the 35 miles journey of the race and qualify for one of the handsome medals offered to all who finished within the time prescribed.

Nineteen started, of whom six received medals. Their names, time and order of finish was as follows: Tony La Rosa, 1 hour 45 minutes; J. B. Butler, 2 hours; Joe Geiger, 2 hours 27 minutes; A. Gelone, 2 hours 28 minutes; Ed Shoemaker, 2 hours 28 minutes 30 seconds; Joe Walters, 2 hours 29 minutes. As noted in these columns recently Van Doren has only just re-entered the retail trade at the famous seaside resort, after an absence of several years. He had in the past conducted a number of road races. That his return to the city is appreciated was amply attested by the fact that crowds lined the street and automobile parties covered the greater part of the course to better view the contest, the first opportunity of the sort they have had since previous to Van Doren's departure. The officials were: Starter and

timer, C. A. Van Doren; judge and referee, W. Van Kirk; checker and assistant referee, James League. Fred Kyte, flying a la motorcycle, saw to it as patrol that none of the contestants accepted outside pace.

Besides the tandem race closed to members and the match race between the two first tandems and the best four single riders for members, the C. R. C. A. field day at Guttenberg track on October 22d, the many events that are scheduled to take place have already interested quite a few riders by the way the acceptances to the invitations received to date tend to show. The main attraction of the day will be an unlimited pursuit race between teams selected from each club in the Metropolitan section, composed of four men, the trophy to be competed for will be a club shield.

A special challenge has been issued by the members, Polacsy and H. Lilienthal to race any two man team on the track that day. The teams that are in training for the tandem race are composed of the following riders: Polacsy-Baker, Carroll-O'Connor, Segal-Segal and Lightfine-Dean.

Cycle Touring is Popular in Canada.

Despite the advance in the motorcycle sport in Canada considerable bicycle touring is witnessed.

Recently two Detroit bicycle enthusiasts, W. Dunfield and J. Herreschoff, employes of the Morgan & Wright Tire Co., wheeled to Toronto from the City of the Straits, using an old C. W. A. road guide, which they found to be still practicable, even as to quality of road over which they had to travel. They were making a two weeks' tour of the Province and paid a call to J. R. Holden's "Nobby Tread agency" while in Toronto.

Two Toronto riders, H. G. Martin and A. S. Bowers, recently set out on a trip through New York State, using the pedal-pushed wheel as a means of transportation. Martin has made many bicycle tours during the last 20 years and still likes it.

Newport Waiter Caught Stealing Bicycles.

Exclusive Newport, R. I., with its "smart set" would naturally seem to be a paradise for a waiter, with tips so fat and frequent as to make him dizzy and concentrate his efforts on the pursuit of his profession, but tips must have been small for Arthur Venier, for Arthur decided to purloin a few bicycles to make up for what he wasn't getting over the table cloth. Unfortunately for Monsieur Arthur, however, the owners of the bicycles "tipped" the police that someone was stealing their bicycles, and while for some time the police were mystified, they finally found the scent and nabbed Arthur. It was three times and out for Arthur, and all three machines were recovered. Arthur pleaded guilty on all three counts and was taxed $10 and costs on each, making a total of $64.50. As Arthur didn't have the necessary amount he will liquidate his indebtedness in jail.

SNAPPY RACING AT THE VELODROME

Altered Program Provides Variety—Fogler-Root Invincible on Tandem—Clark and Goullet Defeat Kramer.

Radical changes in the announced program dispensed with the featured team race and motorcycle match race at the Newark Velodrome on Sunday, the 8th inst., and instead were run an open, a handicap and a tandem match race for the professionals and a motorcycle paced record trial by Elmer Collins and an exhibition by Jimmy Hunter in an endeavor to ride a mile in 60 seconds on the six lap saucer.

The tandem match race grew out of a challenge issued by the Bedell Brothers, Fogler and Root accepted it and Manager Chapman gave the Long Island brothers an opportunity to prove their claimed superiority on the two-seaters. But Fogler and Root demonstrated conclusively their mastery of tandem riding by defeating the Bedells in two straight heats. The first from a front position and the second from the rear. In the first heat both teams got away slowly, with Bedells trailing to the fifth lap, when they tried a jump, but were stalled off successfully by Fogler and Root, who won by a length. The second heat started in the same manner. At the start of the second lap the Bedells dropped down on the inside to the pole line and it looked for several laps as though they would be able to put the same stall over as had Root and Fogler in the first lap, but at the bell the latter team buckled down to business and it was all over except the shouting at half a lap to go, Fogler and Root going around and winning by a clear length.

Goullet, Hehir, Fogler, Lawson, Clark, Anderson, Kramer and Drobach clashed in the final of the mile open, professional. After the usual shuffle Kramer carried the pace slowly for three laps, then Clark spoke his little piece. In the fourth lap Hehir slipped through on the inside and began to warm things up by opening a 10 yard gap, which Clark closed. Anderson, riding in the string, jumped as soon as Hehir was overhauled in the fifth lap and kept going, and it was up to Hehir to bring the bunch up. At the bell Anderson was yet in front by a good margin, when Clark jumped out from third position and set sail for home, carrying Fogler, Goullet and Kramer with him. Clark was never headed, winning by half a length, and Goullet, Kramer and Fogler had a battle royal for second, finishing close together in that order.

A new wrinkle was tried in the two mile professional handicap, when the men usually placed under the 60 yard mark were penalized the corresponding distances behind scratch and the whole line moved back accordingly, retaining the usual intervening allotments with a total of 240 yards between Kramer, Clark and Goullet and the limit man, Ben Hill. Obviously the new method was tried to prevent the possibility of the limit men making a quick jump and thereby overhauling the scratch men in the most favored position on the track, and also to give the back markers the advantage of a start the full length of the stretch. But the long markers kept things humming from the crack of the gun and there was evidence early of a lack of co-operation on the part of the honor men, with the consequence that they and Hehir, from 30 yards penalty, quit at one mile. Fred Hill by an excellent ride from the tape and for the greater part of the journey alone managed to get in with the leaders at the bell. When the gong sounded Anderson (130) came out with the winning gallop, with Jumbo Wells (75) second and Fred Hill (scratch) close up for third.

Alvin Loftes again demonstrated his class by riding practically alone to close a 40 yard gap between him and the next man in the one mile handicap for amateurs, Ericson (30) having punctured in the second lap. With one lap to go 20 yards yet separated Loftes and the flying leaders. In a "do or die" sprint for the entire last lap, high up on the bank he nipped Morgan (150) at the tape. Ray Eaton (130) finished third.

The summary:

One mile open, professional—Won by A. J. Clark; second, Alfred Goullet; third, Frank L. Kramer; fourth, Jos. Fogler; fifth, Iver Lawson. Time, 2:40.

One mile handicap, amateur—Won by Alvin Loftes (scratch); second, George Morgan, Cleveland, O. (150 yards); third, Raymond Eaton (130). Time, 1:57⅖.

Two mile open, novice—Won by James Coole; second, Irving Rice. Time, 5:12⅘.

One mile, motor paced, trial again track record, professional—By Elmer Collins. Time, 1:12⅗. Previous record, 1:13⅘.

One mile invitation, professional—Won by Fred Hill; second, Ernest Jokus; third, Worthington L. Mitten; fourth, Norman Anderson; fifth, Walter De Mara; sixth, Floyd Krebs. Time, 2:07⅘.

Two mile open, Velodrome championship, amateur—Won by Alvin Loftes; second, Ray Eaton; third, Carl F. Ericson. Time, 4:32⅘.

Tandem match race, professional, one mile heats, Fogler and Root vs. Bedell Brothers—First heat won by Fogler and Root. Time, 2:53⅕. Second heat and match won by Fogler and Root. Time, 2:50⅗.

Two mile handicap, professional—Won by Norman Anderson (130); second, Jumbo Wells (75); third, Fred Hill (scratch); fourth, Ernest Pye (115); fifth, Jake Magin (130). Time 3:44⅖.

One mile motorcycle exhibition—By James Hunter. Time, 1:04.

Nineteen-Twelve Plans FOR THE Harley-Davidson Dealers

THIS year we have more to offer the public through our dealers than ever before. Not only have we increased the quality of our machines, but due to a larger output, larger purchasing power, and more modern machinery, we have been able to lower the selling price very materially. In addition to these two factors the Harley-Davidson 1912 machine has two new innovations. Two features which are not only unique, but exclusive. On these two features the Harley-Davidson dealer will have no competition.

These features are the Harley-Davidson "Ful-Floteing" Seat, and the Harley-Davidson "Free-Wheel" Control. In last week's issue of this paper we tried to tell you what these two features were. We say, tried, for no dealer or rider would believe us if we fully told the wonderful advantages of these two devices.

One of the editors of Motorcycling, who saw a demonstration and then tried one of these new models, said: "If you had told me I wouldn't have believed you, and to be candid, I wasn't fully convinced until I had ridden and tried for myself."

To the rider of the 1912 models the "Ful-Floteing" Seat means no more cedar block pavements, no more cobble stones, no more rough roads, every road a boulevard. No road is too rough to "beat it," for the "Ful-Floteing" Seat absorbs all the unevenness and the rider virtually floats over pavements he formerly took standing on his pedals.

The "Free-Wheel" control is the only free-wheel or free engine device made that can be used on a single cylinder motorcycle satisfactorily. Racing of the engine is unnecessary, it never grabs if thrown out, never jars in, and if in, never jars out. Easing in of the clutch, formerly so common, is unknown. The rider simply slams in the lever, and the clutch almost automatically eases itself, without stalling the engine or grabbing.

We know the advantages of these changes and features, and knowing them, we know their selling value. We realize that in a measure they will revolutionize the motorcycle industry. We know that when the American Public hears of and sees these changes there is going to be some drastic changes in the sales map. Furthermore, we are going to see that the American Public does know about these changes. Last year we expended twice the money spent by any other motorcycle company, telling the American Public about the Harley-Davidson, and bringing sales to our dealers. This year we will spend twice what we spent last year. Full pages, half pages, and quarter pages, will appear in the multitude of magazines and papers. The scope of the sales and promotion department has been broadened and every deserving Harley-Davidson dealer will be given the benefit of co-operation by these departments.

We realize that the sales of our dealers will be greater this year than ever before, and realizing this we are only going to replace and add on about two hundred additional dealers for 1912. To the dealer we would say, these changes and additions mean the possible chance for some dealers to obtain the agency for the Harley-Davidson. To you, we would say, regardless of conditions, file your application. If there is a possibility of our adding you or your firm to our list of dealers, we will write you to come to the factory. Then, when you have seen and ridden the new Harley-Davidson, when you have realized its sales possibilities, then, and then only, you will realize what the 1912 Harley-Davidson will mean to the Harley-Davidson dealers.

To assure a prompt reply, all inquiries should be addressed to the Harley-Davidson Motor Company, Desk "C."

YANKEE FLYERS INVADE AUSTRALIA

Stars Lead Exodus That Promises to Deplete Madison Square Garden Race—First Lap of World-Girdling Tour.

Being the first to respond to the lure of Australian gold, A. J. Clark, Iver Lawson and Worthington L. Mitten, three well-known American professional cyclists, signed up contracts last week with J. D. Williams, of the J. D. Williams Cinematograph Co., of Australia, to ride in the two six-day races that are to be run in Melbourne and Sydney early next year. Clark is a native son of the land of the kangaroo, but has made his home in this country for

IVER LAWSON

four years and has also taken out his naturalization papers here. All the followers of the cycling sport in his native country are particularly anxious to see Clark ride, as at the time of his departure for this country he was just beginning to develop, under the tutelage of the masterful Macfarland who claims to have discovered him, , that phenomenal speed which has since earned for him such a wonderful reputation and which has placed him second only to the great Kramer, for whose championship crown Clark has been for the past three years a most persistent and aggressive contender.

Iver Lawson will also undoubtedly meet with a warm reception, as this former world's champion and inveterate globe trotter is almost as well known abroad as at home, naturally in the course of his extensive wanderings he has ridden many races in Australia, where he has legions of friends and admirers.

Worthington Longfellow Mitten is a native of Davenport, Ia., and in this trip is making his first tour abroad. "Little" Mitten, or "the deacon," as he is known to the riders and fans, has competed in the professional ranks for a number of years and is very popular with all who follow the sport. Mitten is a game stayer and a most consistent performer, being particularly good in handicap events. He is easily a veteran in the six-day game, having competed in no less than 22 of the big mills, four of them being of the Madison Square Garden 142 hour grinds.

Lawson and Mitten are the first to start.

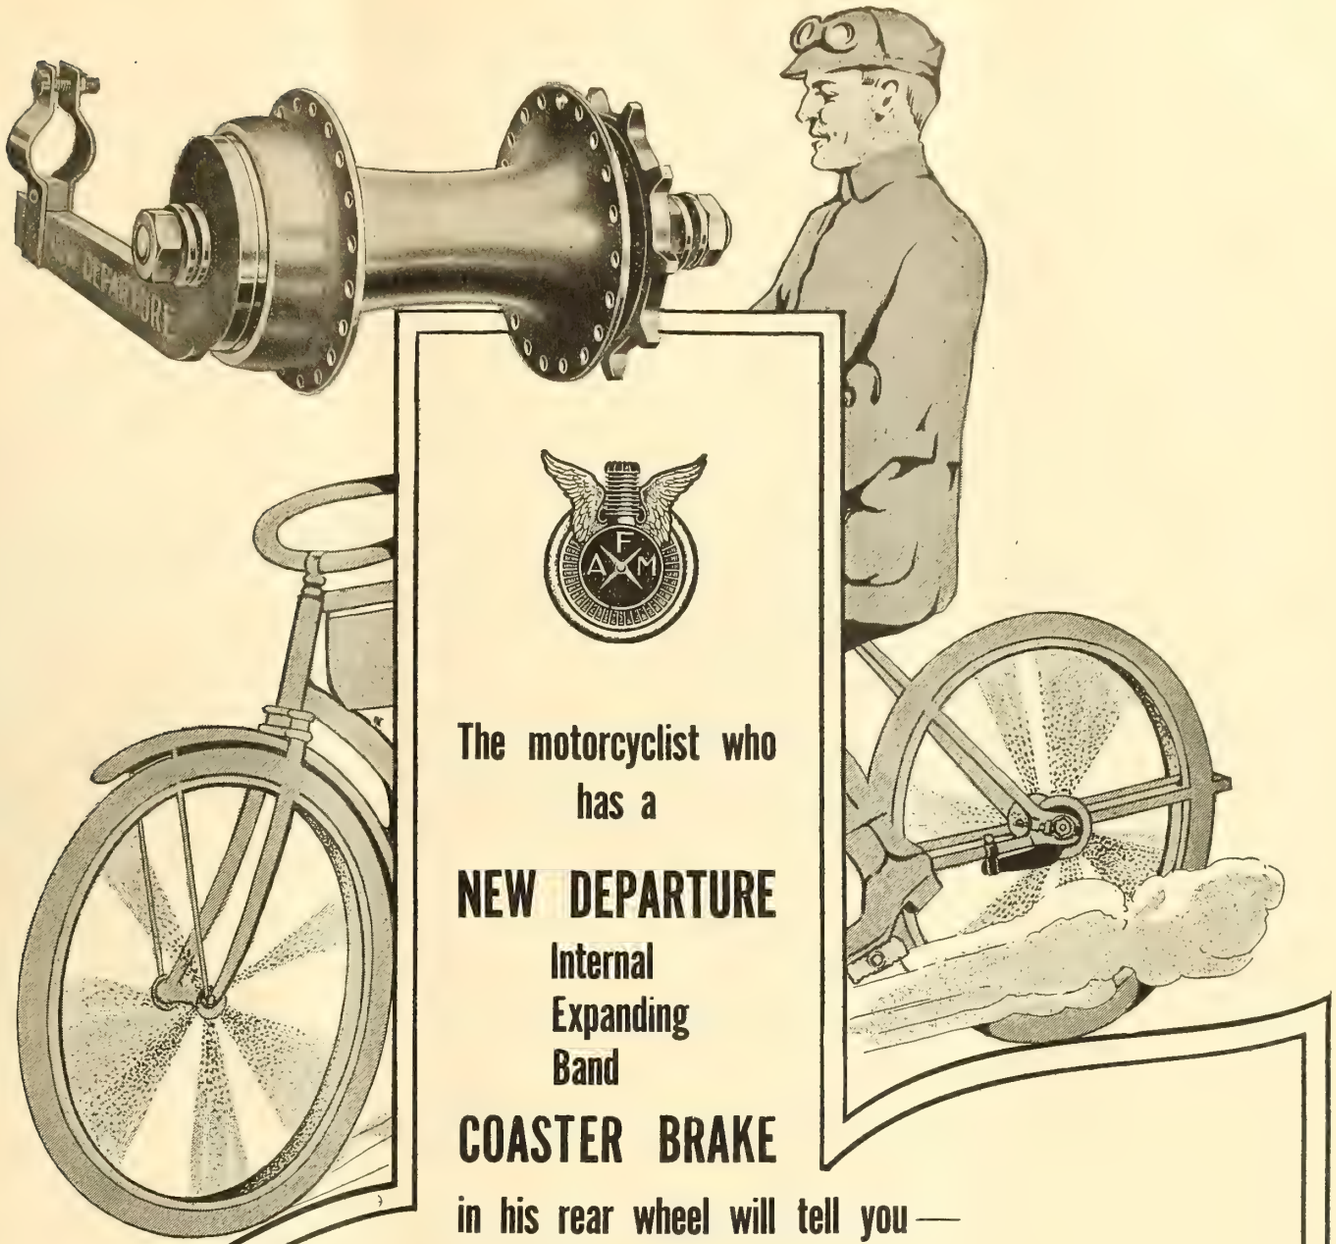
"JACKIE" CLARK

the former left Newark for Buffalo, and Mitten started on Monday last for a two weeks' visit to his home, after which both will proceed to Vancouver, B. C., where Clark and his American wife will join them to sail on November 1st. The trip will extend over at least five months. At the termination of the Australian season the riders will join the big bunch under Floyd Macfarland, who will then be on the European tour.

Although not having signed contracts Alfred Goullet and Paddy Hehir, native Australians, until now riding at the Newark Velodrome, have decided to take in the Australian trip also, with the difference that they will do so on their own account, paying their own expenses. They claim, with no small grounds for reason, too, to be able to make some of the others hustle when it comes to the final of the big grinds in Australia. Both are sprinters of the first quality and both are noted stayers in six-day work and undoubtedly will make their word good to the extent at least that they will defray the considerable expense of the trip home, and should in addition pull down a tidy sum for their work.

Cycle Jauntists Busy Fulfilling Title.

The Bicycle Jaunt Club of Greater New York, organized in July, held its third bicycle jaunt on Sunday, October 8th, 1911, to Greenwood Lake. The members assembled at the foot of Chambers street at 8:30 Sunday morning and caught the 8:45 train to Wanaque-Midvale, N. J., from there cycling to Greenwood Lake, passing through Ringwood Junction, Boardville,



WORTH. L. MITTEN

Monksville, Hewitt and arriving at the head of the lake, where the club stopped for dinner at Miller's Hotel.

After dinner and a good rest the club proceeded along the entire length of the lake, which is nine miles, arriving at Greenwood Lake Post Office. From there they continued through the Ramapo Mountains to Tuxedo and from there home. Among the members of the club who participated in the run are some old timers who joined the cycling ranks in the early nineties.

Sociable Scranton Cyclists Entertain.

The Scranton (Pa.) Bicycle Club's season of 1911-12 opened Saturday, the 7th inst., with a lunch and informal social session for members and their friends. During the winter months night lunches will be served. The club begins its season with a large membership and in a good financial condition. The various committees are at work planning for the winter months. H. M. Simons, chairman of the entertainment committee, was in charge of the arrangements for the Saturday night lunches and the club opening.

The motorcyclist who has a

NEW DEPARTURE

Internal Expanding Band

COASTER BRAKE

in his rear wheel will tell you—

It never fails to operate satisfactorily.

It is the most reliable part of his machine.

It has more power than he ever really needs—he can stall his engine with it.

It is strong to the point of indestructibility.

It has proven it's success.

Among all the motorcyclists who attended the big Buffalo F. A. M. meeting and whose machines were equipped with New Departure Coaster Brakes all reported the brake as giving excellent service and fulfilling all claims made by it.

THE NEW DEPARTURE MANUFACTURING COMPANY, Bristol, Conn.

Coaster Brake Licensors

SEGAL C. R. C. A. CHAMPION

By Adding Six Points, Popular Captain Proves Best of the Season—Scratch Men Late in Handicap Sprint.

The last two of the series of races to decide the championship for 1911 of the E. D. C. R. C. A. were held on Sunday, October 8th, at Freeport, L. I., on the Merrick road. Sylvain Segal clinched his hold on the championship by a margin of 9 points. The distances were one mile and ten miles.

The one mile race was a scratch event and with a rolling start, the riders immediately started along at a fair clip, Bieregel coming from the rear to the front carried along the crowd, and then Baker shot out with a sprint for the leaders and almost shook the stragglers in the end. After slowing up a bit and four riders forming in a parade line in front, and with the positions entirely changed behind for the first half, Segal showed a little activity by coming out and setting a steady gait till within a quarter mile of the line, where the real sprint started, and he (Segal) was never headed, finishing five or six lengths ahead of Terhune, O'Connor and Polacsy, who finished in this order.

The ten mile race was started soon after, with three riders on the three minute handicap mark and the remaining five riders on scratch. The first two miles were over perfect roads, but the remaining three miles of the five mile stretch was covered with dirt and sand two inches deep, which was scraped from the side of the road only a few days before, causing one of the limit men and two of the scratch men to quit, also making the remaining riders slow down considerably, as well as causing a few near-spills. Finally turning at the five mile post and the limit men about 500 yards ahead a spurt was made by the scratch riders, but to no avail, only coming to within 20 yards of the limit bunch at the finish. The time was 30 minutes 7⅗ seconds. Taub, of record run fame, was first by a small margin over Cigal, with O'Connor, from scratch (time 27 minutes 8 seconds), third, and Segal, scratch, fourth.

The summary:

One mile open—Won by S. Segal, 5 points; second, H. Terhune, 3 points; third, O'Connor, 2 points; fourth, G. Polacsy, 1 point.

Ten mile handicap—Won by I. Taub, 5 points; second, M. Cigal, 3 points; third, J. O'Connor, 2 points; fourth, S. Segal, 1 point.

These races bring the series for the year to a close, the final decision of championship by points was as follows: S. Segal, 16 points; I. Taub, 7; H. Terhune, 6; J. O'Connor, 6; M. Cigal, 4; J. Clemen, 2; G. Polacsy, 1; J. G. Kopsky, 1.

A tie resulting in the total points for the third place, between Terhune and O'Connor, it was fought out in a special race for one mile and was won by the former.

Pedal Pushers Enter Melodrama.

Newark, N. J., in addition to maintaining one of the finest bicycle tracks ever erected and supporting it with a regular attendance, the like of which has never been equalled in any other locality, has also some literary aspirants among the fans, instances of whose activity were published in these columns recently.

Again, from the News of that city, is culled the following "bill," sent in to the sporting editor, in which, it may be observed, the various professionals have entered melodrama, in print, and are given their parts (many of them very appropriate) in a pathetic little ballad entitled

"We Have Nothing to Do Until To-morrow"

Cast of Characters.

Kramer.....One in a thousand
Clark.....Not dead, but missing
Goulet.....Always happy
Fogler.....Hazel, the heart breaker
Root.....A scene from Germany
Macfarland....Dingdat; watch me biff him
Bedell Brothers...Gone, but not forgotten
Bennie Hill.....The man with the bad feet
Drobach.....Waltz me to it
Pedlar Palmer,
With a large leak in his dome
King.....On the road to Matteawan
Jumbo Wells,
Something that was shot at and missed
Lawrence.....Make mine ale
Billington.....Only once in a while
Crebs.....That's what they all say
De Mara.....Truck No. 6
William Fenn.....The wandering boy
Jones, alias Levi.....The village cut-up
Rupprecht...Delicatessen clerk, 5c. cheese
Magin.....If I only had a gasoline pony
Trubel.....I want to be a soldier in blue
Stein,
He don't know where he's going, but he's on his way.
Ryan.....First cousin to Mr. Mutt
Mitten.....O, deacon, start the service
Schwab.....Just a little loose
Williams.....It's not my fault
W. A. Bardgett,
Don't shoot, it won't go through

Bicycle Tires Below Cost of Manufacture

We purchased from the Excelsior Supply Co. their entire stock of Bicycle Tires at prices that enable us to sell them to you below cost of manufacture.

The brands included in this lot are:

Perfection Road
Perfection Thick Thread
Perfection Thorn Proof
Triumph Road
Triumph Thick Tread
Holdfast Bailey Tread
Both Road and Heavy Weight
Famous, Wabash, Royal, Hartford, Kokomo Defender and Kokomo Casings.
All sizes. 28 x 1 3-8, 28 x 1 1-2 and 28 x 1 5-8.

It was our intention to hold these tires over till spring and get the long price for them, but our business has grown till we are forced to move into larger quarters. Rather than move these tires and take the chance of soiling them we will give you a chance to make the pick up of your life.

DEALERS
get busy. These will not last long.

A New Prest-O-Lite Motorcycle Gas Tank, Equipped with Gauge, $10

The addition of a gauge makes our motorcycle gas tank similar to our famous automobile tank in everything but size. This gauge shows, at all times, the amount of gas in the tank.

Our tank without gauge, which formerly sold at $10, will hereafter sell for $8. We have arranged with our dealers to take in this tank and exchange it for the new model with gauge, if the user desires, upon payment of the difference in price, $2.

Prest-O-Lite Tanks are now handled by nearly all motorcycle and automobile dealers in the United States.

Investigate Prest-O-Lite

Some of your friends are probably using this famous lighting system.

Ask them if it costs any more to maintain than the troublesome, treacherous generator.

Ask them about its convenience, safety and insurance against accidents. Ask them how much pleasure they find in having 40 hours of brilliant, unflickering, dependable light, turned on and off like a gas jet.

Just one accident due to poor light would probably cost you more than a year's supply of Prest-O-Lite.

But get the genuine. Imitations can be exchanged in very few places. Prest-O-Lite Tanks, when empty, can be promptly exchanged, anywhere and always.

The Prest-O-Lite Co.

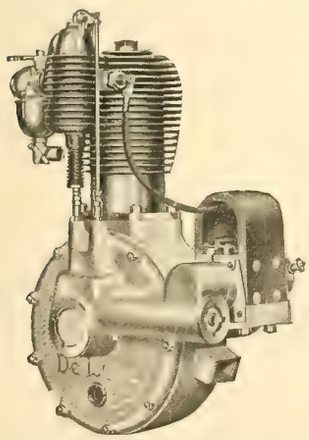
EXCHANGE AGENCIES EVERYWHERE

FREE—Our Handy Ruler



Light, flexible, folding foot rule. Half of it is specially made for finding depth of gasoline in tank. Inches and centimeters. Measures tires, etc. Handy in a hundred ways. Sent free on request. Give name and address, and make of motorcycle.

Price of Tank **$10**

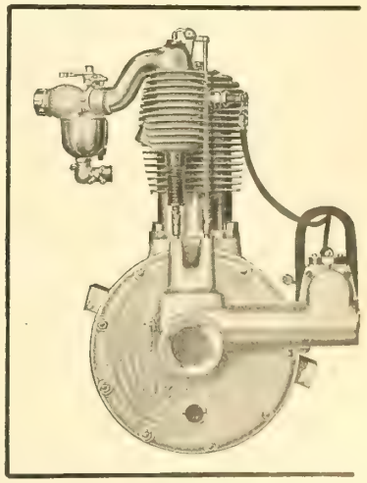
Length, 12 inches; diameter, 4 inches; weight, 7 lbs.

A REVOLUTION IN MOTORCYCLE MOTOR DESIGN

In bringing out our DE LUXE line of motorcycle motors, we have introduced a large number of improvements, and offer these motors as the most advanced now before the trade.

NOTEWORTHY IMPROVEMENTS.

One piece crank shaft.
One part crank case with cover.
Improved cam and magneto drive.
Oil tight motor.
Large Valves.
Simplified design throughout.
Reduced number of parts.
Quiet running motor.
Large Ball Bearings mounted in steel lined pockets.



Equipped with Bosch Magneto.

These improvements in design, together with the high grade materials used in construction, the modern methods of manufacturing applied, and the remarkable performance of these motors in road tests mark a revolution in motorcycle motor building.

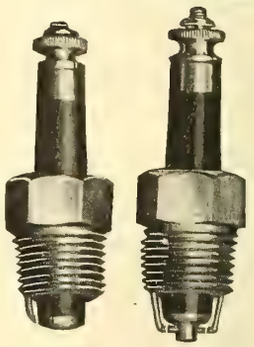
PITTSFIELD

Motorcycle Spark Plugs

Most Satisfactory Plugs Ever Produced

WHILE the Pittsfield Plugs are considered by all the best on the market, we are selling them at a price no higher than that paid for the most ordinary plugs. They are very different from others in that the insulation never breaks down, nor do they carbonize.



More power and more speed is obtained by their use. Greatly superior to porcelain or glass, it is practically impossible to break them. They produce intense, concentrated sparks and never miss. The Pittsfield Spark Plugs are longer lived and give greater efficiency than any other plugs in the world. **Built simply but substantially, they withstand the hardest usage.** **Write for Our Catalog.**

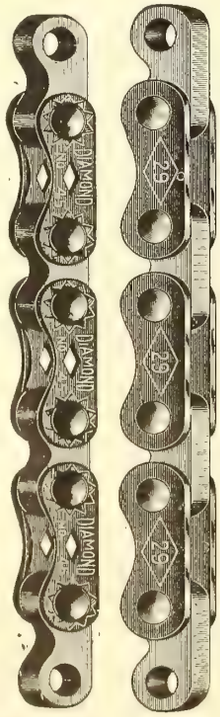
DIAMOND CHAINS

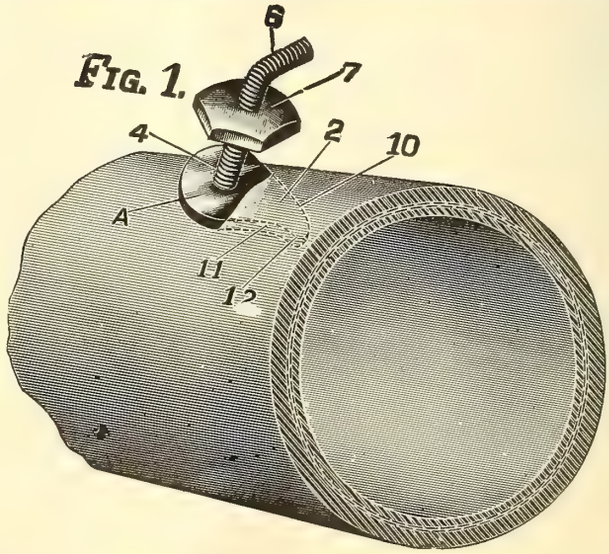
For Bicycles and Motorcycles



Our types and sizes meet every service condition. With a good record extending over twenty-one years and with the most practical connecting link ever offered, Diamond Chain is the logical equipment.

Diamond Motorcycle Chains do their work right in bad weather as well as good and are in every way a mighty good investment in a place where it pays to be careful.

We recommend the following for motorcycle work:



For main drive, Diamond No. 150 Roller Chain
For starting, Diamond No. 29 Block Chain

Of course, we make other sizes. Better start with Diamond Chains than come to them later.

Kokomiles save Kokomoney for the Rider and make Kokomoney for the Dealer!

Kokomiles are those myriad miles of satisfactory service that are given by

Kokomo Tires

Again we ask:

"Are you profiting by what we offer you in Kokomo Tires?"

For instance:

Kokomo Defender Special

This popular guaranteed tire is specially designed and constructed for road use. It is made from the best materials obtainable, being carefully built up by hand with pure para inner tube, and, owing to the very high quality of the inner tube used, a puncture is very easily repaired.

Kokomo "New Oxford"

A medium price tire, yet so good in quality that it does not do it justice to call it a medium grade tire. We have built these tires so that in case of puncture they will not be worthless but can be repaired. Also furnished in smooth tread.

Every dealer handling these tires is doing a benefit to his customers and to his own bank balance.

KOKOMO RUBBER COMPANY, Kokomo, Ind., U. S. A.

Boys, It Talks for Itself!

Listen to the Noise from the Town Built on Seven Mountains

You can pay two-fifty, or you can pay more
But when you see the Flanders, gee, you'll be sore.

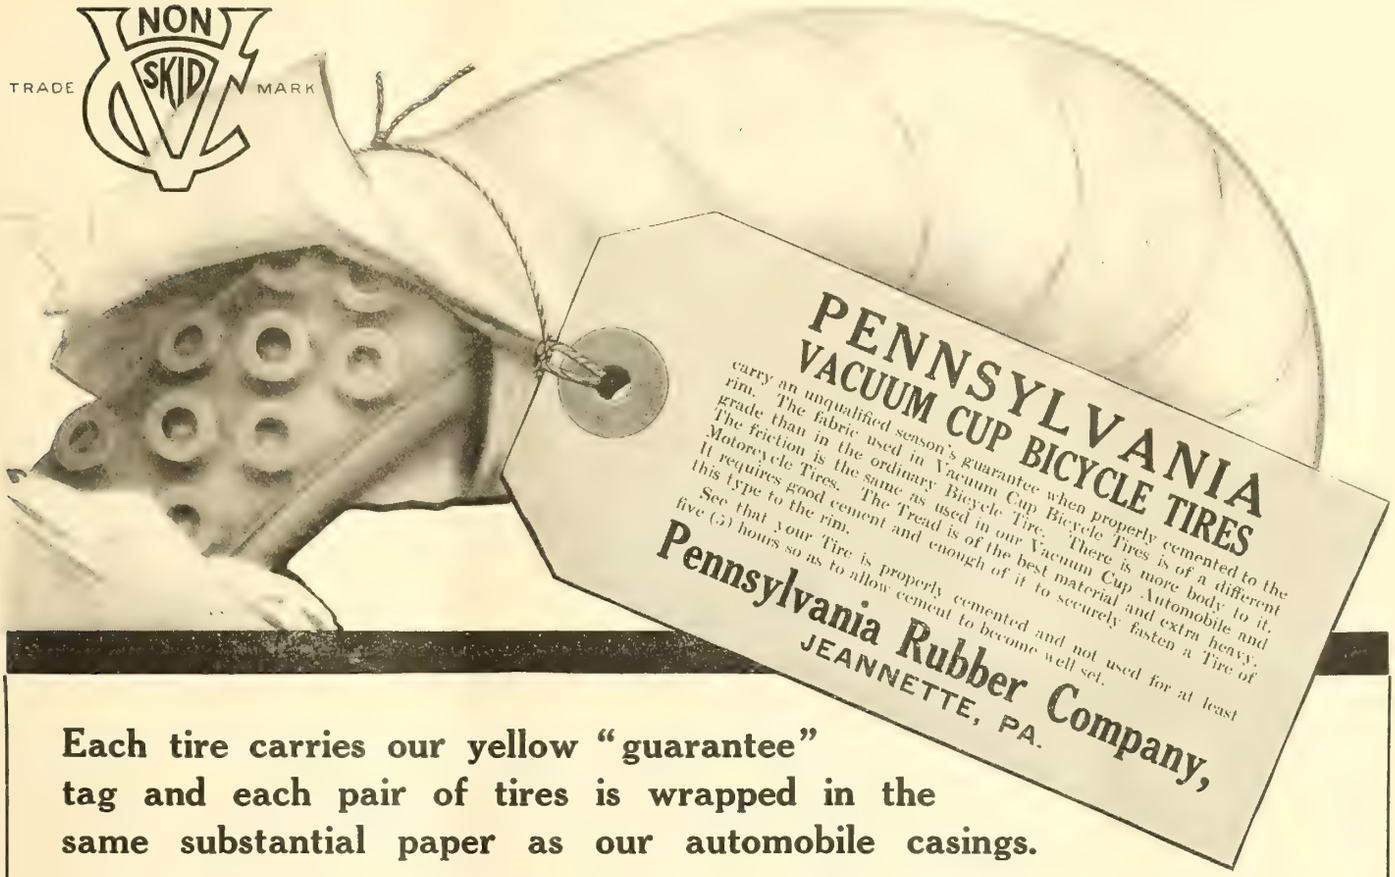
NIGHT LETTER

1 ON KN 45 N L Seattle, Wash., Sept., 30, 1911.

Sales Manager, Flanders Mfg. CO.,
Pontiac, Mich.

My new demonstrator arrived today and am receiving congratulations from dealers of other makes of machines on your neat, powerful and well-built machine. After trying it out with extra passengers was more than surprised at the quiet running of motor and above all, its easy control and the way it operates through sand and mud. How soon can you ship a carload.

Ellis Williams.



FLANDERS "4"

MOTOR-CYCLE $175 WITH MAGNETO

An Eye Opener **A Money Getter**

Business comes easy with this proposition. You note we don't knock. We don't have to.

Flanders Manufacturing Company
PONTIAC, MICHIGAN

Each tire carries our yellow "guarantee" tag and each pair of tires is wrapped in the same substantial paper as our automobile casings.

Pennsylvania Vacuum Cup Bicycle Tires

The increasing popularity of these tires is a striking feature of the tire trade and is due entirely to their sterling worth.

Their non-skid and service qualities are so sound that we are enabled to give an unqualified season's guarantee with each tire. This is a strong inducement to the consumer.

For the convenience of the Jobber and Retail Merchant, Pennsylvania Vacuum Cup Bicycle Tires will be packed ten pair in a strong wooden box. This enables the Jobber to ship in the original package and the Retail Merchant to order in convenient quantities.

Made by an Independent Company with an Independent Selling Policy which insures a fair margin of profit to Jobber and Dealer.

If you want to sell tires for profit, write now for our attractive proposition.

COLLINS MAKES ANOTHER CYCLE RECORD ON A

Columbia

The following dispatch from Elmer L. Collins, the American Motor Paced Champion, 1909-1910-1911, and holder of the former motor paced mile record tells the story:

October 8, 1911.

Broke World's Record at Newark Velodrome today. One mile in 1 min. 12⅗ sec. Rode Columbia Bicycle.

ELMER L. COLLINS.

Collins has ridden a Columbia for years and this is what he says of it:

"I am riding the same COLUMBIA that I have ridden for three years. Bearings and everything else are as perfect today as the day I received the machine and it looks fit for many more long races."

As a Business Proposition, You Will Find That Columbia Bicycles Have Remarkable Trade Winning Qualities. Write for Terms.

THE STANDARD COMPANY

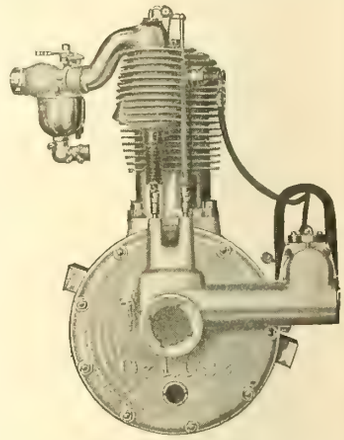
Torrington, Conn.

A REVOLUTION IN MOTORCYCLE MOTOR DESIGN

In bringing out our DE LUXE line of motorcycle motors, we have introduced a large number of improvements, and offer these motors as the most advanced now before the trade.

NOTEWORTHY IMPROVEMENTS.

One piece crank shaft.
One part crank case with cover.
Improved cam and magneto drive.
Oil tight motor.
Large Valves.
Simplified design throughout.
Reduced number of parts.
Quiet running motor.
Large Ball Bearings mounted in steel lined pockets.



Equipped with Bosch Magneto.

These improvements in design, together with the high grade materials used in construction, the modern methods of manufacturing applied, and the remarkable performance of these motors in road tests mark a revolution in motorcycle motor building.

MAIN OFFICE — ONAWAY, MICH.

A New Prest-O-Lite Motorcycle Gas Tank, Equipped with Gauge, $10

The addition of a gauge makes our motorcycle gas tank similar to our famous automobile tank in everything but size. This gauge shows, at all times, the amount of gas in the tank.

Our tank without gauge, which formerly sold at $10, will hereafter sell for $8. We have arranged with our dealers to take in this tank and exchange it for the new model with gauge, if the user desires, upon payment of the difference in price, $2.

Prest-O-Lite Tanks are now handled by nearly all motorcycle and automobile dealers in the United States.

Investigate Prest-O-Lite

Some of your friends are probably using this famous lighting system.

Ask them if it costs any more to maintain than the troublesome, treacherous generator.

Ask them about its convenience, safety and insurance against accidents. Ask them how much pleasure they find in having 40 hours of brilliant, unflickering, dependable light, turned on and off like a gas jet.

Just one accident due to poor light would probably cost you more than a year's supply of Prest-O-Lite.

But get the genuine. Imitations can be exchanged in very few places. Prest-O-Lite Tanks, when empty, can be promptly exchanged, anywhere and always.

FREE—Our Handy Ruler

Light, flexible, folding foot rule. Half of it is specially made for finding depth of gasoline in tank. Inches and centimeters. Measures tires, etc. Handy in a hundred ways. Sent free on request. Give name and address, and make of motorcycle.

Price of Tank **$10**

Length, 12 inches; diameter, 4 inches; weight, 7 lbs.

Another Triumph for Goodyear Blue Streaks

Goodyear Blue Streak Motorcycle Tires win straight heats for 7 H. P. twin previously defeated when equipped with other tires. Motorcyclists find in Goodyears the solution of all road problems.

In the motorcycle races at the Custer County Fair at Broken Bow, Neb., and at Callaway Fair, Edwin F. Myers gave a wonderful demonstration of Goodyear Efficiency.

At Broken Bow he won his heat by 18 seconds riding an Indian "4" equipped with Goodyear Blue Streak Tires.

Later, at the Callaway Fair, Myers shifted these tires to a 7 H. P. Indian Twin which with a different tire equipment had previously lost. But with the **Goodyear** Tire equipment, this machine won in straight heats from the same machines that had formerly beaten it.

Myers can thank **only** his own efforts and Goodyear Tires for the place taken in these events. The performance of the Indian "7" when equipped with, and **without** GOODYEARS **proves** beyond all controversy the superiority of these tires.

EDWIN F. MYERS

The Speediest and Strongest Tires in Existence

are Goodyears!

Goodyear Blue Streaks are built by the world's greatest Auto Tire experts. They are the result of over 12 years auto-tire experience.

Just as Goodyear Auto Tires excel all other tires today in **strength** and **speed** and **durability,** so do Goodyear Motorcycle Tires excel all the others in **these same qualities.**

The reason is this: Goodyear Motorcycle Tires are built of more costly materials than other motorcycle tires. Furthermore, better and more up-to-date methods are used in their construction.

The Goodyear tire itself is built differently. For instance the fabric used has no cross threads in it. The necessary strength is secured by building the tire up with the successive plies laid **at an angle.** Thus is attained the Goodyear resiliency —never equalled or approached by another racing tire. Convincing **proof** lies in the fact that all the world's records for speed and endurance are held by Goodyear Motorcycle Tires.

A Tire for Every Road Condition

The same conscientious effort, modern methods and high grade material that distinguishes Blue Streak Tires is found **duplicated** in the entire Goodyear line of motorcycle tires—the most complete line in the world.

In the **famous five,** there is a tire for every road condition—a **choice** that offers motorcyclists everywhere the decided advantage of picking their tires according to the road and the kind of service expected.

The **greater** service rendered as a result, marks Goodyear Tires as an economy at any cost. Yet because of our enormous production they cost you no more than other standard makes.

Goodyears fit all standard rims—fit in a grip that never lets go until you say the word. Save tire trouble and expense. Insist on one of these.

THE BICYCLING WORLD and MOTORCYCLE REVIEW
Founded 1877

Vol. LXIV. New York, U. S. A., Saturday, October 21, 1911. No. 5

WAGNER ANNOUNCEMENT FOR 1912

Many New Features in Two New Models —New Seat Post Will Give Easier Riding Position—Other Changes.

Additional evidence of the trend toward increased comfort in motorcycles for next year is shown in the 1912 announcement of the Wagner Motorcycle Co., of St. Paul, Minn. A "Velvet" spring seat post will be one of the leading new features of the 1912 Wagners, which will be made in two models, both four horsepower singles with flat and V belt transmission. There will be liberal options, including magneto or battery ignition, Corbin or Eclipse brakes, and the Eclipse free engine clutch. The clutch and magneto will be listed extra.

Easier riding and lower saddle position are claimed through the adoption of the spring seat post. In the construction a plunger is carried on a spiral spring in the seat mast and the lateral motion in the main post is taken care of by a hardened steel roller having plenty of socket play. The device is adjustable to the weight of the rider by moving the seat forward or back on the main post, this movement increasing or decreasing the leverage of the spring.

Instead of exhausting in the frame, an old Wagner feature, the new models will exhaust into separate and distinct pipes leading to mufflers of new design. A hand controlled cut-out is fitted. Motor changes include a new design of head to accomodate the new exhaust pipe, flat seat inlet valve and an electrically welded exhaust valve combining a cast iron head and carbon steel stem. The free engine clutch will be operated by friction hand lever. In other respects the Wagners will retain the 1911 features.

Prices of 1911 Thors Reduced.

Announcement is made by the Aurora Automatic Machinery Co., of Chicago, of a reduction in price of Thor models, as follows: Model R, battery, with chain drive, and Model T, battery with belt drive, both reduced from $225 to $200. Model M, magneto with chain drive and Model N, magneto with belt, reduced from $250 to $225. These prices are to take effect at once and, according to the announcement, continue until all 1911 models are sold.

Reading-Standard 1912 Advance Catalog.

Illustrating and describing all three of its 1912 models of "the new R-S" motorcycles, the Reading Standard Co., Reading, Pa., is first in the field with a 1912 catalog. The book, which is intended only as an advance catalog, contains 16 pages, and features the new seven horsepower twin model which the company is introducing.

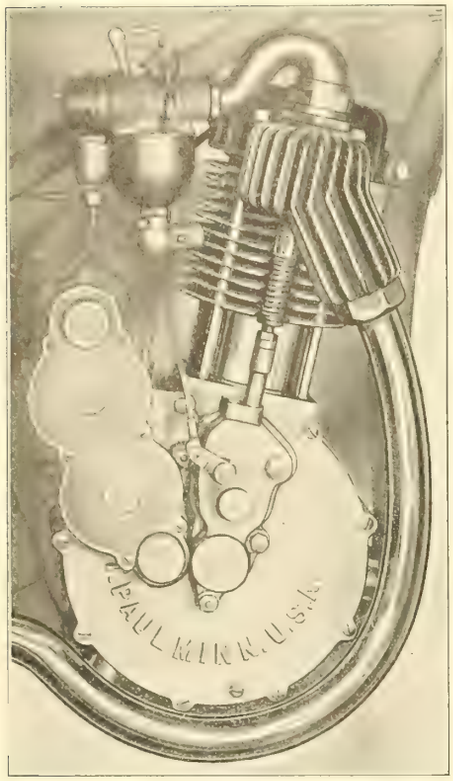
Sixsmith Awarded Promotion by R-S.

T. J. Sixsmith, 203 W. 100th street, New York City, who has represented the R-S line in the "big village" for years, has been rewarded for his faithfulness by being appointed distributor for the entire Metropolitan district. He will appoint subagents for the various boroughs.

New York Agency for Thiem.

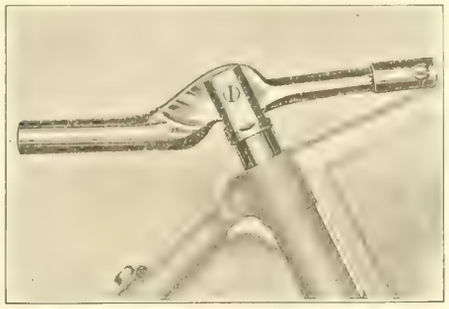
A. Cocchi, 2214 Broadway, New York City, has taken the agency for the Thiem motorcycle and has a stock of 1912 models at the salesrooms, and states that hereafter the Thiem will be entered in all endurance contests and track races in and around New York.

MANUFACTURERS DISCUSS SHOWS



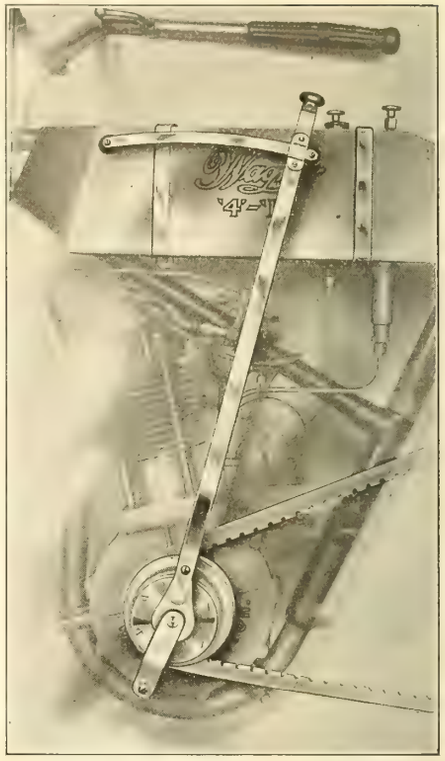
No Quorum at Buffalo Meeting—Association to Exhibit at Chicago Coliseum—Space Taken at Madison Square.

Because there were only five members present and seven constitute a quorum it was impossible to hold the regular quarterly meeting of the Motorcycle Manufacturers' Association scheduled to take place at the Hotel Statler, Buffalo, N. Y., on the 16th inst. An informal discussion among those present took place, however, regarding show matters, and it was stated that Manager S. A. Miles, of the Chicago show, had finally decided to allow the motorcycle manufacturers 3,000 feet of space on the second floor of the Coliseum during the second week of the show. This proposition proved acceptable to the members present and it was decided that the association would exhibit there, and the Show Committee will request the members to send in their applications for space at once.



The following members of the association have decided to exhibit at the Madison Square Garden Show in New York January 6th to 13th: The Hendee Mfg. Co., Harley-Davidson Motor Co., Reading Standard Co., Miami Cycle and Mfg. Co., Aurora Automatic Machinery Co., Pope Mfg. Co., Wagner Motorcycle Co., American Motor Co., Flanders Mfg. Co., Pierce Cycle Co., Excelsior Supply Co., Emblem Mfg. Co., Consolidated Mfg. Co., The Bicycling World and Motorcycle Review, Motorcycle Illustrated and Motorcycling.

The following were present at the discussion: Arthur Davidson, of the Harley-



MOTOR, SEAT-POST AND CLUTCH GROUP DETAILS OF WAGNER 1912 LINE

SINGLE WAGNER MOTOR

"VELVET" SEAT POST

ECLIPSE-WAGNER CLUTCH

Davidson Motor Co., Milwaukee, Wis.; W. F. Remppis, of the Reading Standard Co., Reading, Pa.; George W. Sherman, of the Flanders Mfg. Co., Pontiac, Mich.; W. G. Schack, of the Emblem Mfg. Co., Angola, N. Y., and F. J. Weschler, of the Hendee Mfg. Co., Springfield, Mass.

Flanders Testing Track for Pontiac, Mich.

While other big cities are talking about building motorcycle saucer tracks for next year, Pontiac, Mich., is getting a three-lap track right now without making any fuss about it. The Flanders Mfg. Co. is building it on its property, and the track will be used for testing purposes exclusively, which means that Pontiac will not be on any board track circuit. Not the least interesting feature of the new track is the fact that it will be in use all winter, for the Flanders engineers have devised a way to keep the snow off of it.

Merkel Changes on Coast Cause Comment.

Quite a flurry has been caused in Los Angeles (Cal.) motorcycle circles by the announcement of the Los Angeles Motorcycle Co., one of the leading concerns in that city, that it will handle the Merkel line for 1912. C. L. Smith has had the Merkel agency heretofore. The new agents expect to dispose of 500 machines for the coming year, and state that Merkels will be built with either chain or belt drive on the six and seven horsepower twins. The spring frame will be used on both models.

Dealers Open Pennant "Departments."

Now that the pennant fad is in high vogue with motorcyclists, wideawake dealers are taking advantage of it to make a little money "on the side." Joseph Buckingham, Harley-Davidson agent in New York City, has had prepared neat blue pennants with the name "Harley-Davidson" in white letters, and has improved on other pennants in incorporating on his flags a water color sketch of a Harley-Davidson rider mounted on one of the "Silent Gray Fellows." Hirsh Baxter, Excelsior agent in Providence, R. I., also has prepared "Excelsior" pennants for his riders. Furthermore, Baxter has done a big business the past season in "Providence" pennants among tourists and local riders. Being situated in the motor car district he has garnered a lot of pennant trade from automobile parties. Baxter has sold over 200 "Excelsior" and "Providence" pennants this year. Pennants are a good side line for a live dealer, and he not only can sell them to motorcyclists, but to automobilists as well.

Dozen Florida Plums Fall to Flanders.

The Flanders Motorcycle Co., of Atlanta, Ga., has closed twelve agencies in the State of Florida for the Flanders "4" during the past week with reliable pioneer merchants of the State, such as the Tampa Harness and Wagon Co., of Tampa, the Roberts Motor Car Co., of Jacksonville; E. G. Dorn, of Miami, and the Titusville Boat Co., of Titusville, the balance of the towns closed being smaller ones.

Kentzler-Waverly Co. Goes to Jefferson.

Secured at the expense of sister cities in the state, Jefferson, Wis., is to have a motorcycle factory. The new enterprise is called the Kentzler-Waverly Motorcycle Co., and represents a consolidation of the Kentzler Motorcycle Co., of Cambridge, and the Waverly Motor Co., of Milwaukee. The industrial plum dropped in Jefferson's basket through the efforts of the local Promoters' Club, which agreed to donate a site and a concrete factory, 60x100. Operations are scheduled to begin December 1.

The combination will be known as the Waverly Manufacturing Company and will continue to turn out the regular "Waverly" motors in addition to manufacturing the "Waverly" motorcycle. The officers of the company will be: P. E. Mack, president and general manager; C. W. Mack, vice-president: B. A. Thomson, secretary the treasurer. The board of directors consists of: P. E. Mack, C. W. Mack and F. P. Henning.

Price of Harley Single $235 Instead of $245.

Inadvertently the price of the 1912 Harley-Davidson single, with free wheel control described in the issue of the 7th inst., was given as $245. As the company's advertisement—the largest motorcycle "ad" ever published—stated, the correct price is $235.

Henry J. Wehman Discontinues.

Henry J. Wehman, proprietor of the Curtiss Motorcycle Co., agents for the Curtiss and Marvel motorcycles, located at 1203 Bedford avenue, Brooklyn, has discontinued business, and Mr. Wehman expects to connect with some other concern in the near future.

Radical Reduction Rumored on M-M Line.

Rumor has it that the American Motor Co., of Brockton, Mass., is about to offer two new models of M-M motorcycles; one with battery and the other with magneto ignition, and listing respectively at $135 and $150.

SUCCESSFUL INSTALMENT PLAN

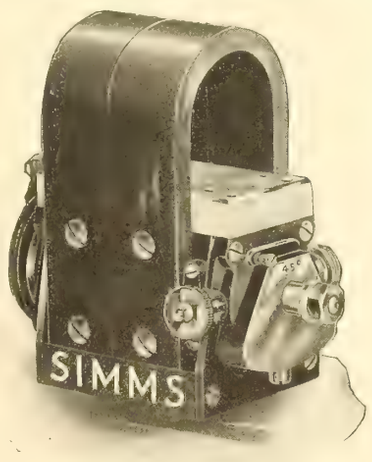
How Joe Wisenfeld, Baltimore Dealer, Carries on Easy Payment Sales—Advantages for Dealer.

The plan to sell motorcycles on the instalment plan, with the Motor Finance Co. of New York as the middleman, has been anticipated by two years by "Little Joe" Wisenfeld, of Baltimore. He has been doing the same thing for that length of time and with great success. While the idea as worked out by "Little Joe" is somewhat analogous to that of the Motor Finance Co., yet it has more advantages, both for the dealer and the purchaser.

As "Little Joe" works it it is something like this: A man wants to buy a motorcycle valued at $200. The price quoted under the instalment plan is $220, 10 per cent. being added. He is then required to put $25 down and pay $10 a month. If, however, the purchaser sees fit to deposit $100 as the first payment he saves $10, as no interest is charged on that sum, the total price of the machine becoming only $210. "Little Joe" has another advantage in that he deals direct with the purchaser and does not have to turn 5 per cent. of the machine's price over to a finance company. The amount paid down and the monthly fee increases in ratio to the price.

A contract is signed by the buyer which deeds all ownership of the machine to the dealer, the purchaser simply being a lessee until the full price has been paid. During the two years this scheme has been in operation many machines have been sold and only one man has fallen down in his payments, and he turned back the machine without any trouble ensuing over his failure to keep up the monthly payments.

While "Little Joe" is progressive and wants to sell as many motorcycles as possible, he does not encourage men to buy them under this plan. Whenever a man comes to him and says he would like a machine, but cannot pay the full price at once, the prospective purchaser is asked what he makes a month and if he can afford to lay aside a certain amount from his monthly income. If the gentleman can comfortably do so, then arrangements are made to suit his convenience. Then, after some reliable person vouches for him, the contract is signed and the deal has been put through. —C. F. Y.



Simms Motorcycle Magneto.

Having acquired an enviable reputation for its product abroad, the Simms Magneto Co., of London, England, which has for some time maintained American offices in New York City, and recently completed the erection and equipment of a model plant at Bloomfield, N. J., is preparing to inaugurate a campaign designed to secure for it its share of American motorcycle magneto business. Simms motorcycle magnetos are made in two models, for single and twin cylinder motors, the latter of the "V" type and, as the accompanying illustrations show, the instruments are of the "open arch" pattern, which is most

SIMMS SINGLE MAGNETO

widely used in this country. The twin type instrument has a stepped armature and is furnished for motors with cylinders set at any angle. The single cylinder magneto is similar to the twin instrument in general construction, but, of course, having but one contact and high tension terminal. Both magnetos are of the high tension

SIMMS TWIN MAGNETO

type and are designed to run at camshaft speed. The company also is developing a new model, with features which will facilitate easy starting, and it is expected that this improved type will be ready soon.

Dealers Celebrate Anniversary.

Richards & Burkey, of Sioux Falls, S. D., general bicycle, motorcycle and sporting goods dealers and repairmen, recently celebrated the first anniversary of their business by moving into larger and more commodious quarters on the main street. They are agents for R-S motorcycles.

KEEPING STOCK WELL ARRANGED

Swenson Has Method for Preventing Display in Show Cases from Being Disturbed by Running of Motors.

"Keeping stock arranged neatly in a 'Silent Salesman' show case is a trick that mighty few motorcycle dealers have mastered, but it is simple enough when you know how," says B. A. Swenson, of Providence, R. I. "You see, it is this way," he went on, "when you demonstrate or test out a machine on the stand in your store, if you speed it up very fast, it not only causes the machine to 'creep,' but it also causes all the stock on the glass shelves of the show case either to slide down to one end and pile up, or else drop off the shelves.

"Naturally, stock jumbled up in a heap like that makes a poor impression, and defeats the purpose of the show case, which is to present goods so attractively that a customer seeing them calls for something voluntarily. I had this trouble with sliding stock and I soon remedied it by getting an old and heavy inner tube, cutting it in strips and putting down one or two layers of the strips all around the edges of the case. This acts as a cushion and takes up the vibration and stock will stay where you put it, even though several motors are run on the floor. A 'Silent Salesman' show case is a good investment for a motorcycle dealer, for in addition to showing up goods to advantage it adds to the appearance of the store and attracts customers, that is, of course, providing it is kept clean and the stock is neatly displayed. I've put several dealers wise to this vibration cure and they were mighty glad to know it, for they said they had given up trying to keep their stock in a nice and attractive layout where it belonged."

Another Dealer Joins Savannah Colony.

Savannah, Ga., just has received another addition to its motorcycle dealers colony, in the opening of a new store by the firm of O'Neil and Burch, at 148 Whitaker street. The first named is no newcomer, having been a member of the firm of Oakman and O'Neil for 15 years. The concern has an attractive, up-to-date establishment, and will handle motorcycles, bicycles and a full line of accessories. Contracts for lines now are being closed.

Schafer Ball Bearing Used.

The use of the Schafer imported ball bearing by both the F. W. Spacke Co. and the Minneapolis Motorcycle Co. in their motors seems to be a significant fact, in that its use by these two companies will probably be the forerunner of the more extended adoption of this style of ball bearing.

Crawfordsville, Ind., Sept. 6th, 1911.

The Corbin Screw Corporation,
New Britain, Conn.

Gentlemen:

SAY! Talking of brakes reminds me of this summer when I was out with an old Pal of mine.

He was riding a ------, and his clutch sleeve was constantly slipping. I gave him the "Ha-Ha" and told him to get one that never wears out.

"What have you got?" he says.

"Corbin, of course."

"Don't they slip?"

"No."

"Well, I'll have one,"----and he has.

When you say "Corbin," she is there with the goods. Well, if you can make your brake any better, either for bicycle or motorcycle, I'd like to see it.

You may send me booklets, transparencies, circulars, hangers and catalogs, and I'll assure you that they will not be thrown away or illegal distribution made.

Yours truly,
ARTHUR C. TILNEY.

NEW YORK, OCTOBER 21, 1911.

A Cycle Boosting Campaign.

The organization recently formed in New York, known as the United Cyclists, can be made, if properly managed and every member of it will do his share of the work, the greatest boosting agency for cycling, both motorcycling and bicycling, in and around New York, and then later in other cities, that has been evidenced in recent years. As far as cycling organizations go, and in fact, generally, in comparison with other cities throughout the country, all, of course, smaller than New York, and many of which are practically no more nor less than towns, cycling in the Metropolis is dead. It is estimated that there are 1,500 motorcyclists in New York City, with a population of close to 5,000,000 people. In comparison with other cities and the work the clubs are doing, there is not a large, active, progressive motorcycle club in the five boroughs of New York. In a small city in California recently 1,500 motorcyclists gathered for their annual reunion, and the five cities that were represented by the riders present had in numbers combined less than 14 per cent. of the population of New York City. The largest motorcycle club in New York City has approximately 50 members. In Los Angeles, Cal., with a population of a little over 300,000, against New York's 5,000,000, the motorcycle club has nearly 1,500 members. In Terre Haute, Ind., with a population of a little over 50,000, there is a club with 200 members, and in Seattle, Wash., with a population of 237,000, a new club has nearly 200 members. The natural question that will follow is, why such a city as New York is so far behind the times in motorcycling?

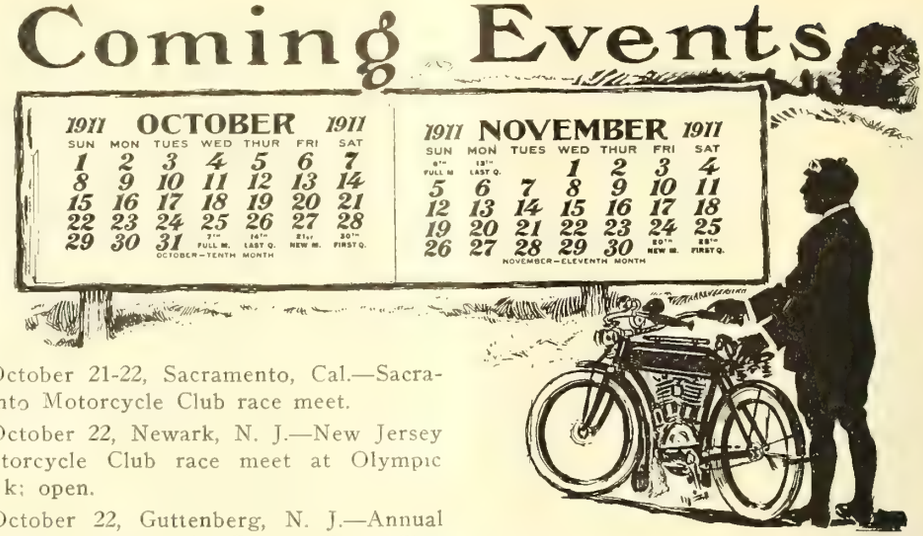
First, we might say that the motorcycle is not properly advertised in and around New York and the dealers are not wide awake to its possibilities, and secondly that the clubs that have been organized could not have followed the right lines to attract the riders or else they would have been more successful and would to-day have a larger membership, and naturally there would be more riders than there are, for the club properly run is one of the greatest advertisements for the motorcycle that the sport could possibly have.

In the first respect the dealers around New York seem to have the mistaken and antiquated idea that money spent in advertising is money given or thrown away. They seem to figure, as the business man of 20 or 30 years ago did, that all that is necessary is for them to open a store and expect the customers to flock to them with open pocketbooks. You may have the best store in the city; you may be a motorcycle expert; you may have the agency for the best motorcycle or bicycle that it is possible to manufacture; you may think yourself that there is no sport better than motorcycling or bicycling; you may have the best salesman obtainable in the line. But if you don't inform the general public of all this, how can you expect to make them your customers?

The public are not mind readers. You may have friends that boost for you, and, of course, you have customers that "drop in" on account of your location. In fact, you may be enjoying a fair business in general, but you are not getting the business that you should if you were placing before the public in an impressive way the pleasures and benefits of cycling and making them want a machine. It is absolutely wrong to consider advertising an expense. If you will think on the question for a few moments you will without doubt recall to mind the great successes that have been attained in the business world entirely through advertising. The right kind of advertising is not an expense—it's an investment; it's the mainspring of a successful business—and without the mainspring the business will not run, or at least, as it should. Of course, if your store is a loafing place for you or others to spend your time, and you don't want to bother with a strenuous business, don't advertise.

But there is a right and wrong way to advertise. A plain card in a newspaper stating that "John Jones" sells "motorcycles" at "99 Ninth street," is an expense and a waste of money. Neither is an advertisement in the classified columns of any newspaper of any great benefit, for those who will read this class of advertising are either "pikers" looking for a bargain or at least they are already interested in cycling, otherwise they would not look under that head. The class that the dealers want to reach are the great mass of people who are not yet interested, but could be in a short time with a good, judicious advertising campaign. The advertisements should read so nicely and be so attractive as to make the reader want to become a cyclist at the earliest possible moment.

Some will say that the winter is coming on and it is foolish to advertise now, but from now on is just the right time to advertise to get the Christmas trade. A good advertising campaign, carefully planned and prepared, using the high-class dailies of New York, perhaps three days a week, backed up then with an attractive window display and an attractive show in your store, can make things "hum" around New York in cycledom this coming Christmas. Among the bicycle dealers, of course, the most should be made of the juvenile bicycles. Here lies the cycle dealer's opportunity, if he will only realize it, for once you can get a child to want a bicycle he or she will have it if it is at all in the power of the parents or relatives to secure it for them, especially for a Christmas present. Not a few of them can be sold around Christmas time if the proper seed of suggestion is sown in the way of good newspaper advertising, followed by an attractively arranged, well-lighted show window.



If the dealers of Greater New York would get together and place an amount of money in the hands of some good advertising man to be spent each week from now until Christmas they would be more than well satisfied on December 26th.

Then about the clubs—and here comes the opportunity of the new organization. Promote sociability among cyclists of both types. Arrange good club runs for both branches, not too far away and not a "speedfest." Have some kind of entertainment for the members during the winter months—good illustrated lectures on various phases of the sport, and perhaps about an extensive trip some riders have taken will prove interesting, instructive, and will arouse the spirit of desire among those who do not possess a bicycle or motorcycle. A good club room or club house will prove a wonderful attraction. Technical talks by various experts on the different parts of the motorcycle would be another helpful attraction. All of this would be attended with a great deal of newspaper publicity of the best kind, news that the general public would read. Hence the United Cyclists have a great opportunity.

First let all the dealers in the association get together and plan an advertising campaign of their own, and perhaps have a separate meeting once in a while, with a talk by an advertising or salesmanship expert, etc., and then let every cyclist in and around Greater New York join the organization and start in to work for the general good of the sport. Then the organization would really do what was at first intended, in carrying on an active, aggressive campaign for the promotion of cycling, by preaching as well as practicing the gospel of pleasure and health to the cyclist.

It might be well to state here, for fear that the purpose of this new organization may be misinterpreted, that it is in no way the thought or idea of those who were responsible for its formation that the United Cyclists will conflict in any way whatever with any organization now in existence. The main object, in a few words, is to inaugurate an active, systematic campaign with its various committees for the promotion of cycling in and around New York. Probably one of the first moves that will be made will be to affiliate with the F. A. M. and arrange for race meets in the spring. "Boost" is the first and last word with the United Cyclists.

Coming Events

October 21-22, Sacramento, Cal.—Sacramento Motorcycle Club race meet.

October 22, Newark, N. J.—New Jersey Motorcycle Club race meet at Olympic Park; open.

October 22, Guttenberg, N. J.—Annual bicycle carnival of the Century Road Club Association, Eastern Division. Rain date October 29th.

October 23, Atlanta, Ga.—Motorcycle races on Atlanta speedway.

October 29, Paterson, N. J.—North Jersey Motorcycle Club reliability run; 170 miles.

October 30, Woodstock, Ont.—Motorcycle races.

November 12, Floral Park, L. I.—Ten mile handicap road race, Century Road Club Association, Eastern Division. Rain date November 19th.

November 5, San Antonio, Tex.—San Antonio Motorcycle Club race meet at International Fair.

November 11, Gulfport, Miss.—Motorcycle races at Gulf Coast Fair; open.

November 20-25, London, England—Annual Olympia motorcycle and bicycle show.

January 6-20, New York City—Twelfth annual automobile show in Madison Square Garden; motorcycle section included in first week.

January 20, New York City—Fourteenth annual ball of the Century Road Club Association, Eastern Division, at Alhambra Hall, Seventh avenue and One Hundred and Twenty-sixth street.

The Joys of Cycling in Autumn.

For perfect cycling weather, and days that inspire the rider with the sheer joy of living, no other season of the year can be compared with autumn.

The roads, at this time, are at their best for folks awheel. Hardened by the summer's traffic, they easily resist the first fall rains, and it is not until winter has secured a firm grasp, with alternate sharp frosts and softening thaws, that the roads will cease to beckon to the true lover of nature and sane, revivifying recreation. Indeed, in nearly every latitude of this great land wheeling in the open is an ideal sport until the new year comes in.

It is gratifying to note, in this connection, that there are abundant signs of the return of the wheel to popular favor. The summer season just ending has been a notable one in respect to the number of wheels sold for pleasure purposes. Of the rapidly increasing use of the wheel for utility and business generally, much has already been said in the press of the country, for the great jump in bicycle sales throughout the United States marks the beginning of a new wheel era. That we are as yet only at its beginning is easily appreciated from the almost incredible number of wheels now employed in Europe, where the bicycle is used to an extent and for purposes not yet dreamed of in America.

A prominent Eastern paper, referring to this combination and to cycling in general, says: "The wheel was the best friend, from a physical viewpoint, that the present generation ever saw. It did more for the men and women—now in middle age—than all the gymnasiums and physical culture teachers were able to achieve in the 50 years that preceded the palmy days of the bicycle. Every day that is lost in bringing back its sane and salutary use is a loss in good red blood, clear brains, and the sort of muscles we need for the daily struggle we all are waging. At present prices and with better materials and more helpful accessories than were known 10 years ago, we all can ride and we all should. So here's long life to our returning friend—the wheel."

That there is much truth in the foregoing statement, that high quality and low prices are at present happily combined in the bicycle, will be confirmed by all who have looked into the prices of wheels this year. They are not absurdly cheap, of course. Worth always brings an honest price. But there is no gainsaying the fact that the wheel of to-day has qualities and high-grade features that could not have been supplied at any figure a few years ago, because they are part of the modern bicycle's perfection and its wonderful development.

DERR THE WINNER AT SAN ANTONIO

Leads the Way to the Tape Three Times and Captures Club Championship—Dead Heat in Match Race.

Straddling the fastest machine on the track, Cotton Derr took the stellar honors at the race meet of the San Antonio (Tex.) Motorcycle Club at the Fair Grounds track on the 8th inst. Derr captured the club championship, the most coveted event on the card, and took three firsts in all. As a track general, Bryson Wickwire surpassed Derr, but did not have the speed in the stretches. Bryson played in hard luck, being eliminated from several races by minor mishaps.

Derr and Bryson were the whole show in the club championship, which was over a nine mile route. Derr was up on a twin and Wickwire on a single. It was a slashing fight from the gun, Derr opening a gap on the stretches and Wickwire closing in and showing the way round the turns. In the final sprint Derr's extra speed told and he won by three lengths. The cup was donated by the Hendee Mfg. Co., and must be won three times by a rider to become his permanent property. Rex Wickwire, cousin of Bryson, has won it twice.

One of the best events of the day was the dead heat match between Heikens and Leoloff on a pair of Thors. While the men jockeyed early in the mill, they were in real earnest in the final rounds, but the machines were so evenly matched that they crossed the finish line absolutely abreast. In the 10 mile time trials against the track record for the distance, the loose condition of the track combined successfully against the setting of any new marks. W. Scott, on an Indian, made the best time, 10:24. On the same machine, Lee Miller did 10:52. Difference in weight and driving ability of the two riders are sufficient to account for the variation of 28 seconds in time.

There was a heap of fun produced in the novelty, which included the usual pie-soda gorge on the double quick. L. Ulrich was the logical winner of this, getting outside the pie long ahead of Derr and tying him on the soda guzzling, but Derr's machine had the speed that more than offset his handicap in the quick lunch line. One rider whose machine stalled at the start turned right round and leisurely put himself outside his share of the grub.

Summary:

Nine mile handicap, singles—Won by B. Wickwire (Indian); second, G. Offer (Thor); third, Lee Miller (Indian). Time, 10:50.

Six mile match, O. Leoloff (Thor) vs. O. Heikens (Thor)—Dead heat. Time, 7:26⅕.

Four mile novelty—Won by Cotton Derr (Indian); second, L. Ulrich (Thor). Time, 6:44⅗.

Ten mile time trial against track record—W. Scott (Indian), time, 10:24; Lee Miller (Indian), 10:52; E. Eckenroth (Excelsior), 11:31⅗.

Six and three-quarter mile handicap—Won by G. Offer (Thor); second, Lee Miller (Indian); third, Cotton Derr (Indian). Time, 8:34⅖.

Twelve mile open—Won by Cotton Derr (Indian); second, E. Eckenroth (Excelsior). Time, 13:37.

Nine mile club championship, free-for-all—Won by Cotton Derr (Indian); second, B. Wickwire (Indian); third, W. Scott (Indian). Time, 9:47⅗.

135 Miles on a Gallon of Gasoline.

Traveling 16 9/10 miles on one pint of gasoline, I. D. Kuehl, riding a four horsepower Excelsior, won the economy contest of the Davenport (Ia.) Motorcycle Club on the 8th inst. This averages better than 135 miles to the gallon. Second honors went to J. R. Reynolds, four horsepower Indian, who went 15 9/10 miles, just one less than Kuehl, before his "gas" gave out. H. Ranzow, four horsepower Harley-Davidson, was next on the "stingy test," making 15 4/10 miles.

Thirteen riders, including one lady, competed, and the lady, Mrs. R. L. Carson, by no means was extravagant of fuel, despite the fact that extravagance is alleged to be one of the capital sins of the fair sex. Mrs. Carson converted her pint of Rockefeller juice into 14.3 miles of motoring. Some curious and interesting results were brought out by the test.

Four horsepower singles took the first five places, and a seven horsepower twin beat seven singles of lesser power and vxarious make. Strange to say, the lowest powered machines, which naturally would be expected to make a good showing, did exactly the opposite. Of course the human element was a considerable factor in the results.

The complete score:

Rider and Machine	Mileage
I. D. Kuehl, 4 Excelsior.....	16.9
J. R. Reynolds, 4 Indian.....	15.9
H. Ranzow, 4 Harley-Davidson..	15.4
C. W. Stadden, 4 Yale.....	14.5
Mrs. R. L. Carson, 4 Excelsior..	14.3
L. S. Alvord, 7 Indian.....	13.2
Walter Ericksen, 4 Indian.....	12.5
C. W. Rose, 4 Excelsior.....	12.1
Edward Sonne, 4 Harley-Dav'n	10.0
Earl Townsend, 3½ Wagner....	9.0
A. Wright, 2¾ Indian.....	5.5
R. L. Carson, 4 Excelsior.....	5.5
Albert Glaspell, 5 Pierce.....	4.5

Motorcycle Races at Canfield Fair.

Two exciting motorcycle events were run in connection with the motor car races at the Canfield fair, Youngstown, O., on the 14th inst. C. Governor, on an Excelsior twin, won the 10 miles race in 15:02, and H. Kaiser, on a Harley-Davidson, took the five mile single cylinder class in 8:07. Attendance, 5,000.

TWO HUNDRED AFFILIATED CLUBS

Chairman Estabrook Has Gratifying Results from His Hard Work—Plenty of F. A. M. Literature.

"What's yours, gentlemen, some membership literature, or a little black on white on how to form an F. A. M. club?" The chairman of the membership committee wants to celebrate the enrollment of the 200th F. A. M. affiliated club and invites all non-F. A. M. folk to line up by mail before his quartered oak literary fountain and make their wants known. The chairman has eight popular brands of Estabrook concoctions for stimulating any free lance, young or old, who has a touch of F. A. M.itis, and guarantees that some one of his preparations will touch the spot.

Yes, there are now 200 F. A. M. affiliated clubs. In fact there are 201, but the more important fact is that there are 200. That sounds pretty big, and it has been a long while coming, but now it is a reality. As there are something like 107 more, however, who are unaffiliated, there is plenty of game still left in the Bangor preserves. The three latest clubs to "get their papers" are the following: No. 199, Ashtabula (O.) Motorcycle Club, 100 per cent.; No. 200, Memphis (Tenn.) Motorcycle Club, 26 men; No. 201, Aurora (Ill.) Motorcycle Club, 31 men. The Memphis M. C., which has the honor to possess the double century certificate, also was the last to "jine" in September, making 14 affiliated clubs for the month. Between the affiliation of club No. 100 and club No. 200 just 192 days elapsed. The chairman hopes to do better on the next lap.

Lockport, N. Y., has "waked up," too, and now has a live club. It is called the Lockport Motorcycle Club, and starts off with 25 members. It will hold the charter open until November 1. On its first run the club made the townsfolk stop and "rubber" and exclaim, "Wal, I swan," by parading through town carrying classy cut double pointed, royal purple pennants, bearing gold letters "L. M. C." The officers of this promising club are as follows: E. J. Emmendorfer, president; W. F. Smith, vice-president; W. J. Ferris, Jr., secretary; Roland Gould, treasurer; L. V. B. Nash, captain; Louis Fleckser, first lieutenant; J. Brakman, second lieutenant; directors, A. Hartman, F. L. Drake and two members at large.

"'Way down in Dixie"—New Orleans, La., to be specific—there is also something doing in F. A. M. lines. Valdemar Jensen, a local dealer, has raked together 25 riders, told them they ought to be ashamed of themselves for not having a club, and then proceeded to form them into one. Result: There is a New Orleans Motorcycle Club

now and it has voted to affiliate. They want a few more members first, however.

With booklets in tool bags on motorcycles sent out from the factories, ads in manufacturers, jobbers and dealers' catalogs, enclosures in trade mail matter and other distributing schemes, it won't be the fault of the chairman if the country isn't pretty well plastered with F. A. M. literature of all sorts before long. The Hawthorne Mfg. Co., Bridgeport, Conn., who are better known as the "Old Sol lamp folks," in particular are giving the chairman great aid in his publicity campaign, and many jobbers also are sending him letters promising help that are encouraging.

The chairman has secured a page in the 1912 R-S motorcycle catalog to preach the F. A. M. gospel. Who's next?

H. O. Young, York, Pa., a live dealer, has laid the foundation of a motorcycle club. When the organization is completed it will affiliate.

Affiliation certificate No. 202, issued to the Reading (Pa.) Motorcycle Club, 21 men. How about that other club in Reading following suit?

In spare moments the chairman is laying out material for the registered repair shop campaign. More details when there is something to announce.

Motorcyclists of Hemet, Cal., at a "talk-it-over" meeting decided that a club was a good thing, and organized the Hemet Motorcycle Club. L. Layton was elected president and permanent organization will be effected later. An affiliation plank is in the club platform.

Anent the open muffler agitation being carried on by the Bicycling World and Motorcycle Review, the chairman is going to join in against it. He will revive ex-Secretary Wehman's red anti-cut-out poster and after making a few changes will shoot them out to clubs and members.

The chairman has been hobnobbing and burning the midnight oil with his enthusiastic friend Thomas M. Dunham, of Old Sol lamp fame. They are hatching some big publicity stunts for the spreading of F. A. M. propaganda and the enticing of new members into the ranks. Also F. A. M. clubs may have a chance to win some Old Sol lamps later.

Five Canadians in "Highland Fling."

A rough and tumble trip of 45 or 50 miles through slime, over sidepaths, along deep ruts and in ditches, was the experience of five Toronto M. C. riders using Reading Standard, twin Excelsior and Indian machines. The point of destination was Hamilton, Ontario, the second city of the Canadian Province, and four hours were consumed in covering the comparatively short distance. Recent rains had played havoc with the roads, but the Toronto riders were not going to stop at a little thing like rough thoroughfares, and after what seemed an endless amount of struggling managed to reach their journey's end, but only after each man had taken anywhere from one to several tumbles. One rider lost his belt-idler when he tried to leap a ditch, and another found his pedal broken off after his machine had skidded in the ooze. It was a case of dancing the "Highland Fling" all the way, so that it was a pretty tired bunch which made the trip. Just before reaching Hamilton, Gladish, on his twin-Excelsior, tried to climb a post, and as a result smashed his lamp and bent the front forks all out of shape. On arrival at Hamilton he straightened out his headlight and placing a jar in the lamp for a glass was able to use his light on the return trip.—W. M. G.

JOHN McDOWELL IN THE COSTUME OF 1711 RIDING A 1911 STEED AT THE NEEDHAM, MASS., BICENTENNIAL CELEBRATION

High Praise for New York Roads.

Canadian riders are finding that the roads in New York State are as much ahead of the Canadian highways as the sun is brighter than the moon. Recently two members of the Toronto M. C., Charlie Neilson and R. M. Case, Indian devotees, the latter the social chairman of the club, took a nine days' jaunt to Springfield, Mass., and return, and the nice things they have to say about the roads on this side of the border is not even equaled by their praise of the trip itself. Except for one bad stretch near Rochester, where a gang is repairing the thoroughfare, they found roads as smooth as a city pavement and good time was made on the entire trip. Where the alterations were being made the road was covered with broken stone and was otherwise cut up, so that it took one hour to cover one mile. The pair left their machines at the "Big Wigwam" at Springfield to be repaired and jumped to New York city by train. Three days later they returned to Springfield, where they resumed the return journey by motorcycle. Nine days after they left Toronto they were back home none the worse for wear and only looking forward to the time when they can do it again. Their cyclometers registered 1,100 miles for the trip, and during the time they were away they only used twelve gallons of gasoline.—W. M. G.

Motorcycles to Stop Poaching.

Motorcycles are to be used by the Indiana Fish and Game Commission to apprehend law violators. Twelve machines will be purchased and turned over to deputies to cover their territory. Speed and economy were prime factors in the selection of the machines for the work.

No Handlebar-Riding in Ashtabula.

Ashtabula, O., is "setting its foot down" against the practice of carrying passengers in front of the driver on motorcycles, and an ordinance prohibiting such practices has passed the first reading in the City Council.

KLARK "CHAMPION" OF TWO STATES

Wins Titles for Ohio and Indiana—Makes "Some" Prize Collections at Fort Wayne.

Don Klark, the fast flying Detroit (Mich.) motorcyclist now has the State championships of Ohio and Indiana hanging from his belt. At least he won those titles, as well as a diamond medal and a few other things as well, at the final motorcycle meet of the season at the Fort Wayne (Ind.) driving park on the 8th inst. Although he suffered two defeats at the hands of De Salvo on his Excelsior, Klark nevertheless was the topliner of the day, for he took the "championships," a 10 mile open, and a match, quite a respectable showing. Incidentally he cracked the local track mile record held by himself, cutting three seconds from his old mark. The new figures are 53 seconds.

De Salvo, who, had his machine not sulked at times, might have dug deeper into the prizes, managed to register first in two five mile sessions for 30½ inch fliers. His other pickings were two seconds, one of them in the championships, and a third. Oberwegner, of Toledo, cashed in quite regularly on seconds and thirds. Three local men, Schorey, Kiel and Tullis, also scored firsts, the latter getting a decision over DeSalvo. A crowd of 2,000 saw the events. The summary:

Five miles, 30½ inch class—Won by Schorey; second, Kiel. Time, 6:52⅖.

Five miles, 30½ inch class—Won by De Salvo (Excelsior); second, Oberwegner (Indian); third, Klark (Indian). Time, 5:09⅕.

Ten miles, open, 61 inch class—Won by Klark (Indian); second, Birkenbach; third, De Salvo (Excelsior). Time, 9:15⅖.

Five mile, 30½ inch class—Won by De Salvo (Excelsior); second, Oberwegner (Indian); third, Klark (Indian). Time, 5:07⅖.

Three miles, stock, 61 inch class—Won by Kiel; second, Hogan; third, Strasser. Time, 3:12⅖.

Twenty-five miles, States Championship—Won by Klark (Indian); second, De Salvo (Excelsior); third, Birkenbach. Time, 22:45.

Ten miles, handicap, 30½ inch class—Won by Tullis; second, De Salvo (Excelsior); third, Oberkegner (Indian). Time, 11:06⅖.

Special match, Klark vs. Birkenbach—Won by Klark. Time, 4:49.

All DeRosier at Macon.

Fresh from their thrilling adventures and coin gathering in Alabama, Jake DeRosier and Arthur Mitchel bobbed up in Macon, Ga., on Tuesday, 16th inst., to let the Georgians hear their motorcycles "sing" "Come to Me Pretty Little Yellowbacks." It was Farmer's Day at the Georgia State Fair, and the city was all agog over the "world's motorcycle champions," as the local papers had it. Some local "champeens" and their machines also joined in the speed chorus, but they were drowned out by the big 'uns, particularly Jake, whose machine "sung" so well that most of the "yellowbacks did come to him." Mitchel got some, too, and Charles Schatzman, the local wizard, got what was left, mostly dust. "Bobby" Stubbs, of Birmingham, also was booked, but "Bobby" had a bad eye and concluded to stay home.

Rain on the 17th prevented the bill for that day being run, and as a circus was to be in town the day following, the second day's races were scratched altogether. The summary:

Five mile open, professional—Won by DeRosier (Excelsior); second, Mitchel (Thor). Time, 4:43.

Five mile open, professional—Won by DeRosier (Excelsior); second, Mitchel (Thor); third, Schatzman (Indian). Time, 4:30.

Ten mile open, professional—Won by DeRosier (Excelsior); second, Mitchel (Thor); third, Schatzman (Indian. Time, 8:29.

Hughes Has Motorcycle Stolen.

On Saturday night, October 14th, a motorcycle belonging to E. M. Hughes, formerly vice-president of the old Southern District, F. A. M., and now president of the Louisville Motorcycle Club, was stolen out of his garage. It was a seven horsepower Indian, enameled red, G. & J. tires and Sager toe clips, 1911 model, with free engine clutch. The machine has one characteristic which will make it very easily recognized. The gasoline tank is partitioned off in the forward end to hold auxiliary oil, and a regular Indian oil hand pump is attached to the right handside of the tank. This tank was made to order after Mr. Hughes's original idea and is the only one like it ever put out by the Indian factory. A negro is suspected of stealing it, and persons in Lexington, Ky., Cincinnati, O., and Indianapolis, Ind., are especially requested to be on the lookout for it. A reward of $25 is offered by the F. A. M. for the recovery of it. Mr. Hughes also owns two automobiles and these had been taken out on several occasions and the front axle of one badly bent. Mr. Hughes's address is 2003 South Second street.

City Department Uses Motorcycles.

The Hydro Electric department of the municipal plant at Toronto has gone in for the use of motorcycles on an extensive scale. Eleven machines are being used at present by inspectors and others of the service, the flying squadron consisting of six Excelsiors, three Indians and two Pierces.—W. M. G.

MILE A MINUTE FOR CENTURY

Joseph Baribeau at Winnipeg Wins One Hundred Mile Event in Fast Time—No Record.

By riding 100 miles in 100 minutes 14⅘ seconds, Joseph Baribeau, at Winnipeg, Manitoba, on the 14th inst., wrested the press agent's "world's 100 mile dirt record," from George Evans, of Columbus, O., who was accorded that empty title by having ridden the century in 102 minutes 9⅖ seconds, on September 17 last. Baribeau, as his name implies, is a French Canadian, and rode an Indian machine, or to be more exact, two Indians, for he changed mounts to take on oil.

He recharged his gasoline tank without stopping, a la Stanley Kellogg, the inventor of the "pass-it-to-me-on-the-fly" system, which, for the benefit of those fans not well posted on racing tactics, consists in signaling for gasoline when it is getting low, having an assistant load a canteen, thumb spring valve funnel or other convenient receptacle with the "juice," mount a machine, pick up the record seeker and pass the liquid power to him, whereupon it is steered into the tank, amid more or less splashing, depending on the skill of the pourer, the empty receptacle is thrown to the officials and the pursuer lays down on his tank and screws his face into a knot as he renews his chase of the second hand. All this is done without stopping and makes a great hit with the spectators, who cheer loudly the daring feat.

Baribeau's performance really was a very good one, for he rode with remarkable consistency and displayed good judgment. The day was chilly, cloudy and anything but comfortable for such an undertaking. On his first start he made a voluntary stop in the first lap to unload same oil from an auxiliary rear tank, which was so heavy as to interfere with his speed and steering. This done he again was given the word at 3:35 p. m. The first mile was covered in 59⅘ seconds, but until the eighth mile he did not get under the minute. From the eighth to the 25th the laps varied from 1:00⅕ to 1:00⅗. The time for the quarter was 25:02⅗, a new Canadian record.

In the next 25 miles Baribeau improved by fractional seconds and finished the half century in 49:57, averaging better than a mile a minute. From 50 to 70 miles he ground out the laps like clockwork, and signaled for "gas" in the 71st lap. W. Pelham supplied it to him in the fashion above outlined. Baribeau refilled so neatly that he only lost six seconds in time on the lap. At 75 miles he still was under the minute average, the watches crediting him with 74:41⅗.

On the 80th lap Baribeau hung out the sign for oil and a spare machine was pre-

pared, to which he shifted on the next lap. He drove his new mount for four laps and again switched to the old one in the 85th rounds. The shifts cost him 47 seconds on time. From this point he began to ride faster, and steadily recovered the lost seconds, but was unable to get back all of them, finishing the grind in 1:40:14⅗, an average of nearly a mile a minute for the entire route. As might be expected, Baribeau was exhausted when lifted from his machine. His friends were so enthusiastic over his performance that a subscription fund was started at the track and $60 raised, which will be used to purchase a medal for him commemorating his remarkable ride.

He was allowed to ride two miles over the century to nullify any intimations that he did not cover the full distance. His fastest lap was the 59th, which was done in 58⅖ seconds. Sixty-one laps were ridden in better than a minute, 13 in a minute flat and 23 laps inside of 1:03. On the three remaining laps time was lost taking on fuel, cutting the average for these rounds.

Five watches were utilized, two pairs in relays for catching the laps, and one for taking the full time. The watches were inspected and tested before the start and the full time watch again tested and verified after the finish. The officials connected with the performance are so elated that they are going to ask the F. A. M. to recognize it as a record, but they are due for a polite "No." The best that can be expected is that it will stand as a Canadian record.

After Baribeau had quit riding, W. Pelham went out on a four horsepower Indian for the Canadian 25 mile record. He got it in 29:53⅕, bettering the old record held by himself by 1:03⅕. Then attempts were made against the mile track record of 56 seconds held by Baribeau. There was no more record breaking, however, Hughson, "7" Indian, doing the mile in 1:00⅖, and Rennick, same machine, 1:02⅖.

"The Same Thing Over Again."

First, first, first, first, first, first, just like that, was the way Erwin Baker, of Indianapolis, gobbled the motorcycle events at the Decatur (Ill.) race meet on the 8th inst. The only event that Baker did not win was the novice, and as he long since has risen from that lowly class, he couldn't expect to play wolf in sheep's clothing and fleece the poor lambs, too. George Kennedy, the local favorite, corraled the novice event, and also was placed in other classes.

It certainly was a "fall" day in the full sense of the word, for falls were frequent. Baker went down in a time trial, but was up in a flash and remounted, finishing in 1:00 flat. Kennedy also "bit the dust" without injury, while Louis Herman was less fortunate and came off with fractured wrist bones. Several events were scratched on account of mishaps to men and machines. Baker's "live wire" style of riding was the feature. Attendance, 2,000. The summary:

Three mile novice, singles—Won by Kennedy (Thor); second, Donahue (Excelsior). Time, 4:04.

Five mile open, four horsepower class—Won by Baker (Indian); second, Stone (Thor); third, Kennedy (Thor). Time, 5:39.

Five mile twin class—Won by Baker (Indian); second, Scott (Indian). Time, 4.55.

Eight mile open—Won by Baker (Indian); second, Stone (Thor); third, Donahue (Excelsior). Time, 9:17⅕.

Three mile open, three mile heats; order of finish in all heats same—Won by Baker (Indian); second, Kennedy (Thor); third, Stone (Thor). Time fastest heat, 3:33⅘.

Ten mile open, twins—Won by Baker (Indian); second, Scott (Indian). Time, 10:02.

Ten mile handicap—Won by Baker (Indian). Scratch.

THE MOTORCYCLE SQUAD OF THE DETROIT POLICE ON INDIANS

Walker Walks Away at Peoria.

Thirty thousand people witnessed some good motorcycle racing in connection with the National Implement Fair held at Peoria, Ill., on the 11th inst. Shanemeyer, Walker, Stansbury, Jamison and Plattner furnished most of the thrills. In the five mile 30½ class event Jamison, on an open port Harley-Davidson, after a hard fight, finally passed Plattner, Indian, and led him by a few inches to the tape. Stansbury, Harley-Davidson, was third.

In the fifteen mile free-for-all there were eight good entries, and from the crack of the pistol it seemed to be a duel between Milander, Indian, and Shanemeyer, Excelsior, for the lead. Jimmie Walker, otherwise known as "Walkaway Walker," got a poor start and had to pedal his machine almost to the quarter pole, giving the rest of the field practically a half mile lead. For the first three miles Milander and Shanemeyer kept see-sawing for the lead, but on the fourth lap Shanemeyer pulled away and held his advantage until the thirteenth mile, when he picked up a nail, making it necessary for him to finish on a flat tire. Walker in the meantime passed everybody but Shanemeyer, and on the fourteenth mile took the lead, finishing first, with Jamison second and Shanemeyer third.

The ten mile 30½ class was another nip-and-tuck affair all the way, Walker again getting a bad start, but finally catching up with the leaders and staying there. Stansbury, Walker and Jamison kept tearing off miles around the one minute mark, until finally Stansbury overtook Walker on the home stretch, leading him across the finish line by a length, with Jamison third. The summary:

Five mile, 30½ class—Won by Jamison (Harley-Davidson); second, Plattner (Indian); third, Stansbury (Harley-Davidson). Time, 6:20.

Fifteen mile free-for-all—Won by Walker (Harley-Davidson); second, Jamison (Harley-Davidson); third, Shanemeyer (Excelsior). Time, 16:42½.

Ten mile, 30½ class—Won by Stansbury (Harley-Davidson); second, Walker (Harley-Davidson); third, Jamison (Harley-Davidson). Time, 11:52.

Motordrome for Portland, Ore.

The Portland Motorcycle Club expects to hold its race meets next year on the new motordrome now in course of construction near the Twelve Mile House, near Portland.

LEGISLATION AGAINST CUT-OUT

Los Angeles Solons Prepare New Ordinance to Correct Defects Found in That Previously in Force.

Los Angeles, Oct. 20.—There is every appearance that the ordinance recently drafted to abolish the practice of running automobiles and motorcycles with the muffler open will become a law. The ordinance is in the hands of traffic squad head Sergeant Butler and Prosecutor Nimmo, and contains a section prohibiting the opening of mufflers.

It has become a matter of comment that the police long ago did not end this nuisance by making wholesale arrests, but the city has been without a really prohibitive law for a year. Before the present traffic ordinance was adopted by the Council, there was an ordinance which enabled the police to convict riders of motorcycles and chauffeurs who did not keep their mufflers closed. The ordinance stood the test of the police courts until a year ago, when a motorcyclist found defects in it, pleaded not guilty and was acquitted. Since then the present ordinance was enacted, but it, too, contained defects which the motorcycle policemen could not overcome.

A draft of the proposed new muffler ordinance now is in the hands of Assistant City Attorney Robertson. The entire traffic ordinance is about complete and in a few days will be presented to the Council. The section concerning mufflers reads:

"Section 50. It shall be unlawful for any driver to drive or cause or permit to be driven any motor vehicle in, upon or along any public street, or to operate or cause or permit to be operated the motor in any such vehicle in any public street, if such motor vehicle or the motor in such vehicle is not provided with a good and sufficient muffler properly attached thereto of such construction and sufficient to muffle or deaden the sound of the exhaust from such motor; or if the exhaust from such motor in such vehicle is ejected otherwise than through such muffler; or if such exhaust is ejected toward the surface of the street or ground."

Matthews and Pfeifer Star at Dayton.

"Shorty" Matthews and his white Thor IV swept the platter clean at the motorcycle meet of the Dayton (O.) Motorcycle Club at the fair grounds track on the 14th inst. Matthews won every event in which he started, which was about all that could be expected of him. Russell Smiley won the city championship from Ivan Jacobs, and also stamped his trade mark on a five mile open. Tobias graduated from the novices, and Pfeifer was the king bee of the private owners. Unfavorable weather scared away many riders and spectators, but those who attended were rewarded by some snappy racing. The summary:

Three mile novice—Won by Tobias (Thor); second, Steger (Merkel); third, Pfeifer (Thor). Time, 5:12⅖.

Three mile trade riders—Won by Matthews (Thor); second, Smiley (Thor). Time, 3:46⅖.

Five mile private owners—Won by Pfeifer (Thor); second, Hilton (Harley-Davidson). Time, 6:16.

Five mile open—Won by Smiley (Thor); second, Jacobs (New Era). Time, 6:26⅖.

Ten mile open—Won by Matthews (Thor); second, Forrer (Indian); third, Jacobs (New Era). Time, 12:26⅗.

Three mile stock—Won by Matthews (Thor); second, Mumma (Indian); third, Gross (Thor). Time, 4:06⅖.

Five mile city championship—Won by Smiley (Thor); second, Jacobs (New Era); third, Howich (Indian).

Unlimited pursuit—Won by Matthews (Thor).

Motorcycles on R. F. D. Prove Profitable.

Statistics on the rural free delivery service, as brought out at the national convention of R. F. D. carriers in Milwaukee, Wis., indicate that thousands of the carriers are able to afford motorcycles, and that this field affords great possibilities for development in the sale of these machines. There are approximately 41,500 R. F. D. carriers, who cover daily 1,007,000 miles in traversing their routes, and serve 21,500,000 people. The compensation of an R. F. D. carrier is graduated according to length of route. The minimum salary is $440 per year for routes not exceeding eight miles, and the maximum salary $1,000 for routes of 24 miles or more. While the average route is nearly 25 miles the average salary is about $35 less than that of a 24 mile route, owing to the fact that 18,000 routes are beyond the limit where mileage is a factor in determining the amount of wage commensurate with services mentioned. Therefore the average compensation may be said to be $965. Inasmuch as a great many owners of motorcycles who follow various pursuits have annual incomes of less than $1,000 per year, there seems no good reason why a great many more R. F. D. carriers cannot use motorcycles. Furthermore, while a great many carriers are not required to give all their time to covering their routes, and derive extra revenue from "sidelines," it would appear that the use of motorcycles would help them to cover their routes more rapidly, and so have more time for other occupations. The extensive advertising being done by some motorcycle manufacturers in the R. F. D. journals indicates that they are alive to the possibilities of this field.

San Antonio, Tex., is reported to have good prospects of securing a board motordrome for next season. Outside parties are behind the project.

NEW MANAGEMENT AT GUTTENBERG

Well Known Newspaper Men Now Control the Track for Motorcycle Races—Big Crowd Last Sunday.

At last there is hope for some good, clean motorcycle racing for New York City fans. The Guttenberg (N. J.) track will be the stage, but the management will be far different from heretofore. Since the Metropolitan Motor Racing Association took over this track, motorcycle racing has received a new and much needed impetus. The new management is composed of newspapermen, viz: E. F. Korbel, president; M. W. Colwell, vice-president, and J. T. Shaw, secretary-treasurer. All are well known to the automobile and motorcycle fraternity in and around New York.

This trio really has assumed full control of the track, and ex-promoter Shaffer has not even a finger in the pie. They propose to put on clean and snappy racing, with the object of providing good sport, and let the financial rewards come as they will. That the new management really means business is shown by the preparations that were made for the opening meet scheduled for Sunday, 15th inst., but which had to be postponed on account of rain.

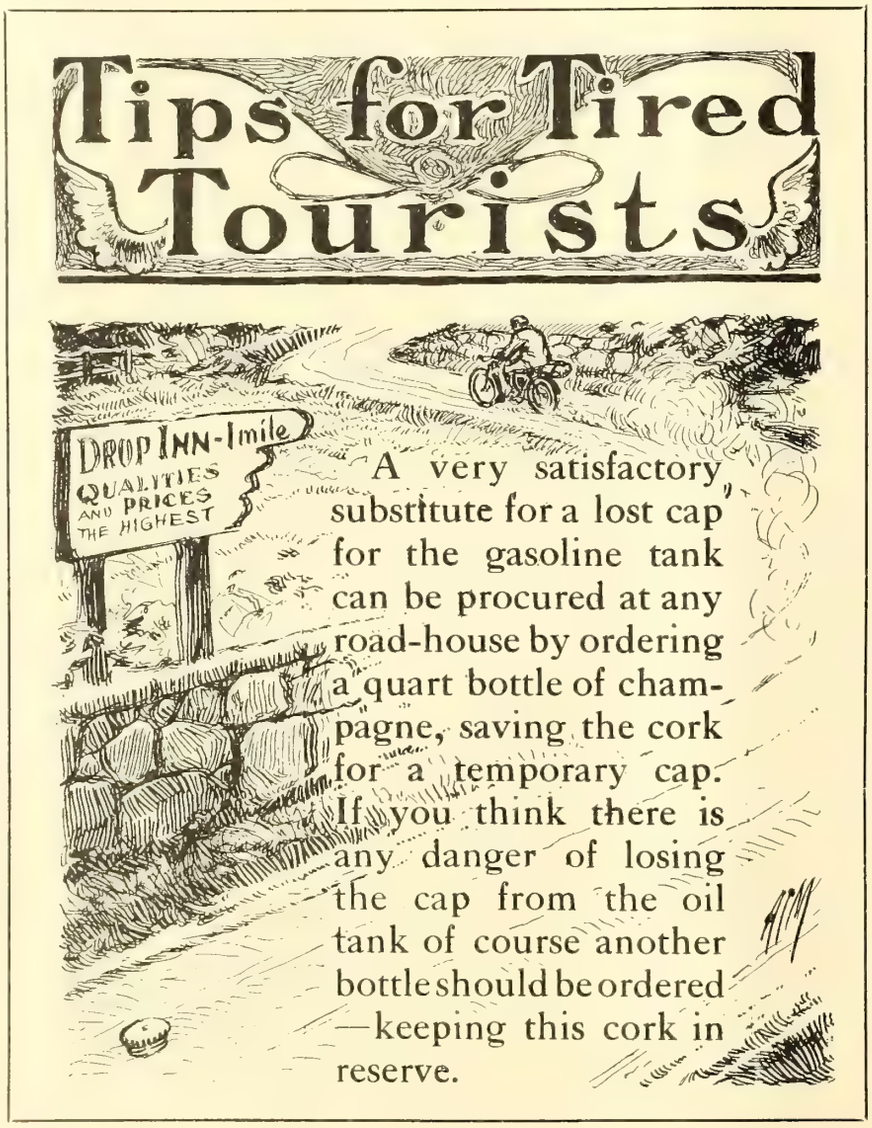
Real entry blanks were issued, also programs, track officials were engaged, likewise police to keep the course clear, and best of all, the meet was well advertised not only in all boroughs of New York City, but in Jersey as well. The New York papers carried more advance matter on the meet than on any motorcycle meet ever held in that section, and window cards were placed along automobile row. As a result over 3,000 people, many of them motor car parties, came to the track on the 15th, and kept coming until four o'clock, when a brisk shower set in. It was the largest crowd that ever attended a motorcycle meet at the track. When the meet was postponed before two o'clock, by unanimous vote of the riders, to whom the question was referred by Referee Pitman, all spectators were admitted free and the management put on a five mile race between J. U. Constant and J. J. Cox. Constant won by half a length. Ralph De Palma, the automobile racer, also gave exhibitions both alone and against motorcycles.

It is the intention of the management to put on special features such as exhibitions by well known automobile drivers, and also to devise new and interesting events for the regular program. Over 60 entries already are in hand for the opening meet on the 22nd, and Ferd Mercier will make his long expected debut in the professional ranks.

DE ROSIER BACK FROM THE SOUTH

Tells Why He Quit the Indian and Is Now Riding the Excelsior—His Plans for the Future.

As unexpectedly as if he were Old Nick himself, Jake DeRosier "blew" into New York Thursday, straight from the sunny, and for him somewhat strenuous South. Naturally the first question fired at him was, "Why did you switch from the Indian to the Excelsior?" and here is DeRosier's own version, published for the first time. "When I went to Chicago from here in August," he said, "Wolters and the Excelsior were just beginning to worry our boys at the motordrome, who couldn't hold him and were getting beaten regularly. We had our best machines, '21' and '23,' out there with Balke on them, and Wolters was holding a gap on Balke all the time.



"When I saw this was no dream, I notified the factory that '21' and '23' were not fast enough, and that something should be done, meaning that faster machines should be sent out. I had our best interests at heart and did not want to see our boys getting licked all the time. Well, for that little act of kindness I got a letter from the factory telling me that Balke and I had better look for new jobs, as the factory didn't have anything fast enough for us then, and had no time to build anything, either.

"Of course, this rather took me by surprise, because I had been with the Indian people so long and always had done my best for them, but as long as they felt that way about it, why Balke and I just saw the Excelsior people and they built machines for us, and were mighty glad to get us. From what we saw Wolters do with it we knew it had the 'stuff' in it. There are a lot of people in the game who have been tickled big because we got canned,' but perhaps they can tell me what for. I'm sure I don't know, and I guess no one but those who did the 'canning' do, and they won't tell, but perhaps I insulted them when I told them for their own good that their machines were not fast enough."

DeRosier says that he is very well satisfied with his new mount, and hasn't any fears of being able to maintain his reputation. While not at all boastful, he is as willing as ever to meet anybody anywhere for any distance. After the "pothunting" season closes in the East he is going to California for the winter. Balke now is at Sacramento and will ride at Oakland when it opens.

Novelty Race at Laurel.

A new sort of novelty race was put on at the Laurel (Md.) track on the 14th inst, in connection with the horse racing, when two runners on foot, running horses and a motor car were sent away against a motorcycle. J. S. Berryman, on a Harley-Davidson, was the motorcyclist. Berryman got a bad start, which cost him victory, for once under way he went like a streak and would have won hands down had the delay in getting away not occurred. The foot runners finished one, two, a horse third and the motorcycle and automobile were fighting it out in the stretch. The handicapping was poor, likewise the start, but the spectators seemed to enjoy the, to them, novel sight. The race was run on a mile track.

FIFTY MILLION FOR GOOD ROADS

Ohio State Commissioner, Backed by Several Organizations, Seems Assured That This Sum Will Be Spent.

"Fifty million dollars for good roads in Ohio." To some this may seem a pipe dream, but according to State Highway Commissioner James R. Marker this slogan indicates an awakening of the good roads project that will put Ohio to the fore in the matter of good roads. Perhaps if the Commissioner's plans develop motorists will whisk through the State without being jarred nearly insensible by "thank-ye-ma'ams."

Commissioner Marker is not pushing the project forward alone, as it is claimed that he is backed by the Ohio Good Roads Association, motor clubs, granges and State officials. In order that the plan may mature quickly it proposed that the fifty millions be raised by a State bond issue. To gain the popular approval of the project is the watchword of the good road backers.

At this point some exceedingly surprising but interesting statistics enter into the matter. According to the Highway Commissioner, Ohio roads are being improved now at the rate of 120 miles a year. Taking this statement for a basis for calculation it will require 750 years to improve the 90,000 miles of roads in the State. To improve the 50,000 miles of free delivery routes and 8,000 miles of roads, which could be used in an inter-county improved road system, it will require 410 years to improve the post roads and 65 years to complete the inter-county system.

In the inter-county roadway system the Commissioner thinks that he is offering an inducement that will prove a boon to the motorist. The idea in brief is to connect the principal cities of the State with a broad, brick-paved highway. By this plan Columbus, Cleveland, Mt. Vernon, Wooster and Akron would be connected by a direct route. Through the middle of the State the old national road, constructed nearly a hundred years ago, would be converted into one of the finest of highways between the East and Middle West.

The World on Wheels: News Notes from Everywhere

His motorcycle brought William Dreiblebuss, of Fort Wayne, Ind., to Philadelphia and New York to see the world's series baseball games. He is going back the same way.

Atlantic, Ia., now has a motorcycle club. It is called the Atlantic Motorcycle Club and started with seven members. The officers elected were A. W. Jensen, president and secretary, and M. W. Shay, treasurer.

Elmer Gress is president and Vincent Steger secretary of the newly formed Dayton (O.) Motorcyclists' Club. It is intended to make the organization rather "select," and applicants for membership will have to attain a certain standard to get in.

Between now and December 31 every motorcycle in the State of Wisconsin must be registered with the Secretary of State under the provisions of the new law. The fee for motorcycles is $2. After the first of the year the machines will have to be re-registered.

At an enthusiastic meeting the Coshocton (O.) Motorcycle Club was formed by motorcyclists of that city. Rolla Peacock was elected president and Arthur Loos secretary-treasurer. The club has secured quarters in the Hay block and plans to affiliate with the F. A. M. later.

"Feeds" and vaudeville entertainment after the transaction of business are becoming popular features of many motorcycle club meetings. The Poughkeepsie (N. Y.) Motorcycle Club is one that uses this scheme for keeping up interest and creating new members with great success.

Now that the outdoor activities are tapering off with the approach of cold weather the Worcester (Mass.) Motorcycle Club ushered in its indoor season with a dance party in its quarters on the 6th inst. The hall was prettily decorated with red, white and blue bunting and ribbon paper, and tiny electric lights were strung on the grounds. Everybody had a good time.

Articles of incorporation of the Old Orchard (Me.) Automobile Association have been filed with the Secretary of that State. Among the objects of the corporation are the promotion of motorcycle contests. The officers are Fred C. Goodwin, president; Walter J. Gilpatrie, secretary; Charles E. Goodwin, treasurer. The association recently promoted races on the beach at Old Orchard.

It is worth something to belong to the Wassacucon Motorcycle Club, of Newburyport, Mass. A handsome club house was erected near the Parker River Bridge, 30x16, with a broad piazza facing the road. The club was organized last spring and has 10 members. The name is an Indian one, meaning "Parker River." All motorcyclists are welcome at the club. The officers: Sumner Parker, president; William Noyes, secretary-treasurer.

So successful was the big roundup of Central California motorcyclists at Livermore recently that two carnivals of the sort are planned for next year. G. H. Robinson, who arranged the recent gathering, was selected to engineer the 1912 affair and he will lay his plans early. The prime object of the carnivals is to boom San Francisco for the F. A. M. meet in 1915, during the Panama-Pacific Exposition.

New officers have been elected by the Norwich (Conn) Motorcycle Club to serve six months. They are C. C. Simpson, Jr., president; W. C. Bode, Jr., vice-president; Ralph Wilson, secretary; W. H. Stebbins, treasurer; C. V. Pendleton, Jr., captain; H. T. Burdick, first lieutenant; Edward Adams, second lieutenant; directors, Charles Roessler and John Hart. A race meet at the fair grounds is under consideration.

Open mufflers and speeding in the city are tabooed by the Seattle (Wash.) Motorcycle Club. The club is co-operating with the authorities in suppressing these nuisances. The club has a set of rules providing for the fining for the first and second offenses, and expulsion for the third, of members violating either the speed or open muffler ordinances. Of the 500 motorcyclists in the city 167 are members of the club.

Jack Prince is going to build a new one-third mile motordrome in Los Angeles, Cal., this winter. It will be located within a block or two of the old Coliseum and will be operated by the Riverview Exposition Co., of Chicago, who are back of the venture. The mile motordrome at Playa del Rey, is a white elephant, hence the new track. Pending the completion of the saucer, Prince will put on races at the Oakland (Cal.) motordrome.

Skids and spills have no terrors for Laura Tammany, a fair motorcyclist of St. Louis, Mo. Her first mishap was a skid in which she was thrown and severely bruised. Her next adventure was while riding tandem on a track in practice for a race. Her companion, who was driving, took a turn too fast and Laura was spilled off the rear very neatly, but escaped with bruises. Despite the mishaps, she says "that she just cannot give up motorcycling."

Breaking the local track record for one mile, so it was claimed, P. H. Rich, driving an Indian machine, won the ten mile Fair Grounds, Spokane, Wash., on the 7th inst. Rich won by half a lap and was clocked in 12:03½. He negotiated the first mile in 1:12, which was stated to be a reduction of one and one-half seconds from the previous record. C. Crutchfield finished second, and was the only other rider to finish, J. Frieze taking a tumble in the 15th lap. He was unhurt.

Some good professional and amateur pickings are offered on the motorcycle speed card which will be run off at the Gulfport (Miss.) fair on November 11. The program is as follows: Professional, open, three, six and nine mile heats; $100, $50, $30; private owners, belt drive, prize values, $20, $10; private owners, belt or chain, prize values, $25, $15; potato race, prize values, $15, $10. The promotors are the Mississippi and Gulf Coast Exposition Co., of Gulfport.

Fifty motorcyclists attended a banquet celebration of the first anniversary of the Terre Haute (Ind.) Motorcycle Club, held at the rooms of the Indian Motorcycle Club on the 1st inst. The club started with 20 members and now has over 200. There was a lot of high brow post prandialism, the oratorical honors going to President H. E. Baldwin, who spoke on "Fidelity to Our Club," and was honored with loud applause. Music and card games contributed to the enjoyment of those pres-

ent. The club is talking about erecting a club house in the suburbs next year.

There is a small boy in West Atchinson, Kan., who has "something coming to him" if Myles Myers and Al Bradley, two motorcyclists, ever learn his name. Myers and Bradley were riding along West Main street the other day, when a small urchin let them have a bucket of water that thoroughly drenched them. Immediately after giving them an involuntary shower the culprit fled, and the surprised motorcyclists had to go home for dry clothes.

"Give and Return" is the slogan of the Madera (Cal.) Motorcycle Club, which is doing things in its section in a quiet but forceful way. The club has a good roads committee, which is agitating the movement for improved highways, and calling attention to bad roads in the district. Meetings are held at members' homes and are followed by social entertainments which are proving to be quite a success. The club charter closed with 18 names on the roll. Regular Sunday runs are held to various points.

With railroad-like precision, Fred Ellett won the secret time run of the Elmira (N. Y.) Motorcycle Club, held on the 8th inst. He covered a 40 mile course in 3:08, only 20 seconds faster than the official time. By his victory Ellett secures a grip on the handsome $75 silver trophy donated by the Eclipse Machine Co., which becomes the permanent property of a three time winner. The official time was taken from the time made by a non-contestant over the course on the day previous. This time was placed in a sealed envelope, which was opened after the conclusion of the run. Naturally the official time was known but to a few officials.

From Mobile, Ala., to Aurora, Ill., is the motorcycle trip undertaken and just completed by G. Gewin and T. B. Henderson. Both rode Thor singles. They left Mobile on September 24 and toured leisurely, stopping whenever fancy dictated. The tourists report deplorable roads in many places and also found the Cumberland Mountains quite formidable going. Aside from numerous falls the only mishaps were punctures. Rain was encountered nearly every day of the trip. The object of the trip was a visit to the Thor factory, where new twins were waiting for them. Henderson will ride back to Mobile, while Gewin will point his front wheel for Toledo, O., his home city. Henderson figures on a trip mileage of over 3,200 when he reaches Mobile again.

Theft of a motorcycle and side car which landed the thieves in court gave the moralists and their "honor among thieves" doctrine a severe jolt in London, England, recently. The prisoners, Edward Hurley and John Miller, admitted having broken into a warehouse and taken the machine. It was brought out in the trial that Miller was an ex-convict and had gone to South Africa to "turn over a new leaf" and start life afresh. Eventually he became a member of the Natal police and fortune smiled on him until it became his duty to round up a gang of horse thieves. In the gang was an old pal, who had been convicted with Miller in England years before. Enraged at his arrest by his former confederate, the pal "peached" on Miller and he was dismissed from the force. Failure to obtain employment finally led him to drift back to his old pursuits and resulted in his arrest for theft.

The annual endurance run of the North Shore Motorcycle Club, of Chicago, will start on Sunday, October 29th, from the club house, Clarendon avenue and Sheridan road, at 6 a. m. The run will be to Milwaukee and return. The schedule calls for 18 miles an hour, which is considered rather fast going over the East road, as this is mostly mud and sand. A large number of entries have been received, and it is expected that about 75 riders will participate. Gold medals will be given for perfect scores at the finish and silver for all having over 900 points.

The larger silver cup offered by the club for the highest score in the three secret time runs was won by Ben Blankenheim, riding a five horsepower Indian, with a score of 931 points. The final run was held on October 8th.

Forty members and friends of the Norwich (Conn.) Motorcycle Club participated in the "housewarming" attending the opening of the club's new quarters at 48 Franklin street. Fine clam chowder was the piece de resistance of the refreshments and was followed by a smoker. In its new rooms the club has perhaps the best appointed motorcycle club quarters in the State. The rooms embrace two floors, the lower floor being devoted to a reception room and workshop, while the upper floor is used as an assembly hall. The quarters have been refinished tastefully and cozily furnished for club purposes. The good taste shown in the fitting up of the quarters evoked many favorable compliments, which belong to the credit of Fred Friswell and W. C. Bode, Jr., who had the work in charge. The club now has 50 members, and is recruiting its ranks from a wide radius. At a short business meeting preceding the "fandango" the club voted to hold the charter open until November 1 and to meet twice a month.

Northwestern Motorcycle Notes.

The next meeting of the North Pacific District, F. A. M., will be held in Portland some time in June, 1912, probably during the annual Rose Carnival.

A number of the members of the Portland club have journeyed on their machines this fall to the Clackamas River and have had very good luck with the finny herd.

President Lindsay, of the Portland club, attended the first semi-annual meeting of the North Pacific district, Federation of American Motorcyclists, held in Seattle last month.

After the meeting adjourned those present were escorted to the Olympia Cafe, where a fine table was set with the best in the market, which was enjoyed until a late hour.

C. L. Smith, Los Angeles, Cal., a leading dealer of that city, has secured the Pope motorcycle agency. He formerly handled the Merkel. The Pope will sell for $190 on the coast.

Mr. Lindsay states that he was received with open arms by the members of the Seattle Motorcycle Club and was given a grand time. The Seattle boys have the right spirit, are very enthusiastic, work well together for the interest of their club and the general good of the motorcycle game.

Mr. E. L. Moore, purchasing agent for the United States Signal Corps for the Northwest and Alaska and secretary of the Seattle Motorcycle Club, was unanimously elected vice-president of the district, and Mr. Lindsay was unanimously elected secretary. Mr. Carl Hassenpflug, of Seattle, was elected treasurer.

A number of good results were accomplished at the meeting, which will have a tendency to promote good fellowship among the various clubs of the Northwest and to make the race meets of the future more interesting for the riders as well as the spectators; each race meet will have riders from other cities, and it is expected to pull off some very warm events next season.

The Portland Motorcycle Club is now located in comfortable quarters at 43rd and East Morrison streets. President, J. Benton Lindsay; vice-president, James Walls; secretary, E. A. Ansley; treasurer, Chris F. Heick; sergeant at arms, Harry Beck; club captain, Verne Maskell; directors, J B. Lindsay, J. Walls, E. A. Ansley, E. Greisheimer, P. J. Ford. The club is, of course, affiliated with the F. A. M.

Frank W. Young, of El Central, Cal., located about 10 miles from the Mexican border, recently completed a trip from that point to Tacoma, Wash, on a twin cylinder Excelsior. He reports a very enjoyable trip, his machine making a splendid showing on the long journey, and but a few minor repairs being necessary. The roads were found in excellent shape for motoring, with the exception of roads in the vicinity of Redlands, Cal. and from Portland, Ore., to Centralia, Wash.

Former Cyclist Killed in Accident.

William Pearce, formerly a well known bicycle and motorcycle rider, but more recently a racing automobile driver, met with an accident while racing at Sioux City, October 19th, which resulted in his death.

Indianapolis Boys' Vacation Trip Awheel

Three Indianapolis boys, 17 years of age, Karl Schoen, Harold Simpson and Donald Ferguson, had this summer a 522 mile bicycle trip over the roads in the Hoosier State, and were so pleased with their vacation trip that they will tackle the hills and the roads again next year. The trip took them ten days—the boys riding only a little over an hour on the tenth day. They experienced some of the roughest roads in the state, and the conditions were such in some sections of the country that 50 miles a day was considered exceptionally good time. The object the youthful riders had in view, besides getting just a view of the country, was to visit the Wyandotte Cave, one of the most famous in the country. This cave is not as large as Mammoth Cave, but it is regarded as a more beautiful one, and it was well worth the going to see, according to the boys' story.

KARL SCHOEN, HAROLD SIMPSON AND DON FERGUSON

Wisely enough, the boys carried only the things that were very necessary for such a long road trip, and all that they took they carried on their handle bars. Each boy carried a blanket and an oil cloth of the same size, an extra shirt, a full army kitchen, set and repair kit, an extra pair of hose and a couple of handkerchiefs. One of the boys carried a camera, and another carried a lamp, which was used as a camp light at night. The boys did no "night riding."

It was the plan of the boys, who are all Y. M. C. A. lads, to sleep and eat in the open all the time, and with the exception of one or two times when the riders got into the larger cities and ate in restaurants, they ate all their meals in the open. They did not need a fire to cook their meals, which consisted chiefly of crackers and sardines, with some watermelons thrown in occasionally for desert. When they returned home they looked to be very healthy.

The riders left Indianapolis on Monday, August 14th, and returned nine days later, August 23rd. On the first day the boys started out at 7 o'clock and rode 64 miles, sleeping near Seymour. It rained that night, but the boys, under their oilcloth covering, did not get very wet. On the first day Ferguson and Schoen got punctures, and it took them about 15 minutes to repair each. Aside from this the initial day's trip was a pleasant one, the roads being exceptionally good.

On the second day, August 15th, they started out at 6 o'clock after getting a "handout," which they paid for, at the farm house. The roads were very muddy on account of the rain at night and only 34 miles were covered that day. Simpson's tire went bad about two miles from Crothersville, which was reached shortly after noon, and Simpson had to walk to the town, where he hoped to purchase a new tire. There were no tires to be purchased in the town, however, and Simpson telephoned back to Seymour for one. The new tire came and about four hours was lost waiting for it. At 4 o'clock the riders started for Scottsburg, which they reached at 6 p. m. The best roads on the trip were experienced on this stretch. The roads here are slate, and the stretch is about 15 miles long. When the riders were about a mile from Scottsburg they were caught in a driving rain, which they said was one of the hardest they had ever seen. They were thoroughly drenched when they rode into town. The rain lasted about an hour. Simpson took a hard fall and was skinned up about the knees and arms, and his clothes were torn. When the riders got to Scottsburg they dried themselves in a flour mill and they slept in shucks in the mill that night. Their supper consisted of the same thing their dinner had consisted of, namely, salmon sandwiches and graham crackers.

On the next day, August 16, the boys made the fastest time of the trip, covering 68 miles. They went from Scottsburg to Corridon, Ind. Leaving their beds of shucks at 4 in the morning they hastened on to Louisville, Ky., where they arrived at 9:30 a. m. Here they took a swim at the Y. M. C. A., where they rested until 4 p. m., when they got out of Louisville. Here Ferguson purchased a new tire. The boys made 34 miles from 4 to 6:30, over good toll roads, where 1 cent a mile was charged. This time was unusually good over the hilly country. One of the hills, or "mountains," as they called them, was so rough and so long that it took them about a half hour to climb it, but then the riders said that there were two sides to all the hills and when it took them a long time to climb one side it was a pretty sure sign that they would make pretty fast time going down the other, which they did.

The riders, with the exception of Simpson, who got a puncture, had very little trouble on their way back to Corrydon from Louisville. At Corrydon the tourists saw the first Indiana State House and the Constitutional Elm, under which the first laws of Indiana were made. It was at this place that the boys had only watermelon for supper, the melon being given to them by a constable who took "pity" on them. The riders sat down and ate their meal on the curbstone of the court house yard. A hard board floor in an open air canning factory furnished the beds for the riders that night.

On the next day, Thursday, August 17th, the riders left Corrydon, Ind., at 7 a. m., and covered 19 miles. It was on this day that the boys visited Wyandotte Cave. They spent many hours in the cave, which is the

most beautiful natural cave in the country. Wyandotte Cave is 12 miles from Corrydon, or five miles from Leavenworth, where the riders spent the night. The road was very rocky from the cave to Leavenworth and the lads had to walk a greater part of the way. After a sardine and cracker sandwich supper the riders slept on grain sacks at a wharf house on the Ohio River. Here the mosquitoes played an important part in keeping the travelers awake during the night, so they could keep a watch for a boat that was to arrive at 1 o'clock in the morning, and which was to take them down to Rockport, Ind. The boat did not come in until 6 a. m. and the riders spent the whole day on the boat. They were the only passengers and practically took possession of it. They had many interesting experiences on the boat, which let them off at their destination at 11 o'clock at night. Ninety-two miles was covered that day on the water. At Rockport they slept on paper in another wharf house.

On Saturday, August 19th, the riders covered 59 miles, ending up at Haubstadt. They practically walked from Rockport to Evansville, Ind., because the roads were so sandy and dusty. The riders had another bath at the Evansville Y. M. C. A., where they were accorded no little reception. They left Evansville at 4:30 and reached Haubstadt at 7:30. Simpson had another puncture on this trip and the riders lost the road for the first time. This got them into Haubstadt later than they had planned. They slept on benches in a railroad station that night.

The next day being Sunday, the riders got up at 5 a. m. and stole out of the little German village and started out for Vincennes, a distance of 54 miles. They reached Hazelton at 11, where Simpson fixed his coaster brake. The boys had a hard time finding a repair shop open that day. The roads from there to Vincennes were very bad, and after leaving Hazelton at 4 p. m. they started out on the remaining 25 miles and reached their destination at 7:30 in the evening. They had to ferry across the river at Hazelton. The evening was spent at Vincennes looking about the historic town and walked across the bridge over the Wabash into Illinois. The travelers slept in a park on their blankets.

Sixty-one miles were covered on Monday, August 21st, and the boys reached Terre Haute, Ind., where they had another bath and swim at the Y. M. C. A. They experienced good roads until they were about five miles from Terre Haute, where the sand and gravel was about a foot deep. They had to walk into the city. They had left Vincennes at 4:30 that morning and reached Terre Haute at 6 in the evening. On that morning the boys had something new for breakfast, which they ate at the fair grounds. They had canned beans and rolls. While at Sullivan, where they ate dinner, they had the "conventional" crackers and watermelon. Two miles from Sullivan the boys stopped for two hours and took a nap in a school yard. Evidently the early rising that morning did not agree with them. At Terre Haute the tourists slept on some comfortable mats in the Y. M. C. A.

The riders rode to Plainfield, 61 miles, on the National road, the next day. They had left the "Hut" at 7 that morning and they got into Putnamville at noon, where they had some crackers and sardines. They left there at 1 o'clock and found the roads good but hilly. One hill was about three-fourths of a mile long, and although it required some labor to mount the hill, the boys found that the other side "went down" and they "went down" a flying. They had 12 miles yet to go to reach Plainfield and they got there at 6 o'clock. After eating one of their "conventional" suppers of watermelon and crackers, the boys went to sleep in a school house yard.

WILLIAM WALLACE DAVIS,
Brooklyn's faithful cyclist, to whose initiative was due the recent monster Cycle Path parade.

The next day, August 23rd, Wednesday, they started out for the last 12 miles on their trip at 7 in the morning and they reached Indianapolis at 8:20.

Tack Throwers Caught Red-Handed.

Bicycle and motorcycle riders, automobile drivers and other users of pneumatic tired vehicles were caused much trouble and expense on a recent Sunday morning in Topeka, Kan., by boys, who had strewn tacks in the streets. Their plan of operation was quite original. The tacks used were really belt rivets stolen from the local street railway company. The rivets had flat heads about the size of a dime and a half inch sharp pointed stem.

These rivets the boys set up in rows across the street, placing them two or three inches apart in three rows and the rows about eight feet apart. No tire could pass without a puncture, and the boys soon had a merry old time watching the numerous repair jobs being carried on along the curb. In all three of the pitfalls were set up in as many different locations in the city.

The police were quick to investigate in response to the wholesale complaints of the victims, with the result that two of the miscreants were caught and information obtained which will lead to the arrest of another. An example will be made of them for the benefit of others who may have an inclination for this sort of "sport," and it is hoped the example will be a salutary one.

More Bicycles Than Other Vehicles.

Richmond, Ind., is a city where many bicycles are ridden, according to figures just compiled by Controller McMahan showing the number of licenses issued to vehicle owners. Of the total of 2,681 tags issued 1,254 were to bicycle riders. The next largest number, 840, were to owners of one-horse rigs. The total number of bicycles in the city is not represented exactly as riders under 14 years of age are not licensed.

The assertion made so often "everybody has an automobile now," is refuted by the figures. Only 245 licenses have been issued to automobile owners, most of them being for two and four passenger cars. The motorcyclists total 52, or nearly 20 short of the number last year.

Baltimore's "Champion Thief Catcher."

Patrolman Ewing, of the Baltimore police force, lays claim to being the champion bicycle thief capturer and is ready to defend his title at any time. He added more laurels the other day to his fame by trapping a negro, who, it was afterward proven, had been consistently stealing bicycles left unguarded outside houses or stores for a few moments. Several victims of the negro identified him as the one who purloined their cycles, and now the thief is cogitating on the evils of stealing bicycles, while waiting for his case to be threshed out in court.

Fine Prizes for C. R. C. A. Race.

The way the prizes are being received for the ten mile race of the Eastern Division will tend to draw out what ought to be the largest amount of starters that any race has had this year. Headed by a Columbia special 1911 racer, the list includes three lamps and other sundries that are essential to the cyclist racer, as also a silver medal to the first member to finish, and a solid gold watch as first time prize. Entries and inquiries will be received by George Bieregel, 1105 Amsterdam avenue, New York City.

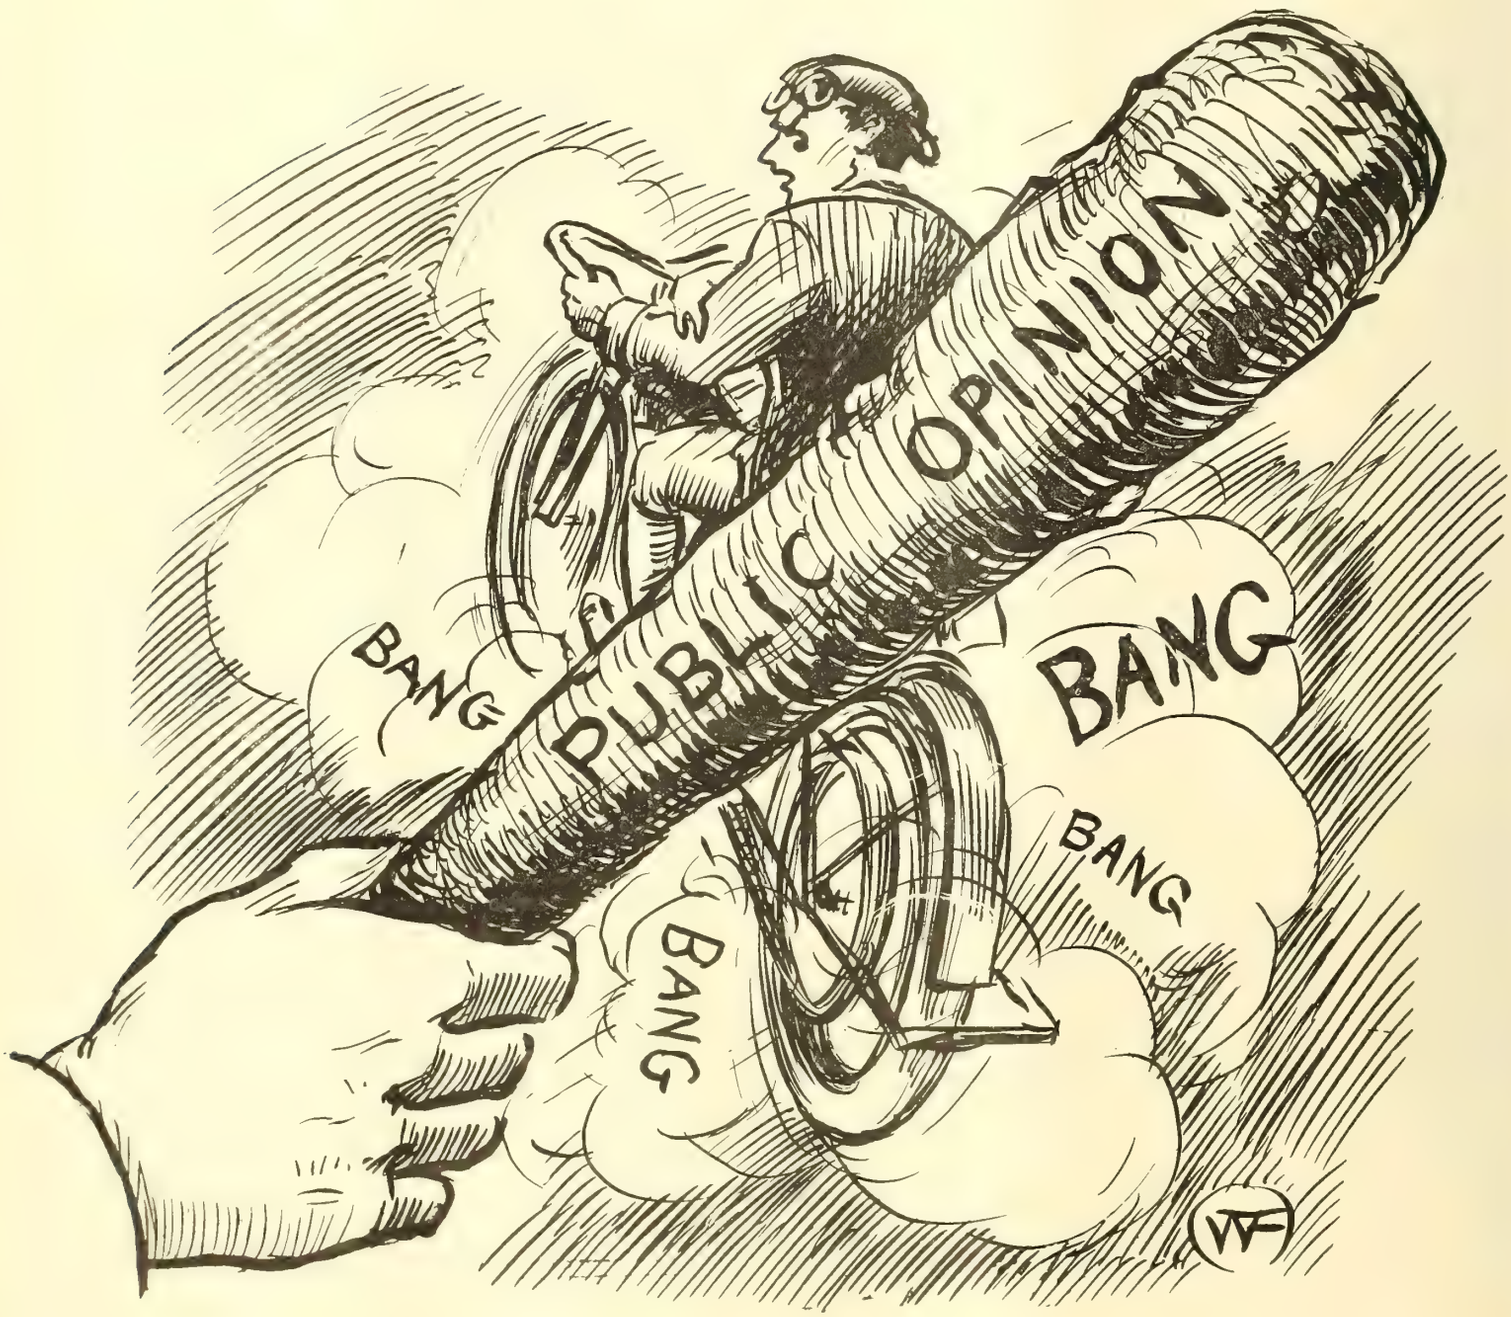
2200 INQUIRIES

A Word to the Live Dealer

If your application is not among the letters above shown or if it has not reached us in subsequent mails you had better "get busy." Mind you we do not promise to award you territory but if there is a possible opening in your territory we will tell you and then it's up to you to prove to us that you are the "Live Wire"—the man for the place. And let us say right here, if we tell you there is a chance for you to get onto our 1912 selling force you had better jump the next train for Milwaukee. Then when you get here we'll prove to you that the New Harley-Davidson is all we have claimed and more. Then you will appreciate why our dealers who have seen and ridden our new model all say "Can you build enough?" "Will you make deliveries of all I can sell?" Listen to what they say:

"Finest thing I ever sat on." W. J. LISTER, Cleveland, Ohio.

"Just give us all we need for California. That's all I have to say."
R. W. SAYERS, of Appeal Mfg. Co., Los Angeles, Cal.



"The Harley-Davidson will sure make a scoop this year."
HAGEDORN & WEBSTER, South Bend, Ind.

"I didn't believe one-half you claimed. Now I know it is as good and better than you said."
P. J. BAILEY, Associate Editor Motorcycling.

These men know their business. They are all men experienced in the motorcycle field. They know what the public want. And the machine the public wants is the machine you should want to handle.

There has been such a deluge of mail that we have been unable to answer letters promptly. If our reply to your inquiry has seemed delayed it is due to this fact, and we can only request that you have patience.

The Cut-Out Must Go!

By BEN MERIWETHER AND HENRY HART

Aside from the punctures received upon our arrival in Paris, our visit to the world's capital of fashion was destined to be one of unalloyed pleasure. We had allotted ourselves an eight days' stay every moment of which was enjoyed to the fullest extent. For, in addition to being practically the guests of two art student relatives who showed us all the intricacies of gay "Paree," we were fortunate in the timing of our stop to be in the city for the observation of the Fete Day de France on July 14th, when for days previous an air of festivity pervades everything in the preparation for the fun and frolic of "the big day," in which all participate with characteristic French enthusiasm and abandon.

Our artist hosts proved excellent guides to all the various places of interest in the city, such as the art galleries, cathedrals and historical places. The drives and parks we of course enjoyed astride our Columbias.

During our stay in Paris we took a side trip to Versailles and spent the day in that most beautiful park in the world located there.

The afternoon of our last day in Paris was spent at the headquarters of the Touring Club de France, where, with the assistance of one of the officials, we mapped out our course for several weeks in advance. In this work and in the future reference on the tour we obtained excellent results from the use of road maps published in card form. On one side of the card was a map showing all the roads in a district and keyed to similar cards of adjoining districts, and on the reverse side was a list of towns with distances intervening and the several points of interest adjacent to each town.

From Paris we struck south through a country where every hill top was crowned with an interesting village, highly cultivated fields and here and there a woodland plot adding to the picturesqueness of the route. A halt was called at Fontainebleau, while we inspected the famous chateau there, and thence to Puiseaux, where a stop for the night was scheduled. We had an amusing experience here in locating a hotel for the night's accommodations. Riding up the main street we came to a very pretentious hotel which we decided was entirely too sporty for us, and kept on riding around the town for a while, finally coming to a place on a side street which we considered suitable. After spending a very comfortable night and enjoying an excellent breakfast the landlord escorted us to the door, another one from that by which we had entered. Upon looking around when we were again in the street we found that we had been guests at the "sporty" hotel, having used the side entrance on our arrival.

VERSAILLES PARK, PARIS

Our trip that day brought us to Orleans at noon. Art galleries and cathedrals here received our attention until about 7 p. m. We decided to go on through the evening to the Chateau Chamford. Before arriving there we had the pleasure of being lost in the road at a fork where the sign posts on inspection showed no other information than the names of the roads. Taking the one that ran down hill we continued through the forest for some time, suddenly coming out into a large open space in the midst of which loomed a large dark mass which proved to be the Chateau.

The following morning after inspecting the local objects of interest and taking photographs, we took up our way again through many charming villages on the banks of the Loire, whose course we followed for several days. Stopping to visit the chateaux of Blois, Chamont and Amboise, our itinerary eventually brought us through Tours to Langeais, where is located a private residence equipped completely with the original carved furniture and elegant tapestries, stone fire-places and household utensils in use for 500 years.

For three days our course led through hilly country, passing en route through the old walled cities of Chinon, Poitiers and Angouleme. The road surface was excellent, but owing to the grades, the heat became oppressive and we changed our system of riding; we arose at 4 a. m. and would start immediately on the road, buying a loaf of bread and eating as we rode along. At 11 o'clock we stopped for lunch, and from then until 4 p. m. we would take things easy, seeing the sights and resting and then take up our ride in the cool of the evening. This program we found worked very satisfactorily as it enabled us to ride from 50 to 60 miles per day with very little discomfort from the heat.

We were now entering the famous grape country and our next large city was Bordeaux. The effect of the southern sun was apparent when we found, upon applying at

a hotel for accommodations, that the proprietor mistook us for Italians, due to the tan on our faces. At Bordeaux we located two of our fellow college men who came over on the cattle boat with us and who were living there for the present, and we had an enjoyable two days' visit with them.

On the wheel again, we passed through Mont-de-Marson and Bayonne, and on the world-renowned seaside resort of Biarritz. Here we indulged in an afternoon's pleasure on the beach, bathing in the bay of Biscay.

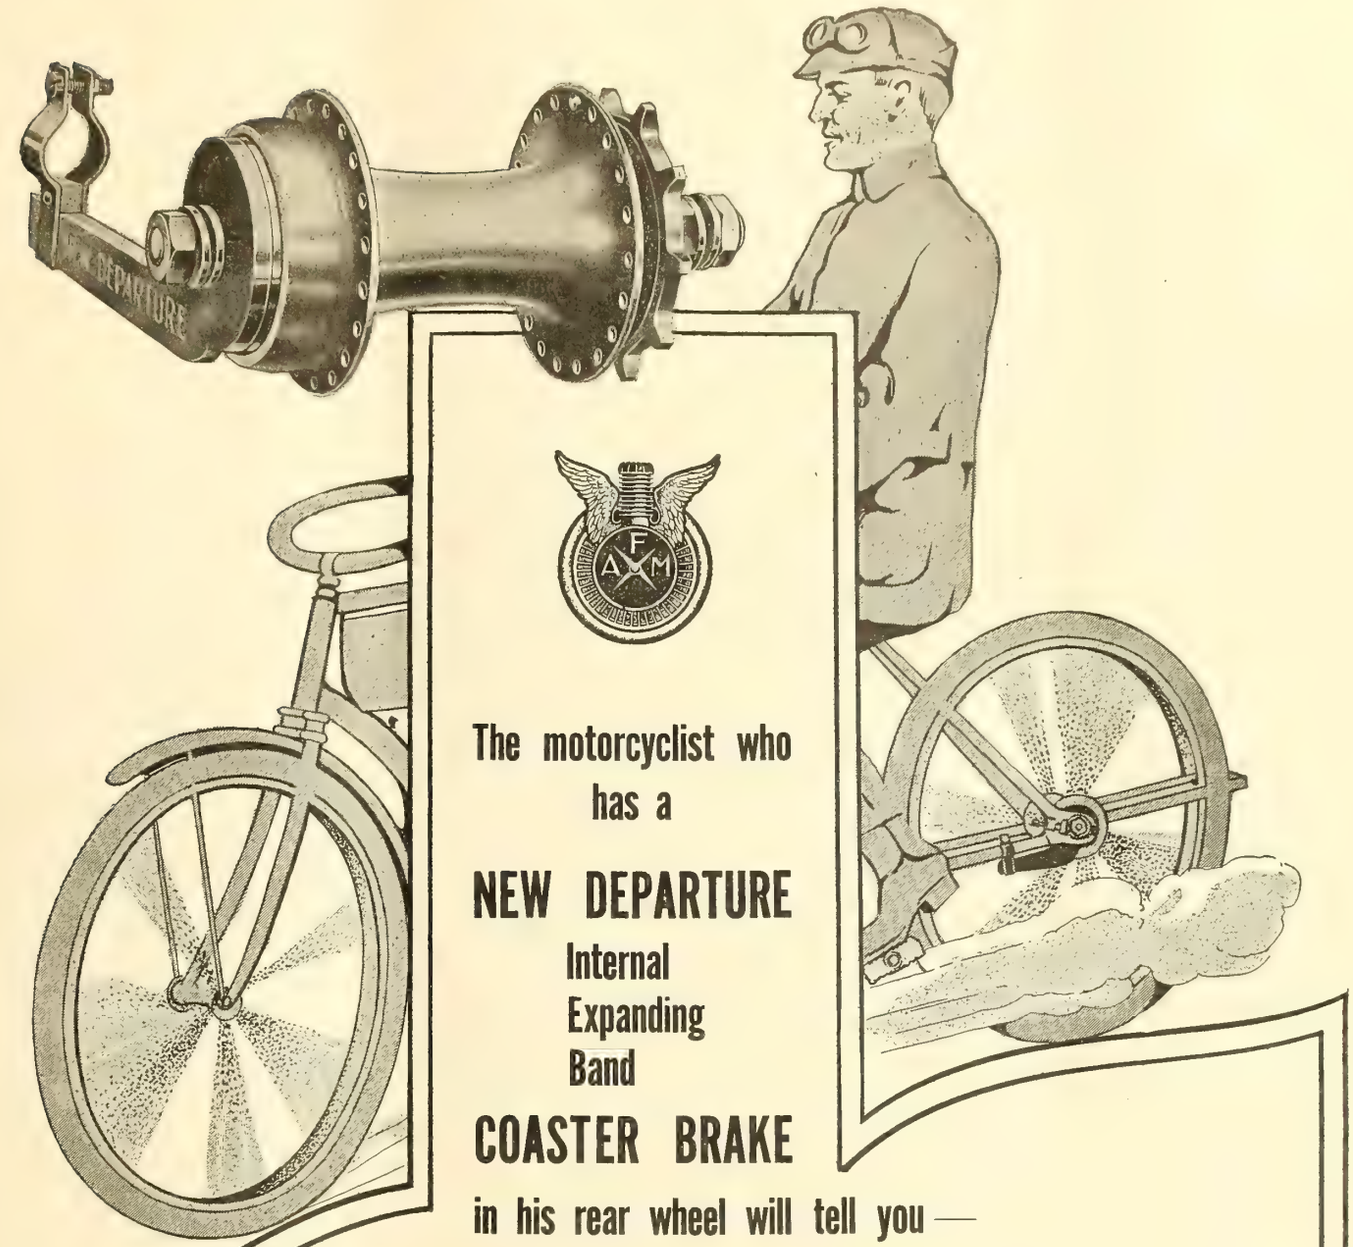
THE ROAD BETWEEN PARIS AND FONTAINBLEAU

Crossing the border into Spain we found that the law required a deposit of 72 francs, about $14.50, on our bicycles, with the customs officials. Not having that amount in change, we offered an American Bankers Association's check for $20. The officials, after some hesitation, decided they would accept this, but upon being informed that we expected the change they objected vigorously. The proposition of handing over actual cash in exchange for that strip of paper evidently not appealing very strongly to them. Finally they decided in our favor, threatening to shoot us should the check turn out to be other than as represented.

We were in considerable doubt as to where we could locate for the night as by this time it was quite late and our knowledge of Spanish was most meagre, but we were fortunate in locating a Frenchman, who acted as interpreter for us. At San Sebastian the next morning we purchased an English-Spanish dictionary and lost no time learning the Spanish words for bread, water, dinner and hotel. Most of that day was spent wandering through the streets of this quaint old town, seeing the sights and getting accustomed to the ways and habits of these people, whom we found so radically different from the French. The evening ride was over 25 miles of almost level road, winding about high mountains. Our stopping place that night was in a little village of about 200 inhabitants, and it required a diligent use of the dictionary for over half an hour to make our wants known to the innkeeper. Naturally the size of the village precluded the possibility of the hotel being other than very crude, but we were surprised upon entering our rooms to discover they were lighted by electricity.

Here began our first experience in mountain climbing, the heavy grades being more than compensated for by the most wonderful scenery we had ever beheld, through valleys and canyons and over ridges and around precipices of exceeding grandeur. Our stop for the day was at Pamplona, a city of about 27,000, with narrow streets and tiny shops and many curious customs. Here this being Sunday we attended our first Spanish church and were greatly interested in the services. That evening we again took up the mountain climbing. In one instance going steadily upward for three miles with a two-mile descent on the other side, arriving at the village of Viscarrel about 8 p. m. On our approach to the front door of the hotel two pigs came rushing out. On further investigation we found that the pigs, together with some mules, were tenants in the room next to the dining-room and directly beneath the room assigned to us. Our dinner that evening was cooked on the hot embers in the large fire place which was of such a size that we could comfortably sit within and watch the cooking. The next morning several chickens paid us a call before we arose, but on the whole the place was exceptionally clean and the food well prepared ond of the good old-fashioned kind —that is to say, it tasted well and didn't cost much!

It is now about two weeks since we left Paris and our cyclometers show over 1,100 miles since leaving Liverpool, and our wheels and equipment are in excellent condition.



TYPICAL WELL NEAR CHAMBORD

Dates for Buffalo Races Changed.

There has been a slight change in the date of the 10 hour amateur bicycle team race at Buffalo. The date now set is October 31st. The six day race for professionals will begin November 6th and end November 11th. On November 4th, the Saturday preceding, there will be a mixed sprint meet, in which all the riders will compete.

The track is now in course of construction in the Seventy-fourth Regiment Armory, and will be one of the largest indoor tracks ever built, being eight laps to the mile. The professionals signed up and paired off by Macfarland so far are: Fogler and Freddy Hill, Carslake and Ryan, Bedell Brothers, Stein and Palmer, DeMara and Lawrence, Drobach and Pye, Anderson and Wells and Jones and Jokus. Eddie Root and Elmer Collins will in all probability make up another team.

The motorcyclist who has a

NEW DEPARTURE

Internal Expanding Band

COASTER BRAKE

in his rear wheel will tell you —

It never fails to operate satisfactorily.

It is the most reliable part of his machine.

It has more power than he ever really needs — he can stall his engine with it.

It is strong to the point of indestructibility.

It has proven it's success.

Among all the motorcyclists who attended the big Buffalo F. A. M. meeting and whose machines were equipped with New Departure Coaster Brakes all reported the brake as giving excellent service and fulfilling all claims made by it.

THE NEW DEPARTURE MANUFACTURING COMPANY, Bristol, Conn.

Coaster Brake Licensors

MEETING OF UNITED CYCLISTS

President and Secretary Elected—Constitution Changed Reducing the Dues—To Raise Funds for Olympic Team.

Considerable material progress along the lines of completing the organization was made at the second regular meeting of the United Cyclists' Association, held in the assembly room at 1213 Fulton street, Brooklyn, on Monday, the 16th inst. There were also several important changes made in the constitution and bylaws.

The most radical of the latter was that making the dues $2 per year instead of $4, as at first decided. The proposition fee of $1 remains the same as originally prescribed by the constitution, but by unanimous vote it will be suspended for six months, so that now the only payment required with the proposition of new members will be that of six months' dues of $1. This change was made in order to quickly build up the membership. It was also found on comparing the fixed charges with those of similar organizations that the dues as originally decided were higher than ordinary. Another alteration was that of the name of the organization, it finally being decided to drop the word "association" from the title, thus making it United Cyclists.

The election of officers was taken up and owing to the lateness of the hour only two were decided—president, J. A. Hall, and secretary, W. R. Stroud. The nominations and election of vice-president, treasurer and the board of trustees was held over until the next meeting. The membership was materially added to, among those who were admitted being H. A. Gliesman, Jerome T. Shaw, Paul Bosace, all of New York, and George I. Kreamer, of Los Angeles, Cal.

Julius Bindrim, Brooklyn, was appointed chairman of the membership committee, and H. A. Gliesman, of Manhattan, chairman of the social committee. In considering ways and means for furthering the interests of cycling the proposition set forth in the Bicycling World and Motorcycle Review of the 14th inst. regarding the bicycle race at the next Olympic games was fully discussed, and it was decided to take up the matter actively in the near fuure. All present were requested to submit at the next meeting suggestions for methods whereby the organization could contribute to the fund.

The next meeting is called for Monday, October 30th, at 9 p. m., at 917 Eighth avenue, New York City.

Peculiar Result of Collision.

Two bicyclists of Hartford, Conn., figured in a collision on North Main, near Windsor street, Friday night, the 13th inst., and it ended in an unusual manner. The two were riding at a fair rate of speed when they collided. One of the two wheels was badly damaged, but the other escaped unscathed. The owner of the damaged wheel here created the sensation of the episode by suddenly seizing the undamaged bicycle and riding it up Main street as fast as he could pump the pedals, leaving the real owner standing open-mouthed. The police are now trying to find the man who appropriated the wheel, but so far without success.

Cullington Leads Atlas Riders.

By crossing the tape in second position in the final race of the point series of five races for members of the Atlas Bicycle Club, of Brooklyn, Wm. Cullington, on Sunday the 15th inst., put the finishing touches on what has proved to be a very consistent performance throughout the series. Previous to Sunday's race, which was a three mile handicap event, Arthur Dawson was high man with 10 points, Paul Smith 9 points, and Cullington 8 points.

The three miles handicap was won by James Mangels (1 min.); second, Wm. Cullington (45 sec.); third, V. J. Lind (1 min.); fourth, Wm. Kirchner (45 sec.); fifth, Frank Mehrman (15 sec.).

The series just closed is the club's first effort, and as shown by the appended score, was productive of keen competition, all of the races being well filled with starters, and a hot finish was the rule in every event.

The final score was as follows:

Wm. Cullington, 12 points; Arthur Dawson, 10; Paul Smith, 9; Harry J. Murphy, James Mangels, Victor Lind, 7 each; Wm. Kirchner, George Russell, 5 each; George Steinert, 4; Jerome Steinert, Chas. Hausenbauer, 3 each; A. Hausenbauer, A. Walcott and F. Mehrmann, 1 each.

Triangle Run of America's.

In the 150 mile triangle run held by the Century Road Club of America Columbus Day, Henry E. Johnson, of the Little Rhody Cycle Club, of Providence, R. I., made the distance in 9 hours and 44 minutes. This is the fastest time ever made around the triangle on a bicycle.

There were about 15 starters from Boston and about 25 in all, the Boston bunch finishing in about 15 hours. The roads were in excellent condition and the weather fine. All finished the run in good condition. Medals were given as prizes for all riders finishing in the time allowed.

The course of this run was North Attleboro, Norwood, Boston, Waltham, Marlboro, Worcester, Woonsocket and return to Providence, where the start was made.

Johnson also made the fastest time on the century run held on September 17th, and has made the "big triangle," including Malden, Mass., in 11 hours and 20 minutes. The fastest time previous to that was 11 hours 32 minutes, made by a Boston rider.

LEIMBACH LEADS MILEAGE CONTEST

Heads the List of Crescent Bicycle Club of Baltimore—October Expected to Prove a Record Breaker.

In the century mileage contest of the Crescent B. C. of Baltimore, Charles M. Thomas, who led at the end of August, has been nosed out by William A. Leimbach. During September only 4,532 miles were reeled off, including three centuries. The failure to cover a greater distance was due to the fact that the members were in training for the annual road race of the Crescent and Racycle clubs, which were held this month. If present indications count for anything October will prove a record-breaker, as the boys are now piling up a big mileage without any let up.

The standing, according to the report of Captain J. Fred Huber, is as follows: 1, William A. Leimbach; 2, Charles H. Thomas; 3, August T. L. Leimbach; 4, Fred M. Sanborn; 5, Fred E. Mommer; 6, Langdon M. Sanborn; 7, Alfred J. Baker; 8, J. Fred Huber; 9, George Peilstacker; 10, C. Edward Berigtold; 11, John W. Trost; 12, Thomas W. Baker; 13, Fred S. Plitt; 14, Charles Baquol; 15, Frank Fertitta; 16, John Andreas; 17, J. F. Solan.

Centuries to Gettysburg, Pa., Washington and Fort Meyer, Va., are on the program for the near future. A trip to Frederick is being considered. This ride is known to be the hardest century route in the State. The Crescents make this trip annually, especially in the spring, and the club is the only one making the run in a body.

Motorcycle Division, Bay City Wheelmen.

The Bay City Wheelmen of San Francisco, one of the oldest wheeling clubs in the country and one that was always to the front in the palmy days of the bicycle, has organized a motorcycle club within the club, and will take an active part in this branch of sport in the future.

Enough members have been obtained to make it possible to apply for admission to the Federation of American Motorcyclists. Permanent organization has been effected and the following officers elected: H. Robinette, president; H. Sappler, vice-president; F. Kletz, secretary and treasurer; D. Dunlap, H. Born, R. White and W. Wanowski, Jr., directors.

The old members who made the club a success in its early days are taking a great interest in club affairs and an entertainment and ball will be given November 17th. This will be in the nature of a grand reunion, and such men as Judge Frank Kerigan, Charles C. Moore, Judge Frank Dunne, Daniel O'Callaghan and Henry Day, who were all enthusiastic bicycle riders a number of years ago, will take part.

Real Money in This Tube for You

YOU are actually losing money if your stock of bicycle supplies does not include NEVERLEAK, the wonderful Tire Fluid that automatically heals punctures on the run without the rider having to dismount. Thousands of dealers are making big money handling

NEVERLEAK TIRE FLUID

which is the only legalized tire fluid sold to-day.
Besides the fine margin of profit that NEVERLEAK pays there is also a big list of premiums that have value written all over them.
It will pay you to investigate. See your jobber about it, or write us direct.

Reliance

(REG. U.S. PAT. OFF.)

In Special Motorcycle Type

A single drop of water will put every spark plug out of business—except one—the "Reliance." Put the Reliance in a glass of water and it continues to spark.

Do you appreciate the full import of this statement? Water is the greatest short-circuiting medium known; if water won't affect a plug, nothing else will. Carbon and soot have absolutely no effect upon "Reliance" Plugs. Its patented electrical action destroys them as fast as deposited.

When you realize that **ninety per cent.** of all plug troubles are caused by **carbon** and **soot** you begin to appreciate why the Reliance should be your first and last choice; you see why those who have once used Reliance troubleless plugs will have no other.

Regular Type $1.00
Magneto Type $1.25

For sale by most dealers; if yours does not carry, write and we will ship prepaid at prices quoted.

MORE Kokomo Tires will be made during the next twelve months than ever before, because those made in the past have proved so good that riders and dealers not only come back for repeat orders, but bring their friends as customers. That's the kind of business that we like. It is based on the merits of

KOKOMO TIRES

For bicycles two of the Kokomo leaders are:

Kokomo Defender Special

This popular guaranteed tire is specially designed and constructed for road use. It is made from the best materials obtainable, being carefully built up by hand with pure para inner tube, and, owing to the very high quality of the inner tube used, a puncture is very easily repaired.

Kokomo "New Oxford"

A medium price tire, yet so good in quality that it does not do it justice to call it a medium grade tire. We have built these tires so that in case of puncture they will not be worthless but can be repaired. Also furnished in smooth tread.

Every dealer handling these tires is doing a benefit to his customers and to his own bank balance.

Pennsylvania VACUUM CUP Bicycle Tires

Stocked by the leading hardware and sporting goods jobbers throughout the country.

The raised rubber cups moulded on these tires absolutely prevent skidding on wet or slippery pavements or in mud. The cups "hold the road" better than any known form of non-skid, and by ensuring safety and better traction power they admit of increased speed. The rubber knobs render these tires exceptionally long wearing. They last.

The high quality of materials used in the manufacture of Pennsylvania Vacuum Cup Tires enables us to give with each an unqualified season's guarantee. Each tire carries our yellow guarantee tag.

Made by an Independent Company with a selling policy which ensures a fair margin of profit to jobber and dealer. Write for profitable particulars.

SPLITDORF MAGNETO

"Always There"

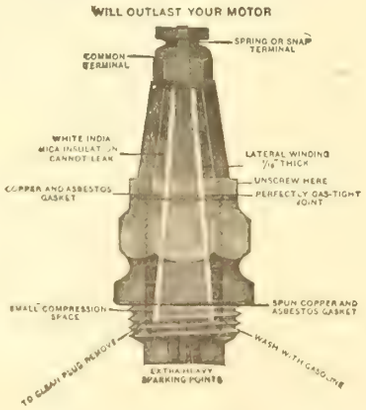
Champions Demand PLUGS

As an example of the universal demand for SPLITDORF PLUGS the following communication from Frank Hart, the country's amateur champion, is self-explanatory:

> **"Will you kindly send me a few of your invincible spark plugs for use in my Indian racing machines. I have used your spark plugs for the past year in all my racing machines and have never lost a race through a spark plug sooting up."**

And Frank Hart's experience has been duplicated by every wise motorcyclist in the country be he a racing man or just an ordinary road plugger.

Please remember, too, Mr. Motorcyclist, Jenatzy, Europe's famous automobile racing driver, used SPLITDORF motorcycle plugs in his victorious Pipe car this year and writes:



> **"Never have I obtained better efficiency from the motor on my car."**

And, what is more, the Clement Lebaudy dirigible in its memorable flight between France and England was equipped with SPLITDORF PLUGS and, that they worked to perfection, despite high pressure engines and terrific speed only proves what motorcyclists know of their perfect quality.

To go even further, Gagno, the Italian "sky-pilot," uses SPLITDORF PLUGS in his aeroplane—fouling is unknown in their usage.

You cannot make a mistake in insisting upon SPLITDORF PLUGS.

And, incidentally, keep your eye peeled for the SPLITDORF MOTORCYCLE MAGNETO. The biggest individual manufacturer is using it exclusively—he is the forerunner for the SPLITDORG MAGNETO—knows true merit when he sees it—so be wise and INVESTIGATE.

Pope Motorcycles

Trade Follows the Pope Trademark

THE famous Pope Trademark is the recognized seal of quality. It stands for mechanical excellence and a square deal. It has inspired public confidence for over thirty years because it has always been identified with high-grade, standard products. Pope and Quality are today synonymous. It saves all argument on the Dealer's part when he can point to the Pope Trademark for Pope Quality is known the world over.

QUALITY—NAME—PRICE

IN these three selling essentials, Pope Motorcycles have the advantages of all competitors. The Pope's credentials are absolutely high-grade materials throughout, expert workmanship and correct design; the far-reaching reputation and prestige of the "Pope" name; and the highly attractive price, **$175.** What more could the dealer ask?

The Perfected Product of a Famous Factory

THERE is nothing experimental about the Pope Motorcycle. The efficiency of every feature has been demonstrated by long experience and exhaustive preliminary tests. The Pope Motorcycle was bound to be a success from the start. It excells because it is the result of Pope Experience; Pope Resources; Pope Quality; Pope Methods; and Pope Skill. It is the perfected product of a factory long famous for the quality of its output.

The BROOKS B104—a perfect saddle of great strength and comfort. Made of the finest materials throughout, and specially designed to give a low-riding position.

It is—has always been

an acknowledged fact that of the few best things in the World of Wheels, the BROOKS is BEST among Saddles.

And there are many reasons for that fact; here is one—

THE BROOKS

is the only saddle that can embody the original and only genuine Compound-Springs.

Those springs absorb vibration within themselves and, by their compensating action, totally eliminate the slightest tendency to bounce—

And no other springing system will do that—and that alone must interest your customer, for to him it means unequalled comfort and unequalled satisfaction—to you, a "talking point" of the utmost value in the making of the sale.

A Bunch of New Victories for Goodyear Motorcycle Tires

18 ripe juicy "firsts" picked off by invincible Goodyear BLUE STREAK Racing Tires. Results on all sides proving, other things equal, that a machine equipped with these tires is equal to a race already won. An enormous demand for Goodyears.

Here are the facts: At Birmingham, Ala., on October 5, Balke won 5-mile race and 10-mile on 6th—Hasha won 5-mile on Saturday. Goodyear Tires of course.

At Indianapolis, October 8th, Blue Streak Tires won 10 firsts and 4 seconds out of 12 events. Baker lowered three track records, making 1-mile in 54 2-5 seconds—5-mile in 4 minutes, 55 seconds and 10-mile in 10 minutes, 2 seconds.

At Memphis, Tenn., October 4th, Goodyears won three races. Read more about these winning tires—

5 Great Expense-Less Tires

Compared with other motorcycle tires, Goodycars are expense-less for this reason: They cost no more than do other makes—but they **give more service.** They **save** future waste.

The high grade of material used and the method of construction **differentiates** Goodyears from all others—guarantees these tires against 99% of common tire-troubles. A blow-out, wear-out, leak, rim-cut or puncture is a rarity with a Goodyear.

Hence with greater serviceability assured and the repair item practically done away with, Goodyear Tires **are** expense-less and they actually cost **less** in the **long run.**

GOODYEAR
BLUE STREAKS
Stock Motorcycle Tires

Adapted to **motorcycling** requirements by the world's greatest and most successful Auto Tire builders, **Goodyear Motorcycle Tires** offer advantages found in **no** other makes—are the speediest, strongest and **most enduring** tires in the field. This statement is based on **performances** that you yourself are reading about in every issue of this paper.

One of these big features is **endurance.** This extra endurance is secured by the adoption of better materials **throughout** and a **tread thicker** than that found on any other tire. We test our tread and the tread of every other make on an endurance machine. If ours isn't the toughest, doesn't outlast **all others,** it is **never** adopted. Hence the **wear-ability** of every Goodyear Tread and every Goodyear Tire is **known to a certainty** before it ever gets onto the market.

You pay for this **wearability.** Why don't you secure the **most** for your money in these 5 expense-less

Trouble-Proof Tires

A tire for every road condition—a tire with bead moulded to exact duplicate of your rim—a tire that means a saving all along the line.

1—**Goodyear Corrugated Tread Tires**—For the average give-and-take road.

2—**Goodyear Studded Tread Tires**—For mud, sand, snow and ice travel.

3—**Goodyear Non-Skid Tires**—For city pavements.

4 & 5—**Goodyear Blue Streak Racing Tires**—Hold all world's records. One tire for dirt tracks, another for cement or board.

Send for "Tires of Old War Horse"

A fascinating story of the actual breaking of a record. Chock full of money-saving tips to tire buyers. Also brings full information about the Goodyear Quintette of Motorcycle Tires. WRITE TONIGHT. You'll have book by return mail.

Vol. LXIV. New York, U. S. A., Saturday, October 28, 1911. No. 6

HENDEE MAKES CHICAGO CHANGE

Relieves Branch of Retail Distribution—Edwards-Crist to Handle Local Sales of Indian Motorcycles.

Owing to the rapid growth of the motorcycle industry in the Middle West, the Hendee Manufacturing Co. has found it necessary to arrange plans for a greatly increased and wider distribution of Indian motorcycles throughout this territory, and as it is intended to handle this business through its present Chicago branch, the great volume of business that will be thrown on this establishment in the future, necessitates that it be relieved of the detail and work of retail local sales, which it has heretofore handled.

With this object in view, negotiations have been pending for some time with the Edwards-Crist Mfg. Co., of Chicago, with a view of it taking over the local retail business, whereby it will handle the sales of Indian motorcycles in Cook County, commencing November 1st. Heretofore the Edwards-Crist Mfg. Co. has handled several other makes of motorcycles, but in view of the expected increase in business that will result from the new arrangement it has canceled all other contracts of this nature, and will hereafter sell Indian motorcycles exclusively in the Windy City and Cook County.

The Edwards-Crist Mfg. Co. is widely and favorably known as one of the most extensive houses of its kind in the Middle West, and is noted for its up-to-date and progressive methods. Its splendid organization and unusual facilities, including five different stores in the city of Chicago, give it an equipment which will enable it to handle the Indian business on broad lines, and to the satisfaction and convenience of its customers; and undoubtedly the new arrangement will prove of mutual advantage.

Kicherer Incorporates His Agency.

Incorporated under New York State laws with $10,000 capital, the Sun Motor and Supply Co., of New York City, has been formed to handle Flanders and N. S. U. motorcycles in the metropolitan district. E. C. Kicherer is president and John Lentz vice-president of the new concern. Kicherer, of course, is well known as the former American manager of the N. S. U. Motor Co., whose business in this country is taken over by the Sun company. Lentz has been associated with Kicherer for some time, and as the latter recently secured the metropolitan distribution of Flanders motorcycles the formation of the company is a step taken to permit of the conduct of the business on a bigger and more extensive basis.

The company has acquired the former N. S. U. quarters at 206 West Seventy-sixth street, New York City. In addition to Flanders motorcycles, a full line of N. S. U. models will be carried, the 1912 line being expected to arrive December 1. Parts for past models of N. S. U. machines, as well as for the Flanders, will be carried in unusually complete stocks. For territory the company has been allotted Greater New York, Long Island, and the following counties in New Jersey: Monmouth, Middlesex, Union, Essex, Hudson, Passaic and Bergen. Sub-agents will be appointed, and large stocks of machines and parts carried, in order that the factory service at short range may be rendered to dealers and owners.

SCHWINN TAKES OVER EXCELSIOR

Acquires Plant and Business, Contingent on New Lease of Factory—Purchase Price Given as $147,500.

Following the negotiations which have been pending for some time, Ignaz Schwinn, of the Arnold, Schwinn Co., Chicago, practically consummated the purchase of the name, good will and plant of the Excelsior Supply Co. on Friday last. It is understood that Mr. Schwinn has paid $147,500 for the business, and that he will take title dating from October 16th. The sale, however, is contingent on Mr. Schwinn being able to secure a new lease on the Excelsior plant for a period of two years and the privilege of renewal of one year. The Excelsior Supply Co. now has a lease on the factory for twenty years and the approximate rental is $23,000. Seventeen years is still to run on this lease, but Mr. Schwinn desires to make a new lease for the period stated. Pending the result of negotiations in regard to the lease, Schwinn is tentatively in charge of the plant.

Seven members of the creditors' committee met in Chicago last week to go over the matter and an agreement was reached after Mr. Schwinn had made several offers. The creditors' committee has full power to act in such matters through the virtue of power of attorneys granted to them by the other creditors. If this deal is consummated it is estimated that the creditors will receive about 40 cents on the dollar for their various claims. It is understood that the present Excelsior force will be continued by Mr. Schwinn and that

the present Excelsior policy will remain and similar models will be manufactured without the loss of a day's time and, no doubt, on a larger scale.

The Excelsior Supply Co. was organized in 1906 for the purpose of manufacturing motorcycles, by George T. Robie, the father of Fred C. In addition to the manufacture of motorcycles, this company also had a large automobile supply jobbing business, and later began, unfortunately, the manufacture of motor car engines. This latter move, however, proved to be the undoing of the company and finally resulted in its being placed in the hands of the creditors last fall. George T. Robie had died in the meantime and Fred C. turned over all his property to the creditors, whose claims amounted to $897,000. It was decided at the time by the creditors to appoint a committee of seven to continue the business and this committee had full power of attorney to act. The committee found that every line of the business, except that of the manufacture of motorcycles, was running at a loss, and hence dropped the other departments and gave their full attention to the motorcycle. The business has grown to a healthy state under this arrangement and it is stated that some 6,500 machines were sold last year, and that since the entrance of the Excelsior into racing events the business has taken a decided bound. There are now in the course of manufacture between four and five hundred machines, which will probably be sold in a short time, and it is almost certain that the creditors' committee would not feel authorized to continue the management of the business after these machines are disposed of.

If the contingency is overcome and the sale consummated, Mr. Schwinn will proceed to manufacture motorcycles without a hitch of any kind and the business will continue without the loss of a minute or a day, probably along larger and more progressive lines. This title, dating October 16, of course will include the plant, machinery, tools and good will and between four and five hundred unfinished machines, as stated.

Mr. Schwinn is well known in the trade, having been a manufacturer of bicycles, marketed largely through the jobbing trade, for some twenty years, and has built up the business, calling for an output of 100,000 wheels a year.

Aluminum Rim on English Market.

An aluminum bicycle rim has appeared on the English market. It is made of a patented alloy known as chrome aluminum, which is claimed to possess all the advantages of aluminum without any of its defects. It is so constructed that it has no rivets or joints. In addition to being rustless, the makers guarantee it to be as strong and stiff as a steel rim, these claims being based on the results of severe tests carried on during the past two years under service conditions.

N. Y. DEALERS IN ACTIVE SESSION

Instalment Sales and Open Mufflers Under Discussion—Resolve Against the Cut-Out—Plan a Dinner.

The regular meeting of the Motorcycle Dealers' Association of Greater New York was held at Turn Hall, 917 Eighth avenue, New York, on Wednesday evening, October 25. The meeting was well attended and a number of important matters pertaining to the future of motorcycles in Greater New York were very actively discussed. A committee was appointed to arrange for a dinner which the association will attend with the motorcycle manufacturers and their representatives during show week. This committee will probably co-operate with a similar committee from the United Cyclists.

A resolution denouncing the open muffler fiend as a detriment to the popularity of motorcycling and a nuisance to the public at large, and instructing the secretary to draw up a petition to present to all manufacturers of motorcycles, requesting them to discontinue placing the cut-out on the machines, was unanimously adopted after many strong remarks had been made in favor of it.

These resolutions also suggested that the members of the association urge the discontinuance of the use of the muffler cut-out by any riders coming into their stores and also requesting them to post placards in their stores and shops with the same intent.

The association now has on its membership roll every eligible motorcycle dealer in Greater New York with the exception of two and they have already specified their intention to enroll soon. At the meeting four applications were received, every one of which was from dealers outside of Manhattan, who have realized the important advantages that can be gained by joining the organization.

The instalment proposition again came in for its share of discussion, and it was reported that since this plan was started approximately 25 sales have been effected by the members of the association and apparently everything pertaining to the transaction was satisfactory to all concerned.

Baker to Give Up Uptown Store?

Changes are impending in the uptown branch of F. A. Baker & Co., New York City, metropolitan distributers for Indian motorcycles. Baker is considering dropping the branch located at 2142 Broadway and has given H. F. Bidwell, manager, an option on it until November 1. Bidwell is endeavoring to form a stock company to take over the store, in which event he will continue as manager, and may add other lines. If this deal does not go through Baker probably will continue to operate the branch.

Mercier to Become Proprietor.

Ferdinand Mercier, one of the best known and most likable of the motorcycle racing men in New York City, who has had charge of the repair department of F. A. Baker & Co.'s uptown store, is going into business for himself. He will locate in Brooklyn, the exact spot yet to be selected, and will specialize on repair work exclusively, a field that offers good opportunities. He will not take the agency for any machine.

New Yorkers Advertise Instalment Plan.

That all who run, or walk, or ride, for that matter, may read, and learn that it now is possible to buy motorcycles, among other things, a la "so much down and so much per week," the Motor Finance Co., New York City, is running small advertisements in the local papers. The company has a time payment arrangement with the local motorcycle dealers.

Standard Welding's Chicago Branch.

The Standard Welding Co., of Cleveland, O., maker of tubing, steel rims and cycle parts, has discontinued the agency with L. F. McClernon & Co., of Chicago, and has established in that city a branch office. The company's representatives will be Messrs. B. A. Quayle and A. C. Clark, having their offices in the People's Gas building.

All Day in Tacoma's Merkel Agency.

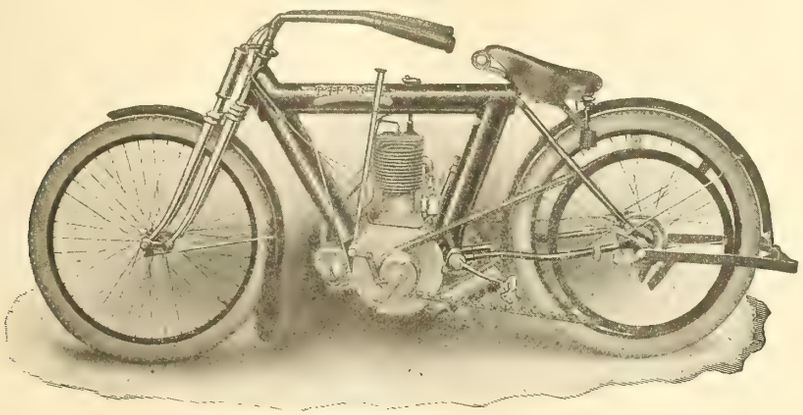
Ray E. Day, a popular young motorcyclist of Tacoma and for some time past identified with the "Flying Merkel," has bought out the interest of Ray Packard, formerly associated with him, and will handle the "Flying Merkel" in his attractive show rooms at 944 South D street, Tacoma.

Lewis Specialty in Cycle Trade.

The Lewis Specialty Co., capital $3,000, has filed incorporation papers at Lansing, Mich. The company will handle automobile, bicycle and motor boat specialties. Among the stockholders are James M. Haynes, Richard Shoemaker, R. H. Shoemaker and C. E. Lewis.

Columbus Dealers in Larger Store.

The progressive Columbus (O.) dealer, the Franklin Cycle and Supply Co., has outgrown its present quarters and will be moved to its new building erected especially for the company on East Gay street, just west of Fourth. Phil Vogel will be in charge.



Camplejohns Open in Jacksonville.

Charles and Bert Camplejohn, under the firm name of Camplejohn Brothers, have opened a bicycle and motorcycle repairing business at 22 East Beaver street, Jacksonville, Fla.

PIERCE ANNOUNCES ITS 1912 LINE

Four-Cylinder Model Continued—Increased Stroke on Singles—Other Mechanical Refinements.

Bristling with new features, while perpetuating the foundation lines upon which their predecessors were constructed, the 1912 models of Pierce motorcycles, produced by the Pierce Cycle Co., Buffalo, N. Y., will comprise four machines, three five horsepower singles, essentially replicas in a broad sense, and the distinctive four cylinder seven horsepower type, which continues as the only American motorcycle employing four cylinders. The single cylinder models and prices will be as follows: 12A, $225; 12B, $250; 12C, $265. The four cylinder will list at $400, showing no price advance over the 1911 model. All

PIERCE "12C" MODEL

models are fitted with magneto ignition exclusively.

In the trio of singles, model 12A is continued from 1911 with minor changes, and is the lowest priced machine in the Pierce line. Models 12B and 12C are duplicates, save in transmission form, the 12B being equipped with a flat belt and hand idler, and 12C with V belt and hand lever operated clutch contained in the engine pulley. In external appearance the only radical changes that "stand out" are the shortening of the frame head and fork cartridge, dropping of the handlebars, and a new form of exhaust tube and muffler positioning.

Models 12B and 12C being similar save in details noted, a single description will suffice for both. They represent an evilution of model 12A in advanced form. The engine design has been altered throughout. The cylinder is larger with wider cooling flanges, and the head flanges are vertical instead of horizontal as on 12A. The bore remains the same, 3½ inches, but the stroke has been increased ¼ inch, now being a full 4 inches, giving an increase in horsepower. A block rating of 5½ horsepower is claimed. Flywheels and crankcase also have undergone enlargement.

In keeping with an increase in the size of the explosion chamber, the valves have been enlarged ¼ inch, giving interchangeable inlet and exhaust valves 1⅞ inches in diameter. To take care of the greater cylinder volume adequately, the exhaust tube and muffler have been increased in capacity and greater muffling has been obtained without appreciable sacrifice of power. In the valve gear, direct cam lifts have superseded finger lifts, and the tappets have been capped with fiber to silence the contact click between the push rods and valve stems. The magneto has been rendered immune from oil working in from the motor through the gear case, by placing it entirely outside the gear case. The magneto platform is cast integral with the motor base, and a Herz magneto is used. The use of ball bearings on the main and crank shafts is continued, with improved adjustment provision. Piston rings are wider and better steel is used in them.

In place of the flanged rear pulley, one without flanges has been adopted. The pedaling chain idler, heretofore a separate unit, now is incorporated in the bottom bracket. A new type of fork cushion has been designed to prevent breakage of the cushioning springs. Instead of the conventional tank filler caps of the screw type, spring caps are used. In improved form, the Breeze carbureter will be used on all models. Handlebar tubing has been increased to one inch diameter, and the main bar members have been dropped to parallel the top frame tube. The frame head has been cut down. Changes in the head and handlebars make for easier riding position and neater appearance of the machine. A roller contact on the grip control sleeves gives easier operation, and an index on the bar on the throttle side gives a throttle setting of the grip for starting.

Other sundry refinements include a strengthened rear mud guard clip, insuring the attachment of the guard to the frame, a new supporting clip for the stand, and a buffer on the lower frame tube to prevent denting when the front fork crown swings around. Improved quality and workmanship also are embodied in the new models.

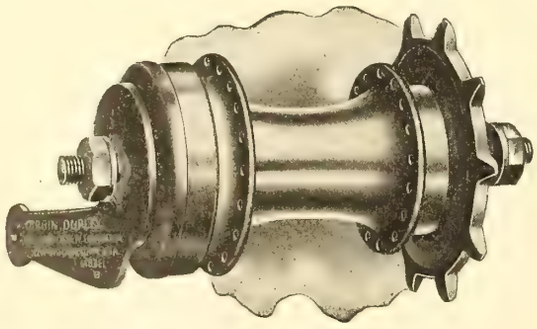
No radical changes have been made in the four cylinder model, the alterations representing a refinement born of experience and experiment. The most important change is in the oiling system, wherein the present gear pump is supplemented by a splash system, and the crank case has been re-designed to accommodate the combining of the two forms of lubrication.

Wider piston rings are used and they are pinned to prevent turning. Bronze bearings in the motor are continued without change, the same applying to the design of crank shaft and connecting rods. The crank case has been made oil tight, assuring the exclusion of stray oil from the magneto, distributor and flywheel. An outside oil gauge has been fitted, which may be read from the saddle. The turning of the oil cock from the saddle also is facilitated through a connecting rod leading to the top frame tube. New style valve lifters eliminate the pumping of oil outside the motor through the suction of the push rods, and the exterior of the crank case is highly finished.

The gear shaft connecting the transmission with the rear wheel has been redesigned, and the flywheel now is mounted on the crank shaft by taper and key. All transmission gears are fastened in the same manner. Clutch pins are larger. To render easier the gear changing and control, the gear shifting lever has been changed to the right side of the frame, having been on the left heretofore.

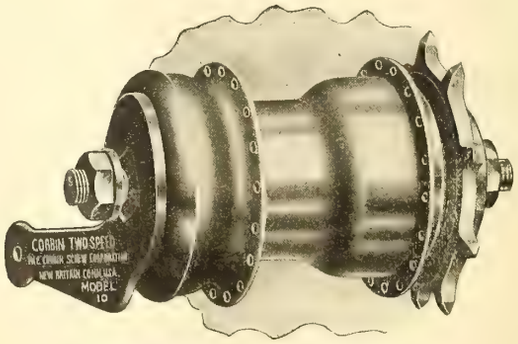
The four cylinder model also embraces new features common to the singles, such as larger handlebar tubing, roller contact grip sleeves, self contained rebound spring in the fork cartridge, frame tube bumper, and mud guard and stand clips of new design.

Such standard Pierce features as tank-in-the-tube-frames, and Pierce hygienic cushion forks, long wheelbase, mechanical valves and high powered motors are continued on both models.



Indians That Would Help Business.

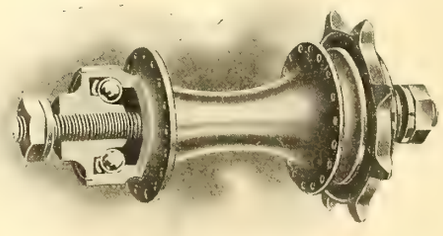
"Indian Motorcycles for Commercial Purposes" is the title of an attractive and interesting pamphlet recently issued by the Hendee Manufacturing Co., Springfield, Mass., illustrating and describing the uses to which motorcycles profitably are being used in business. Among the occupations shown in which motorcycles have proven most successful are for police, municipal, rural free delivery, telephone and telegraph service, salesmen, ministers and physicians. The Hendee company also has issued a special catalog devoted to a description of the 2¾-horsepower single, which is designated as a "runabout" and its adaptability as an efficient and economical general utility machine is emphasized.



THE CORBIN SCREW CORP
CORBIN
NEW BRITAIN, CONN. U.S.A.

¶ Chief of the reasons why there will be no change in Corbin duplex coaster brakes and Corbin two-speed coaster brakes for bicycles for 1912 is that all the "1912 improvements" were put in a long time ago and have been in ever since. No one that we have found has been able even to suggest further improvements.

¶ Therefore, for bicycles the 1912 Corbin offerings are:



Corbin Duplex Coaster Brake

Corbin Two-Speed Coaster Brake

Corbin Front Hub

Corbin Rear Hub

THE CORBIN SCREW CORPORATION

New Britain, Conn.

Licensed Coaster Brake Manufacturers

NEW YORK, OCTOBER 28, 1911.

Carrying Passengers in Front.

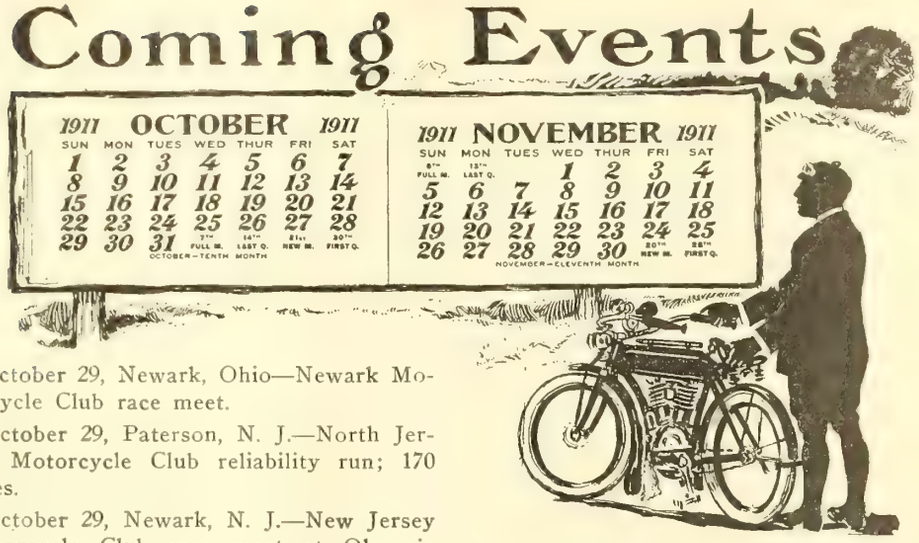
Whether or not the carrying of more than one person on a motorcycle, even though it be provided with an extra seat of standard construction, is or is not dangerous is an open question, but at any rate the authorities of the District of Columbia evidently think it is, for they have secured an amendment to the penal code forbidding the carrying of more than one person on a motorcycle equipped with more than one seat unless a special permit be secured. This regulation undoubtedly will discourage tandem riding and the sale of tandems in the District, and indirectly discourage the sale of motorcycles, for many sales are traceable to tandem rides which give ultimate purchasers their first taste of motorcycling pleasures.

There is no question but that the fixed prohibition of carrying passengers on informal and improvised "seats" such as the top frame tubes, tanks and handlebars is just, and such riding should be suppressed for the public safety, if not for the safety of the riders of a motorcycle so operated. With a tandem, however, the element of danger is not so great. The safety of tandem riding largely lies with the degree of skill possessed by the passenger, for many skids and mishaps can be avoided by the mastering of the art of balancing and leaning in or out as the situation of the moment may require. The skill and temperament of the operator of a tandem motorcycle also is a factor to be reckoned with, for if he or she is reckless accidents are bound to be more frequent and disastrous than if the operator is cautious.

There is no gainsaying the fact that there is a greater element of danger in the operation of a motorcycle carrying more than one person than with one toting a single person. On the other hand, there are thousands of tandem riders throughout the country who are enjoying motorcycling with perfect safety because they have mastered the art of tandem riding, which is an art just as much as is the learning to operate a machine. Many a tandem passenger has been "scared big" on his first ride "on behind," either through the recklessness or mischievousness of the operator, who has indulged in road burning, corner cutting and other such stunts. However, most of the so-called tandem accidents have happened where the passenger was in front of the operator.

That it should be necessary to "see the police" and convince them that one is competent to carry a passenger on a regulation tandem seat of a motorcycle or a bicycle is unreasonable and an interference with a constitutional liberty. If the motorcycle dealers and riders of the District of Columbia do not secure the repeal of this section of the ordinance it means for the former a brake on business, both directly and indirectly, and for the latter a curtailment of pleasures heretofore enjoyed.

The Lack of Competent Repair Men.



There is a world of truth in the remarks in another column of a motorcyclist concerning the lack of really competent repair men in and around Greater New York. Nor does this condition apply to that district alone, but to other large cities also. There are a great many alleged "repair men" who acquired what smattering knowledge of motorcycles they may possess by tinkering with machines at the expense of owners. Machines were brought in for repairs; the "repair man" did not know what the trouble was, so he just started on a blind hunt for it, which often involved the complete dismantling of a motor in the endeavor to locate a trifling ailment. And many the time the ailment not only has remained undiscovered, but the machine was in worse condition after being dissected and "pawed over" than when it came into the shop.

Not all motorcycle shops in Greater New York are of this sort, but there positively are altogether too many that can be counted in. There are mighty few dealers or repair men who have had experience in the factories, but there is no better place to secure a first-class education on motorcycle troubles and how to remedy them. Into the factories come machines in all stages from one with a "knock" to one that is ready for the scrap heap. In the winter or early spring, or whenever business is dull with the dealer, the best possible investment which he can make, either of his own time or that of one of his employes, is to either go himself or send his man to the factory he represents for a few weeks to brush up in the repair department and familiarize himself with the new models.

Wherever racing flourishes the ability to "tune up" machines is a rare asset that will bring its possessor many dollars. But it is not the racing end that requires the attention of "trouble men" so much. Many riders who indulge in racing are fairly expert in getting the speed out of their machines themselves. On the other hand, there is the great and growing body of tourists who care nothing for racing, but who do want to enjoy the pleasure of riding their machines in a rational way. Many of them do not care to equip themselves with a mechanical education in order to enjoy motorcycling, and others are well satisfied to acquire only a superficial knowledge of their machines sufficient to insure their operation under ordinary conditions.

When trouble of a puzzling or serious nature develops these classes of riders do not care to slip into overalls and try to find out "what's what." They much prefer going around to see a repair man, whose business is finding and remedying trouble, and they do not mind paying a fair price (and sometimes it is most unfair), but they want results, not tinkering. It is to the interests of the manufacturers and agents in the large cities at least to see that competent repair men are on hand to render good service to those who require it.

Coming Events

October 29, Newark, Ohio—Newark Motorcycle Club race meet.

October 29, Paterson, N. J.—North Jersey Motorcycle Club reliability run; 170 miles.

October 29, Newark, N. J.—New Jersey Motorcycle Club race meet at Olympic Park.

October 29, Guttenberg, N. J.—Metropolitan Motor Racing Association, open motorcycle meet.

October 30, Woodstock, Ont.—Motorcycle races.

November 5, San Antonio, Tex.—San Antonio Motorcycle Club race meet at International Fair.

November 7, Great Neck, L. I.—Bicycle carnival, four events, open. Auspices of the Great Neck Cycle Club.

November 11, Gulfport, Miss.—Motorcycle races at Gulf Coast Fair; open.

November 12, Floral Park, L. I.—Ten mile handicap road race, Century Road Club Association, Eastern Division. Rain date November 19th.

November 20-25, London, England—Annual Olympia motorcycle and bicycle show.

January 6-20, New York City—Twelfth annual automobile show in Madison Square Garden; motorcycle section included in first week.

January 20, New York City—Fourteenth annual ball of the Century Road Club Association, Eastern Division, at Alhambra Hall, Seventh avenue and One Hundred and Twenty-sixth street.

CORRESPONDENCE

Referee Gresham Explains.

Birmingham, Ala., October 18, 1911.

Editor Bicycling World and Motorcycle Review.

I note an article in your last week's issue, October 14th, under headlines "Hot Time in Sunny Alabama," giving an account of the races held here, October 5th to 7th, inclusive; in which appear several statements to which I wish to call your attention and which I believe you should get right.

The part I take exception to is in regard to the scrap between Jake DeRosier and Robt. Stubbs. This scrap did not occur on or near the track, it happened about two hours afterward at the Hillman Hotel; in fact I had gone home and did not learn of it until the next morning, and as for my taking Stubbs's side of the question, it is out of all reason, as I was not even present.

Now in regard to the statement that Birmingham is an Indian town and where no other riders can get a square deal is another misstatement, as such is not the case, as I am quite sure that all riders will agree that as referee I have ruled to all alike, as I have certainly tried to treat all alike regardless of the man or machine.

Possibly some the exceptions were taken because I had the races run in heats, where more than four were entered in any one race, and I will say that as long as I am referee I will do the same, as I do not deem it safe for more than four big sevens to be on the track in a race at one time, that it, at this track here.

(Signed) W. D. GRESHAM, Referee.

What "A" and "B" Say About Motors.

To the Editor of the Bicycling World and Motorcycle Review:

Please decide the following: A say (1) That there are one, two and four cycle motors. (2) That two cycle motors are made only in two cylinder form. (3) That a four cycle motor makes two strokes to one explosion. B says: (1) That there are no one cycle motors, only two and four cycle. (2) That they are made in one, two and four cylinder form. (3) That a four cycle motor makes four strokes to one explosion. Who is correct? A. K.,

Buffalo, N. Y.

(1) B is right. (2) Two cycle motorcycle motors are made with one and two cylinders. Four cycle motorcycle motors are made with one, two and four cylinders. (3) B is right.—Editor.

HONORS DIVIDED AT SACRAMENTO

Seymour Leads Professionals — Alzina Three Times Winner of Amateurs—Inter-City Championship.

If the press agents tell the truth, Ray Seymour made money at the rate of $100 per mile, for five miles, by winning an event at that distance at the annexation jubilee motorcycle race meet held at Agricultural Park, Sacramento, Cal., on the 20th inst. Seymour defeated Collins and Albright for what was stated to be a $500 purse. Maybe it was, but——? Harry Alzina was the king pin of the amateurs, winning three events, although he did not bag any of the championships decided.

G. Shunner, representing Stockton, won the inter-city championship and the Weinstock-Nichols cup, over the five-mile route. D. Galloway galloped in ahead of C. H. Scott in the sprint for second place. In the club championship for the Weinstock-Lubin cup, five miles to go, W. Shoemaker was returned the winner. C. H. Scott and G. Grimshaw won the three-mile tandem race for the State championship. In the novelty slow race all the contestants stalled, and it was declared no contest. There was much disappointment over the non-arrival of the Excelsior team, consisting of Balke and Wolters.

Seymour made the fastest time of the day in the five-mile $500 race, being clocked for a mile in 51⅖. Attendance, 2,000. Summary:

Five-mile amateur, stock singles—Won by H. Alzina; second, C. H. Scott; third, C. Edwards. Time, 6:24⅗.

Five mile open, professional—Won by Ray Seymour (Indian); second, W. G. Collins (Indian); third, J. Albright (Indian). Time, 4:35⅗.

Five mile amateur, stock twins—Won by C. H. Scott (Indian); second, Roy Emery (Excelsior); third, E. A. Shoemaker (Excelsior). Time, 5:19⅗.

Australian pursuit, amateur—Won by H. Alzina (Indian); second, G. Schrum (Excelsior); third, D. Smith (Excelsior). Distance, 13½ miles. Time, 17:35.

Five mile inter-city championship, amateur—Won by G. Shunner, Stockton; second, D. Galloway; third, C. H. Scott. Time, 5:10.

Five mile amateur, twins—Won by G. Shunner; second, C. H. Scott; third, D. Galloway. Time, 5:10⅘.

Five mile amateur, singles—Won by H. Alzina (Indian); second, Holdridge; third, C. H. Scott (Indian). Time, 5:33⅗.

Five mile club championship, amateur—Won by E. Shoemaker; second, W. B. Trapper; third, R. Hawtry. Time, 5:40.

Three mile tandem, State championship—Won by Scott and Grimshaw; second, Murphy and Edwards. Time, 4:50.

TULLIS THE NEW "RISING STAR"

On a Lively Thor Gives Baker and Constable a Big Surprise—Trojans See Fine Sport.

Two hundred and fifty dollars worth of prizes offered, brought such stars as Erwin Baker, Thurman Constable and D. L. Tullis to Troy, Ohio, on the 14th inst., for the joint speed party given by the Piqua and Troy Motorcycle Clubs at the fair grounds. Baker did not make his usual clean up, however, getting only one first, while Tullis was the "big noise" of the meet, taking four wins. William McClain, a local boy, upheld the honor of his town quite well, pounding out two victories, while a pair of Piquans, Moore and Bixler, each scored once.

Through a combination of circumstances Baker was forced to use an old machine that had seen hard service and therefore was an "also ran" most of the time. Tullis had a real lively Thor, and as it was an off day for Constable, Tullis had things pretty much his own way. Although Tullis had the better of the start in the pursuit, Baker gave him a hard fight and lasted 7⅝ miles before he was caught.

McClain was a prime favorite with the crowd, but did not get a chance in many events, as all but one was for 30½ inch machines, and he had a twin. In the novice he showed good form, riding a "5" and beating a "6½" twin, and again in the belt class, on a borrowed machine that was pretty well "frayed out," he managed to pick first prize.

A lively shower in the morning made the track very slippery and caused one accident, Walter Shute hitting the fence in practice and fracturing his collar bone. Attendance, 1,500. Summary:

Two mile club class—Won by D. L. Moore (Excelsior); second, Joseph Baxter (Harley-Davidson); third, J. Brush (Excelsior). Time, 2:59⅕.

Ten mile trade riders—Won by E. G. Baker (Indian); second, D. L. Tullis (Thor); third, Thurman Constable (Harley-Davidson). Time, 12:22⅖.

Four mile novice—Won by William McClain (Indian); second, Frank Hemm (Harley-Davidson); third, John Cathcart (Harley Davidson). Time, 5:21⅖.

Five mile trade riders—Won by D. L. Tullis (Thor); second, E. G. Baker (Indian); third, T. Constable (Harley-Davidson). Time, 6:05.

Five mile private owners—Won by J. Bixler (Harley-Davidson); second, J. Brush (Excelsior); third, J. Hays (Harley-Davidson). Time, 7:16.

Five mile trade riders—Won by D. L. Tullis (Thor); second, E. G. Baker (Indian). Time, 6:05.

Five mile open, belt drive class—Won by William McClain (Indian); second, J. Bixler (Harley-Davidson); third, J. Hays (Harley-Davidson). Time, 7:01.

Unlimited pursuit—Won by D. L. Tullis (Thor); second, E. G. Baker (Indian); third, T. Constable (Harley-Davidson). Distance, 7⅝ miles.

Mile time trials—Won by D. L. Tullis (Thor), time 1:09; second, E. G. Baker (Indian), time 1:12.

Warner is F. A. M. "District Champion."

"Records" fell and champions were made at the big motorcycle race meet of the Short Grass Motorcycle Club, at Oakdale Park, Salina, Kan., on the 12th inst. Paul Warner and Wells Bennett were practically the whole show, and gathered nearly everything in sight. Warner had a shade the best of his rival, winning the F. A. M. central district mile championship and breaking the five-mile State record. Bennett picked the five-mile trade rider State championship, and also "lived longest" in the pursuit. Miss Inez Patterson, daughter of Dr. B. J. Patterson, vice-president of the central district, rode an untimed exhibition. The crowd was the largest that ever attended a motorcycle meet in the State, and represented nearly every county in western Kansas. Previous to the meet the club gave a street parade in which nearly 200 motorcyclists participated, the object being to advertise the meet. Summary:

One mile district championship—Won by Paul Warner (Indian); second, Wells Bennett (Indian). Time, 1:16¾.

Five mile State championship, trade riders—Won by Wells Bennett (Indian); second, Paul Warner (Indian). Time, 6:35.

Australian pursuit—Won by Wells Bennett (Indian). Distance, 9½ miles. Time, 12:00.

Ten mile, trade riders—Won by Paul Warner (Indian). Time, 12:35½. (Claimed State record.)

Five mile stock, trade riders—Won by Paul Warner (Indian). Time, 6:15.

Fined for Carrying a "Passenger."

Carrying a passenger on his motorcycle cost Allen Lake, of South Bend, Ind., $11 in the City Court recently. Lake told the court that he did not know it was a violation to carry another outside the business section and that he was taking a friend to the depot when picked up. "You should learn of these ordinances before you attempt to ride a machine," said the court. "This ordinance was passed to prevent accidents and it will be enforced."

To Tax Motorcycles in West Virginia.

At its annual convention the West Virginia Rural Letter Carriers' Association passed resolutions favoring a State tax on all motor vehicles, the revenue derived therefrom to be used for the improvement and maintenance of State roads. The tax recommended for motorcycles was 50 cents per horsepower.

SEVEN DAYS OF EXCITEMENT

Alabamans Have Full Week of Motorcycle Racing—Joyce and Hasha in See-Saw Battles.

Even though the professionals hippodromed every day, the thousands who attended the Montgomery (Ala.) Fair during the week of October 16-22 saw some mighty exciting motorcycle racing. There were amateur events, too, and these were won on their merits, and were by no means uninteresting, even though they were slower than the "pro" events. Three events were run daily, at least two of them professional, and sometimes all three were money races.

Gayle Joyce, a local crack, had the other local riders beaten before they started and won whenever he pleased or had not agreed to let one of the others beat him "just to let them win once in a while." Joyce won 10 firsts, and Porter Chamless won three races. When Ed Hasha came on the scene late in the week Joyce had a formidable competitor, and if they hippodromed they certainly "played it fine." Hasha won three and lost two to Joyce. Hasha rode a five-mile race in 4:24, which was announced as a "world's record." Anyway, the crowd liked his riding, and expressed a preference for it over the horse events, on the ground that it was far more exciting. Summary:

October 16.

Five mile open, professional—Won by Gayle Joyce (Indian); second, Porter Chambless (Indian); third, Richard Gayle (Indian). Time, 5:16.

Ten mile handicap, professional—Won by Gayle Joyce (Indian) (scratch); second, R. Gayle (Indian) (⅛ mile); third, Porter Chambless (Indian) (⅛ mile). Time, 10:34.

Ten mile open, amateur—Won by Farrar (Harley-Davidson); second, Horrel (Indian); third, Brown (Merkel); fourth, Morris (Indian). Time, 14:20.

October 17.

Five mile open, professional—Won by Porter Chambless (Indian); second, Gayle Joyce (Indian); third, Richard Gayle (Indian). Time, 5:15.

Ten mile open, professional—Won by Gayle Joyce (Indian); second, Richard Gayle (Indian); third, Porter Chambless (Indian). Time, 10:33.

One mile against time—Gayle Joyce (Indian). Time, 0:55.

October 18.

Five mile open, professional—Won by Gayle Joyce (Indian); second, Richard Gayle (Indian); third, Porter Chambless (Indian). Time, 5:12.

Ten mile handicap, professional—Won by Gayle Joyce (Indian (scratch); second,

Porter Chambless (Indian) (½ mile); third, Richard Gayle (Indian) (¼ mile). Time, 9:19.

One mile against time—Gayle Joyce (Indian). Time, 0:52½.

Five mile open, amateur—Won by Horrel (Merkel); second, Dedrick (Thor); third, tie between Sparks (Thor) and Farrar (Harley-Davidson). Time, 6:25

October 19.

Five mile open, professional—Won by Porter Chambless (Indian); second, Gayle Joyce (Indian); third, Richard Gayle (Indian). Time, 5:02¼.

Ten mile handicap, professional—Won by Gayle Joyce (Indian) (scratch); second, Porter Chambless (Indian) (½ mile); third, Richard Gayle (Indian) (¼ mile). Time, 9:20.

Two miles against time—Gayle Joyce (Indian). Time, 1:45.

Five mile open, amateur—Won by Horrel (Merkel); second, Dedrick (Thor); third, Egge (Indian). Time, 6:06.

October 20.

Five mile handicap, professional—Won by E. Hasha (Indian); second, Gayle Joyce (Indian); third, Porter Chambless (Indian). Time, 4:43.

Five mile match, professional—First heat, five miles, flying start. Won by Gayle Joyce (Indian); second, E. Hasha (Indian). Time, 4:23½. Second heat, five miles, standing start. Won by Hasha; second, Joyce. Time, 4:24. Alleged "world's record." Third heat to be run later.

October 21.

Ten mile open, professional—Won by E. Hasha (Indian); second, Gayle Joyce (Indian); third, Porter Chambless (Indian). Time, 8:49¼.

Five mile match, professional—Third heat. Won by Gayle Joyce (Indian); second, E. Hasha (Indian). Time, 4:31.

Three mile match, professional—Won by Porter Chambless (Indian); second, Gayle Joyce (Indian). Time, 3:01.

October 22.

Ten mile handicap, professional—Won by Gayle Joyce (Indian); second, Richard Gayle (Indian); third, Porter Chambless (Indian). Time, 9:21½.

Five mile match, professional—Won by Richard Gayle (Indian); second, Gayle joyce (Indian). Time, 5:25.

Three mile open, amateur—Won by Fuller; second, Morris; third, Dedrick.

Five mile open, amateur—Won by Peacock; second, Dedrick; third, Morris.

Joe Wolters Still the King Bee.

Chopping six seconds off the local track record for 10 miles, "Joe" Wolters again was the feature of the motorcycle meet at the Tuileries track, Denver, Colo., on the 8th inst., batting out three victories over Armstrong, Schwartz and Fleckenstein. The 10-mile session was a thriller all the way. Wolters and Armstrong conceded a lap to King and Schwartz. King was tagged three times and Schwartz once, while Wolters beat the "red top" by less than a foot. Armstrong won a five-mile event when Wolters stayed out, and Schwartz duplicated the trick when Armstrong stayed out. Summary:

Five mile open—Won by Wolters; second, Schwartz; third, Fleckenstein. Time, 3:30.

Five mile three-cornered match—Won by Schwartz; second, Edwards; third, King. Time, 3:38.

Five mile open—Won by Wolters; second, Armstrong; third, Schwartz. Time, 3:30⅘.

Five mile open—Won by Armstrong; second, Schwartz; third, King. Time, 5:33⅘.

Ten mile open—Won by Wolters; second, Armstrong; third, Schwartz. Time, 6:57⅗.

Klark Didn't Guzzle His Soda.

With Mayor B. C. Sonn acting as scorekeeper, some exciting motorcycle races were staged at the fair grounds, Van Wert, Ohio, on the 12th inst. F. A. De Mint promoted them, and was well pleased with the success of his efforts. Don Klark and E. G. Baker were "among those present" and Klark scored twice on Baker, while the latter "got" the Detroiter once. Klark was disqualified in the novelty race for failing to stop and drink his soda, and Baker won it. In the pursuit, the top line number, Klark gave Baker 20 seconds and caught him in 12 laps. Summary:

Five mile open—Won by E. G. Baker; second, G. H. Farrar. Time, 6:25.

Five mile, county cup—Won by Ray S. Miller; second, Huffman. Time, 7:05.

One mile open—Won by Farrar; second, Baker. Time, 1:22.

Novelty race—Won by Baker; second, Farrar. Distance, 2½ miles. Time, 7:05. Klark disqualified.

Five mile open—Won by Warner; second, Rectine; third, Huffman. Time, 7:05.

One hundred yard slow race—Won by Warner; second, Rectine; third, Huffman. Time, 1:32.

Six mile pursuit—Won by Klark; second, Baker. Time, 7:45.

Mile time trials—Won by Klark, time 1:12; second, Baker. time 1:15.

Half-mile bicycle race, boys—Won by Logan Fair. Time, 1:32.

AMAZONS IN LIVELY BATTLE

Columbus (O.) Sees First Motorcycle Race Meet for Women—Dolly Fast But Viola Best in Match.

Columbus, O., always has claimed to be a "live wire" motorcycle city. The claim never has been seriously disputed, but it was considerably strengthened on Saturday, 21st inst., when the first motorcycle race meet for women ever held in this country was staged at the Columbus Driving Park. True, the meet was not sanctioned by the F. A. M., and the Columbus Motorcycle Club had no part in its management, but nevertheless it was a novel and highly exciting affair. Frank Lawwell, an automobile racer, managed the meet.

Columbus was represented ably by its own favorites, Dolly and Lucile Adelman, who captured three of the four events between them. Viola Culp, of Elwood, Ind., won the other race. Despite the raw day the spectators soon warmed up through the lively scraps between the girls. Dolly Adelman won the five-mile open, the first number, easily. Then came the 10-mile open, with Dolly and Miss Culp fighting it out. Lucile Adelman was given a mile handicap in this race, and needed it to win. Dolly and Viola rode neck and neck for several laps, and the tie was not broken until the last half-mile, when Dolly shot in front and stayed there to the finish.

Viola then met Dolly in a three-mile match and beat her by less than a second after a tabasco fight all the way. The feature race, the 15-mile open, proved sensational. Miss Culp led until the 13th mile, when Dolly Adelman forged ahead and increased her lead to an eighth of a mile at the finish. The track was in fine condition after recent rains. The second day's program was postponed to the 28th on account of heavy rain on the night of the 21st, which turned the track into a quagmire. Summary:

Five mile open—Won by Dolly Adelman (Indian); second, Viola Culp (Indian); third, Lucile Adelman (Indian). Time, 5:46½.

Ten mile open handicap—Won by Lucile Adelman (Indian) (1 mile); second, Dolly Adelman (Indian) (scratch); third, Viola Culp (Indian) (scratch). Time, 11:41.

Three mile match—Won by Viola Culp (Indian); second, Dolly Adelman (Indian). Time, 3:33½.

Fifteen mile open—Won by Dolly Adelman (Indian); second, Viola Culp (Indian); third, Leda Leslie (Indian). Time, 17:40½.

Anti-Passenger Ordinance Checked.

Opposition to the proposed ordinance introduced in the Ashtabula (O.) common council to prohibit the carrying of passengers in front of the operator on motorcycles arose on the second reading of the measure. One of the councilmen stated that he did not favor the ordinance, as he did not think the council had the power to prevent a motorcyclist carrying a passenger in front of him if he chose. He opined that both motorcyclists and passengers knew the danger they incurred in riding in such a manner, and that they could not be deterred from taking the risk if they chose. Upon being interrogated as to the power of the council to enact such an ordinance, the city solicitor stated that it had such power, and that such an ordinance would be valid, as it concerned the safety of the public. There the matter rests at the present time.

Wanted: Someone to Kill Jupiter Pluvius.

If looks could kill, old Jupiter Pluvius would be a dead one. The latter part of last week he frowned incessantly upon Maryland, and with the wrinkling of his ancient brow he also saw fit to drop a few tears. They were not sparingly bestowed, and as a result the members of the Maryland M. C., of Baltimore, and other crack riders cast up at him as black looks as were ever worn on a human countenance. Through his extremely mean disposition two motorcycle meets had to be postponed and much fine sport was lost by the wayside.

Howard A. French had arranged to run several races at the fair at Frederick, Md., on October 20, and his intention was to provide some thrills for the country folk in that section. On the day in question, notwithstanding the fact that it had rained almost incessantly for several days previously, he and the local riders went up to Frederick in the hope that there might be a dry spot on the map, But they found conditions just as bad there as in Baltimore, and they had to return—a mightily disgusted bunch.

J. Boyd Anderson, the crack rider from South Carolina, and Billy Fleurstein, the idol of the South, came up to participate and they felt like choking J. Pluvius for his mean spirit. The other riders who made the useless trip to Frederick from Baltimore were John Blakeney, Gus Heintz, Freddie Tiemeyer, Matt Gault, W. S. Fisher and Dick Blakeney.

The other meet was to have been pulled off at the fair at Belair, with races on both October 20 and 21. Even though the weather interfered, there was some doubt as to whether they would have been run, as the Sandruck Brothers, who were promoting them, had been outlawed recently and they were unable to procure an F. A. M. sanction. They tried to do it, but failed, and they manifested a disposition not to pull them off as outlaw races. It is understood that they will endeavor to get back into the fold. It is also possible that the Belair races will be run some time in the near future.—C. F. Y.

STUBBS HURT AT BIRMINGHAM

But His Injuries Not Due to His Fight With DeRosier—"Jake" and Balke Clean Up Everything.

There were more lively doings at the motorcycle races at the Alabama State Fair at Birmingham during the week of the 9th to 14th, inclusive. DeRosier and Balke got down to business and cleaned up everything on the card for the entire week. Robert Stubbs was in a bad smash on Monday, 9th, sustaining a severe cut under the right eye. A rear tire "blew" and Stubbs went down. It was thought at first that he would lose the eye, but later the injury was found to be less dangerous. After Friday's race on the 14th Hasha protested Balke and DeRosier's machines and they were taken down and measured and found under size. DeRosier and Balke also got some so-called "dirt track records," the former doing five miles in 4:16 and the latter 10 miles in 8:39¼. The record cracking occurred on Thursday, 12th.

After his accident on Monday Stubbs did not ride any more. It now appears that the fight between him and DeRosier the week before occurred at a hotel in the evening. An inch gash as clean as a razor slit was made in DeRosier's cap by the piece of steel with which one of Stubbs' friends struck him. The hotel people set the police on Stubbs, and he was fined $10 in court next day.

After the protest of the Excelsior machines on Friday, 13th, the referee hunted up C. B. Pike, of the Pike Machine Works, who brought measuring instruments along. Balke's machine was measured Friday night and found under size. DeRosier's machine was measured Saturday morning and also was passed O.K. As a matter of general information the measurements of DeRosier's motor were as follows: Front cylinder bore, 3.3298; rear cylinder bore, 3.330; stroke of both, 3½; displacement, 60.96 cu. in.

DeRosier alleges that in the attempt to force his machine over size at any cost the referee told Pike to take the bore measurements at the largest part of the cylinders he could find, and not average up with the smallest diameters. He also alleges that the stroke of both cylinders was measured in the hope of finding them different. There were no races on the 10th and 11th on account of rain. Summary:

Monday, October 9.

Three mile open—Won by Balke (Excelsior); second, Hasha (Indian) Time 2:32¼.

Three mile open—Won by DeRosier (Excelsior); second, Stubbs (Indian).

Ten mile open—Won by Balke; second, DeRosier. Time, 8:49. Stubbs fell.

Thursday, October 12.

Five mile open—Won by DeRosier. Time, 4:16.

Ten mile open—Won by Balke. Time, 8:30½.

Friday, October 13.

Twenty-five mile open—Won by Balke; second, Mitchel. Time, 22:05.

Saturday, October 14.

Twenty-five mile open—Won by DeRosier; second, Mitchel. Time, 22:36.

Washingtonians Test New Ordinance.

Deliberately violating the recent police regulation forbidding the carrying of more than one person on motorcycles or bicycles without special permit, Henry James and Robert Thomas, motorcyclists of Washington, D. C., have offered themselves as sacrifices to make a test case of the ordinance. The ordinance went into effect on Friday, 13th, and on the day following the two "martyrs," after previously sending word to the authorities of their intentions, appeared in front of police headquarters, and, after being photographed, mounted the motorcycle and rode up the street. A bicycle policeman was on hand to uphold the law, and at the end of the first block he put them under arrest and summoned them to appear in court.

The motorcyclists are members of an association organized to fight the ordinance and have retained counsel to look after their interests. Both sides say that the case will be fought to a finish, and in the meantime the police have been given strict orders to arrest all violators. The bicycle interests are also involved through the arrest of George Black, who was charged with carrying another person on his bicycle. Following the death of a girl who was struck by a motorcycle carrying two passengers, the ordinance was passed on September 13 and 30 days of grace allowed before its enforcement. It reads as follows: "No bicycle or motorcycle constructed for use by one person only shall carry more than one person while being ridden on the alleys, streets, avenues, highways or roads in the District of Columbia, and no such bicycle or motorcycle which has been altered or adapted so as to carry more than one person thereon shall be so ridden without special permit."

New York Shy on Good Repair Men.

It was after midnight, and a party of nine motorcyclists were sitting around a round table in their cosy club house, indulging in a quiet and friendly game of poker Between drinks and deals the talk reverted to motorcycling, naturally. Suddenly one of the party burst out: "I think I will sell my machine and quit riding." "What!" exclaimed several. "You're only 'kidding.'" "No, really I mean it," said the first speaker. "Well, what is the reason?" he was asked. "The reason is," he went on, as he looked at his cards, threw them down with a slam and took a drink, "that there isn't a good motorcycle repair man in the whole of Greater New York. I mean a man that knows more about a machine than a rider does himself, and can find and fix troubles that stump me. Why, I've given $15.50 in the last few days to fellows who said they could take a 'skip' out of my motor, and that 'skip' is there yet as big as it ever was.

"Why, at that rate it costs more to keep a motorcycle than it does an automobile, and I'm getting sick of these big repair bills and no results. It's simply a case of paying a so-called 'repair man' big money to tinker with your machine and teach himself a few things that he doesn't know, and never did know, and probably never will know. Often when such fellows get through with your machine it is worse than when you let them have it. Honestly, I would be willing to 'back' a good repair man in this town, for such a man is needed mighty bad, and if he could 'make good' everything would be 'velvet' for him. It seems to me that the motorcycle manufacturers ought to take a tip from the automobile people and give some thought to taking care of their customers. They ought to realize that in a big city like this, where a large number of machines are out, good repair men are badly needed to keep the machines going and thereby keep the owners satisfied. That is why I am thinking of quitting riding, at least until a competent repair man hangs out a sign, and shows that he can 'deliver the goods.'"

DAVID MOLIN—3½ H. P. N. S. U.—WINNER OF M. T. C. GOLD MEDAL

Motorcycles to Replace Automobiles.

The civic authorities at Toronto, after having spent thousands of dollars yearly on automobiles for the departments at the City Hall, have decided that the motorcycle is just the thing to facilitate the work of the inspectors and others. The risk of joy-riding is eliminated while a number of the single-trackers can be purchased for the price of one motor car. As a start the city engineer has sent in an order for two motorcycles for use by the members of his department.

The Tallest "Fish-story" Ever Told!

Here is one you can chew on for a bit: W. Griswell, of this city, while fishing the other day, reports that he "caught" a motorcycle on the end of his line. Griswell says that he walked into the water and hauled out the machine, which proved to be a Harley-Davidson, No. 2402. No. of tires, 56,670, C. & G. make, and in fair condition. The tires were properly inflated and the tank full of gasoline. The machine was but little rusted.

Seven Start in South Bend (Ind.) Run.

Threatening weather and bad roads kept down the number of starters in the last run of the season of the South Bend (Ind.) Motorcycle Club on the 8th, only seven riders electing to brave the elements. The route was to Valparaiso and return, 115 miles, and originally was planned as a reliability run, but was reduced to an ordinary pleasure spin with no prizes up.

Jupiter Pluvius "Butts In" at Newark.

Rain "queered" the race meet of the Newark (O.) Motorcycle Club scheduled for Moundbuilders' Park on Sunday, 22nd. The club will try again on the 29th.

Motorcycling in Rainier National Park.

By L.H.Whiteman.

Unlike the Yellowstone Park and the Yosemite Valley, the new Rainier National Park, created as it was when machines were in common use, is open to motor driven vehicles. Not only does the Government permit the entrance of automobiles and motorcycles into this wonderful region of mountain peaks, waterfalls and glaciers, but has constructed the park's highways with the convenience of the machine enthusiast as an object in view.

"WE KEPT OUR HORNS GOING CONTINUOUSLY"

Situated in the heart of the Cascade Mountains, containing Mt. Rainier, the second highest peak in the United States, and not more than a hundred miles from Seattle, this region, although still inaccessible for the most part, is visited each year by an increasing number of motorcyclists. When the roads proposed are completed Rainier National Park will be one of the chief touring points in all Western travel, not only for automobiles but for the two-wheelers as well.

To obtain an idea as to what this region holds for the rider of the motorcycle was the object of a four-day trip taken by a friend and myself.

We left Tacoma about eight o'clock one morning, heading our machines south from the city into what is known as the Rainier-Tacoma road, that for a great part of its 50 odd miles to the park's southern boundary, runs up the picturesque Nisqually Valley. In fact the actual end of this road is at the headwaters of the Nisqually River, the Nisqually Glacier. This is said to be the only road in America running to a glacier.

Our way for the first half of the ride led through logged off timber lands, or sunburned little prairies, and then into the heavily grown forests of the higher slopes. The grade was an easy one, hard and smooth, our machines ran like clockwork and we rapidly covered the miles.

It was almost noon when, swinging around the grade, the little town of Ashford, the terminus of the branch railroad to the park, came in sight. We had made the distance from Tacoma, counting out the stops in a little more than three hours.

The daily train from Seattle had just arrived. Two or three motor "rubber-neck wagons" were loading with passengers for the National Park Inn at Longmire Springs, the chief object point for visitors.

Speeding up a little, in order to get a start of the "wagons," we began what proved to be one of the finest parts of the ride. For several miles from Ashford the road had been macadamized; the steam rollers were at work as we passed. From this point to Longmire Springs, 14 miles up the mountains, the road climbs steadily without a descent at an average grade of 1.6 per cent., winding through one of the heaviest timbered regions in America, crossing and recrossing milky glacier streams, from the bridge of one of which we caught our first glimpse of Mt. Rainier since leaving Tacoma.

In a few minutes we had crossed the Pierce county line and were on the Government road, riding through the Pacific Forest Reserve, from which the National Park was created in 1899.

During all this time we passed and were passed by a continuous string of automobiles. On the curves we kept our horns going continuously.

Seven miles from Ashford, half way to Longmire's, is the park's official entrance. Across the road stands a rustic gate constructed from fir logs, peeled and varnished. Here we dismounted and, registering at the lodge inside the gate, learned that our speed from now forward must not exceed more than six miles on the curves and fifteen on the tangents; also that no motor driven vehicles were allowed to leave Longmire's, going out, after 8 p. m., or to leave for the Nisqually Glacier later than 7 p. m.

I was much surprised, none of the khaki-clad regulars, so numerous in the Yellowstone and Yosemite, were stationed here, the registration booth being in charge of a youthful forest ranger. It was explained to me, however, that the park was under the control, not of the War Department, but the Department of the Interior.

Just beyond the boundary the only mishap of the entire trip occurred. A dust hidden horseshoe, well studded with nails, gave us a sweaty half hour with a tire that objected strenuously to coming off, and once off objected just as strenuously

ACROSS THE SNOWFIELD

"A REGION OF WATERFALLS"

to going on again. While we were putting on a patch an incident occurred that proved more amusing to us afterward than it did at the time. A seven-passenger touring car, loaded with a crowd of noisy youths, who had the air of having imbibed "not wisely but too well," found in us an excuse to guy all motorcyclists in general, and us in particular. A little later we passed the same machine "dead" —dead to stay dead. Its occupants stood aside to take our dust as we passed.

LONGMIRE SPRINGS "BEFORE THE GARAGE"

At last, seven miles from the entrance, we ran out of the forest to the inn at Longmire Springs. Here a large number of automobiles and motorcycles were lined up before the well-stocked garage. After a plunge in the hot sulphur pools, for which this place is noted, we joined between 200 and 300 autoists and tourists in dinner at the inn.

The Rainier inn faces the mountain, so near does it appear that one fancies that to walk to it and back would be a nice after dinner stroll. Back of the inn the Nisqually River tears madly along its bed, frothing white and rumbling with the hidden boulders that roll along its bottom.

I am not going to weary the readers of this sketch with any attempted description of the beauties and wonders of this region. Words are inadequate to picture its waterfalls, cascades, mighty snow peaks and glaciers. Rainier itself is, of course, the great overtowering wonder of the park. The size and number of its glaciers are unequaled elsewhere in the United States. It reaches its majestic, awe-inspiring head more than 14,000 feet into the clouds. But even were there no Rainier this region would be worth traveling a thousand miles to visit, such is the beauty of its plateaus and uplands.

Early the next morning we mounted our machines and finished the last stage of the journey to the foot of the Nisqually Glacier, winding along a splendidly graded road that nowhere exceeded 4 per cent., skirting the Nisqually canon, in which we caught a glimpse of the beautiful Narada Falls.

At the foot of the glacier the machines were left in company with a dozen others, and we continued up the trail to Paradise afoot.

This trail has been commonly called the most beautiful in America. From it are visible the charming Washington Rapids, a mile in length. It makes its way steadily upward through wild flower gardens over which the flower lover goes in raptures. At last one comes out upon a wide plateau, flower carpeted and rivulet worn. Here is the Camp of the Clouds, starting point for the mountain climbers and stopping place for the tourists. Below lies a wide, precipitous valley—Paradise, in the upper end of which is visible the Sluiskin Falls, tumbling hundreds of feet from the Paradise Glacier to the bottom of the glacier worn valley below.

Across the valley we could see the road winding along the cliff. This is the road we had left an hour before, since it is not open to machines. It runs to Reese's camp at the Camp of the Clouds, but owing to the lack of funds obtainable for its construction, its width from Nisqually Glacier to the latter place is only 12 feet. Too much cannot be said about the magnificence of this scenic highway. It winds for 25 miles covering a distance of 12 from the entrance of the park to its end. The last few miles, open only to stages, are constructed along the edges of a precipice, a sheer drop of a thousand feet to the river below. All the way the majestic Rainier is visible, while cascades and wild flowers delight the eye.

At the present writing there is a project on foot, that, Congress approving, will mean its continuance at the standard width around the entire mountain. When this is completed Rainier National Park will be one of the world's wonders. Such a highway would open up the wild and little frequented north sides, and would skirt the ends of some of the largest American glaciers.

"Pop" Reese runs a hotel at Paradise. It is a little, plain board shack, with a row of tents for bedrooms, but the dinner he set out for us that evening tasted, to us at least, better than a banquet. Climbing trails at 6,000 feet had served to edge our appetites.

The balance of the day and the day that followed we spent in climbing the snow fields and the nearby Paradise, and Cowlitz Glaciers, and in strolling about the flower strewn Paradise Valley.

Nowhere else, say the botanists, do wild flowers grow with greater profusion than about the high plateaus of Mt. Rainier. Here are lilies pushing their way up through patches of melting snow. Entire hillsides are clothed in the purple and scarlet garbs of lupine, hellebore and figwort.

PARADISE VALLEY—ROAD ONLY 12 FEET WIDE

Paradise, alas, was not all heavenly. Mosquitoes were the serpent in this Eden. Were they vicious in proportion to their numbers the first weeks of summer would be unbearable in Paradise. Even on the snowfields, a mile from evaporating pools

of snow water, where they breed, they exist in clouds. Later in the summer, when the lower snow fields have disappeared, they vanish also. On a subsequent trip some weeks later I saw scarcely one.

Around the camp fires at night "Pop" Reese had many stories concerning the mountain and its visitors. Said he: "We git all kind of people here. The first week after I had dug this shack out of the snow this summer there was a young fellow up here from New York. We got ter callin' him Broadway, because he talked so much about that place. He used ter climb around on the snow with no hat or coat on an' with his sleeves rolled up. Said he 'wanted to git tough so as to sing opera.' Use ter keep the folks awake practicing, too, until

"WHEN THE ROADS ARE COMPLETED"

I had to kick. Funny lot o' people in this world anyhow, ain't there?"

Late that night a party of a dozen men and guides left for the summit of Rainier. We saw them the next day crawling across the dazzling white snow fields, and looking in the distance for all the world like big black ants. After hearing their experiences that evening my friend and I wanted to attempt the climb. The guides advised us not to, however, saying that no one should undergo the hardships of this ascent without first hardening himself on the lesser peaks nearby.

This was our last day in Rainier Park. Next morning we dropped down the trail to our waiting motorcycles and that noon were back again in Tacoma after a most delightful trip.

Enclosed please find check to cover renewal for my subscription. I do not know just when my previous subscription expires but I do not want to take a chance of missing any issues.—Chas. J. Dyke, Windber, Pa.

100 MILES INSIDE 100 MINUTES

Ben Broderick, Two Mile National Champion, Turns Trick at San Jose—Acrobatic Feats by Alzina.

Another press agent "world's dirt track 100 mile record," this time an "amateur" one, was made at San Jose, Cal., on the 15th inst., when Ben Broderick, of San Francisco, reeled off the century in 98 minutes and 48 seconds, an average of 61 miles an hour. Bud Northrup, a local boy, was second, in 99 minutes and 5 seconds, or 17 seconds behind the winner. C. Oberg was the third man across the finish line. The race was the feature of the card and was bitterly fought from gun to gun. Broderick, the winner, is the two mile national champion.

Seven started in the century dash, and the excitement began almost immediately. Northrop and Alzina soon found that they were about evenly matched and seesawed for several miles, much to the delight of the spectators. They made a race of it all right. Reade, on an Excelsior, had carbureter trouble in the fifth round and broke a valve in the 25th mile. At the quarter century pole the order was Broderick, Northrup, Oberg, which was destined to be the ultimate finish lineup. Broderick had taken the lead almost at the start and was going in great form with Northrup pressing him close.

In the 30th mile Alzina caught Oberg and now was third. Broderick and Northrup still were one, two, at 50 miles. There was lots doing in the 53rd lap when both the leaders stopped for gasoline. It took Broderick longer to fill but he got away better than Northrup, who was over anxious, so matters were evened here. This pair woke up the spectators again in the 77th lap by some lively seesawing. Alzina's chances began to go in the 90th mile when his rear tire went down. He took a chance, however, and keep fighting desperately with his crippled machine. In this lap, while Alzina and Northrup were making a turn together, the former skidded fearfully and nearly carried Northrup down. Both escaped this time, but in the 95th lap Alzina blew a front tire and was hurled over the handlebars. No one was near him when the accident occurred.

He escaped injury, and his machine also came through the spill unscathed but the tire trouble put him out of the race. Oberg then recovered third place, which he had been fighting to regain for so long. Reade had considerable mechanical trouble which set him way back, but toward the last he seemed to have shaken his hoodoo and tore off some sensational miles. He gained a second per mile on the field in the last eight laps, and was clocked once in 58 seconds.

In the snappy preliminary events Northrup won a five mile race for belt machines, and T. Campi slugged out a victory in the free-for-all for stock singles, 30½ inch class. He may be disqualified for entering after entries had closed. W. G. Collins went two exhibitions over the three mile route, the fastest being 2:38⅖. His best mile was 52⅖ seconds. The weather was ideal but the crowd was not as large as expected.

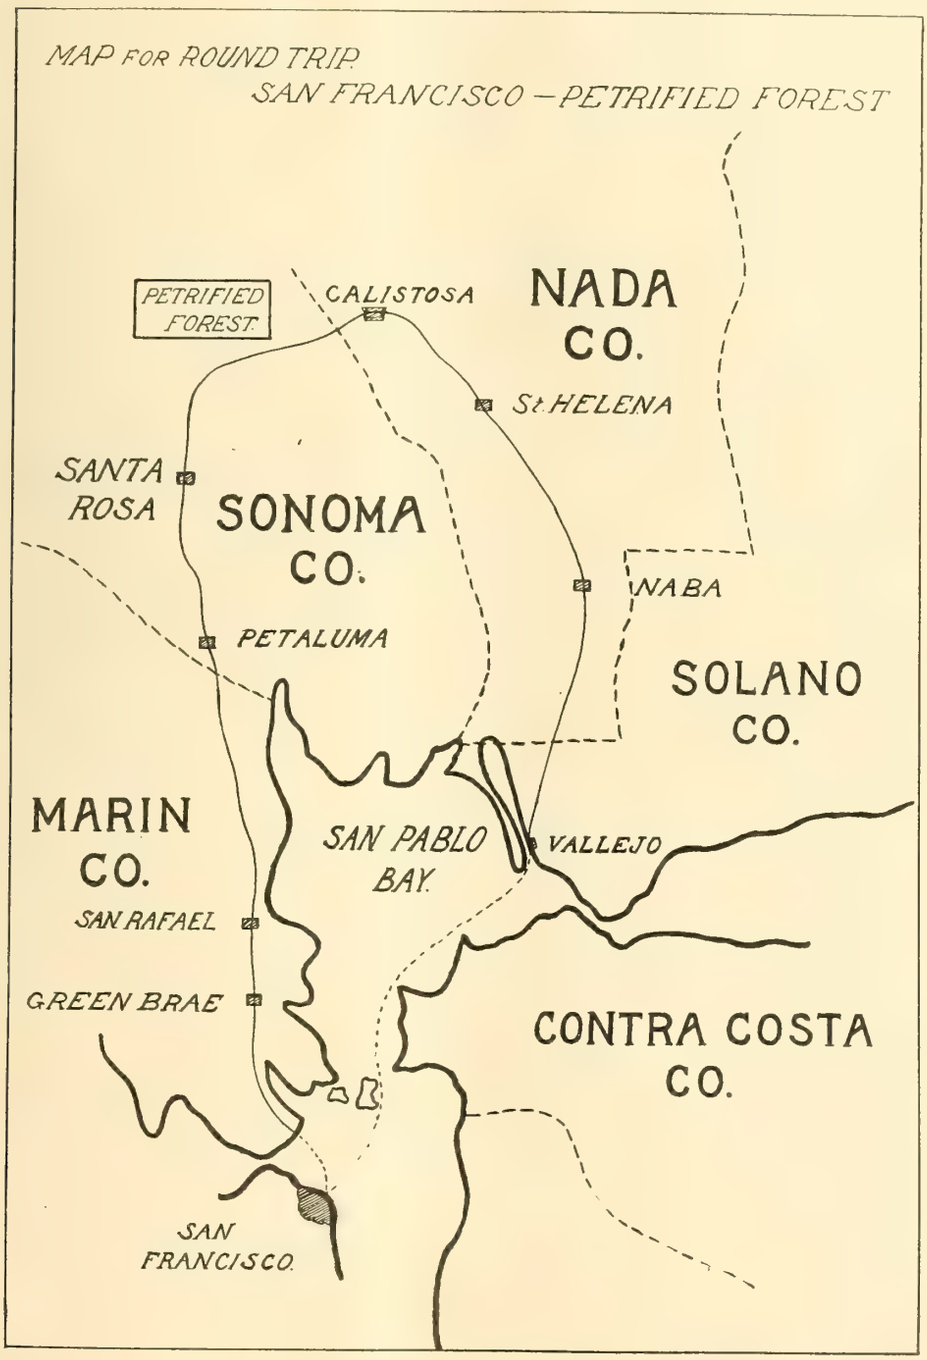
Summary:

Five mile stock, flat belt, 30½ inch class—Won by B. Northrup (Indian); second, S. S. Norman; third, E. Haldridge. Time, 5:57⅖.

Five mile free-for-all, singles, 30½ inch class—Won by T. Campi (Indian); second, B. Northrup (Indian); third, V. McKay. Time, 5:47.

Three mile exhibitions—W. G. Collins (Indian). First trial, 2:41⅗; second trial, 2:38⅖; best mile, 52⅖.

One hundred mile free-for-all, stock, 61 inch class—Won by Ben Broderick (Indian); second, Bud Northrup (Indian); third, C. Oberg (Indian). Time, 1:38:48.



More Cities Squelching the Cut-Out.

There appears to be an epidemic of legislation relating to the motorcycle. The rapid increase of the number of motorcycles is attracting the attention of city and state authorities and new laws and ordinances are reported from many parts of the country. One of the most popular restrictive measures is one requiring a muffler to eliminate the sharp pop-pop of the motorcycle. Such an ordinance has just been passed by the Chicago City Council. Topeka, Kan., has decided to enforce an ordinance which has slept for two years, requiring mufflers.—Middletown (O.) Journal.

A One Day's Tour to the Petrified Forest

By FRANZ WEIGELT

Recently there were published in the Bicycling World and Motorcycle Review a number of one-day motorcycle routes in the neighborhood of New York City, and no doubt many riders found them worth their while to follow. But as only a small number of knights of the wheel are living in Gotham, as compared to the many thousands out here in California, it would be no more than fair to let them have an inning or two in the publication of routes. As the first of these a splendid round trip from San Francisco to the Petrified Forest in Sonoma county, one of the wonders of the whole country, may here be described shortly.

This trip, as behooves a first attempt at map touring, is quite simple, it almost being a case of following your nose. There is a much traveled road leading through Green Brae, San Rafael, Petaluna to Santa Rosa. But once in the city of Santa Rosa it becomes necessary to be more careful, as a number of avenues lead in various directions, and it is not so easy to pick out the proper one.

Take Mendocino avenue to the junction of the Mark West and Porter Canyon roads, where you must turn to the right. Traveling for about five miles, passing Burks Village and Mark West Springs, brings you to a little cottage, which marks the beginning of the petrified forest.

This forest stretches for about four miles and covers an area of some 300 acres. It is very difficult to ride on any kind of vehicle into the forest itself, on account of the wonderfully thick and heavy undergrowth; much better it would be for each rider to leave his machine at the cottage near the entrance. The big trees, some of them 80 feet high and from 6 to 10 feet in diameter, are of the giant redwood species (Sequoia Gigantea), and are said to have been crushed to earth by volcanic action. Somehow or other mineral waters or solutions of salts covered the fallen giants of the woods and slowly petrified the fiber. It must have occurred a long, long time ago, for geologists have fixed the age of these fallen monarchs of the forest at over 30,000 years. Just to think of the ages that have passed since those big trees grew and flourished gives one the creeps, if one is in the least inclined to speculate or dream of all that has occurred since the sap rose and fell within those wooden pillars. So perfectly have they been preserved that even now it is possible to count the rings and even to notice the color of the bark and to distinguish between firs and redwoods.

There is much more that is wonderful and interesting in this remarkable forest of stone, for more fallen giants are uncovered every day, as there is continuous digging going on in the whitish-gray volcanic ash and dust. Large and small fragments of scoriaceous rock and great chunks of lava litter the ground, while the rough sides of the mountain are fissured with deep ravines of seismic origin, in which streams of lava flowed irresistibly down into the valleys, carrying destruction in their course.

A fee of 25 cents is charged for admission to the forest proper, but it is money well spent. The visit is not only highly interesting from a scenic point of view, but is of great educational benefit to him who looks around him with his eyes wide open.

Although the road from Mark West and Porter Canyon is somewhat hilly and quite rough, it is not impassable for the sturdy two-wheeler. Once past West Springs,

however, the road becomes splendid, almost perfectly smooth and level, until you reach Calistoga. It is made of shell rock and rarely gets muddy, while the scenery and views confronting the rider are simply magnificent. Emerging from the canyon some little distance before Calistoga one has a beautiful view of Mount St. Helena.

Just before reaching the little town of Calistoga a rather steep descent brings you into the beautiful Napa Valley, where the road is like a boulevard, absolutely level, broad, with fine trees, and you just feel like "letting her go"—but don't do it! Because the speed limit is 25 miles an hour, and while motor cops are not in evidence the country constables are—very much in evidence, in fact!

Returning via St. Helena, Napa and Vallejo the rider will find the roads in rather poor condition, but great work is being done, and it will not be long before a fine boulevard will reach from Napa straight down to San Pablo Bay. At Vallejo it is necessary to take the steamer across the bay to 'Frisco.

The whole round trip can easily be accomplished in 10 hours, allowing one hour for dinner and one hour for exploring the petrified forest. If the rider wants a hearty meal at noon time he will do well to stop either at Santa Rosa or St. Helena, as the cottage near the forest has nothing but sandwiches and soft drinks. Calistoga, too, has a very nice little restaurant, where one can get a dandy meal for about 50 cents.

Baker to Try for Six-Hour Record.

The proposed six-hour record trial which will be made by Erwin G. Baker on the Indianapolis Motor Speedway will be watched with much interest, as it will without a doubt determine whether the Speedway is suitable for motorcycle racing. Speedway surfaces as a rule are too rough to permit of high speed by the little two-wheelers, but the new brick surface of the Hoosier course is much smoother than a cement surface and correspondingly easier on tires. Even a slight rolling surface, while presenting no difficulties to a large racing car, often proves a Waterloo for motorcycles at extremely high speed. Baker has been practicing for several days for the event and recently rode 75 miles before a blow-out forced him to stop momentarily. He said he experienced no unusual jar or jolt and felt good for several hundred miles. In the six-hour trial it is his intention to ride as far as possible without a stop, getting his oil and gasoline on the run. If he proves that the Speedway surface will permit of the high speed attained by the racing machines the Indiana Motorcycle Club will no doubt make a bid for the F. A. M. convention.—L. L. G.

Krebs Nearing End of Long Tour.

William Krebs, of the Cincinnati Motorcycle Club, passed through Indianapolis, homeward bound on the last leg of a 1,200-mile trip through Indiana, Illinois, Missouri, Iowa and Ohio. Though compelled to "ship" an additional 300 miles or so, Krebs enjoyed the visit to the utmost and came through with flying colors. Neither tires nor machine gave him any trouble and he had but one spill. He left Cincinnati on October 8th to spend his vacation with friends in Iowa. He reports the roads in Indiana and Ohio to be in excellent shape after the hard rains, but he says the Iowa and Missouri roads after a rain of several days are enough to sour the disposition of the most optimistic motorcyclist.

The farmers in that part of the country for the most part use vehicles with narrow steel tires, and the effect of these tires on a clay road can well be imagined. A deep rut is worn in the soft road, this rut ranging from two to four inches in width, and all the vehicles follow this track. It is almost impossible to ride in the horse track, as the clay soon hardens and resembles more a boulder road. Krebs says if a man is an exceptionally good equilibrist he can manage to stay in the same old rut, but if he deviates from the perpendicular his name is mud in more ways than one.

Indianapolis is proving to be a sort of a stopping place for tourists bound east and west, and is becoming one of the best known parts supply stations.—L. L. G.

"WHEN THE AUTUMN LEAVES ARE TURNING INTO GOLD"

The World on Wheels: News Notes from Everywhere

Bobby Walthour's winnings for the European season just closed, during which he won the motor-paced championship of Germany, are reported to be $12,500.

Amateur track racing in Australia is evidently in little immediate danger of going into a decline, judging by the entries received recently in two events—a half-mile and a 1½-mile handicap, drawing 140 and 160 entries, respectively.

Octave Lapize, the winner of the Paris-Brussels, Paris-Tours, Paris-Roubaix and the 100 kilometer road championship of France, and Leon Georget, six times winner of the Bol d'Or race, will be one of the pairs to represent Europe in the coming Madison Square Garden grind.

Scarcely a motorcycle factory but has been overrun with visiting riders of its machines during the season just closing. Among recent Harley-Davidson visitors were Fred and Charles Sheppard, of Louisville, Ky. They rode singles and report a puncture as the sum total of troubles.

Germany has the six-day fever, at the time of going to press there being no less than three big grinds scheduled for the near future—the first at Frankfort-on-the-Main, starting October 27th; one at Berlin, on November 14th, and the third, an eight-day affair, dated December 1st, at Cologne.

Howard A. French, of Howard A. French & Co., of Baltimore, forgot all about motorcycles and bicycles and other things on the evening of October 18 when he observed the twelfth anniversary of his wedding. He had a few of his friends at his home and the celebration was a very quiet one. French is the agent for the Indian in Baltimore and Washington.—C. F. Y.

George Wiley, the little ex-messenger boy of Syracuse, N. Y., who has been giving such a good account of himself the past two years in the motor-paced game, sailed for Europe on Tuesday, the 24th inst., on the steamer Wyndham. Wiley will ride in Germany during the months of November and December and will then return to this country.

World's series baseball was not the only sport affected by the Elinor Glyn portion of rain in the East last week, for all of the week-end race meets also went over for another seven days. The meets postponed were Pottstown, Pa., to the 28th, and Guttenberg and Olympic Park, N. J., to the 29th. This is the second postponement of the two latter events.

Siren horns no longer are under the ban in Birmingham, Ala., and motorcyclists who have them are using them with fiendish glee when they see a policeman these days. Some time ago the police department put a taboo on the use of the horns. Since then, however, a new State automobile law permitting the use of sirens has become effective, and nullifies the police embargo.

Quite a few members of the Maryland M. C., of Baltimore, took a night off on October 18 and went down to the Ariel Boat Club, and for several hours indulged in the art of Terpsichore. The weather was not conducive to a fine attendance, but notwithstanding there was quite a crowd at the event. Later in the evening there were refreshments, and then back to the old grind again.—C. F. Y.

"The law must be enforced when motorcyclists who ride after dark neglect to have lighted lamps," said Judge Sheller, of Everett, Wash., to three motorcyclists arraigned before him for "failure to light up." "I don't see any excuse for it, do you?" inquired the court. "Not exactly," admitted one of the trio, "we had lamps, but we did not light them." "I fine you $5 each," said the court. They paid.

In the motorcyclist's list of apparel there is no one thing, probably, that is as short lived as gauntlets. Chafing on the grips and handlebars wears the thumbs through in a hundred-mile ride or so, as this member receives more of the friction than any of the fingers. A good way to prevent glove fingers from wearing through is to wrap some tape around them. It wears pretty good, is easily renewed, and protects the leather from chafing.

Rain on Sunday, the 15th inst., caused a postponement of the race meet at the Newark Velodrome. The same program will be run next Sunday. Eight races are on the card, with a three-cornered team match race as the headliner. Freddy Hill will be Champion Kramer's partner, Jackie Clark and Floyd Macfarland make up another "head-and-legs" combination, while Eddie Root and Joseph Fogler will, as usual, keep the crowd and the bunch guessing.

The purse of $1,000 hung up recently by the Diamant Bicycle Works, of Germany, and Franz Hoffman, the pacemaker, for a new paced hour record brought a promising rise out of Arthur Vanderstuyft when he made the attempt recently to better Guignard's mark of 63 miles, 189.8 yards. Vanderstuyft, in his trial at the big Munich track, according to foreign reports, slipped his pedal after having ridden 40 kilometers (25 miles) 18⅘ seconds faster than Guignard's time for the same distance.

The New South Wales Individual Championship under the auspices of the New South Wales Cyclists' Union, on September 2d, at Homebush, Australia, was won by S. Edworthy; second, D. Kirk; third, C. M. Cutcliffe. The winner's time for the distance, 40 miles, was 1:47:31. Time of the respective leaders for the intermediate distances was as follows: 10 miles, 25:07; 20 miles, 51:50; 30 miles, 1:19:02. Best previous performances: 20 miles, 55:43⅕; 30 miles, 1:17:41⅕; 40 miles, 1:42:40.

Under the auspices of the Great Neck Cycle Club there will be a cycle carnival on Election Day, November 7th. The carnival will be held on the athletic grounds at Great Neck, L. I. Four events for amateurs are on the card—half-mile open, one-mile handicap, miss-and-out and an Australian pursuit. The meet is under National Cycling Association sanction; entry blanks can be procured of and entries made with Dieges & Clust, 25 John street, New York City, or the committee, Edward J. Burke and Charles D. Uhl, Great Neck, L. I.

Everett Troop, Minneapolis (Minn.) Boy Scouts, has organized a mounted patrol on bicycles. The patrol consists of eight members. Its duties are to scour the neighboring country on bicycles, locating attractive camp sites, gathering information as to routes and laying out the regular Saturday hikes of the troop. The members of this bicycling patrol are Assistant Scoutmaster Charles Darnell, Edward Vos, Charles Leitz, Lowry Harrison, George Messing, Clifford Domning, Leo Naden and Eugene Galvan. Good luck to them.

Three Indianapolis riders, Nelson Hod-

gin, Fil S. Brown and Wm. Grepp, started on a cool weather motorcycle trip that should prove interesting as well as educational. The main points in their journey will be Chicago, Milwaukee and Aurora, and they will cover approximately 700 miles before they return home. It is their intention to visit the Indian branch and the Excelsior, Harley-Davidson and Thor factories. All three men are engaged in business and are taking the trip to get away from business cares They will be gone about ten days.—L. L. G.

With Jake DeRosier, the world's professional champion; Frank Hart, king of the amateurs; J. U. Constant, the 10-mile title holder; Ralph DePalma, credited with being the star of the auto drivers on mile dirt tracks, together with a big array of lesser lights, on hand, the biggest and best motorcycle card ever staged in or around New York will be put on at Guttenberg, N. J., on Sunday, 29th. The program has been expanded to include 10 events, and Walter Goerke's track record of 56 seconds will be attacked. There are whispers that Hart will spring a surprise by turning professional to get a chance at DeRosier.

Severe censure of the police of Sacramento, Cal., for not enforcing the light law, as a result of a collision between two lightless motorcycles which resulted in the death of one of the riders, has brought a protest from the chief of police that the criticism is unjust, as there is no law requiring motorcyclists to carry lights. He says that some time ago he called the attention of the board of trustees to the fact and drew up an ordinance, which he tried to have passed, but nothing more was heard of it. While the police are powerless to act, since the accident motorcyclists have been warned to carry lights.

While in training on the Parc des Princes track, Paris, on the 10th inst., Nathaniel Hawthorne Butler, America's veteran pace follower, met with a severe accident when the front forks of his motor-pacing machine broke and caused the machine to swerve up the bank. The machine ran into a table placed at the upper side of the track for the use of the officials; the pace-maker was thrown heavily across the table and escaped with a few bruises, while Butler collided with the fallen motorcycle and was catapulted entirely over the table, landing on his head on the track. He was seriously cut about the face and head, his nose and one ear receiving the most damage.

Reeling off the 200 laps without a stop, E. G. Baker, of Indianapolis, Ind., the long-distance specialist, won the 100-mile motorcycle race conducted by the Vincennes Motorcycle Club at the Knox County fair grounds on the 15th inst. from a field of seven starters, of whom but three finished. Baker's time was 2:23:37⅘. He rode an Indian "4." Second place went to a local favorite, V. O. Scantling, also on an Indian, who finished nearly six minutes behind the winner. Scantling made one stop for oil. William Johann was the other survivor. His time was 2:37:35, and he also stopped once. Mechanical troubles retired the others. First prize was a $65 gold watch. Baker had the race won before the start and led all the way. The track was half a mile.

Paul Guignard, the world's hour record holder, was returned the winner of the Grand Prize of Boulogne race at Parc des Princes track, Paris, on October 9th, after a grueling duel with Darragon. The distance was 80 kilometres, about 50 miles; the winner's time, 1:04:27⅕; second, Darragon; third, Seres; fourth, Bouhours; fifth, L. Didier; sixth, Huybrechts; seventh, Parent; eighth, Nat Butler. According to reports, the veteran American rode in exceedingly hard luck, having trouble with

YOUNG AMERICA AWHEEL

his pacing machine from the start, and through its misbehavior receiving a bad fall in the 20th lap. He changed machines twice, but was unable to overcome the big lead of his opponents, although the exhibition of pluck and gameness made the Yankee quite as popular with the spectators as the winner.

Ellis Diver, a motorcycle cop of South Bend (Ind.) has received a shock which it is feared will incapacitate him for duty for duty for many months. In passing, it may be remarked, the shock is one of a nervous nature, not physical. To be brief, Diver received a scurrilous note in which the writer expressed himself in no uncertain terms regarding the motorcycle squad of the South Bend police force. In consequence of this frank criticism and its accompanying near attempts at scornful utterances. Diver is at the point of a nervous collapse. Here is the note verbatim: "Mr. Diver: Dear Sir—The general opinion of two-thirds of the automobile owners is that you are an overgrown motorcycle cop. Be cheerful and speak to the owners just as you do to your friends. Be like the policemen of the big cities." After bravely wading through this missive to the end Diver hid his head in his hands and great, hot, scalding tears seeped through, pattering on the ground with loud thuds. His recovery is giving the police officials considerable worry.

Since women began to break into motorcycling prominently, which is of quite recent occurrence, some of them apparently have shown such a wonderful aptitude for and quick mastery of the sport as to lead an unsophisticated person to believe that the days of miracles again are with us. Here is a sample "miracle" as a reporter got it from a friend of a fair feminine motorcyclist: "Miss Blank is only 15 years old, but is as daring as any of the men riders on the track. Ever since she was big enough to be allowed near motorcycles she has shown a deep interest in them." And here's another: "Miss Dash has been riding motorcycles since she was 12 years old. In the four years she has been riding she has mastered the machines thoroughly and has no fear of trouble when alone on the road. In fact, she dismantles and reassembles her machine as handily as any man who ever conducted a motorcycle shop." Now isn't there some fair young motorcyclist somewhere who can persuade her parents to recall that she was born with a gold-plated spark plug in her hand, and preferred a carbureter as a rattle as against the old-fashioned dolls? Verily it is to scream, this "wizardry" of our amazons.

A Few "Don'ts" From One Who Knows.

The following "don'ts" for motorcyclists have been compiled by Fred H. Caley, ex-State Registrar of Motor Vehicles of Ohio. Mr. Caley has been prominent in motor circles over the country, and the following should prove of great value to the riders:

"Don't cross a railroad track anywhere, at any time, until you have strictly observed the injunction to stop, look and listen.

"Don't approach a curve or sharp turn unless your machine is under absolute control.

"Don't anticipate what the driver of the vehicle ahead of you might do; be prepared for any emergency.

"Don't drive in the middle of the street unless passing another vehicle.

"Don't cross an intersecting street unless you have the right of way.

"Don't take it for granted that everything and everybody will get out of the way when you sound the horn.

"Don't start on a trip without first making sure that the brakes are in perfect condition; a worn-out brake has been the cause of many fatal accidents.

"Don't imagine that you own all the road because you are the owner of a machine, some other people have rights that you are bound to respect.

"Don't argue the right of way with a railroad train, street car, load of stone, or a hay wagon. It requires patience sometimes, but it is the surer and safer policy in the end."—H. C. Q.

PERTINENT REMARKS ANENT THE OPEN MUFFLER

Motorcycle Clubs All Over the Country Hasten to Jump on the "No Cut-Out" Band Wagon—Fines and Expulsion Await the "Cut-Out" Fiend Who is a Member.

The campaign against the use of the cut-out by motorcyclists being carried on by the Bicycling World and Motorcycle Review is receiving the attention of all who are looking to the best interest of the sport in all parts of the world. The F. A. M. affiliated clubs throughout the country are generally adopting the resolutions suggested. The press in this country and abroad is heartily falling into line and endorsing the movement. Wherever the resolutions have been adopted the newspapers have generally published them in full with a double-column heading, and often endorsed the action in the editorial columns; thus the clubs are taking a step in the right direction by proving to the general public through the press that the great majority of motorcyclists are not noise fiends and nuisances, but law-abiding citizens, thoughtful of others' nerves and pleasures.

Dr. J. P. Thornley, chairman of the F. A. M. competition committee, in a letter to the Bicycling World, says:

"When I see a man going down the street with his muffler wide open, with the general air of 'please look at me and see what a wonderful piece of work I am,' I feel that he could not be punished by any known method of torture to such an extent as to make me pity him," says Dr. J. R. Thornley, chairman of the F. A. M. Competition Committee. "It is this breed of animal, a cross between a braying jackass and a laughing hyena, that should be made to suffer, and not the man who uses his open muffler judiciously and for the common safety of himself and the pedestrians. Were there such a thing as an absolutely silent motorcycle on the market I am inclined to think it would create more consternation, and more opposition, and do more damage than even the open muffler fiend.

"Where there is a great deal of noise and people are darting in and out, to quickly open and close the muffler is one of the surest ways of warning people of your approach. Moreover, you do not have to remove your hands from the handle bars for an instant to do it.

"In long rides in the open country in very hot weather there is a very noticeable difference in running a machine with the muffler open and with it closed.

"I think your idea of having manufacturers eliminate cut-outs on their machines is wrong in principle. It makes law-abiding and considerate men suffer for the shortcomings of an inconsiderate few. It really punishes the decent, intelligent man and lets the idiot off scott free.

"My idea of handling the thing is for the Federation of American Motorcyclists, through their Legal Department, to formulate an ordinance regulating the use of the muffler cut-out, restricting it absolutely in parks, parkways and other places of restricted traffic, but allowing it to be used within 100 feet of crossing, where traffic is congested, and street cars particularly are in operation.

"There is nothing more dangerous for the public at large and the motorcyclists than to trail behind a street car. People are continually getting off and on, and every time this occurs some one is liable to be hurt. To pass street cars noiselessly is even more dangerous. Some one with the usual lack of sense is liable to jump off the front platform without looking, or seeing where he is going to land, or giving anyone the slightest warning. If the motorcyclist is coming up noiselessly, trying to pass out of the danger zone, he is just as likely as not to hit such a passenger, and more than probably be thrown under the wheels of the car. The only way the dormant intellect of passengers such as this can be reached is through their ears, because it requires no effort on their part to hear, while it does require some effort to look where they are going.

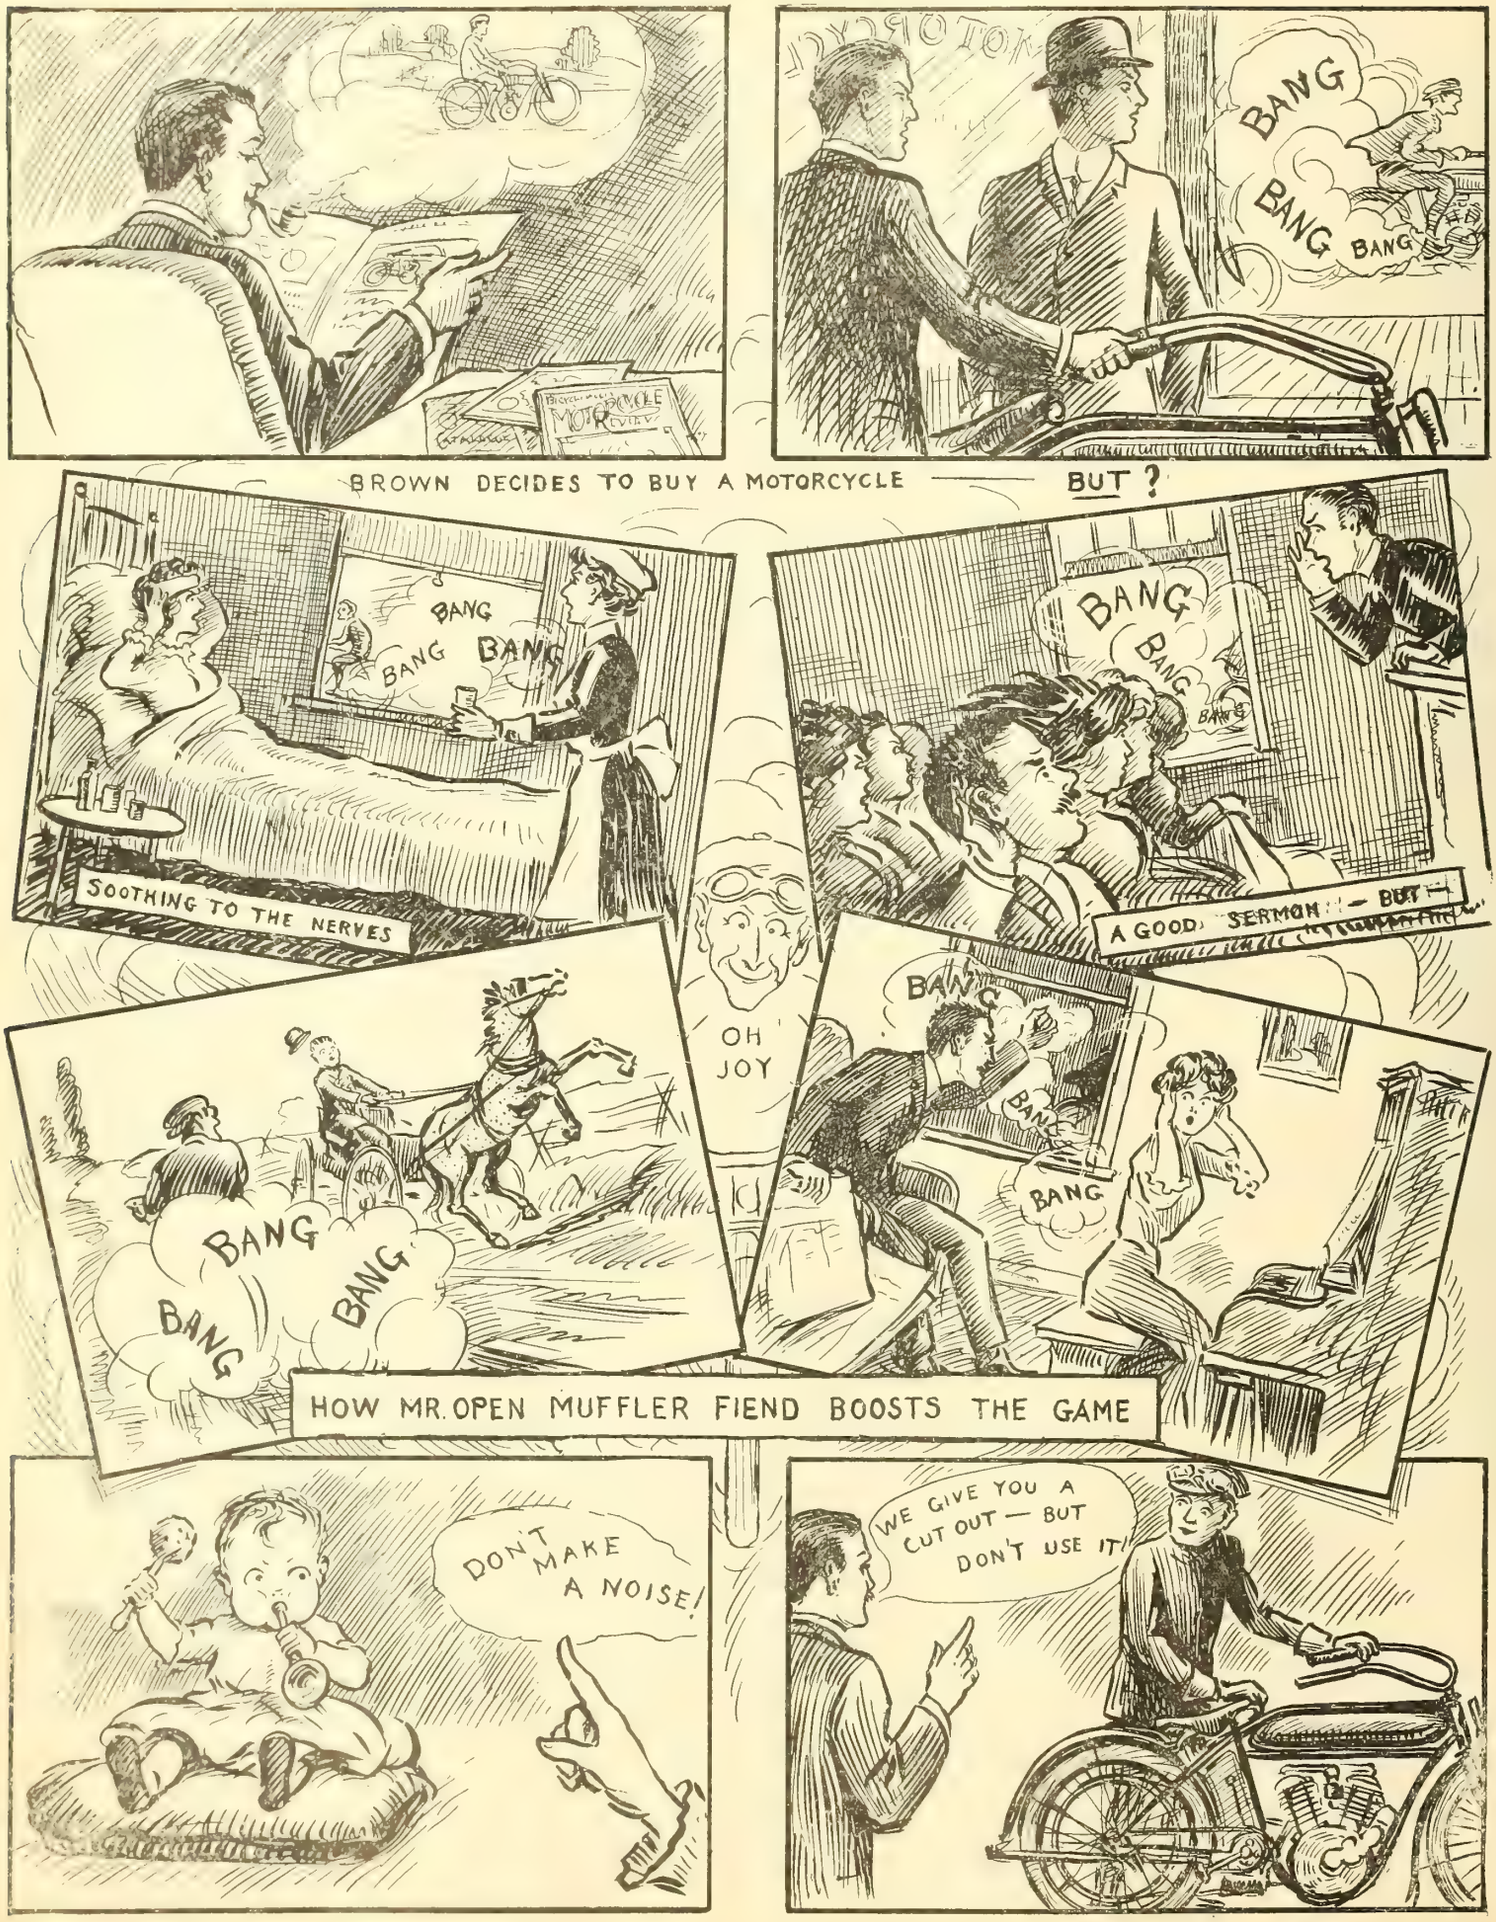
"I do not believe that sirens would help the matter at all. The continual tooting of a horn in all probability would not be heard. You have either got to make a good big noise in passing a street car, or simply refuse to ride on streets where street cars are operated.

"I believe that some such ordinance as this, if recommended by the Federation of American Motorcyclists, would be unanimously adopted all over the country, and if a good stiff fine was recommended as a punishment I am inclined to think that the open muffler nuisance would be very promptly a thing of the past.

"I always hate to disagree with a man the least bit who is working in the right direction for the good of the game. I feel convinced that your plan alone would not accomplish the desired result, and with the adoption of my plan the desired result would be accomplished, and your scheme would not be necessary.

"Furthermore, I think it would be easier to get such ordinance adopted in the majority of cities of the country, than it would be to get the manufacturers together and have them agree unanimously not to manufacture and equip their machines with muffler cut-outs. If one single manufacturer refused to do this, all the others would have to fall in line with him or he would have a distinct selling advantage over the others."

The resolutions condemning the use of muffler cut-out, particularly in city streets, suggested by the B. W. and M. R., with an article added against the practice of "tank riding," were adopted by the Fulton County Motorcycle Club, of Gloversville, N. Y., at its last meeting, and the evening papers of Gloversville published them in full. There was a large attendance, with President R. D. Boyd in the chair. The resolutions are practically identical with those adopted by the F. A. M. New England district meeting at Providence, R. I., this month.



The Miami (Fla.) Motorcycle Club adopted the resolutions at its meeting on the 18th inst., and added an article requiring the members whose machines were not already equipped with mufflers to have them attached by November 1st, and, failing to do so, placing them liable to the following penalties: "First offense, to be reprimanded by the club; second offense, to be fined one dollar; third and each additional offense thereafter, fine to be doubled each time or dismissal from the club.

The campaign was thoroughly discussed at the last meeting of the Bridgeport (Conn.) Motorcycle Club, and every member present spoke in favor of it. As there is an excellent law in the State of Connecticut against the open muffler, there was no need for further action in the matter, but a motion strongly endorsing the campaign was unanimously carried.

The Harlem Motorcycle Club, of New York, jumped on the popular "no cut-out band wagon" at its meeting on the 21st inst. and adopted the resolutions unanimously calling for a fine of one dollar for the first offense and dismissal from membership for the second.

The resolutions calling for a fine on any member using the cut-out for the first offense and dismissal on a repetition were adopted by the Davenport (Ia.) Motorcycle Club at its meeting on the 19th inst.

The Dubuque Motorcycle Club, of Dubuque, Ia., adopted the resolutions against the cut-out unanimously at the regular meeting of the club held on the 9th inst.

Up to the Minute F. A. M. and Club News

The newly organized Coshocton (O.) Motorcycle Club has fitted up cosy quarters over Thompson's clothing store. The club has 18 members, and is out to show a big growth before the riding season closes.

Muskegon, Mich., motorcyclists have organized a society for the agitation of the good roads movement, and will lend aid to the county board of supervisors in its campaign for better highways. H. C. Wright is president and Fay Meeker secretary of the new organization.

Chicken supper followed by piano selections and singing was the way in which a merry evening was spent by 14 members of the Berks County Motorcycle Club, of Reading, Pa., on the 11th inst. The festivities occurred at the Spring Valley Hotel, a favorite resort of local motorcyclists.

For the second successive time the reliability run of the Detroit (Mich.) Motorcycle Club to Grand Rapids and return, scheduled for the 15th, was held up on account of rain. It probably will be abandoned for the year. It originally was booked for the 8th, but the weather man interfered.

With over 75 machines in line the Reading (Pa.) Motorcycle Club held a parade through the principal streets on the 13th inst. to advertise its race meet the next day. A motorcycle officer and buglers headed the line, and red fire was burned promiscuously along the route. Crowds were attracted by the unusual procession of "night riders."

At its regular meeting on the 24th inst. the Invincible Motorcycle Club, of Brooklyn, N. Y., voted to give a theater party and supper on November 17. The club will occupy a box at the Orpheum, and later adjourn to the Hof Brau for the dining part of the program. The party is limited to 40 and friends and members are eligible to attend. It is not a money-making affair, but strictly a social gathering.

An old-fashioned rabbit dinner was enjoyed by the Poughkeepsie (N. Y.) Motorcycle Club and friends at the hunting lodge of R. H. Wood at Rochdale on the 15th inst. After the eating party the motorcyclists went for a sail up a creek in canoes and rowboats. Of course the inevitable upset occurred, Harry English taking an involuntary bath. About 17 were present as guests of the host, who is a member of the club.

Invitations to participate in an oyster dinner proved a powerful magnet in attracting a big turnout of the Camden (N. J.) Motorcycle Club, their friends, and some Philadelphia brethren, to Port Norris, on the Jersey coast, on Sunday, 15th inst. A brother of one of the motorcyclists was the host. After the "feed" the riders enjoyed a boat ride on the Mauria river, and had their photograph taken. On the return trip the roads were in bad shape following a heavy morning rain, but all returned safely, reporting a good time.

At the annual election of officers of the Bridgeport (Conn.) Motorcycle Club, held on the 17th inst., the following were chosen for the ensuing year: Thomas Buchanan, president; Samuel Lyons, vice-president; Fay Stevens, treasurer; C. R. Dosch, secretary. The executive committee includes the four officers and the following members: O. E. King, Ed. Booth and Ed. Kitchen. The club has been increasing in membership very rapidly during the past year, and although it was but recently that new and larger quarters were secured, still larger quarters are now being considered.

Balloting in their half-finished new club rooms, the Columbus (O.) Motorcycle Club held its annual election of officers on the 11th inst. with the following result: Dr. P. M. Sarver, president; Charles F. Webster, vice-president; N. B. Redden, recording secretary; G. H. Bangham, financial secretary and treasurer. Trustees—P. I. Haynes, G. H. Bangham, W. H. Snyder, three years; Dr. P. M. Sarver, Phil Vogel, two years; W. H. Mathews, Grant Lees, one year. Over 50 members were present, making one of the largest and most enthusiastic gatherings ever held by the club. The new quarters will be ready by November 1. This is the club that is bidding for the 1912 F. A. M. meet.

The Harlem Motorcycle Club is to have another ball this winter, and the expenses for same have already been fully subscribed by the members and a special fund of $150 has been put aside for this purpose. The same procedure took place last year, and the affair was a success both from a social standpoint and financially. A committee consisting of D. J. Willis, J. Gold and Gus Rotholz has been appointed to make arrangements for some hall, and preference is to be given to Saturday, January 6, or Saturday, January 13, 1912, which will be at the time of the New York show, allowing the out-of-town manufacturers to attend. Handsome souvenir medals will be given to the guests and Wennstroem's band of ten pieces has been engaged.

At the meeting of the Davenport (Ia.) Motorcycle Club, held on the 19th inst., Dr. C. M. Stephens and John D. Kuehl were elected to serve on the board of directors, and the organization of the club is now complete.

All members of the club are taking an interest in the selection of suitable colors, to design a pennant for use when riding on club runs, etc., the member presenting the accepted design will receive a pennant free for his trouble.

The entertainment committee is making arrangements for a supper and entertainment to be held, at which the membership committee hopes to get busy and round up the balance of the riders in town and have them join the F. A. M. and receive the benefits derived therefrom

Bearing out its promise to be one of the "live ones," the Lockport (N. Y.) Motorcycle Club has affiliated with the F. A. M. Its number is 203.

Giving tangible evidence that he is a real worker, George B. Carroll, recently appointed F. A. M. county commissioner for S. Monroe County, N. Y., is "doing things." In addition to organizing his county, he is developing an F. A. M. club for Monroe.

G. H. Brown, Hoosatonic, Mass., has imbibed from the chairman's fountain of knowledge and become enthusiastic for the F. A. M. He hopes to show results with an F. A. M. club.

Since D. C. Crooks, Galveston, Tex., the new F. A. M. state commissioner, took the trail there is no peace for county commissioners who are "asleep at the switch." He is running the gauge on the F. A. M. boilers up to the blow-off point.

Here are greetings to the new Richmond County Motorcycle Club, of Port Richmond, N. Y. Charles R. Heide, the founder,

THE INDIANA MOTORCYCLE CLUB OF INDIANAPOLIS—"IN THE GOOD OLD SUMMER TIME"

was rewarded with the presidency. Affiliation papers have been sent to the club, and it will fill them out soon.

Join the "live ones" by affiliating, says the chairman to the new Wassacucon (Mass.) Motorcycle Club. Will the invitation go begging?

F. R. Jenkins, Des Moines, Ia., F. A. M. state commissioner for Iowa, is a dealer, and offers free storage to all riders of the machine he handles. He has a nice cement garage that has earned the right to flaunt one of the F. A. M. repair shop signs.

No More Open Mufflers in Savannah.

Savannah, Ga., Oct. 27.—With the end of the open muffler on Saturday last, the Savannah Police Department has come out in a big story in the newspapers of this city telling the motorcycle and automobile drivers that if they are caught after Saturday a fine of from $5 to $50 will be imposed upon them. Several months ago the Savannah Motorcycle Club passed at its meeting a resolution to present to the city council a draft of an ordinance making it unlawful to ride through the streets with an open muffler. This passed the council the first time presented but was never forced upon the public before. When the Savannah Motorcycle Club presented this resolution to the council the Savannah Automobile Club did the same thing. Both of these clubs are looked upon throughout the South as the largest of their kind, and of course, now that the open muffler fiends will have to vacate this city, other cities in the South will no doubt follow.—O. A. M.

Klebes Wins Thrice at Reading.

Reading, Pa., doesn't have a motorcycle race meet very often, but when it does it usually puts on a pretty good one. That was the sort of a speedfest the Reading Motorcycle Club staged at the fair grounds on Saturday, 14th inst. While honors were passed around pretty evenly, Harry Klebes, of Philadelphia, was the star, capturing the feature event, the half-hour race, and a 10-mile open.

Ten started in the half-hour grind with Constant setting the pace. He soon developed engine trouble and fell back. Then Klebes went in front and stayed there to the end. He covered 23½ miles, beating Williams by half a mile. Stoudt was third and Constant fourth. Constant captured a 10-mile open by pretty riding, but lost to Stoudt in the time trials. Thomas Dedge, of Washington, topped the private owners, and Arthur Bruderick graduated from the novices.

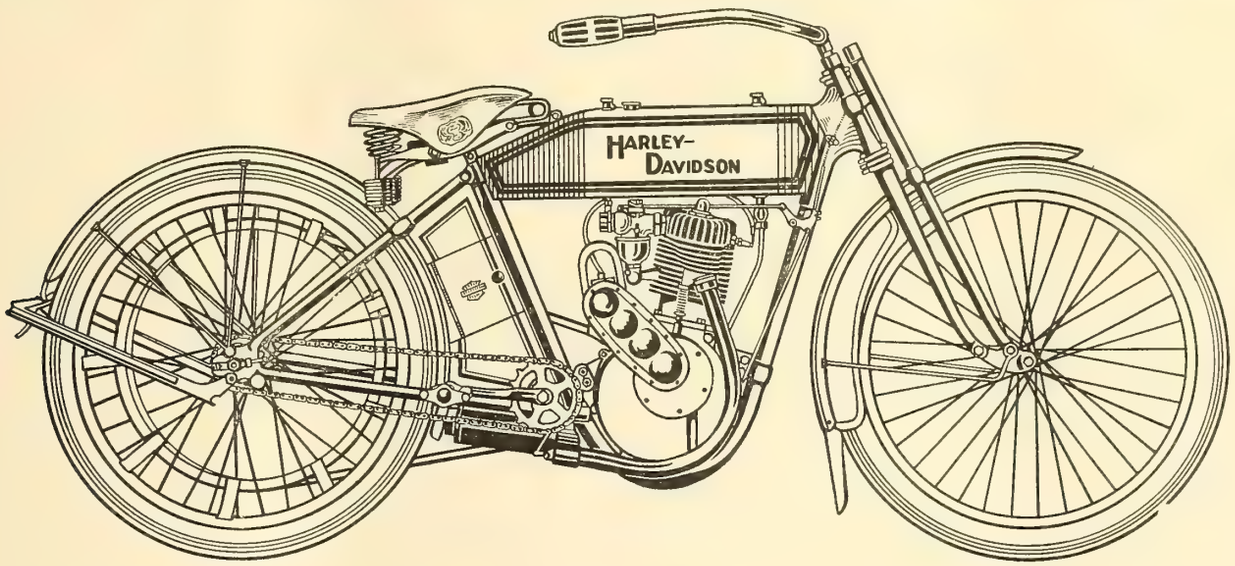
There were several mishaps. Constant had four falls, but escaped unhurt each time. At the finish of the half-hour race the spectators rushed on the track to hear the announcements, and after several narrow escapes one of them, William Obenhausen, was struck by Thomas Dedge. Both men were "laid out" and were taken to a hospital. Stoudt has been suspended indefinitely for competing while already ineligible by having competed at an unsanctioned meet in Toronto. Stoudt claimed that he had permission to ride at Toronto, and was eligible to ride at Reading, and the referee accepted his statement. His case has been put before the competition committee, and as he had not received permission to ride at Toronto and made a false statement at Reading it is likely to go hard with him. Attendance, 5,000. Summary:

Five mile novice—Won by A. E. Bruderick (Indian); second, Samuel Nye (Indian); third, Milton Reese (R-S). Time, 7:08.

Ten mile private owners—Won by T. R. Dedge (Indian); second, Milton Reese (R-S); third, J. A. Harper (R-S). Time, 14:16⅗.

Ten mile trade riders—Won by H. Klebes (Indian); second, W. Stoudt (R-S); third, H. C. Becker (R-S). Time, 12:42.

Ten mile trade riders—Won by J. U. Constant (Indian); second, H. Klebes (Indian); third, W. Stoudt (R-S). Time, 13:07.



Half hour open, trade riders—Won by H. Klebes (Indian), distance 23½ miles; second, H. B. Williams (Indian), 23 miles; third, W. Stoudt (R-S), 22½ miles; fourth, J. U. Constant (Indian), 22 miles.

Mile time trials—Won by W. Stoudt (R-S), time 1:13; second, J. U. Constant (Indian), time 1:13⅘.

Handy Log Book for Tourists.

Motorcyclists who desire to keep records of their mileage, running expenses and other items incidental to touring or average running will find handy for the purpose the "Motorcyclists' Log Book," made up for free distribution by the Eclipse Machine Co., Elmira, N. Y. The book will be mailed to any motorcyclist on receipt of name, address and make of machine, and can be exchanged when filled for a new one.

What has been done, not what may be done, is what counts

ANY motorcycle manufacturer or salesman can tell a dealer that he will sell more motorcycles of the particular make he represents, than of any other.

BUT talk is cheap. What the dealer really wants to know is which machine WILL sell and the best way to find this out is to look up the records of dealers who have been successful in the motorcycle business, and learn what machine they sold. The fact of the matter is, most dealers know that the Harley-Davidson is the best seller, whether they are enjoying those sales themselves or whether it's their biggest competitor who has the agency.

Now, when a salesman representing some motorcycle other than the Harley-Davidson makes exaggerated statements about how big a demand there is going to be for such and such a motorcycle, the dealer naturally discounts those statements and also discounts in like manner all the other statements that that salesman makes.

Harley-Davidson salesmen don't have to make predictions—they can point to past records.

Down in Louisville the Harley-Davidson dealer sold more machines than all the other dealers in town put together. In fact, he sold nearly ten times as many as three of his competitors.

But the success of Harley-Davidson dealers has not been confined to the large cities by any means. In and around the little town of Danville, Kansas, which the census credits with but 200 population, there are 54 Harley-Davidsons, all of them sold by our dealer there this year. The chances are great that you could count the number of machines there of other makes on one hand.

In Piedmont, Okla., motorcycles are looked upon as something new. Yet there are 14 of them there, 12 of these Harley-Davidsons, all sold this year, and Uncle Sam only credits Piedmont with something over 400 inhabitants.

Down in Fremont, a little town in Ohio. our dealer, a new man in the motorcycle business, has sold ten Harley-Davidsons in about two months.

Down in South Carolina Harley-Davidsons are everywhere. In fact, one dealer in Greenwood, S. C., has made the statement that two-thirds of all the machines sold there are Harley-Davidsons. At any rate, the Harley-Davidson dealers in that section are more than getting their share of the business.

Harley-Davidson Motor Co., 123 C St., Milwaukee, Wis.

MIHLON PLANS ALL-YEAR RACING

Aims to Provide Cycle Speed Saucer in the South for Winter Months—Signing Up Riders.

Plans are now under consideration by Frank Mihlon and his associate and manager of the Newark Velodrome, John M. Chapman, whereby, if consummated, professional bicycle racing will be placed on a much more attractive basis for the riders than heretofore in this country.

Mihlon's idea is to provide winter as well as summer racing for the cyclists who, up to the present time, have been riding only during the summer months at Newark, Providence, Boston, Salt Lake City and Denver and the annual Madison Square grind. The venture in prospect is the building of a track in either New Orleans, La., or Jacksonville, Fla.

Chapman will start South in a few days to size up the situation, and upon his decision, work will be started so that the track will be ready for operation about December 24. It is planned to have a Southern season of about four months, the riders returning to the Northern circuit in April.

The proposition calls for an investment of about $10,000. The track will be either six or eight laps, depending upon the location. It is practically assured that the track will be built, as one of the principal stipulations made by the promoters was that the riders sign an agreement to ride only for actual prize money and that no demand be made for bonuses; to this fourteen have assented and at least five more are considering the matter favorably.

Those already signed are: E. A. Pye, Charley Stein, Pete Drobach, Fred Hill, "Brownie" Carslake, Albert Crebs, "Jumbo" Wells, Ernest Jokus, Saxon Williams, "Pedlar" Palmer, William Morton, Percy Lawrence, Clarence Carmen and Elmer Collins. Others who in all probability will sign in the near future are: Al Halstead, Bedell Brothers, Walter DeMara and Chris Schiller. Eddie Root and Joe Fogler are dickering on an engagement to ride in some of the German six-day races, and if not closed they will also sign for the Southern track.

The construction of this track and the maintenance of regular race meets will undoubtedly mean much to the sport and business, as it will obviate the necessity of the riders taking in the European trip, and will give a decided impetus to the business locally, as has been abundantly proven in Newark and elsewhere.

Elmer Collins, America's premier pace-follower, has a contract to ride in Europe during the latter part of December and early January; he will sail immediately after the finish of the New York six-day race, and upon his return will be seen on the new Southern track.

Minneapolis Contest Drowned in Mud.

Drowned out by rain and stalled by roads that were under water for miles, the 16 contestants in the 500 mile endurance contest of the Minneapolis (Minn.) Motorcycle Club, which finally started from that city on Friday, 13th—note carefully the date and then reflect—after four postponements, gave up the fight on the afternoon of the first day. When the water and mud knocked out the mechanical plants right and left, and the few machines that survived were stalled by the roads, the referee called the contest off for good and took the riders aboard his car to the nearest town, Freeport, five miles away. They left their machines at a farmhouse and shipped them home next day, returning themselves by train. C. C. Gould, on a Thor IV, refused to quit when the run was called off, and made Freeport that night. The next day he likewise refused to ship his machine, and rode back to Minneapolis over the fearful roads. The struggle was terrific but Gould won out. Things went well with the contest until about 5 o'clock in the afternoon, Friday, when, between Albany and Freeport, a rainstorm broke. Then was staged a repetition of the famous mud party in the 1910 national endurance run.

STRAIGHT FACTS TO REMEMBER

Essential Points Concerning F. A. M. Contests and So-called "Records"—Words of Warning.

Until further notice be it known that—

THERE ARE NO "WORLD'S MOTORCYCLE RECORDS" — No records are recognized outside of the country in which they are made.

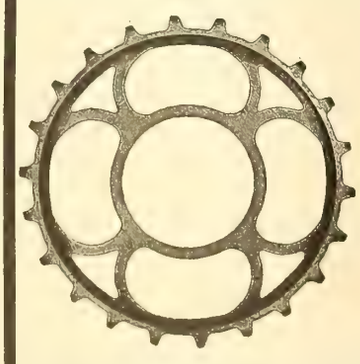
THERE ARE NO "WORLD'S DIRT TRACK MOTORCYCLE RECORDS"—The only real and accepted records are those made in the fastest time, regardless of track.

THERE ARE NO "SINGLE CYLINDER" — "BELT DRIVE" — "CHAIN DRIVE" — "TWIN CYLINDER" OR OTHER MOTORCYCLE "CLASS RECORDS"—The only constructional factor having bearing on the legitimacy of a record is piston displacement.

THE "TUILLERIES" TRACK AT DENVER, COLO., IS "SHORT"—It is the only "short" motorcycle track in the country, and all claims or statements of "records" made on it are false and misleading.

NO WOMAN IS ELIGIBLE TO COMPETE AS A CONTESTANT IN ANY CONTEST SANCTIONED BY THE F. A. M.—They may participate in road events as non-contestants.

MEMBERS OF THE F. A. M. ARE FORBIDDEN TO COMPETE IN ANY FOREIGN CONTEST WITHOUT FIRST SECURING PERMISSION FROM THE CHAIRMAN OF THE COMPETITION COMMITTEE.



NO RECORDS OF ANY SORT ARE ACCEPTED BY THE F. A. M. UNLESS SWORN AFFIDAVITS OF THE TRACK OFFICIALS HAVE BEEN FILED.

"Enclosed find renewal for my subscription. Am well pleased with the Bicycling World and Motorcycle Review. Can't do without it."—Burt Foote, Anna O.

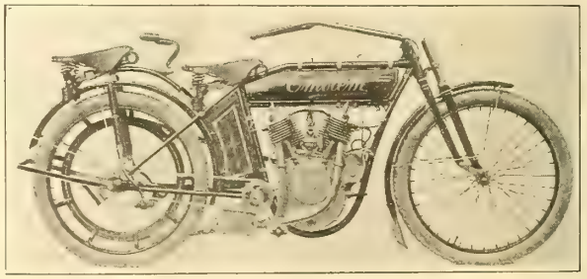
Schafer Ball Bearings

(MADE IN GERMANY)

are the most suitable bearings for motorcycles

BECAUSE

They withstand vibration due to the strong cage and large number of steel balls.



SCHAFER BALL BEARINGS are used throughout the *De Luxe* motor and two speed transmission for motorcycles manufactured by F. W. Spacke Machine Company, which fact proves that SCHAFER BALL BEARINGS stood up under the most severe tests before being adopted and that the best bearing regardless of cost is used on the *De Luxe* motor and transmission.

EMBLEM MANUFACTURING CO., Angola, Erie Co., New York

Member Motorcycle Manufacturers' Association

A New Prest-O-Lite Motorcycle Gas Tank, Equipped with Gauge, $10

The addition of a gauge makes our motorcycle gas tank similar to our famous automobile tank in everything but size. This gauge shows, at all times, the amount of gas in the tank.

Our tank without gauge, which formerly sold at $10, will hereafter sell for $8. We have arranged with our dealers to take in this tank and exchange it for the new model with gauge, if the user desires, upon payment of the difference in price, $2.

Prest-O-Lite Tanks are now handled by nearly all motorcycle and automobile dealers in the United States.

Investigate Prest-O-Lite

Some of your friends are probably using this famous lighting system.

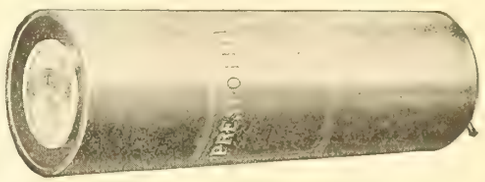
Ask them if it costs any more to maintain than the troublesome, treacherous generator.

Ask them about its convenience, safety and insurance against accidents. Ask them how much pleasure they find in having 40 hours of brilliant, unflickering, dependable light, turned on and off like a gas jet.

Just one accident due to poor light would probably cost you more than a year's supply of Prest-O-Lite.

But get the genuine. Imitations can be exchanged in very few places. Prest-O-Lite Tanks, when empty, can be promptly exchanged, anywhere and always.

The Prest-O-Lite Co.



245 East South Street **Indianapolis, Ind.**

Branches at Atlanta, Baltimore, Boston, Buffalo, Chicago, Cincinnati, Cleveland, Dallas, Detroit, East Cambridge, Jacksonville, Kansas City, Long Island City, Los Angeles, Milwaukee, Minneapolis, New York, Oakland, Omaha, Philadelphia, Pittsburg, Providence, San Francisco, Seattle, St. Louis and St. Paul.

EXCHANGE AGENCIES EVERYWHERE

Price of Tank **$10** Length, 12 inches; diameter, 4 inches; weight, 7 lbs.

PITTSFIELD

Motorcycle Spark Coils

Unaffected by Heat or Strain

CAREFULLY wound by specially designed machines, Pittsfield Spark coils never short circuit. The insulation is wonderfully effective, being a solid compound that holds the entire coil together in one solid mass.

These coils are unaffected by vibration and are absolutely moisture proof. They cannot run hot. They are the longest lived and most satisfactory motorcycle coils ever designed. May we send you catalog describing them?

PITTSFIELD SPARK COIL COMPANY

Dalton, Mass.

SALES REPRESENTATIVES—* New England States, William J. Connell, 555 Boylston St., Boston, Mass. Atlantic States, Thomas J. Wetzel, 17 W. 42nd St., New York City. * Central States, Brown & Caine, 1517 Michigan Ave., Chicago, Ill. * Pacific States, Chanslor & Lyon Motor Supply Co., San Francisco, Los Angeles and Fresno, Cal.; Seattle and Spokane, Wash.; Portland, Ore. * Canada, Russell Motor Car Co., West Toronto, Canada. * Full line carried.

Every motorcycle should be equipped with Pittsfield Jewel Mica Spark Plugs.

Getting directly to the facts, so that you can judge for yourself, the 1912 HAVERFORD "BIG FOUR" at $175 has the following features:

THE MOTOR is "long stroke," in accordance with the most advanced motorcycle practice. It is 3¼-inch bore by 4-inch stroke, and develops more than a full 4 horsepower. It is roller bearing and has an aluminum crank case. It is vertically mounted and in every way accessible.

IGNITION is by Bosch high tension magneto, the most expensive and the most satisfactory magneto that is obtainable.

CARBURETER is the Schebler Model "H," the Schebler being the type of carbureter used on the most powerful automobiles. The Model "H" has been shown to be as perfect a motorcycle carbureter as can be obtained.

TRANSMISSION is by flat, double-thick, endless leather belt, 1¾ inch wide, with spring tension hand-operated idler, having ball bearing belt pulley.

SPRING FORK has leaf spring suspension, the most popular and comfortable suspension ever devised for motorcycles. The fork itself is of the truss pattern, insuring maximum strength. Four leaf springs are provided, with new clip to prevent rebound breakage.

SADDLE is the Persons "Champion." The Persons reputation in saddle making is well known, and the "Champion" model is the Persons biggest and best.

WHEELS are 28 inches in diameter.

TIRES are 28 x 2½ inch, studded tread.

CONTROL is from the handlebar grips through levers; right side is throttle, left side is spark. The handlebar has 3-inch rise and 14-inch back sweep, and has Rough Rider long rubber grips.

GASOLINE CAPACITY, 1½ gallons.

OIL CAPACITY, 1½ quarts.

LUBRICATION by force feed pump.

GUARDS, three sections, extra wide, enameled; detachable at the rear; leather splasher flap on the front.

STAND is attached to rear jaws. Swings up and latches automatically when not in use.

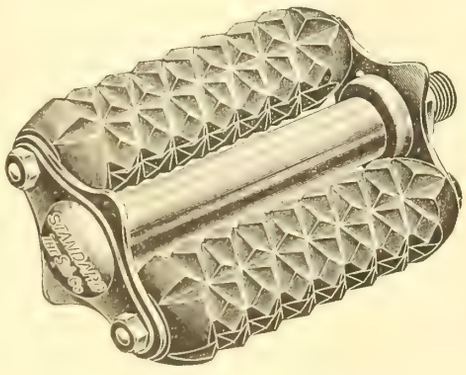
WHEELBASE, 54 inches.

GEAR RATIO, 5 to 1 with flat belt.

WEIGHT, 160 pounds.

TOOLS include pump, wrench, screwdriver and tire repair outfit contained in metal tool box.

FINISH, Royal Blue.



SPEED, 5 to 55 miles per hour.

PRICE, $175.

Prompt action is what will best serve in getting the agency for the HAVERFORD "BIG FOUR" in any given territory. We are closing the 1912 agencies now, and we are commencing deliveries now. Furthermore, we are protecting every one of our agents on deliveries, and we will take no more agents' contracts than we can fulfill.

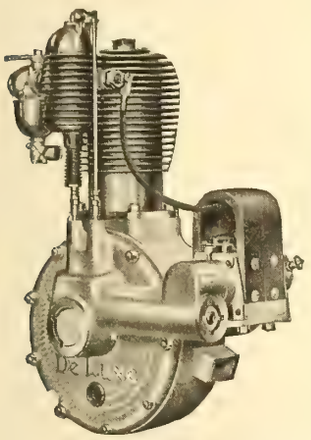
THE HAVERFORD CYCLE CO., 825-827-829 Arch St., Philadelphia, Pa.

BRANCHES—411 Market Street, Philadelphia; Buffalo, N. Y.; Washington, D. C.; Newark, N. J.; Atlantic City, N. J.

Our products for the cycle trade include:

EMERGENCY AXLES, SAGER MOTORCYCLE TOE CLIPS, DIAMOND E SPOKES, BRIDGEPORT AND STANDARD PEDALS, SAGER AND STANDARD TOE CLIPS.

"Auxiliary Saddles"



The pedals are exactly that, as they bear part of the motorcyclist's weight, and the harder the bumps, the more the pedals bear. That is why one needs those big, generous, easy rubber cushions, that are a feature of the

No. 3 STANDARD MOTORCYCLE PEDAL

Deep corrugations in the soft rubber give the "cling" that makes the foot stay on. The pedals sell for $3 per pair.

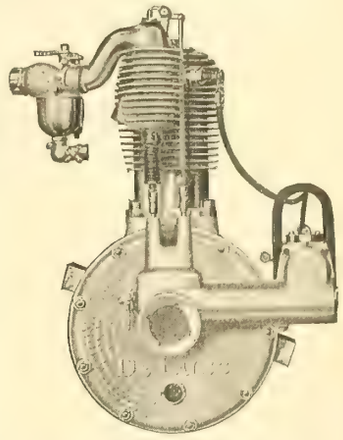
THE STANDARD COMPANY, Torrington, Conn.

A REVOLUTION IN MOTORCYCLE MOTOR DESIGN

In bringing out our DE LUXE line of motorcycle motors, we have introduced a large number of improvements, and offer these motors as the most advanced now before the trade.

NOTEWORTHY IMPROVEMENTS.

One piece crank shaft.
One part crank case with cover.
Improved cam and magneto drive.
Oil tight motor.
Large Valves.
Simplified design throughout.
Reduced number of parts.
Quiet running motor.
Large Ball Bearings mounted in steel lined pockets.



Equipped with Bosch Magneto.

These improvements in design, together with the high grade materials used in construction, the modern methods of manufacturing applied, and the remarkable performance of these motors in road tests mark a revolution in motorcycle motor building.

MOTOR CAR SUPPLY COMPANY
1451-1453-1455 Michigan Blvd. Chicago

MORE Kokomo Tires will be made during the next twelve months than ever before, because those made in the past have proved so good that riders and dealers not only come back for repeat orders, but bring their friends as customers. That's the kind of business that we like. It is based on the merits of

KOKOMO TIRES

For bicycles two of the Kokomo leaders are:

Kokomo Defender Special

This popular guaranteed tire is specially designed and constructed for road use. It is made from the best materials obtainable, being carefully built up by hand with pure para inner tube, and, owing to the very high quality of the inner tube used, a puncture is very easily repaired.

Kokomo "New Oxford"

A medium price tire, yet so good in quality that it does not do it justice to call it a medium grade tire. We have built these tires so that in case of puncture they will not be worthless but can be repaired. Also furnished in smooth tread.

Every dealer handling these tires is doing a benefit to his customers and to his own bank balance.

KOKOMO RUBBER COMPANY, Kokomo, Ind., U. S. A.

SPLITDORF MAGNETO

"Always There"

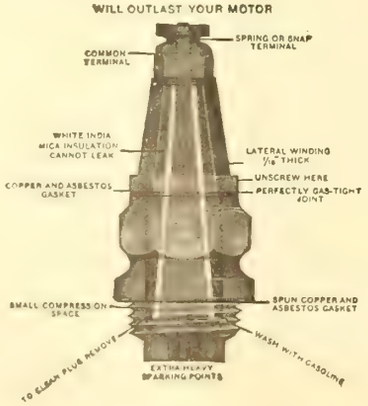
Champions Demand PLUGS

As an example of the universal demand for SPLITDORF PLUGS the following communication from Frank Hart, the country's amateur champion, is self-explanatory:

> **"Will you kindly send me a few of your invincible spark plugs for use in my Indian racing machines. I have used your spark plugs for the past year in all my racing machines and have never lost a race through a spark plug sooting up."**

And Frank Hart's experience has been duplicated by every wise motorcyclist in the country be he a racing man or just an ordinary road plugger.

Please remember, too, Mr. Motorcyclist, Jenatzy, Europe's famous automobile racing driver, used SPLITDORF motorcycle plugs in his victorious Pipe car this year and writes:



> **"Never have I obtained better efficiency from the motor on my car."**

And, what is more, the Clement Lebaudy dirigible in its memorable flight between France and England was equipped with SPLITDORF PLUGS and, that they worked to perfection, despite high pressure engines and terrific speed only proves what motorcyclists know of their perfect quality.

To go even further, Gagno, the Italian "sky-pilot," uses SPLITDORF PLUGS in his aeroplane—fouling is unknown in their usage.

You cannot make a mistake in insisting upon SPLITDORF PLUGS.

And, incidentally, keep your eye peeled for the SPLITDORF MOTORCYCLE MAGNETO. The biggest individual manufacturer is using it exclusively—he is the forerunner for the SPLITDORG MAGNETO—knows true merit when he sees it—so be wise and INVESTIGATE.

PENNSYLVANIA "Guaranteed" INNER TUBES "No. 503"

For Motorcycles

AFTER months of experimenting, the Pennsylvania Rubber Company has at last evolved a genuinely serviceable motorcycle tube which sells at a reasonable price. This is the Pennsylvania "No. 503."

Each Tube is Guaranteed

So thoroughly tested is this tube, so well made and of such high quality material, that it carries an unqualified season's guarantee.

Pennsylvania "No. 503" Tubes are made in the most popular selling sizes:

26 x 2½; 28 x 2¼; 28 x 2½

NOTICE: In placing this tube on the market, we have contemplated an attractive margin of profit for the trade. Jobbers and Dealers, therefore, desiring to sell Inner Tubes for PROFIT should write to us.

FLANDERS "4" $175

WITH MAGNETO

25%

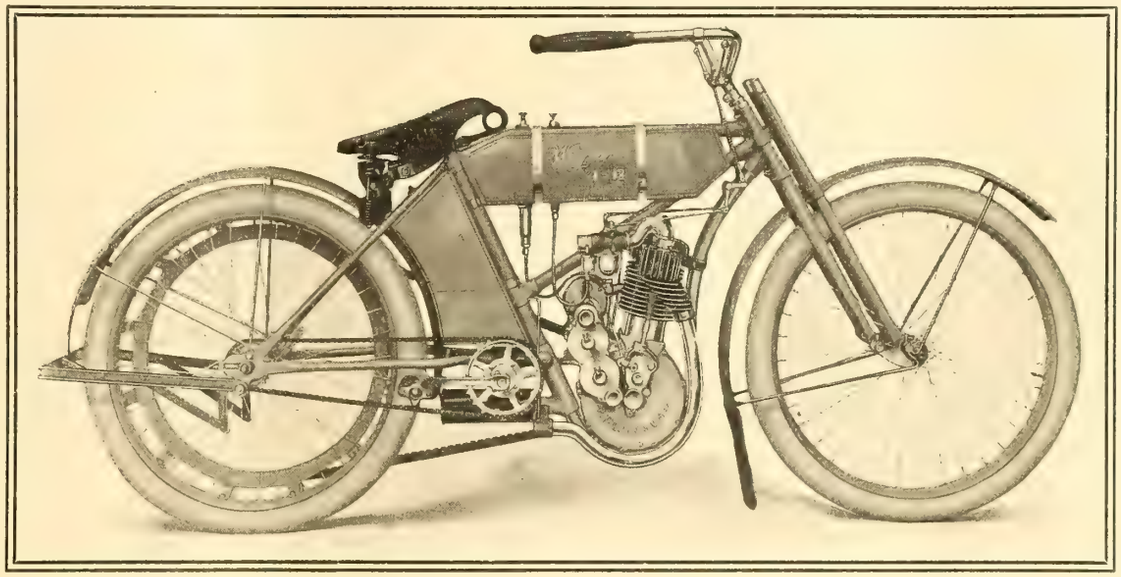
Saved by the Purchaser

100%

Increase in Business for the Dealer

This is a business proposition of laying plans to secure a large volume of business – the only way a manufacturer can make profit. And to secure this, the question of the price is a big factor. When you combine a low price with high-grade goods as we have done, every one sits up and takes notice.

It's a simple problem for a great producer like Walter E. Flanders to solve. It's just a question of having nerve enough to go to it with a fine outlay of specially designed tools, jigs and machinery. Back it up with a good advertising and sales campaign, and the results are a good manufacturers' profit on a $225 motorcycle selling for $175.



The dealer who will have the Flanders "4" Motorcycles to sell during the 1912 season will have less questions to answer than the other fellow.

WAGNER MOTORCYCLE COMPANY, St. Paul, Minn.

A New Prest-O-Lite Motorcycle Gas Tank, Equipped with Gauge, $10

The addition of a gauge makes our motorcycle gas tank similar to our well known automobile tank in everything but size. This gauge shows at all times, the amount of gas in the tank.

Our tank without gauge, which formerly sold at $10, will hereafter sell for $8. Any dealer will take in this tank and send it to us to be exchanged for the new model with gauge, if the user desires, upon payment of the difference in price, $2 and transportation charge, plus the usual exchange fee if the old tank is empty.

Prest-O-Lite Tanks are now handled by practically all motorcycle and automobile dealers in the United States.

Investigate Prest-O-Lite

Some of your friends are probably using this splendid lighting system.

Ask them if it costs any more to maintain than the troublesome, treacherous generator.

Ask them about its convenience, safety and insurance against accidents. Ask them how much pleasure they find in having 40 hours of brilliant, unflickering, dependable light, turned on and off like a gas jet.

Just one accident due to poor light would probably cost you more than a year's supply of Prest-O-Lite.

Get the genuine. Imitations can be exchanged in very few places. Prest-O-Lite Tanks, when empty, can be promptly exchanged, anywhere and always.

The Prest-O-Lite Co. 245 E. South St. Indianapolis, Ind.

In This Advertisement We Put the

PIERCE

Argument Squarely in Front of Every Motorcyclist.

Single Cylinder Models

Four Cylinder Model

You cannot evade stubborn facts like these:

That the design of Pierce motorcycles is ahead of everything else.

That not a single piece could be better built than it is.

That material and workmanship are superb and stand the test of wear and tear.

That no motorcycle equals the Pierce in handsome, dignified appearance.

That Pierce motorcycles can be ridden with **less** noise, fuss or trouble; with **more** ease, smoothness and comfort than any other machine.

SINGLE CYLINDER MODELS

For 1912 we offer single cylinder models which while maintaining the simplicity of the Pierce Single yet give the efficiency of twins. Pierce Single Cylinder models now mark the greatest advance ever achieved in this type of motorcycle.

FOUR CYLINDER MODEL

The Pierce Vibrationless Four Cylinder is now just where we want it. Not only is it superior to every other motorcycle, but it is far ahead of any of our previous fours. For the man who appreciates excellence, who wants the best—there can be no other mount than the Pierce Four.

Read description of Pierce 1912 models in October 28 issue of this paper.

MOST OF THE BEST DEALERS in this and foreign countries represent Pierce motorcycles (and the celebrated Pierce bicycles manufactured by us). Should you want to make money and increase your prestige, apply now for "The Agency that Pays."

THE BEST CLASS OF RIDERS ARE MOUNTED ON PIERCE MOTORCYCLES, and every motorcyclist owes it to himself to investigate Pierce models before deciding on his 1912 mount.

The BROOKS B104—a perfect saddle of great strength and comfort. Made of the finest materials throughout, and specially designed to give a low-riding position.

It is—has always been

an acknowledged fact that of the few best things in the World of Wheels, the BROOKS is BEST among Saddles.

And there are many reasons for that fact; here is one—

THE BROOKS

is the only saddle that can embody the original and only genuine Compound-Springs.

Those springs absorb vibration within themselves and, by their compensating action, totally eliminate the slightest tendency to bounce—

And no other springing system will do that—and that alone must interest your customer, for to him it means unequalled comfort and unequalled satisfaction—to you, a "talking point" of the utmost value in the making of the sale.

EMBLEM MANUFACTURING CO., Angola, Erie Co., New York

Member Motorcycle Manufacturers' Association

All the Leading Motorcycle Manufacturers Specify These Tires for 1912

WE hold signed and sealed contracts for over **one-third** of all the manufacturers' motorcycle tire equipment for 1912. 12 of the biggest and best known motorcycle manufacturers in America will supply Goodyear tires as regular equipment on their 1912 machines. Goodyear **efficiency** the reason they specified **Goodyears.** Note the names of these manufacturers listed below in alphabetical order :

Aurora Automatic Machinery Co...	Thor
Black Hawk Motor Co.....	Black Hawk
Consolidated Motor & Mfg. Co.....	Yale
Emblem Mfg. Co.....	Emblem
Excelsior Motor & Mfg. Co.....	Excelsior
Flanders Mfg. Co.....	Flanders
Harley-Davidson Motor Co.....	Harley-Davidson
Hendee Mfg. Co.....	Indian
Miami Cycle & Mfg. Co.....	Merkel
Minneapolis Motorcycle Co.....	Minneapolis
Theim Mfg. Co.....	Theim
Wagner Mfg. Co.....	Wagner

Why You Should Specify Goodyears

Goodyear Motorcycle Tires render **most service** at least **cost.** They enable you to realize upon the Maximum Efficiency of your motorcycle. They make this machine worth more to you because they nearly do away with tire-trouble, the nightmare of all motorcyclists.

So when the manufacturers specified Goodyear Motorcycle Tires for their 1912 output, they had a good reason for doing so.

Goodyear Motorcycle Tires were an assured success from the start. What experimental work had to be done, was done before the tires were ever placed upon the market. We did not ask the public to share with us the expense of making them perfect. We did not sell tires broadcast and base our improvements upon faults that the motorcyclist has to pay for.

Instead of that, we focused on the Motorcycle tire problem the brains and experience of the world's greatest auto tire experts—the same who perfected the now famous Goodyear No-Rim-Cut Auto Tire.

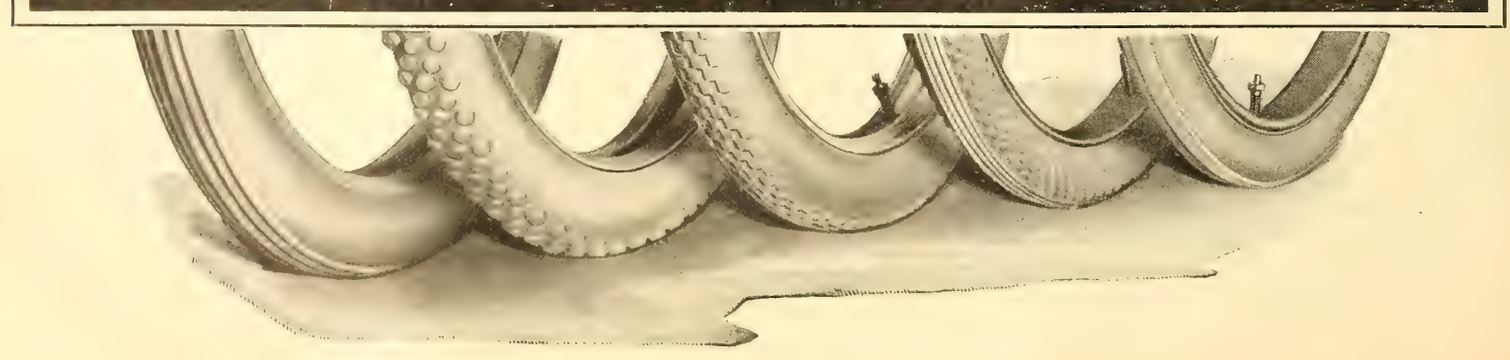
GOODYEAR
Motorcycle Tires

We built the tires with treads thicker than found on any other make. We built them with good rubber. We used a fabric of remarkable tensile strength. We put pains, knowledge, conscientious effort into their construction and the service that came out put the tires in a class by themselves. For Goodyear Motorcycle Tires hold all world's records for endurance and speed.

Be sure to specify for your 1912 machines, tires that are in greatest demand by riders—tires that will bring you credit from the consumer. Those Tires are **Goodyears.**

The Five Great Tires

One Tire for Every Road Condition



1.—Goodyear Corrugated Tread Tires—For the average give and take road.
2.—Goodyear Studded Tread Tires—For mud, sand, snow and ice travel.
3.—Goodyear Non-Skid Tires—For use on slippery pavements.
4 & 5.—Goodyear Blue Streak Racing Tires—Hold all world's records. One tire for dirt tracks, another for cement or board.

Send for our book on "Motorcycle Tires." It describes them all.

THE BICYCLING WORLD and MOTORCYCLE REVIEW
Founded 1877

Vol. LXIV. New York, U. S. A., Saturday, November 4, 1911. No. 7

HARLEY-DAVIDSON AGAIN ENLARGES

Purchase of Additional Properties Directly Adjoining Present Plant Consummated —Capital Increased to $500,000.

When the Harley-Davidson Motor Co., of Milwaukee, Wis., completed its five-story factory last spring, it felt sure it would have ample room for turning out all the motorcycles its representatives in the various cities could sell in two or three years to come. Since this time, however, and particularly since the 1912 announcement was made, it is stated that the increase in the business and the prospects for the future have gone so far beyond expectation that it has been found necessary to secure additional manufacturing facilities, which has been done in the hope of making prompt deliveries on orders received at all times. The company has just purchased all the properties of the Buchman Mfg. Co., between 37th and 39th streets and from Johnson street to the railroad tracks, a residence property and vacant lot, and the factory of Erdman Bros. adjoining. This addition will give the company about three times the acreage covered by the present factory buildings and the buildings of the new property, including the planing mill, sash and door factory, general and milling work plant, etc., will be razed immediately. The architects are now at work on the plans for the new Harley-Davidson buildings, and they will cost approximately $80,000.

By the purchase of these properties, the company has acquired very desirable sidetrack facilities, the lack of which heretofore has greatly inconvenienced and handicapped them in making carload shipments, which the claim has increased very rapidly during the past season, one of their dealers alone getting eight carload lots. By having its own sidetrack running right into their yards, the company will also be able to get much of their raw material, such as steel, iron, brass and aluminum, as well as tires, in carload lots, making every increased facility in the running of its plant in general. The company now has its own gas producing plant where it generates gas for the use of their various departments and for the running of their big gas engine, necessitating the use of a great deal of coal. Heretofore it has been necessary to haul this coal by wagon to the plant; now, of course, this can be run on the sidetrack, enabling them to secure the same in carload lots.

Announcement is also made that the capital stock of the Harley-Davidson Motor Co. has been increased from $100,000 to $500,000, and every dollar of the new stock was subscribed by the present stockholders before the papers had even been drawn up by the Secretary of State. This increase in capital stock was deemed necessary in order to handle the rapidly growing business. Incidentally, it is stated, the financial condition of the Harley-Davidson Motor Co. is in an excellent state, the company having no bonded indebtedness or mortgages of any kind and no debts or obligations to be paid outside of the regular current bills.

Denver Show to Be Held in March.

The annual Denver Automobile Show will be held in the Denver Auditorium the week of March 4th Motorcycles will be given space necessary for a most comprehensive display.

HENDEE STOCKHOLDERS' MEETING

Officers and Directors All Re-elected—Reports Show an Increase of Fifty-five Per Cent. on Gross Sales for Year.

The annual meeting of the stockholders of the Hendee Mfg. Co. was held at the office of the company in Springfield, Mass., Wednesday, October 25th. The officers and directors were all re-elected. The directors of the company are: George M. Hendee, Carl O. Hedstrom, William E. Gilbert and Edwin A. Carter, all of this city, and William B. Thompson, of New York. Frank J. Weschler was re-elected clerk and treasurer. Reports made at this meeting showed that this company has had an unusually prosperous year, and the indications are that even greater success is in store for the coming season.

The fiscal year of the company ends on August 31st. The gross sales for the fiscal year of 1911 totaled $2,284,340.16. The gross sales of the previous year totaled $1,473,820.36, which shows that there was an increase of 55 per cent. during 1911. During the year just passed the company manufactured and sold 9,567 Indian motorcycles. The net profits for 1911, after $65,000 had been charged off for depreciation, were $406,000. During the fiscal year of 1910 6,500 motorcycles were manufactured and sold and the net profits were $335,000. It is expected that the output for the coming year will be from 12,000 to 14,000 machines.

The company has recently paid off a $50,000 mortgage on the property, leaving its plant entirely unencumbered. During the past year a branch house has been

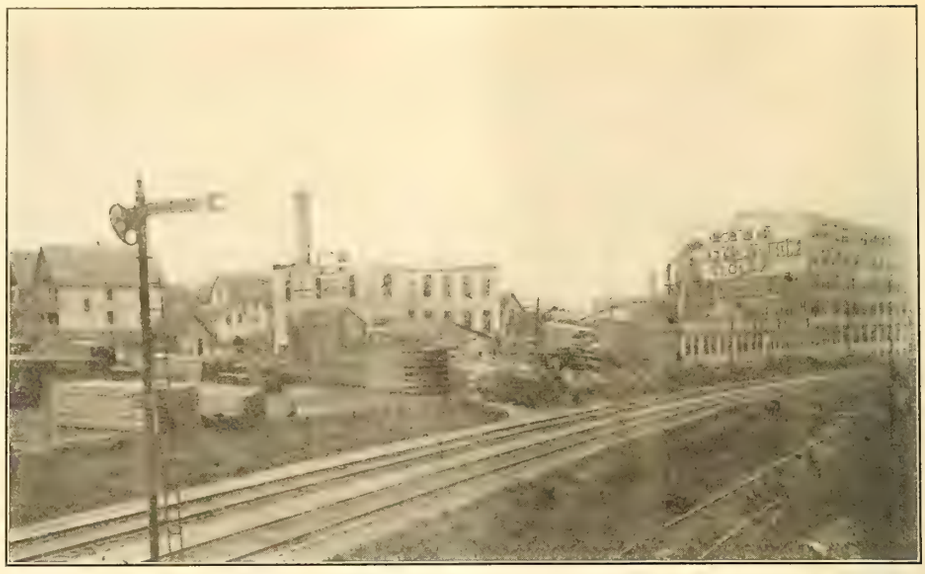
opened in San Francisco. The other branches are in Chicago and in London. The success of the English branch in London has been particularly gratifying to the officers of the company, because England is said to be the home of the motorcycle, and it means not a little to be able to enter that market with a foreign product and make good against keen competition. Over 600 Indian motorcycles have been sold through the London branch office. In the recent Tourist Trophy motorcycle race in England, the course of which was 250 miles and the fame of which attracted about 100 entries from all parts of the world, there were three Indian motorcycles entered. And these three won the first, second and third prizes.

During the past season the company has completed and occupied a large addition to its plant, and it is now employing 850 men. The plant of the Otis elevator works has also been bought and the Hendee company is now in the process of occupying that. This will increase their size by about one-third. The net worth of the Hendee company at present is $1,153,364.

The balance sheet as of August 31, 1911, compares with that of the previous year as follows:

	1911	1910
Cash	$79,920	$54,690
Accounts receivable	218,934	127,882
Merchandise	525,154	468,838
Real estate	250,000	230,749
Machinery	195,582	230,832
C. O. D. sales (pending collection)	3,472	708
Good will	1,500,000	1,750,000
Total assets	$2,773,065	$2,863,702
Liabilities:		
Accounts payable	$105,409	$108,107
Proceeds cash sales (pending delivery)	316	7
Reserve to cover deferred charges	13,973	10,000
Mortgage	.....	50,000
Capital stock — 6,000 shares 7% pfd., $600,000; 20,000 shares com. stock, $2,000,000	2,600,000	2,600,000
Surplus	53,364	95,587
Total liabilities	$2,773,065	$2,863,702

Output and net earnings for four years to date, after charging off depreciation, are officially stated to have been as follows:



Season ending	Motorcycles	Earnings
August 31, 1908	3,257	$155,000
" 31, 1909	4,063	250,000
" 31, 1910	6,500	335,000
" 31, 1911	9,567	406,000

Four Grand Prix for Renold Products.

Hans Renold, Ltd., Manchester, has been awarded two Grand Prix for its display in the Cycle and Motor Section at the International Exhibition at Turin. These are the highest possible in the two classes which include chains for cycles, motorcycles, motor cars and motor vehicles for industrial, commercial and public use.

In addition the firm was awarded two Grand Prix for its display in the Engineering Section in the classes which include apparatus for the transmission of power, etc.

These successes are a confirmation of similar awards given to Messrs. Hans Renold, Ltd., last year at the Brussels International Exhibition.

PROPERTY PURCHASED BY HARLEY-DAVIDSON CO.

Bottom Bracket Patent Upset.

After occupying the attention of the courts for some 20 years, the famous bottom bracket patent, No. 392,937, issued to William E. Smith, November 13, 1888, and which was owned by the Pope Mfg. Co., Hartford, Conn., finally has been upset and declared invalid, by the United States Court of Appeals for the Seventh Circuit, in Chicago. The decision, which upsets the patent for all time, was rendered by Judges Grosscup, Baker and Carpenter, on the 13th ult., who affirmed the decree of the lower court in favor of Arnold, Schwinn & Co., from which the Pope Company had appealed.

The court holds that "a patent to be valid must exhibit invention beyond what was known to the world prior to the advent o$f the patentee. The patent here involved falls short of this standard." As there is no appeal from this decision, and as the patent itself has expired, the last probably has been heard of the famous patent which for years had the entire trade by the ears, and which affected every bicycle ever built since the safety bicycle became a factor in the industry.

Big Motorcycle Order from Chicago.

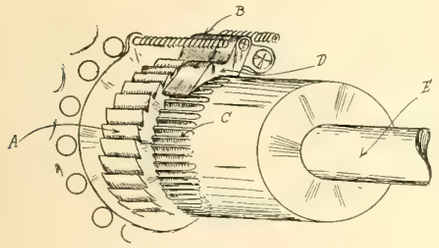
After a visit to the Harley-Davidson factory, C. A. Lang, their Chicago dealer, contracted for 1,000 1912 models. It is stated that in the period of eleven days after the 1912 announcement was made, Lang placed 52 orders for the same. He took the agency for the Harley-Davidson Motor Co. in 1905 and sold three machines —all he could get. In 1906 he sold 24; in 1907, 46; in 1908, 96; in 1909, 184, and the following year 364. During the 1911 season, just passed, Lang disposed of 693 machines.

Willis to Resign Secretaryship.

Fred I. Willis has tendered his resignation as secretary and treasurer of the National Association of Cycle Jobbers, giving as his reasons the fact that his new interest in the Kokomo Rubber Co., added to the time taken up by the Hersey-Willis Co., of Indianapolis, necessitates his taking this step. President P. R. Robinson, however, has requested Mr. Willis to withdraw his resignation until the annual meeting of the jobbers, which will probably be held on Thursday, January 11th. Mr. Robinson says:

"Mr. Willis has been a very efficient officer of our association and has contributed largely toward the success attained. and it is with much regret that I realize that we may soon lose the benefit of his assistance in conducting the affairs of the association. I, in common with the other members of our organization, wish him much success in his new position and have no doubt but that prosperity and good fortune will smile upon him."

Bay City After the Breed Plant.



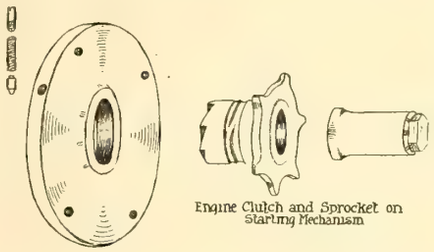
The business men of Bay City, Mich., are offering every inducement to the Breed Mfg. Co., who are now located in Detroit, to remove their factory to the former place. A piece of land has now been given to the Bay City Improvement Association with the understanding that if the Breed plant will locate in Bay City the land will be given to them free of cost. The matter has not yet been settled.

A HOST OF NOVELTIES FROM THE INDIAN CAMP

"Tourist Trophy" Models Among 1912 Offerings—Only Two Sizes of Motors Used—Standardization of Parts and Economies Effected—Reduction of Prices and Refinements in Construction.

Reflecting brilliantly the efforts of the engineering staff during the past year in their ceaseless pursuit of motorcycle perfection, the 1912 models of Indian motorcycles which the Hendee Mfg. Co., Springfield, Mass., will build in two sizes of motors, a seven-horsepower twin and a four-horsepower single, and will offer in seven models, with either chain or belt drive, the latter on the regular single only, embrace no less than 30 distinct new features, some of them nothing short of revolutionary, and all refinements of real worth. Startling as are some of the new mechanical details, the new prices are, if anything, more so, and the combination well may be likened to four aces in a game of poker.

In their new war paint and feathers the latest members of the Indian tribe which will roam the country next year, and the amount of wampum necessary to secure



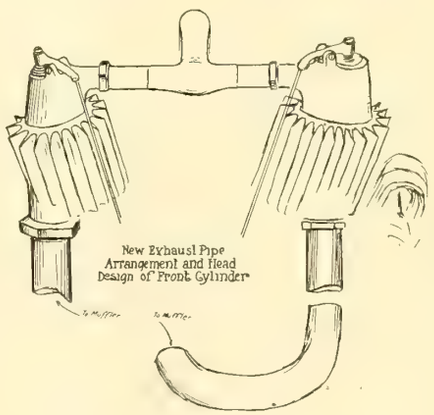
Starting Crank Ratchet Mechanism

them, are as follows: Four-horsepower single, chain or belt drive, $200; seven-horsepower twin, chain drive, $250; four-horsepower Tourist Trophy, chain drive, $250; four-horsepower T. T. two-speed, chain drive, $275; seven horsepower T. T., chain drive, $300; seven horsepower T. T. two-speed, chain drive, $325. All models will be fitted with a new type of Bosch magneto at the prices named, the battery system being abandoned entirely. The belt drive will be supplied on the regular four-horsepower single only, and a flat belt will be used.

Duplicates of the machines which won the great Tourist Trophy road race in the Isle of Man, Great Britain, last July, the T. T. models, are entirely new additions to the catalogued line, and represent the most advanced creations of the Indian factory. They will be built in two powers, "four" single and "seven" twin, and each size will be furnished with or without the two-speed gear. All of the T. T. models will be chain-driven in the approved Indian form. The regular models will be the "four" single and "seven" twin, with clutches, and will embody a great many of the new features, which will be shared in common by all models. As the regular single will have either chain or belt drive, it really will be made in two models.

Foremost among the new features, and one which is destined to add greatly to the popularity of motorcycles, is the foot starter, which is fitted to all of the T. T. models. In construction it reflects the

Engine Clutch and Sprocket on Starting Mechanism



characteristic ingenuity of design, long peculiar to Indian motorcycles, and seems as nearly fool-proof as is possible of attainment at the present day. It is remarkably easy of operation, and the mastering of it should require not more than 10 minutes.

Like a pack of firecrackers touched off at once, the other new things come thick and fast. There is a larger gasoline tank, a priming gun in the gasoline filler cap, priming cups with dust caps in the cylinder

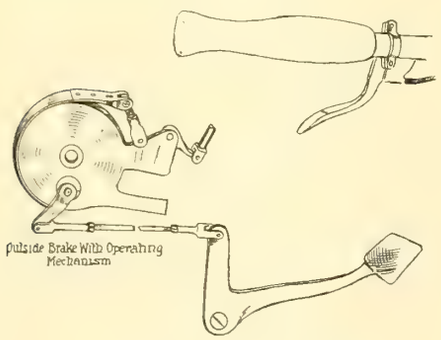
Cylinder Priming Cup

heads, an extension of the front mud guard beyond the fork spring, heavier single-clinch rims, heavier spokes, larger clutches on the "sevens," a new enclosed magneto with recessed and protected terminals for the cables, a metal tool box in two forms, larger valves and springs, redesigned front cylinder head and front exhaust pipe lead, keyed handle-bar stem, heavier grip control universal blocks, hard rubber ball hand grip on clutch levers, spring latch gear shift lever and notched sector, longer clutch bearings, attached the small countershaft sprocket with dogs, and on the two-speed models, muffler tail pipe, right hand clutch control, double brakes, floating rear axle, and roller bearings.

Long strides toward standardization are evidenced by the listing of but two sizes of motors, in which the cylinders and numerous parts are identical. This duplication also applies to frames, wheels and many other units, so that the concentration of the manufacturing facilities on the production of "fours" and "sevens" means the

New Exhaust Pipe Arrangement and Head Design of Front Cylinder

elimination of a great many non-interchangeable parts involved where several models of different sizes are built. The models abandoned were the 2¾-horsepower single and the five-horsepower twin, a pair in themselves, each of which contained a great many duplicate parts, and yet were not applicable to the larger single and twin. Therefore the reduction of motor sizes practically reduces the sets of parts required from two to one, and the manufacturing expense proportionately.



This economy in manufacturing expense, coupled with increased output, is the key to the reduction in price and increase in quality. High-grade as were the present models in materials, finish and equipment, the new Indians will be greatly superior, for the very good reason that the savings effected in manufacturing economies and increased output permit of the use of more expensive material and workmanship. To the person versed in manufacturing methods a reduction in the selling price of an article does not imply a reduction in its quality under the conditions outlined.

Naturally the T. T. models will embody all of the new features applicable to them.

All of them will be without pedals, and will have the regular folding foot boards instead. On the single-speed T. T. models there will be the foot starters, double brakes, right-hand clutch control, metal tool boxes on the top frame tube, tail pipes and lesser refinements. The two-speed models will be identical with the single-speeds, save, of course, that they will have gear boxes, metal tool cases under the saddle and longer frames.

On the two-speed models the wheel base is 55 inches, and on the standard machine 53 inches. The standard models will have pedals, left-side clutch control, V band brake and such of the new features as heavier spokes and rims, front guard extension, housed magneto, priming gun, larger valves, redesigned front cylinder head and exhaust tube, keyed handle-bar stem, larger clutch on the "seven," longer clutch bearings and larger gasoline tank.

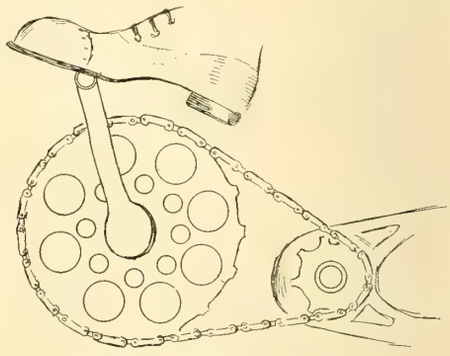
Because of its importance as the first

Pulside Brake With Operating Mechanism

device of its kind, and the advance which it represents, the foot starter holds unusual interest. It may be said to comprise two separate and complete units, working in co-relation through the medium of a chain. The first unit is composed of a pedal crank, sprocket, a revolving and a fixed ratchet, and two spring-actuated pawls. This unit is mounted on an axle, which in turn is supported by the front anchor plates of the motor. The axle, which is fixed, passes through both anchor plates beneath the magneto.

The second unit, which is mounted on the motor driving shaft, consists of a small floating sprocket with extended hub carrying dogs, sleeve bearing and sprocket locking nut combined, a sprocket supporting flange, a spring tensioned switching pin in the flange plate, and the motor driving sprocket, which also has a series of dogs corresponding to and meshing with those on the inner end of the floating starting sprocket. The foot starting crank is held upright by a coil spring, and rests against a spring cushioned stop.

In starting, the foot is placed on the crank pin and the crank pushed down vigorously with a snap kick as far as it will go. The gear ratio between the large and small sprockets is slightly more than three to one, and one stroke of the starter gives 1¼ engine revolutions actual, while the "spinning" effect, set up by the quick turning over of the motor, extends the travel of the motor shaft to two full revolutions before the starting force is fully expended. Twins naturally will start easier than singles.



For starting, the compression is relieved by raising the valves and dropping them quickly, and advancing the spark, when the foot has traveled halfway down its stroke on the starter. The starting stroke ends when the foot strikes the foot board, and upon being released the starting crank automatically returns to an upright position. If the foot slips from the knurled crank pin, or the crank is allowed to fly back, it is arrested at the top of its stroke by a sliding hinge spring check which absorbs the force of the blow and prevents the bending of the stop, which would occur if it were rigid.

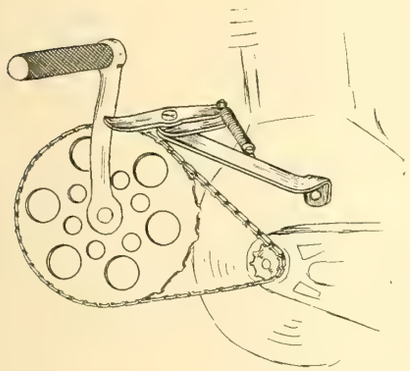
A ¼-inch block chain connects the starting sprockets. In Figure 1 the action of the forward starting unit is explained clearly. A is a revolving ratchet fixed to the pedal crank hub. B is the spring pawl which rides on this ratchet and engages with it. C is a stationary sleeve with ratchet teeth, and D is another spring pawl which rides on it. E is the fixed axle upon which the whole is mounted. It passes through the front anchor plates of the motor beneath the magneto and is bolted solidly to them. The pedal crank and ratchet A revolve together, while the big sprocket which is mounted between them floats idly. Pawl B is mounted on the big sprocket, and pawl D on the off-side end of pawl B. Both pawls are spring actuated.

In Figure 2 the second unit of the starting mechanism is shown. At the left is shown the flange plate, which is fastened to the short chain guard directly outside of and in line with the motor shaft. In this flange plate rides the small starting sprocket, which has an extension hub with two grooves, a cross-over switch, and, at the inner end, a series of dogs. At the right is the sleeve nut which locks the engine sprocket to the shaft. A shoulder on the inner end of this sleeve provides a bearing for the small starting sprocket when it is engaged with the motor drive sprocket. This shoulder, and an inverse shoulder at the outer end of the hole in the small sprocket, prevents the dropping from the motor shaft of any part of the mechanism of the second unit.

In the rim of the flange plate is a small hole in which a small bullet-nosed, hardened stud is inserted and seated by a spiral spring, and retained by a check screw. This stud rides in the grooves in the hub of the small starting sprocket. As the central sleeve nut cannot drop off, even should it unscrew, on account of the retaining shoulders on it and in the bore of the small sprocket, and as the small sprocket is retained by the stud seating in the grooves, and as this stud is screw trapped and the flange plate bolted to the chain guard, it is obvious that the entire mechanism of the second unit is securely attached.

In action the operation of the starter is as follows: When the foot crank is depressed the pawl B engages in ratchet A, locking it to the sprocket, and A, B and D go round with the big sprocket and crank. At this time D simply is riding the fixed ratchet sleeve C, and has no function. While this is occurring the revolution of the small sprocket (Figure 2), which normally is out of engagement with the switching stud in the inside narrow groove, causes the stud to take the cross-over into the outer and wider track, and simultaneously feeds the starting sprocket dogs into engagement with the motor drive sprocket dogs. Once this engagement occurs, the motor shaft is locked with the foot starting crank, and the turning over of the motor commences. This engagement

Showing Foot in Position to Start Engine



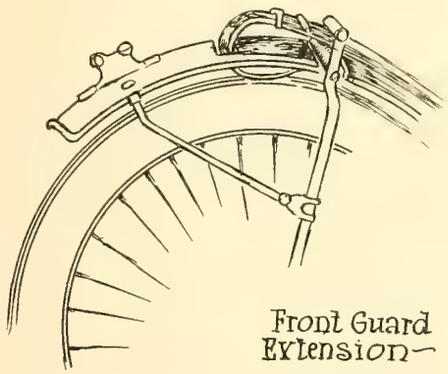
occurs immediately after the crank is pushed ahead, so that the full force of the kick exerted is expended in "spinning" the motor.

The spring return of the foot crank at the end of the stroke also automatically disengages the small dog sprocket from the motor by backing the starting sprockets, thus bringing the switching stud into play. When the motor starts it immediately "runs away" from the small dog sprocket, and the cut of the dogs also tends to keep it out of engagement with the motor when the latter is running. Therefore it is impossible to damage the starter by "picking up" the motor when it is running.

As the small central sleeve and sprocket nut in the second unit revolves with the motor, it must be free from contact with the stationary starting dog sprocket. This is accomplished by making the sleeve small from the shoulder outward. The dog sprocket has a bearing on this shoulder when engaged with the motor, but when out of engagement it is entirely free of this spinning sleeve, so that no friction is set up. To allow for the lateral motion of the dog sprocket in engaging and disengaging, the outer groove on the sprocket hub is wider than the inner one, so that once the switching pin enters the wide groove it tends to feed the sprocket in to engagement, or vice versa, on leaving the groove.

That most important danger to be guarded against, back firing, has been anticipated and provided for. When a back fire occurs it naturally has a tendency to pull all the mechanism backward, but at this happening pawl D comes into play, locks in stationary ratchet C, and, being attached to pawl B, disengages it from ratchet A. This disengagement allows all the mechanism to revolve backward without damage, and at the same time this reversal automatically throws the small dog sprocket out of engagement with the motor. Thus nothing can be wrecked by back firing. The entire mechanism weighs about five pounds and all wearing parts are hardened.

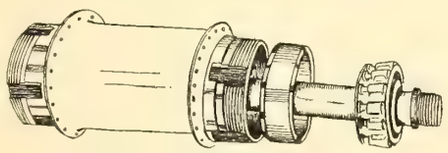
Ordinarily, extending the front mud guard does not call for any great mechanical ingenuity, but when a leaf fork spring of the Indian type intervenes the trick involves a bit of clever designing. In this



Starting Crank Spring Stop

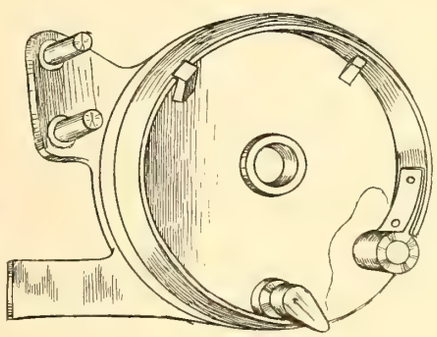
case the extension is entirely independent of the main front guard. At its rear it is hinged to the front supporting bolt of the spring, and in front is supported by braces attached to the spring leaf upright standards. On machines shipped abroad a small license plate bracket will be attached to the top of the extension. Of course the main purpose of the extension is to deflect mud and water carried up past the spring by the front wheel, and to keep sand from the rider's face and eyes when riding with head down.

Greater riding range is provided by increasing the gasoline capacity to 11 quarts —three more than heretofore. The priming gun in the filler cap not only serves to prevent splashing of the fluid through the vent hole into the rider's face, but also comes in mighty handy for coaxing the motor to "mote" in cold weather, or for any purpose where a small amount of gasoline is required. The oil capacity remains at two quarts as heretofore, and the mechanical oil pump is retained without change, the best proof of the satisfaction it has given. The auxiliary hand pump also is retained, but the oil lead from this pump to the motor base now enters the latter above the chain guard, bringing it away from the chains and obviating the danger of chafing through by chain whipping.



While priming cups in the cylinders are a new Indian feature, the addition of dust caps is the last word, and considerably freshens a very common feature. The cups are screwed into regular spark plug openings, another mark of standardization.

In addition to having the openings under the magnets housed in, the new Bosch

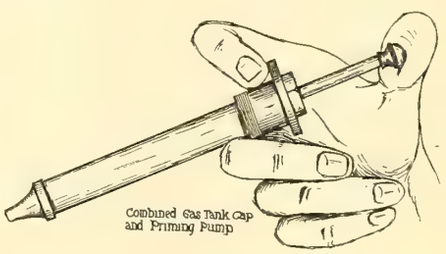


magnetos also have improved and protected cable terminals and an automatic cut-out inside the contact breaker. The complete abandonment of the battery and coil system by such a leading manufacturer marks its speedy relegation to the hall of antiques in motordom.

On all the "sevens" the clutch disks have

T T Hub dissembled showing Timken Roller Bearing

been increased considerably in diameter, giving a large increase in contact surface. The clutch diameter on the "fours" remains unchanged. On the T. T. single-speed models a new countershaft eccentric is fitted, in which the clutch bearings have been greatly enlarged, and on all the T. T.



Brake Mechanism

models the clutch is operated from the right side, the operating shaft passing through a sleeve in the center of the clutch and having the same worm motion as the regular clutch mechanism. The top of the clutch lever on the two-speed models is offset slightly to clear the gear shift lever, and the locating of the clutch in close proximity to the gear shift facilitates the manipulation of both levers.

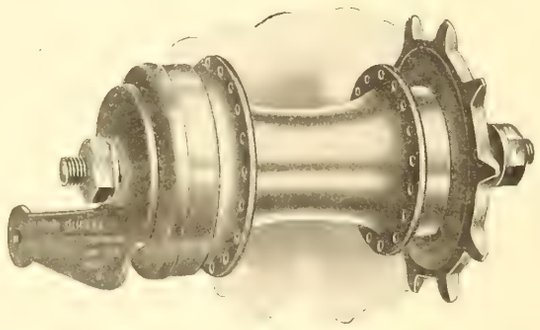
In the re-designing of the front cylinder head and exhaust lead much has been gained. Instead of exhausting directly out around the magneto in a wide sweep, the front cylinder now spits straight down and around an easy bend into the muffler. In addition to a shorter and neater pipe, it also permits of better cooling of the front head and cylinder by giving an unobstructed passage of air against it, and full advantage of this is taken by arranging cooling flanges so that a current of air is directed between the cylinder and valve pocket.

Naturally, larger valves is another way of saying more power, and the heavier springs mean longer life and resistance to heat, as well as longer maintenance of maximum power. Instead of through an apron on the under side of the muffler, the T. T. models now have a final exhaust through a tail pipe. The cut-out is retained on all models.

Two powerful brakes are provided on the T. T. machines—an internal expanding metal-to-metal and an external contracting band faced with raybestos. Adjustments

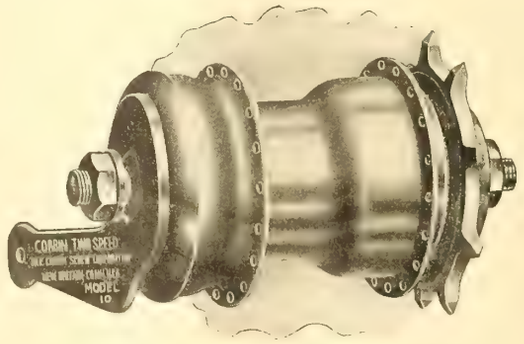
are provided for taking up wear, and the arm of the brake drum slips into a frame clip, dispensing with the usual bolt and nut lock and making for quick insertion or withdrawal. The band brake is operated by hand latch on the left handle-bar, the motion being transmitted through a Bowden cable. The internal brake is operated by foot pedal on the right side of the motor. The foot brake is designated as the service brake for ordinary running and the band brake as the emergency. The brake drum is six inches in diameter and three-fourths inch wide. Both brakes are mounted on the right side of the rear wheel. The V band coaster brake is continued on the regular models.

For the T. T. models a special rear hub machined from the solid is used. It is mounted on big Timken roller bearings, which have high load capacity and long life. There is but one other known instance where this type of bearing has been used on a motorcycle. These hubs also have floating axles carried in sleeves, and quickly may be knocked out without disturbing any adjustments. It represents a logical extension of the front knock-out axle idea.



Accidents due to turning of handle-bars are rendered impossible by the keying of

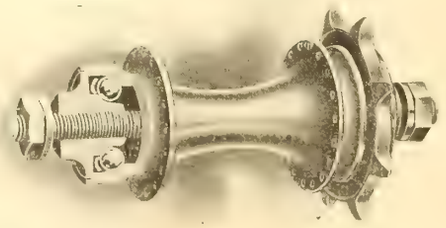
(Continued on Page 288)



THE CORBIN SCREW CORP.
CORBIN
NEW BRITAIN, CONN. U.S.A.

¶ Chief of the reasons why there will be no change in Corbin duplex coaster brakes and Corbin two-speed coaster brakes for bicycles for 1912 is that all the "1912 improvements" were put in a long time ago and have been in ever since. No one that we have found has been able even to suggest further improvements.

¶ Therefore, for bicycles the 1912 Corbin offerings are:



Corbin Duplex Coaster Brake

Corbin Two-Speed Coaster Brake

Corbin Front Hub

Corbin Rear Hub

To Facilitate Matters Our Patrons Should Address us at P. O. Box 649.

NEW YORK, NOVEMBER 4, 1911.

Is It Malice or Ignorance?

One of our esteemed contemporaries last week said "to call him an open muffler fiend gives him too much credit—it flatters him; he is not malicious, but unintelligent. A boob—that is what he is."

To our recollection the word "boob" is a German one, and translated, means boy. If every motorcycle rider who rides through our streets with an open muffler was a boy he could be taken off his machine, severely thrashed and sent to bed. We wish this might be the case. However, we are dealing with supposed men, and although some of us may hesitate about classing the open muffler fiends among the self-respecting men of the day, they are more than boys, and hence have a greater knowledge of the difference between right and wrong and know when they are going through the streets racking the nerves of the passers-by and perhaps some sick one in a house which they pass that they are not only malicious, but almost criminal. They know when they are riding through the streets that they may be passing a home where a person is suffering terrible agony from nervous prostration or some other serious illness.

In one of the leading streets in Brooklyn a few Sundays ago 19 out of 24 motorcycles passed a given point with their cut-outs wide open. There are fine residences on that street. How many cases of nervous prostration or other serious illness were passed by these 19 motorcycles during the afternoon no one can ever tell, and where it is very evident these noise fiends have no respect for themselves they should be made to have some care regarding the health of others. There is no name that can properly fit the motorcycle rider who goes with his cut-out wide open. "Fiend" is too good for him; "boob" gives him an excuse, for a boy delights in noise. He can certainly be classed among the most undesirable citizens. As long as the cut-out is given to him, and as long as there is no law that will land him in jail for using it, motorcycling will continue to have its greatest enemy. Again we say, CUT OUT THE CUT-OUT.

American Cyclists at Olympic Games.

As reported in another page of this issue, the United Cyclists decided, at the meeting held in New York on November 1st, to send a bicycle team representing that organization to the Olympic games to be held at Stockholm, Sweden, in July, 1912. This will necessitate, first, the contribution of about $4,000. There should be no trouble whatsoever on this score. Every bicycle rider, every bicycle dealer and every bicycle manufacturer who has enough patriotism and enough love for the sport should be represented in the list of contributors, collections for which are to be received by The Bicycling World and Motorcycle Review. A general committee is to be appointed by the organization, which will have full charge and supervise all the work, and special sub-committees will be appointed in various cities throughout the country. R. F. Kelsey, chairman of the Board of Control of the National Cycling Association, and a member of the general Olympic committee, will probably be the chairman of the general committee from the United Cyclists. Elimination trials will necessarily have to be held in all parts of the country, the final trials being held in or near New York. Three teams of four men each should represent America.

There is not a possibility of a doubt that we have bicycle riders in this country who can win anything on the Olympic program. If this team is sent, and if it should be successful, it will give the greatest impetus to bicycling in the United States that has been seen here in many years, and this will be a healthful boom and not simply an adoption of a fad. The increase in the number of sales of American-made motorcycles as a result of the victory in the great Tourist Trophy Race abroad is conclusive evidence of what might be expected, only to a greater extent, as the result of an American team winning the bicycle races in the Olympic games.

There is not too much time left to prepare ior this event. Every cycling organization in the country should immediately appoint a committee of one to communicate at once with the United Cyclists and stand ready to do everything in its power to raise the necessary funds to aid in selecting the bicycle team to represent America in these races. Every dealer who is alive to the possibilities of such an event—who realizes the advertising value that would be connected with an American team winning this race, and who desires to further the interest of the sport in every possible way, should get busy at once in collecting funds and working the matter up in his neighborhood.

For most of the leading manufacturers the last year was the best since they have been engaged in manufacturing bicycles. This is evidence in itself that the time is now ripe for cycling to come into its own in America and all that is necessary is for some big move to come as a starting gun. The fact of sending twelve of our best amateur riders to the Olympic games and the great possibilities of their winning the races there is the greatest opportunity that has presented itself in this country to become a starting gun for a great, general, healthy revival in cycling. In order that the committee may know whether it can expect to go on with this work as soon as possible, those interested should respond to the call for subscriptions, published on another page of this issue, promptly. Subscription lists should be started by every cycling club and every dealer throughout the country at once. America led the way in the greatest motor cycling event in the world in the Tourist Trophy race, and America can lead the way in the greatest bicycle event at the Olympic road race.

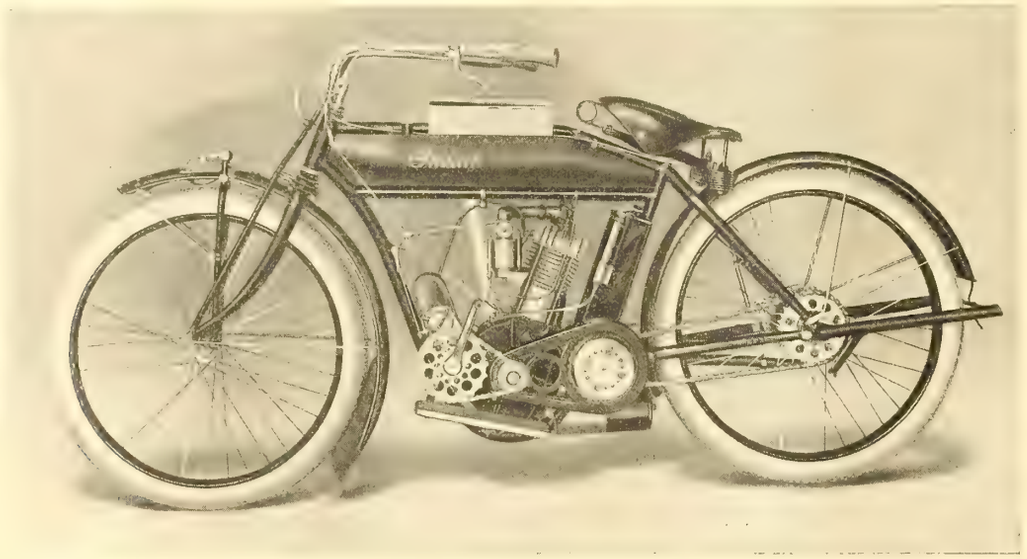
A HOST OF NOVELTIES FROM THE INDIAN CAMP

(Continued from Page 285)

the handle-bar stem. In the grip control the universal blocks have been made heavier, and the pins now cross through separate holes instead of piercing, so that increased strength is gained.

A gear shift sector with high and low speed notches now is provided on the two-speed models. It is mounted on the top bar just ahead of the saddle and set at right angles to the frame so that the shift is fore and aft, affording a direct and natural hand movement.

Heavier spokes are used all around, and work in unison, the automatic features being retained.



On the single-speed models a metal tool box mounted on the top bar is furnished, and on the two-speed machines, the tool box is of different shape and located under the saddle. Larger crank-pins are used in all motors. The luggage carrier and an acetylene gas tank cradle slung on the handle-bars will be listed extra.

Despite the numerous changes and additions, there is much that has been retained in its old form. Under this head come the trussed loop frame with internal girder reinforcement, the cradle spring fork also internally stiffened, separate cylinders and heads, mechanical valves, double grip control, mechanical oil pump, the only one model extends only the width of the adjusting ring beyond the pulley.

An oil reservoir having a capacity sufficient for at least 1,000 miles is embodied in the center of the shaft extension, and by a simple means of communication provides ample lubrication for the disks.

By the removal of six small screws on the face of the adjusting ring the whole construction can be taken down. Option will be given on the method of operating the control; either hand lever or handle-bar grip lever will be furnished, as desired.

Owing to the fact that the sprockets are smaller than the belt pulleys, the chain style is more compact. Sprockets will be furnished in 16 or 18 teeth for use with ⅝-inch pitch motorcycle chain.

THE NEW TOURIST TROPHY SINGLE SPEED INDIAN

there are 36 to each wheel. Single-clinch rims of heavier construction than the former double-clinch type are fitted. They stand punishment better and spokes do not pull out as easily. The tire equipment will be G. & J. or Goodyear studded tread, 28x2½ inches all around, but the rims will take 2¾-inch tires.

There is no change in the two-speed, the gears being always in mesh, and are locked to obtain the speeds by means of sliding dog clutches. While yet building a belt model for those who prefer that type of transmission, the Hendee company remains the pioneer and steadfast advocate of the chain drive as the best for all-around service.

While it now is formally introduced on the new models, the Hedstrom multiple jet carbureter shows no change since it first appeared late in the spring. As distinguished from its predecessor, it embodies an auxiliary and smaller spray nozzle and mixing chamber for delivering a small charge for starting and slow running. Normally the throttle is closed tight and the motor runs on the small jet which is not throttled, but when the throttle is opened the main jet comes into action and both now used; separate fuel tanks, inclined single motor, disk clutch and other well-known and tried Indian features.

New Eclipse Pulley Models.

Decided improvements and an entirely new model for chain drive mark the appearance of the 1912 line of Eclipse free engine clutch pulleys as presented by the manufacturers, the Eclipse Machine Co., Elmira, N. Y.

The improvements are along the lines of greater simplicity and strength. The 1912 model consists of but three main parts. All that is required to make the necessary adjustments is the turning of one ring, and this usually can be moved by hand. The shaft extension which was hexagon shaped has been changed so that it is stronger and more simple. The disks are heavier and larger, giving twice the friction surface. Double the 1911 spring pressure is provided and it is evenly distributed over the plates or disks. Both these features presage greater durability and more positive action.

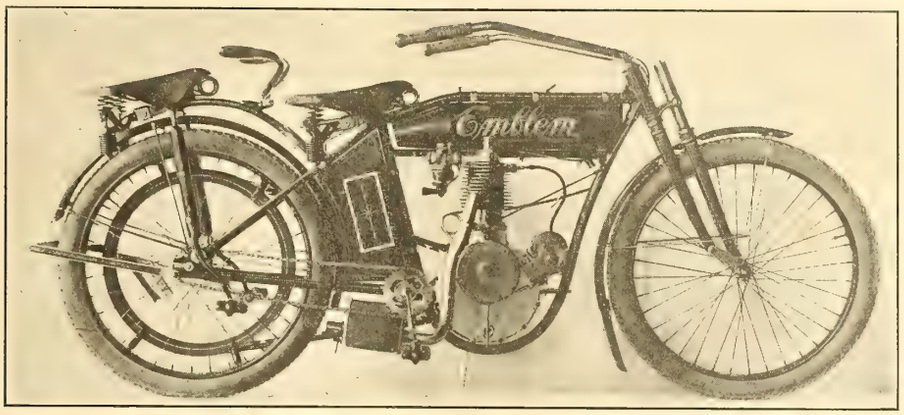
The whole construction has been made more compact. The extension arm, by means of which the mechanism was operated, has been discarded so that the new

The Eclipse is made in sizes to fit any make of American machine, and many motorcycle manufacturers are now offering it as regular equipment on their 1912 models.

Chicago Show Space Increased.

F. J. Weschler, chairman of the show committee of the Motorcycle Manufacturers' Association, states that the space to be allotted to motorcycle manufacturers in the balcony of the Chicago Coliseum Annex during the second week of the show, from February 5th to 10th, has been increased to approximately 3,500 square feet. Applications for space were sent out during the past week, and the allotments will be made probably by the 13th.

Peavey Leaves M. & W.



R. A. Peavey has resigned his position with the United States Tire Co., in St. Louis, Mo., after a period of 12 years' service with the Morgan & Wright Co., a branch of the United States company. He was in charge of the St. Louis office and managed the sales of the company in southern Illinois, Missouri, Arkansas, Texas and Oklahoma.

IMPROVEMENTS AND REFINEMENTS OF THE EMBLEM LINE

Frames More Graceful and Top Bar Lowered—Longer Front Forks and More Clearance Between Tire and Mudguard—Tandem Arrangement Novel and Comfortable—Prices Reduced.

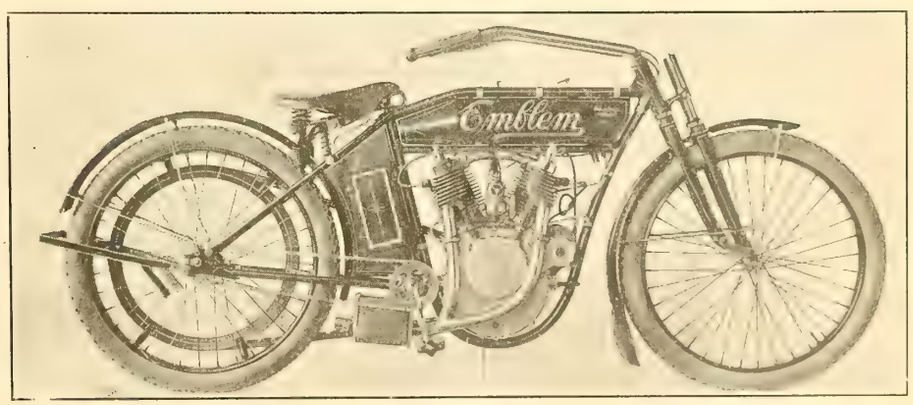
Refinement of a pronounced nature is apparent in the 1912 line of Emblem motorcycles, manufactured by the Emblem Mfg. Co., of Angola, N. Y. This refinement applies not only to the general appearance of the machines, where it is most marked, but to mechanical details as well.

Beginning with the frame, where the change from the 1911 model is most

THE 1912 SINGLE CYLINDER 4 H. P. EMBLEM

marked, there is much of interest and improvement to arrest attention. The head cluster has been lowered one inch, and instead of two stems, the handlebars now are firmly held by three stems, the central member being held by an expander, making it impossible for the handlebar to work loose under any conditions whatever.

The top bar of the frame has been dropped 2½ inches at the seat post, making the design more graceful, and at the same time giving better balance and control to the rider. To add to the lowered position, so much in vogue these days, the spring seat post also has been changed to allow a still lower position, and the adoption of a special steel spring for the gooseneck seat post has made the lowered 1912 design even more flexible than that used in 1911.



The lowering of the top member of the tube has made it possible to shorten the handlebars, thereby bringing the rider 1½ inches nearer the front. This is claimed to make the machine exceedingly easy to control in unfavorable road conditions, while the lowered saddle position will make falls easier to avoid.

Front forks are longer and give more clearance between the tire and mudguard, so that it is impossible to clog up the opening with mud, and the increased space also will give ample room for repairing a tire without necessitating removal of the wheel. The same feature is applicable to the rear wheel. Rear fork ends also are of a different construction, the stand being fastened to the lower rear end, and when down, is supported by a lug brazed to the lower rear fork. The stand is a considerable improvement over its 1911 counterpart, as it requires only a slight pull backward to lift the machine on the stand. The rear stays have two lugs brazed thereon to permit the attachment of the tandem.

The Emblem tandem is one of the novel developments in the line. Not only is it of neat construction, but the makers claim it is one of the most comfortable tandem attachments yet produced, as well as one of the safest, being integral with the machine. The upper support of the tandem section consists of a yoke which fastens to two lugs, which are firmly brazed, on all 1912 Emblem models. There is also a handlebar stem on which an adjustable bar is fastened. This bar can instantly be dropped when it is desired to use a tandem equipped machine as a single. The adjustable bars make it possible to carry a suitcase or other large package in the rear, or the saddle can be removed in a minute and a flat luggage carier attached. The yoke that passes over the rear wheel is equipped with two large telescopic tubes on each side of the wheel, inside of which are specially made spiral springs 13 inches long, and of ample diameter, which gives the tandem rider an up and down movement of three inches as a maximum, and the springs can be furnished for light, medium or heavy weight passengers. The pedal cranks are curved forward to give the most comfortable riding position obtainable. The rider is seated well over the rear wheel so that steering a tandem model is claimed to be as easy as controlling a single machine.

To return to the frame, the V-belt model is made with the rear stay in one piece, having no offset forgings. The flat belt frames have a detachable forging at the pulley clearance, to permit of the removal of the flat belt.

The design of the tank also has been improved considerably. It appears smaller in size, but the capacity has not been diminished—it still holding two gallons of gasoline and two quarts of oil. The tank fits between the truss bar and the upper tube. A change has been made in the position of the gasoline and oil compartments, the latter now being in front. Lubrication is by force pump, as heretofore, but the removal of the pump to the front of the tank, and the placing of it in a slanting position, make it easy to oil on sandy or rough roads, as the rider can hold his forearm against the left bar and work the oiler. A transparent celluloid cylinder replaces the glass cylinder in the 1911 pumps, and is claimed to be absolutely oil-

THE 1912 TWIN CYLINDER 7 H. P. EMBLEM

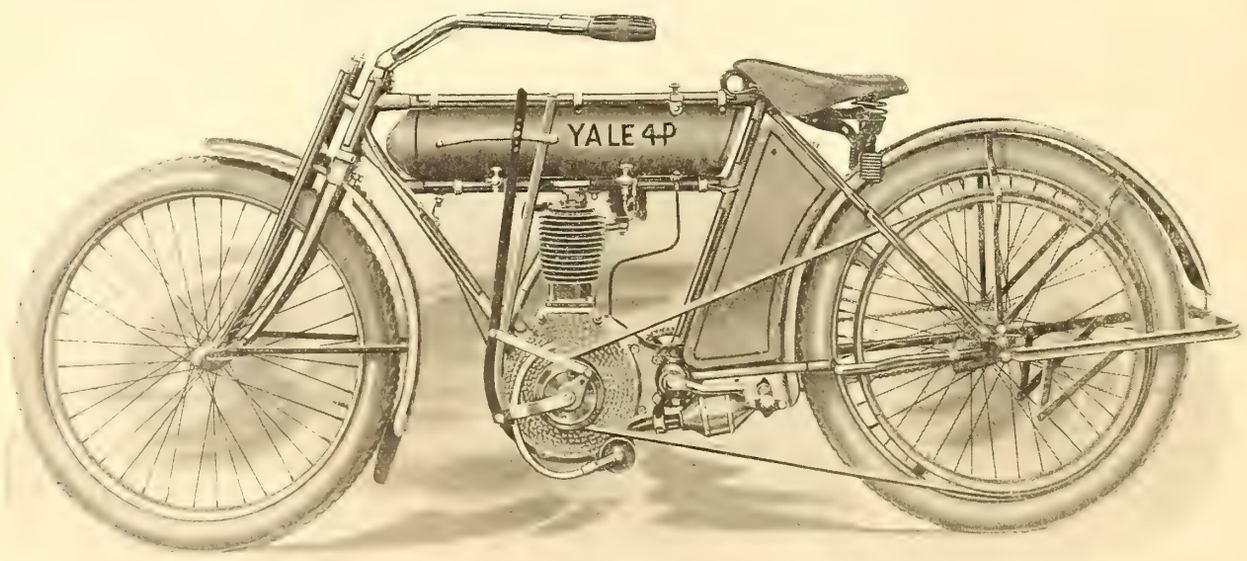
tight, while nothing has been sacrificed as far as transparency is concerned.

The tank is made up entirely from 20 ounce copper, reinforced on the inside by brass lugs. The finish of the tank also has been improved. The battery case has been changed and is slightly shorter. It has the same capacity, however, three No. 6 standard dry cells, and a coil. On magneto models this compartment is used for a tool box. The battery case is fastened in a different way than previously, a small forging on the rear stay brace holding it securely.

The 1912 Emblem motors are of the same size as their predecessors, the four horsepower having a bore of 3½ inches and a stroke of 4 inches; the five horsepower, 3¾ inch bore and 4 inch stroke. Cylinders are made from close grained iron and are of the same design as last year, with the exception of the flanges being somewhat lighter, while the interior is ground and lapped to a mirror finish.

Crank cases are made from special aluminum, and the insertion of a new packing makes a positively oil tight motor. The crankcase compression release tube now passes through the cam gear case and opens on the lower side. Pistons are cast of special steel, with convex heads, and the distribution of weight is so arranged as to make them very light and vibrationless. They are also fitted with a ¾ inch hollow wrist pin and are heat treated and ground to size. Cylinder rings are special die castings, ground on three sides, giving generous flexibility. Ball bearings have been increased in diameter. The 1912 twin connecting rod bearing is 4 inches in diameter, or just twice the size of last year's model.

The Emblem still retains automatic inlet valves, believing them best for all around service. The inlet valve has been changed considerably, however, the valve guide being twice as long as in previous models, while the stop has been redesigned to give smoother running. Exhaust valves are made of nickel steel heads and carbon steel stems, the latter hardened to reduce wear, while the valve tappets are made of hardened tool steel. The cam gear has been lightened considerably. On the battery model the adoption of a circular cam will reduce largely the breaking of contact springs. The bearing of the cam has been lengthened one-half inch to give a firmer support.



All magneto models will be fitted with Herz magnetos. The new 1912 free engine pulley is of improved design and does not extend outward any further than a flat belt pulley. The disks are larger than those used on the 1911 model, and run in oil, reducing the tendency of overheating. The free engine attachment is offered as a desirable equipment in combination with the tandem attachment.

There will be three models for 1912—two singles of four and five horsepower, respectively, and a twin of seven horsepower. Either flat or V belt will be furnished. The standard colors will be black, carmine and French gray, the last named being a darker shade than was used on 1911 models.

Perhaps the most important new feature, from the purchaser's point of view, is the price. The four horse power battery model will list at $200; the five horsepower at $215, and the seven horsepower, including magneto, at $250. On the single cylinder $25 extra is charged for magneto. Dual ignition will be furnished at a slight additional cost, this feature having been first used on motorcycles by the Emblem Mfg. Co. Free engine pulleys will cost $15 extra, and will be operated by hand lever or grip latch.

A New Member Joins the Yale Family

One absolutely new model—a five-horsepower twin—an entire line of four models equipped regularly with free engine clutches and distinct improvements in the construction and equipment details that partake of the nature of refinements rather than radical alterations are some of the attractive features displayed by the 1912 line of Yale motorcycles, the product of the Consolidated Mfg. Co., Toledo, O.

MODEL 24 YALE, 4 H. P., BATTERY IGNITION, $210

The two singles are identical with the exception that Model 24 is equipped with battery ignition, while Model 24M is the magneto type. The motor is rated at four horsepower, 3¼-inch bore by 3 43/64-inch stroke, giving a piston displacement of 30.46 cubic inches.

The new member of this long-established family will be known as Model 25. It has a twin-cylinder motor, 2¾-inch bore by 3 43/64 inch stroke; piston displacement,

"Every Little Bit Added"—etc.

A YEAR AGO we told our dealers that we were going to take care of them in the matter of deliveries. As usual, we made good our word and Harley-Davidson dealers had little cause for complaint on poor deliveries.

But you will remember in connection with this, how we had to make things move in order to be able to keep pace with the demand our dealers placed upon us for Harley-Davidsons. You will remember how we pushed the work on our last five story reinforced concrete and steel buildings in the middle of winter by erecting an immense wooden shed around the scaffolding, so that the masons could work in zero weather. We simply had to do this in order to get our plant up in time to meet the spring rush.

We have added a large number of new dealers to our selling force since the announcement of our 1912 models, to say nothing of the fact that our old dealers are contracting for on an average nearly twice the number of machines they did last year. We must take care of this additional business and we are going to, and in order to do so we have just closed negotiations whereby we have acquired property adjoining our present plant, which will give us nearly three times the acreage occupied by all our present factory buildings.

Our larger dealers will be glad to hear that along with this new property we have acquired splendid side-track facilities, the lack of which greatly handicapped us during the past season in making their carload shipments.

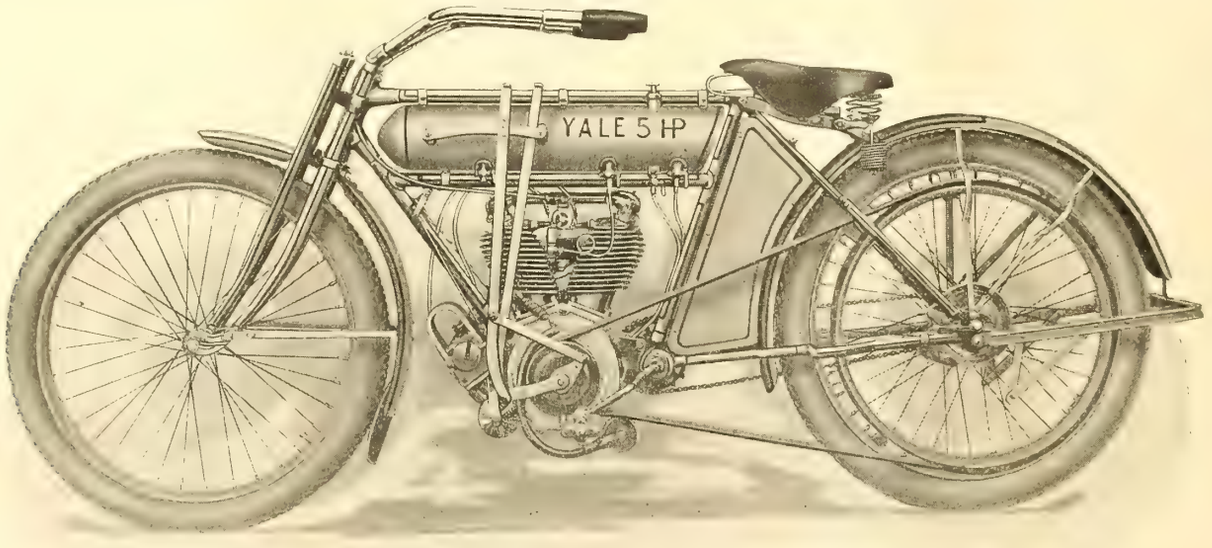
The present buildings on the newly acquired Harley-Davidson property will be cleared for our contractors just as soon as the former owners can move their machinery, stock, etc., and two immense Harley-Davidson buildings, to cost approximately $80,000.00, will be put up. So you see we are going to take care of our dealers again this year so they can get all the Harley-Davidsons they want, even in the busiest part of the busy season.

Yes, we are growing—and you know why. This year our dealers are going to realize that its easier sailing for them when they represent a concern that is really wide awake—progressive instead of retrogressive.

Harley-Davidson Motor Co.

133 C Street **Milwaukee, Wis.**

43.62 inches; rated horsepower, five. The motor of the seven-horsepower twin, Model 27, is of the same dimensions as formerly—3¼-inch by 3 43/64-inch, and the piston displacement 60.92 inches.



Some special features used exclusively on the twins are: A dual lubricating system consisting of a positive acting gear pump operated by a continuation of the shaft of one of the idler gears, pressure regulated, the force pump retained as auxiliary; priming cocks to facilitate starting, these cocks curely anchored by the extension of the fork-sides upwards beyond the crown and corresponding lugs projecting downwards from the handle-bar forging fitting into the tops of the fork-sides.

The grip control is so devised that the valves may be held open absolutely at the will of the rider. An eccentric yoke of new design and the usual 1½-inch travel in the rear fork-ends permit of rear wheel adjustment sufficient for a 3-inch stretch in the belt. Extra heavy, double ply, 1¾-inch satisfactory in that by means of it the rider is easily, firmly and comfortably seated, insuring perfect control of the machine at all times and under all conditions.

All models are now built to conform to a standard wheel base of 57½ inches.

Heitger carbureter is specified as regular equipment. Bosch magneto on the three magneto models and three dry cells on the only battery model furnish the ignition.

Increased values for the same price and marked reductions are noticeable in the

MODEL 25 YALE, 5 H. P., TWIN CYLINDER, WITH BOSCH MAGNETO, $260

fitted with covers to exclude dirt; and an innovation whereby it is claimed a perfect circulation of the air currents is obtained in arranging the cooling fins horizontally, or parallel with the road.

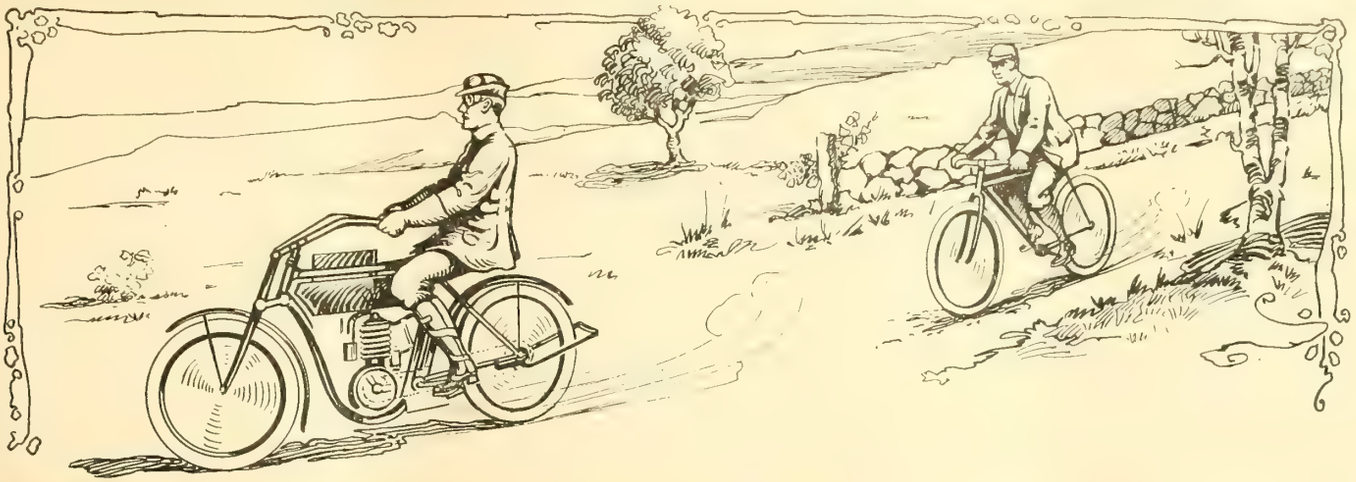
Tires of larger sectional diameter are used throughout; instead of the usual size, 2½-inch, the regular equipment will be 2¾-inch. Wider mud-guards are noted, they being full 4 inches wide. Heavier gauge spokes, larger head fittings in which ¼-inch balls are used, and improved Adams pattern stand are among the advancements tending to increase the serviceability of all models. The forks and handle-bars have been strengthened and the latter more se-

flat Yale and 1⅛-inch Spartan "V" belts comprise the options on the transmission system.

The latest improved model of the Eclipse free engine clutch, the pioneer in this field, is used on the entire line. The clutch is lever-controlled and is furnished in varying sizes commensurate with the model to which it is applied. All frame fittings are drop forgings "Yale made" and specially heat-treated according to the latest approved methods. Tanks are cylindrical, are reinforced and have capacity for two gallons of gasoline and two quarts of oil. The seat post, of the same pattern as formerly used, is retained, it having proven entirely

following schedule: Model 27, seven-horsepower twin, $285; Model 25, five-horsepower twin, $260; Model 24M, four-horsepower magneto single, $235; Model 24, battery single, $210. Tandem attachment, extra, $20.

Marvel and Curtiss Not Yet Merged.



The announcement is made by C. L. Waters, manager of the Marvel Motorcycle Co., that the consolidation of the interests controlling the Marvel and Curtiss motorcycles will not be consummated for two or three weeks, and that pending the final action the Marvel machines will be turned out as usual.

Assume two bicycles—

one with rigid, non-adjustable bars and the other with the Kelly bar, giving 25 riding positions. Which bicycle will sell more readily?

The Kelly adjustable handle bar is a real contribution to cycling and a positive feature of added value to the machine.

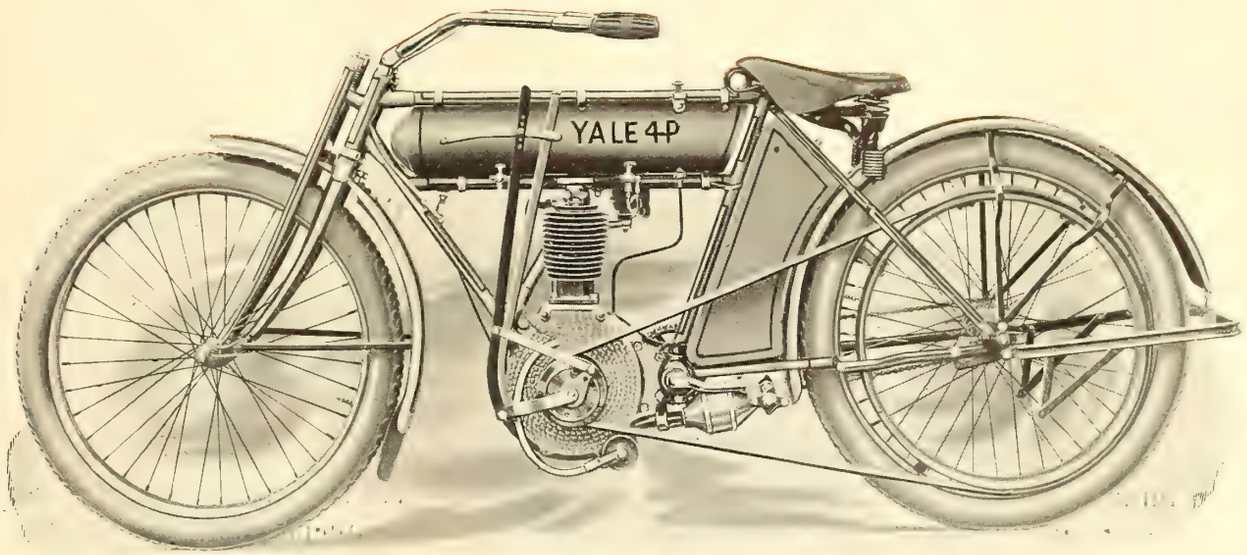
Sales are stimulated when the Kelly is an equipment feature.

The Kelly Bar Has 25 Riding Positions

THE KELLY HANDLE BAR COMPANY, Cleveland, Ohio

Dealers' Pocketbooks Are Helped by Us

Bicycles that you can buy right and sell right, and that sell easily because of their superiorities, are what we supply.



CYRUS JUVENILE

Our capacity, with our new four story addition and a total floor space of 240,000 square feet, is a carload of bicycles a day, including Adlake, Cyrus, Crown and other models, in addition to which we can produce 5,000 pieces or parts per day, including Fauber hangers. Not only are we usi g Fauber patent one piece crank hangers in our bicycles but also roller chains, which we adopted two years ago, being in advance of the rest of the cycle manufacturers in this respect. Write for 1912 prices.

GREAT WESTERN MANUFACTURING CO., La Porte, Ind.

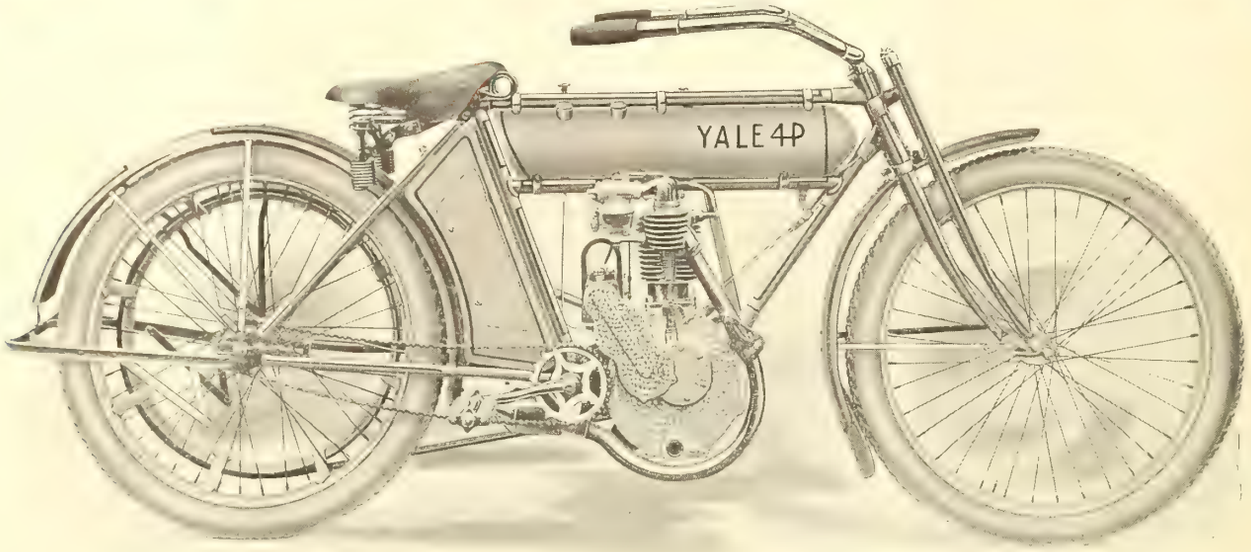
YALE 4P YALE 5P YALE 7P

Four Yale Models for 1912

Model 24 Yale, 4 H. P., Battery Ignition, $210

Wheel base 57½ inches. Eclipse Free Engine Clutch. 3¼ inch bore by 3 43-64 inch piston stroke. Cubic Displacement 30.46 inches. Tires 28 by 2¾ inches. Transmission optional, flat or V leather belt. Tool equipment full and complete, including pump. Saddle, option of Mesinger Standard No. 4 or Eagle Motorcycle Seat. Color, French gray artistically striped with Yale blue.

The four 1912 Yale models present not only the greatest advance in sane construction yet shown, but give the rider a range of choice that has never before existed under one name plate, and cannot be equalled by any other combination of machines now on the market.



Ten Good Things for 1912 That Are Distinctively Yale

1. Eccentric Yoke.
2. New Front Forks and Handle Bar.
3. Eclipse Free Engine Clutch with Positive Lever Control.
4. Equipment fully Nickeled on Copper.
5. Mechanical Oiler on Twins.
6. Large (2¾ in.) Tires.
7. Extra Wide, Auto Fender Type, Mud Guards.
8. Heavier Gauge Spokes.
9. Priming Cocks on Twins.
10. Improved Grip Control.

2 3-4 inch Tires and Free Engine Clutch on all Models

YALE 4P YALE 5P YALE 7P

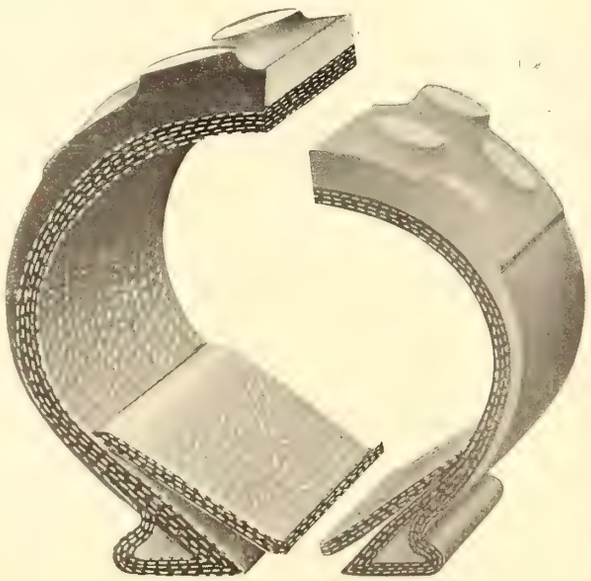
YALE 4P YALE 5P YALE 7

Model 24 M Yale, 4 H.P., with Bosch Magneto, $235

Wheel base 57½ inches. Eclipse Free Engine Clutch. 3¼ in. bore by 3 43-54 in. piston stroke. Cubic displacement 30.46 in. Tires 28 by 2¾ inches. Remainder of specifications as shown for Model 24.

Keep in mind as you read the story of the 1912 Yale, the important fact that in this good year of 1911, the Yale won every endurance contest and reliability run of any consequence held in the United States.

Yale Eccentric Yoke



Furnishes an easy and scientific method for tightening the chain without the use of any special tool. One turn of the yoke takes up one link of chain. A full 1½ in. backward movement of the rear wheel is permitted by the slots in the rear fork, and in connection with the eccentric yoke, allowance is made for a 3 in. stretch in the belt. Extra chain links are furnished free by us.

Eclipse Free Engine Clutch

Used on all models. A practical, scientific solving of an important problem. Is extremely flexible, starts easily and gently with any degree of power desired. All speeds controlled by a positive lever arrangement. No flexible joints or loose connections. Adjusted instantly for tension with an ordinary screw driver. This is the only free engine clutch which has stood the test of time, and has been still further improved for 1912. All others are untried experiments.

Stand

Improved extra heavy Adams.

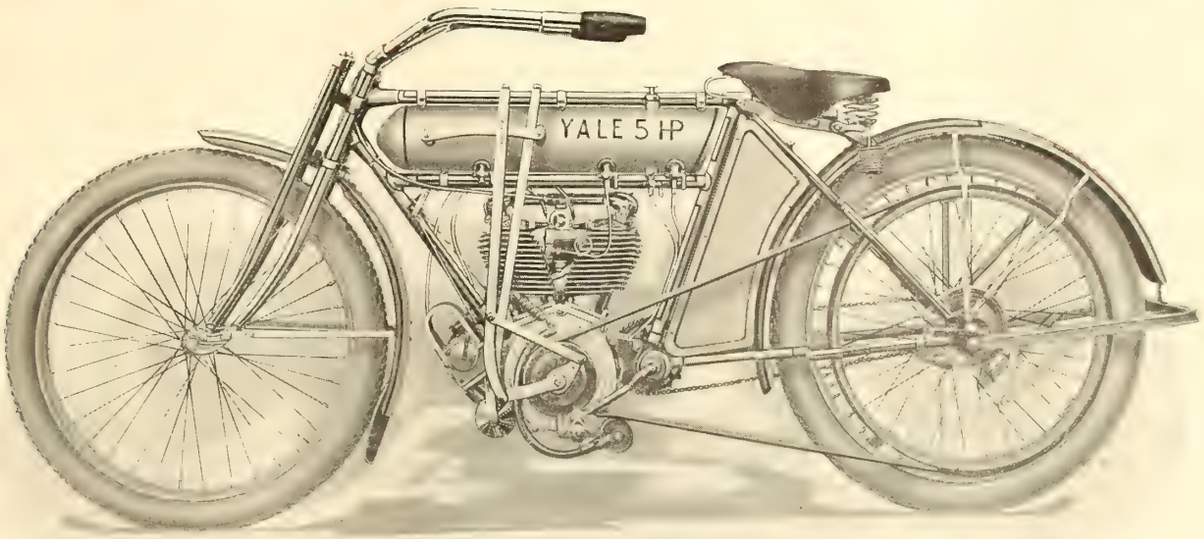
2¾ and 2½ in. Tires Compared

New Yale Fork

An exclusive improvement with which all Yales are fitted. Fork-sides are carried up to handle bar and are anchored on either side of the stem by means of lugs which project downward from the handle bar forging, and fit into the fork-sides' tops. A three-fold anchorage is thus made, which equalizes any shock to the front wheel, and prevents the handle bar from turning. Fork proper and cushion fork are joined by a very powerful straight-line connection. Fork sides are thoroughly reinforced from within.

Heavier Gauge Spokes

In order to be well within the limit of safety for tandem riders, we have increased the gauge of our spokes, and the front wheels now have 36 and the rear 40 spokes. These are of the finest quality of steel ever used for this purpose, and are made to our order and specifications.



Yale Head Fittings

Are larger than ever before and contain ¼ inch balls. They are turned from the bar to 1-1000 of an inch accuracy and are properly case hardened.

2 3-4 inch Tires and Free Engine Clutch on all Models

YALE 4P YALE 5P YALE 7

YALE 4HP YALE 5HP YALE 7HP

Model 25 Yale, 5 H. P., Twin Cylinder, with Bosch Magneto, $260

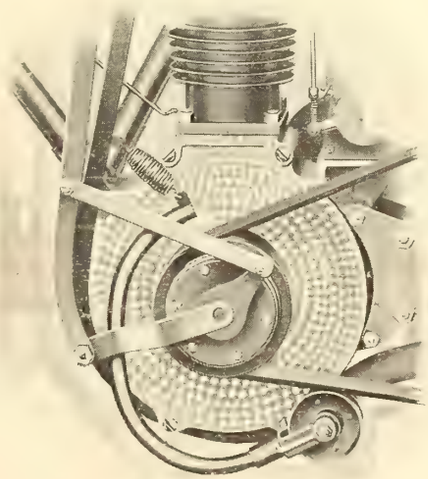
Wheel base 57½ inches. Eclipse Free Engine Clutch. 2¾ in. Bore by 3 43-64 in. piston stroke. Cubic displacement 43.62 in. Tires 28 by 2¾ inches. Remainder of specifications as shown for Model 24.

Every seasoned rider in the land is familiar with Yale construction. To those features that have already given the Yale its splendid service record, add mentally the tremendous advantages that come from the advancement in construction of which these pages tell.

Mechanical Oiler on Twins

A perfect dual oiling system. So small that it is mounted on the side of the magneto drive gear train. Is operated by a continuation of the shaft of one of the idler gears. A positive acting gear pump with pressure regulated by a small spring needle valve, which allows excess oil to pass back into the intake side and follow out the cycle of movement as required for perfect lubrication of the parts. As an auxiliary oiler, we retain the force pump.

Auto Fender Mud Guards



A very desirable addition and rendered necessary by the Yale's big tires. They are full 4 in. wide, and afford perfect protection under all circumstances.

Priming Cocks

The priming cocks on the twins provide for easy starting, and are fitted with covers so that dirt cannot accumulate about them when not in use.

Ignition Systems

The Bosch Magneto is used on all Yale twin and magneto machines. On the battery machines we use three dry cells and a dependable coil.

Eclipse Free Engine Clutch

Larger and Better Tires

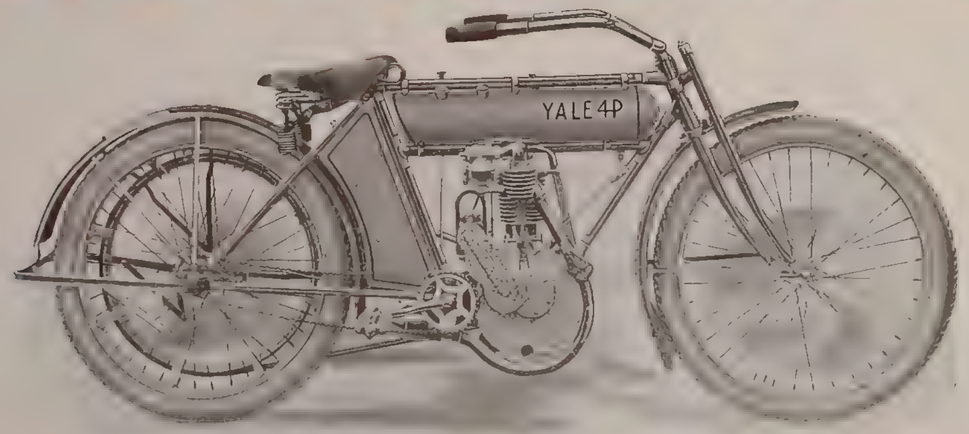
A necessary provision in view of the increasing vogue of tandem riding. Yale tires are really small automobile tires, and are 2¾ in. instead of the customary 2½ in. This gives 10 per cent. more air for cushioning purposes and 300 lbs. carrying capacity per tire, which is one-third more than the 2½ in. tires. They may be ridden softer than a smaller tire, have more resistance to skidding, are less likely to rim cut, are more comfortable for the single rider, have increased fabric as well as more rubber, and weigh only 18 ozs. more than common tires.

Cooling Fins on Twin Cylinders

Are now arranged so that the planes of the fins will be parallel with the road. Note the illustration showing twin power plant. This Yale innovation gives a perfect air current circulation along natural lines.

Improved Grip Control

We use a new locking device which holds the valves open absolutely at the will of the rider.



Brakes

Eclipse motorcycle coaster with option of Corbin band.

2 3-4 inch Tires and Free Engine Clutch on all Models

YALE 4HP YALE 5HP YALE 7HP

YALE 4P YALE 5P YALE 7P

Model 24 M Yale, 4 H.P., with Bosch Magneto, $235

Wheel base 57½ inches. Eclipse Free Engine Clutch. 3¼ in. bore by 3 43-54 in. piston stroke. Cubic displacement 30.46 in. Tires 28 by 2¾ inches. Remainder of specifications as shown for Model 24.

Model 27 Yale, 7 H.P.

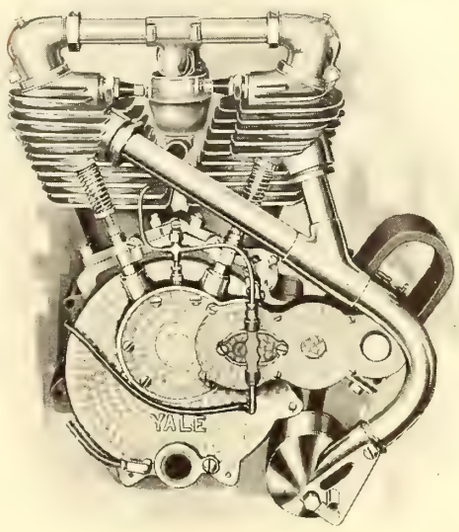
Twin Cylinder with Bosch Magneto

$285.00

Wheel base 57½ inches. Eclipse Free Engine Clutch. 3¼ in. bore by 3 43-64 in. piston stroke. Cubic displacement 60.92 inches. Tires 28 by 2¾ inches. Remainder of specifications shown for Model 24.

The story of the Yale is one of progress – of development along proved lines—of a policy that has never yet offered an untested, radical change. Yale riders run no risk. Our laboratory and road tests absolutely safeguard them against any raw, untried flounderings in construction.

A Safe, Dependable Seat Post



We retain the old tried and true hold-fast seat post. The rider who is not firmly and easily seated cannot possibly have perfect control of his machine. Our saddles are of the very best, most comfortable type, as will be seen from the option given in the specifications of the different models.

Tandem Attachment

Very comfortable and efficient. Furnished complete ready for attaching, for $20.

Transmission System

Flat or V leather belts as desired. Yale flat leather belts are 1¾ inches wide and **extra heavy** double ply. Our V belt is the celebrated 1⅛ in. Spartan. On all flat belt models, the rear belt rim is lagged with an endless piece of leather securely fastened by our process.

Yale Twin Power Plant

Our Own Drop Forgings

All fittings are drop forgings made by us from steel of the finest quality used for this purpose, and are properly heat treated, which is the practice of the makers of the highest grade automobiles. There are no malleable iron castings or pressed steel fittings employed in the construction of the Yale.

Reinforced Tanks

All Yale models have heavy reinforced cylindrical tanks with 2 gal. capacity for gasoline and 2 qts. of oil.

Muffler

Fitted with cut-out on all models. The improved Yale mufflers when closed are silent and are of ample size for emission of burnt gases.

All machines go ready to ride—with handle bars and saddles attached.
Our new design crate allows this great improvement.

A little territory left for the best agents.

DE ROSIER AND HART IN COLLISION

But Amateur Champion Was the "Innocent Bystander"—Both Injured at Guttenberg Sunday Meet.

For the first time in the history of American motorcycle racing, the professional and amateur champions both were "knocked out" simultaneously at Guttenberg, N. J., on Sunday, 29th ult., when Jake DeRosier, coming into the lower turn at a terrific gait, went towar dthe outside and struck Frank Hart, who was standing there, before the latter could get out of the way. Hart dropped with a double fracture of a leg near the ankle where the pedal of DeRosier's machine struck him, and Jake and his machine turned three "cartwheels." DeRosier escaped with a sprained ankle and a severe shaking up.

FRANK HART, THE AMATEUR CHAMPION

Hart was rushed first to the North Hudson hospital, and later to St. Luke's in New York, where he is at present and progressing well. DeRosier refused to go to a hospital, and after a few days' confinement now is able to be about. The escape of both men from death was miraculous. The crash occurred in the second round of the five-mile professional when Mercier and Cox, the new professionals, were leading and setting a very warm pace, and Jake decided to "go get 'em."

After two postponements the meet finally was favored with ideal weather and a record crowd of over 4,000 turned out. When Hart was eliminated J. U. Constant had things pretty much his own way and took two firsts. He was beaten in the miss-and-out by Costello on a Merkel, who did some very good riding. If Costello had had more speed he would have won oftener, for he uses his head to good advantage.

DeRosier's retirement left Ferd Mercier, L. H. Guterman, J. J. Cox and W. L. Coursen to fight for the money events. Cox took the 10-mile handicap, the feature event, and Mercier won the five-mile in which the accident occurred. Cox and Constant were caught several miles in 0:57. There was warm scrapping in the trade rider and professional events. Ralph De Palma drove a three-mile exhibition in a light racing car. Summary:

Three mile novice—Won by J. A. Gaucher (Indian); second, G. A. Smith (Indian); third, W. M. Annis (Indian). Time, 3:29.

Five mile miss-and-out, trade riders, 61-inch class—Won by M. Costello (Merkel); second, J. U. Constant (Indian); third, J. Buckingham (Harley-Davidson). Time, 4:55.

Five mile professional, 61-inch class—Won by F. Mercier (Indian); second, J. J. Cox (Indian); third, L. H. Guterman (Indian). Time, 4:57⅕.

Five mile, private owners, 61-inch class—Won by G. A. Smith (Indian); second, G. C. Haas (Indian); third, W. M. Annis (Indian). Time, 5:44.

Ten mile handicap, professional—Won by J. J. Cox (Indian); second, W. L. Coursen (Indian); third, F. Mercier (Indian). Time, 10:56⅕.

Five mile handicap, trade riders—Won by J. U. Constant (Indian); second, M. Costello (Merkel); third, J. A. Gaucher (Indian). Time, 5:00.

Three mile free-for-all—Won by J. U. Constant (Indian); second, M. Costello (Merkel); third, J. A. Gaucher (Indian). Time, 3:02⅖.

"JAKE" DE ROSIER ON HIS NEW EXCELSIOR

Bosch to Advertise from Main Office.

After November 1st the advertising and publicity department of the Bosch Magneto Co. will be located at the main office, 223-225 West 46th street, and the office now occupied by this department on 54th street will be discontinued. Mr. A. H. Bartsch will be in charge as heretofore. This change has been made possible by the extensive alterations throughout the entire Bosch building.

UNITED CYCLISTS GET TO WORK

Appoint Committee on Olympic Games—Subscription List Started—Elimination Races to Begin Soon.

Auspicious in a marked degree is the start given the proposition recently suggested in the columns of The Bicycling World and Motorcycle Review to formulate plans to provide funds for and send a bicycle team to the next World's Olympic Games at Stockholm, Sweden, in July, 1912.

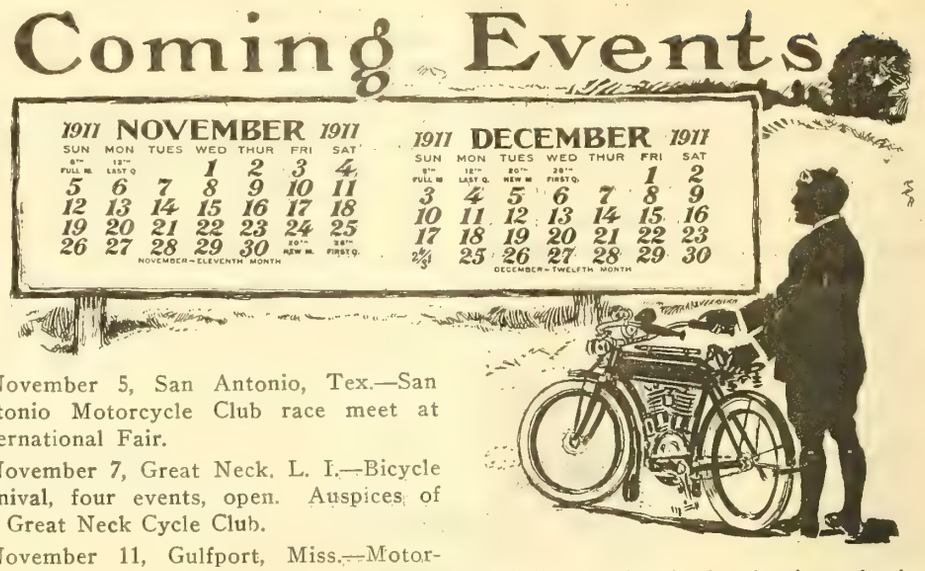
At a meeting on Wednesday, November 1st, of the United Cyclists, New York's live, hustling and youngest cycling organization, the question was thoroughly discussed from every possible angle, with the result that a committee of ten, six of whom were appointed, was brought into being and authorized by the organization to confer at once with the American Olympic Committee and to work in conjunction with it in the matter of raising the funds necessary to send a complete team of cyclists.

The members so far assigned to the Olympic Bicycle Race Committee, as it will be known, are R. F. Kelsey, chairman of the Board of Control, N. C. A., and member of the American Olympic Committee; Harold J. Dibblee, to whose efforts was due entirely the sending of the American cyclist team to the Olympic Games last held in London; W. R. Stroud, of The Bicycling World; William Van Den Dries, N. Y. A. C., American amateur champion of 1907; Franklin Fisher, S. A. A. C., and H. A. Gliesman, all of New York City. The remainder of the committee will be appointed at an early date.

The committee immediately took up the consideration of plans to promote a series of race meets, both indoor and outdoor, the proceeds to be applied to a subscription list that will hereafter be run in the columns of The Bicycling World. Try-outs and elimination races are also being planned to be run in various sections throughout the United States, with finals to be run in or near New York City.

The general rules governing the Olympic bicycle race, which will be for a distance of 200 miles around Lake Malar, Stockholm, Sweden, are as follows:

The race will be partly team and partly individual; scoring in both divisions will be done simultaneously. The contestants will start singly at intervals of three minutes. The maximum number of competitors allowed from each nation is twelve. All entrants must be registered as amateurs with the sport controlling body, that in the United States being the National Cycling Association.



The team competition will be so arranged that the best four from each nation will be considered to form a team, and the total time of the four shall decide. Nine riders may be entered by each nation in the team competition; six to start, three to be held in reserve and the score of four to count in determining the order of finish.

Prizes in the individual competition will be gold, silver and bronze Olympic medals for first, second and third, respectively. Every non-prize winner whose time does not exceed that of the winner by 25 per cent. will receive a special diploma of merit. The winning team will receive an Olympic diploma, and each member a silver-gilt Olympic medal; to each member of the second team a silver Olympic medal, and to the third team, individual bronze Olympic medals.

The entries close June 7th, 1912. Start of the race, 2 a. m., Sunday, July 7th, 1912.

The subscription list is headed by the contribution of $10 by B. A. Swenson, a prominent dealer and rider of bicycles and motorcycles located at Providence, R. I. The second subscription to be received is that of H. A. Gliesman, of the Tiger Cycles and Aeroplane Co., 782 Eighth avenue, New York City. All donations and subscriptions sent to either The Bicycling World or W. R. Stroud, secretary of the United Cyclists, New York City, will be promptly acknowledged in the columns of The Bicycling World. Every manufacturer, dealer and cyclist in the country is urged by the committee to send in his subscription at once, so that an active, systematic campaign can be immediately inaugurated. J. A. Hall, the president of the organization, was voted full power to act in the campaign for an American bicycle team, preliminary to the completion of the general committee, and stated that he believed that the manufacturers, dealers and cyclists would be prompt in responding to the call for subscriptions.

Coming Events

November 5, San Antonio, Tex.—San Antonio Motorcycle Club race meet at International Fair.

November 7, Great Neck, L. I.—Bicycle carnival, four events, open. Auspices of the Great Neck Cycle Club.

November 11, Gulfport, Miss.—Motorcycle races at Gulf Coast Fair; open.

November 12, Floral Park, L. I.—Ten mile handicap road race, Century Road Club Association, Eastern Division. Rain date November 19th.

November 20-25, London, England—Annual Olympia motorcycle and bicycle show.

December 11-16, New York City, N. Y.—Madison Square Garden—Nineteenth annual international six days' professional bicycle race.

January 20, New York City—Fourteenth annual ball of the Century Road Club Association, Eastern Division, at Alhambra Hall, Seventh avenue and One Hundred and Twenty-sixth street.

March 4th-11th, Denver, Colo.—Motorcycle and automobile show in Auditorium.

Keyes Joins the Silent Majority.

Atwood B. Keyes, inventor of the K. & C. lock joint rim and superintendent of the factory of the K. & C. Mfg. Co., of Henniker, N. H., for 13 years, died at his home after a long and painful illness on October 14th. Mr. Keyes was born in Princeton, Mass., in 1850. At an early age he went into the chair business, but his inventive genius and mechanical ability soon brought him into contact with other lines of the wood-working industry. For several years he was engaged with the New Haven Wheel Works, New Haven, Conn. He was instrumental in organizing the K. & C. Mfg. Co., manufacturing bicycle rims, the patents on the machines and product being the result of his inventiveness. In 1909 he superintended the erection of machinery of the Tucker-Lovell Co., at Bingham, Me. This was his last active work.

"Bosch, as usual," seems a trite phrase for calling attention to the frequent triumphs of this well known magneto in motorcycle contests. Its latest achievements are as equipment on the winning machines in all of the Canadian motorcycle championships and other races recently run at Toronto, as well as on the winners in the trade rider, private owner and all special award classes in the Wetsern Endurance run at Chicago.

HOMER PIGEON ON ENDURANCE RUN

Toronto Club Uses One on Its Initial Long Distance Tour—Arithmetic Needed to Disclose Winner.

The very first endurance run of the Toronto Cycle Club was held starting Saturday, October 28th, when almost 40 riders set out on a 263-mile tour of the province, passing through Hamilton, Brantford, Woodstock, London, Stratford and return. Three days were spent on the trip, the finish being made on the following Monday, which was Thanksgiving Day for the Dominion. The endurance run was for a $350 trophy put up, along with several other prizes, by the Dunlop Tire & Rubber Goods Co. Through the courtesy of Fred Hambly, of the Royal Canadian Homing Pigeon Club, a homer pigeon was taken along and liberated on the afternoon of the second day, the bird carrying a message back to Toronto, which was announced at the automobile and bicycle meet held at the fair grounds the next day. Fine weather prevailed for the whole of the journey, and a huge time was afforded the participants. Practically every make of motorcycle, both American and British, represented in Canada was started in the test, the winner of which will be announced after the racing committee of the Toronto M. C., aided by a few adding machines, figures out the result. W. M. G.

Canadian Club Decides to Join F. A. M.

For the purpose of showing the Federation of American Motorcyclists that they are acting in good faith, the members of the Toronto Motorcycle Club decided, at a meeting held the latter part of October, to apply to the American governing body for affiliation. It is the intention of the Canadians to join the F. A. M., and then, when they are strong enough, to ask to be allowed to arrange self-government for all Canadian clubs. By doing this the Toronto club will secure more attention, it was thought. The Toronto club will hold its events under F. A. M. auspices in future until the time is ripe for the creation of a Canadian body.

A few months ago the Northerners let an awful yelp when it was learned that the Federation had "annexed" Canada and the recent change in policy came as a thunderbolt from the blue sky. The club now has a membership reaching almost to 150. W. M. G.

Hodgin Returns From 1,200 Mile Trip.

Nelson J. Hodgin, who will be remembered as the man who rode from Indianapolis to Chicago and return, a distance of 410 miles, in a little over 14 hours, has just returned from a 1,200-mile motorcycle trip through Indiana and Wisconsin. Hodgin, about 10 days ago for a recreation tour with the intention of visiting the Hendee and Excelsior establishments at Chicago and the Harley-Davidson factory at Milwaukee.

The trip to Chicago was uneventful, the roads were good and the weather ideal for fall touring. The tourists were not treated so gently in Wisconsin, as they had a touch of winter in Racine and Milwaukee. The snow was just heavy enough to short-circuit their unprotected terminals and to make the going extremely slippery. No accidents marred the trip, however, the riders not even experiencing a puncture, which is considered quite an accomplishment for three riders on a 1,200-mile trip. Hodgin while in Chicago became infatuated with William Grepp and Fill Brown, two business men of the Hoosier capitol, left with a two-speed seven-horsepower Indian and straightaway emptied his pockets and purchased same. This is the first two-speed Indian in Indianapolis, and it is attracting more than the usual amount of attention, and, of course, Nelson is as proud as a schoolboy with a new suit. Grepp and Brown stopped off at Rochester, Ind., to spend part of their vacation in pursuit of the finny tribe.

Race Track Proposed for Waterloo, Ia.

Motorcyclists of Waterloo, Ia., are endeavoring to raise a fund to build a race track at Cedar River Park. Some time ago the park commission laid out a half-mile track at the park, but the work never progressed beyond this stage. Desiring to hold races, the riders now want the track finished, and are doing something besides wishing to bring about such a result.

EXTRA! "SPEED QUEEN" DISCOVERED

Dolly Adelman Wins Empty Title at Columbus—Unsanctioned Meet Provides Many Thrills.

Miss Dolly Adelman, on an Indian, was the star of the ladies' motorcycle races held on the one-mile dirt track at the Columbus (O.) Driving Park on Sunday afternoon, October 29th. Miss Adelman easily proved her right to be called "Speed King," or rather "Speed Queen," from her performance in the 10-mile event for the track championship. Leda Leslie, riding an Indian, proved Miss Adelman's strongest rival in her race for the championship and a handsome silver trophy. Miss Adelman demonstrated the fact during the afternoon that she could ride fast miles, as lap after lap she tore about the oval in 1:01 and 1:02. Miss Leslie also deserves a great deal of credit for her fast riding in the different races.

MISS DOLLY ADELMAN, "SPEED QUEEN"

The first event on the afternoon's card was a five-mile open one for boys. There were many starters and consequently things were not "mixed up" at the start. After the first quarter the field became sorted out, with S. H. Karins, on a Bradley, in the lead. This was the first public appearance of the Bradley on a local track, so the interest centered about it. Karins led the field until the fourth mile, when Otto Tresmer, on an Indian, and the Bradley rider came down the straightaway wheel to wheel. The Indian rider forged to the front, however, and crossed the finish a winner by about 50 yards.

The next event was a five-mile open one for ladies. Dollie Adelman made a bad start and was passed by Leda Leslie on an Indian, but the former rider "put-puted" it right into first place at the half-mile pole. From this point the riders see-sawed back and forth in a manner that made the race intensely interesting. On the fourth mile both riders were close to each other, and each held her relative position until Leda Leslie on an Indian passed Dollie Adelman, also on an Indian, at the four and three-quarters mark. Leda Leslie won the race by the margin of 20 yards.

In the 10-mile handicap race Karins, on the Bradley, was given a three-fourths mile handicap on Otto Tresmer, on an Indian. The race proved a walk-away for the Indian rider, as Tresmer passed Karins on the sixth mile, and almost lapped him again at the finish.

Miss Dollie Adelman, on an Indian, was bested by a foot runner in the novelty race. The runner had a handicap of seven-eighths of a mile, however.

Miss Adelman proved an easy winner over an automobile in the next event. The automobile was given a one-fourth mile handicap, but was bested by at least a fourth of a mile at the finish.

The last event of the afternoon was one over a course of 20 miles. Dollie Adelman and Leda Leslie flew about the track for several laps with positions equal. On the eighth mile Miss Adelman stopped for a repair and lost a lap. In the tenth mile Miss Adelman was forced to stop, as she broke the oil pipe on her machine. Miss Leslie then proved to be an easy winner over Lucile Adelman, covering 14 miles in 16 minutes.

The races were held primarily to decide which rider will compete in a series of races to be held this winter to decide the lady championship of the world. Miss Adelman, from her daring and consistent riding in to-day races, will prove undoubtedly a foe worthy of any rider seeking championship honors. Of course the meet was not sanctioned by the F. A. M. The summaries:

Five mile open for boys—Won by Otto Tresmer (Indian); second, S. H. Karins (Bradley); third, A. Tresmer (Indian). Time, 6:40⅖.

Five mile open for girls—Won by Leda Leslie (Indian); second, Dollie Adelman (Indian). Time, 5:45.

Ten mile handicap—Won by Otto Tresmer (Indian); second, S. H. Karins (Bradley); third, A. Tresmer (Indian). Time, 11:23⅖.

Ten mile ladies "track championship"—Won by Dollie Adelman (Indian); second, Leda Leslie (Indian); third, Lucile Adelman (Indian). Time, 10:29⅕.

Motorcycle-automobile race—Won by Dollie Adelman (Indian).

Twenty mile for women—Won by Leda Leslie (Indian); second, Lucile Adelman (Indian). Time, 23:05¾. H. C. Q.

BAKER ON INDIANAPOLIS SPEEDWAY

Tries for Non-Stop Mark, but Nail Spoils Attempt—Surface Good—Makes Mile in 47 Seconds.

Some interesting trials have just been completed by Erwin G. Baker on the Indianapolis Motor Speedway. Baker carted several racing machines out to the famous race course where he intended to demonstrate to the doubting Thomases that the surface of the two and one-half mile course is well adapted for motorcycle racing. It has been the contention that speedway surfaces are too rough for the two-wheeled racing machines, but Baker's successful experiment proved that the local track is as well fitted for motorcycle racing as any track in the country.

About two months ago Baker attempted to set up a non-stop mark, and for this purpose used a stock seven-horsepower Indian with regular tires, saddle, fork, etc. Although his trial was spoiled in the 75th mile when a nail punctured his tire, the test proved beyond a doubt that long distances are not injurious to either the machine or the rider. Although there is some vibration, it is not pronounced enough to worry or tire the rider, and the extremely wide turns, which are well banked, make the course practically a straightaway. The 75 miles were covered at the rate of 60 miles per hour.

His recent tests were more for speed than for distance, and for this purpose he used a stripped stock seven and a ported seven-horsepower Indian. The ten miles on the stock machine were negotiated in 9.03 and the timers caught one mile in 54 seconds flat. Employees of the automobile companies who use the speedway for testing purposes held the stop-watches, and as they are continually timing the stock and racing automobiles the time is considered authentic. The mile time trial with the ported seven was made in a fraction over 47 seconds, and Baker says that the resistance caused by an extremely high wind was responsible for five or six seconds which could have been cut off this mark. He sees no reason why board track time cannot be made on the smooth surface of the local course.

His trials have been watched with interest by members of the Indiana Motorcycle Club, and it is probable that they will make a bid for the 1912 F. A. M. meet.

Turner Wins Four Out of Six Starts.

Clarence Turner was the shining star of the motorcycle races held at South Park, Cal., on the 15th ult. Entered in six races, Turner took first place in four events and second in one. The five mile match race was a nip-and-tuck affair all the way, the riders constantly seesawing for position. On the final turn Turner took the lead and gaining a trifle on the stretch won the race by three yards.

The summary:

Five miles, free-for-all—Won by Turner; second, Eyke. Time, 6:06⅖.

Three miles, 4 H. P. machines—Won by McNew; second, Bedeur. Time, 4:46.

Three miles, 5 and 6 H. P. machines—Won by Eyke; second, Lundbard. Time, 3:52⅖.

Five miles, 7 H. P. machines—Won by Turner; second, Eyke; third, Lundbard; fourth, Hall. Time, 6:00⅗.

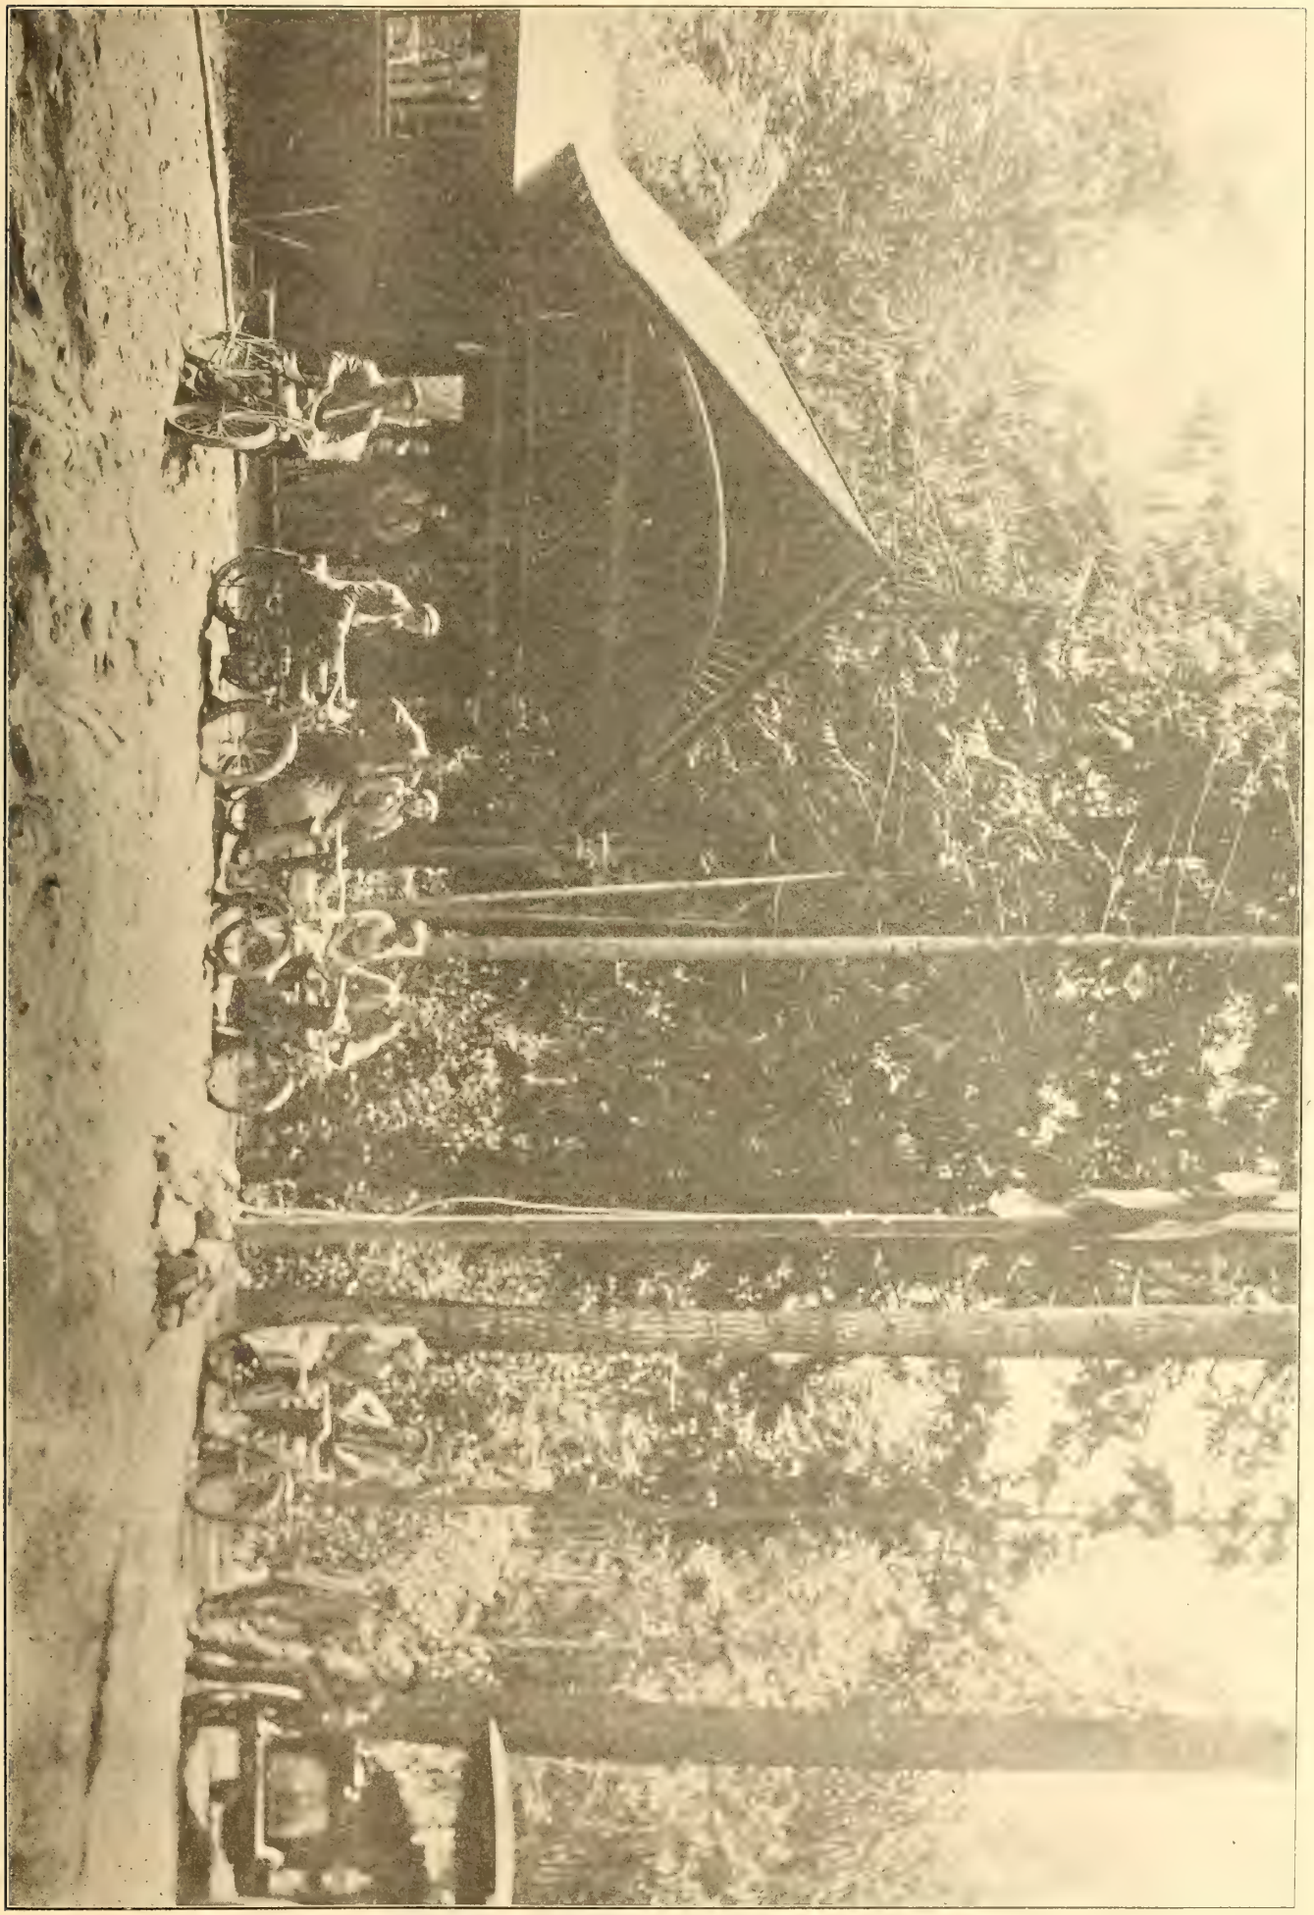
Novelty race, one mile (riders making one lap of track, deflated and pumped up one tire and finished mile)—Won by Hall; second, McNew. Time, 4:00⅗.

Five mile match race—Won by Turner; second, Lundbard. Time, 6:20⅗.

Australian pursuit race, five miles—Won by Lundbard; second, Turner. Time, 6:14.

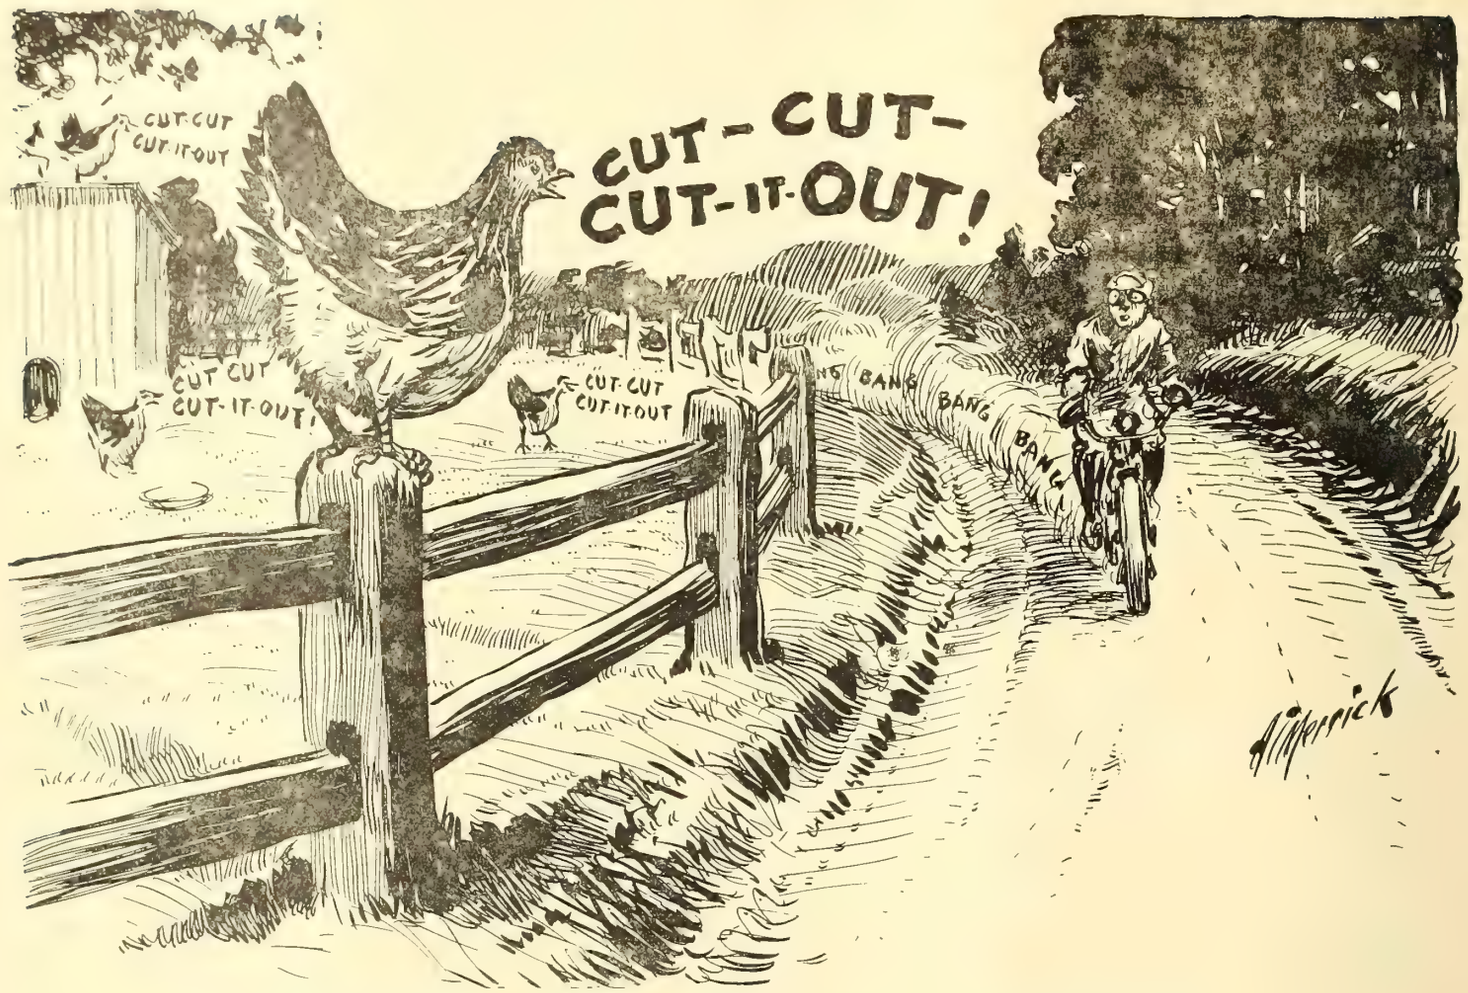
Three mile professional—Won by Turner; second, Eyke. Time, 6:48⅖.

Two mile tandem—Won by Lundbard; second, Lowenthal. Time, 3:08⅖.



Swenson Shows Them How to Do It.

On Sunday, October 29th, a number of Providence motorcyclists made the annual visit to Tarbot, the Dahlia King, in West Greenwich. This trip is an annual event, but as part of the route is over the worst roads of the State it is not often that any rider will visit the place more than once, except B. A. Swenson, who has made the trip annually during the past eight years. This year everyone walked from one to two miles, slipping the clutches and doing a little pushing—that is, everybody but Swenson, who has made three trips through the worst part and did not have to walk a step.



He was mounted on an Indian two-speed four-horsepower, and to say that he was the envy of a good many of the other riders is putting it mildly. The road is a very narrow one, and for about four miles from Crompton is uphill, very sandy and covered with rocks and boulders. Reaching Mr. Tarbot's place, they were royally entertained with something good to eat and drink, and after a short time they started the return via East Greenwich, six miles of down grade and of slightly better roads.

Crescents Still Keep Up Good Work.

The Crescent B. C., of Baltimore, held its second fall century last Sunday, the run being to Fort Myer, Va., and return. Eight members made the trip—Alfred J. Baker, Charles H. Thoms, Langdon M. Sanborn, Edward Berigtold, William A. Leimbach, Fred M. Sanborn, Augustine T. L. Leimbach and Capt. J. F. Huber. The roads were found in good condition with the exception of a stretch of about ten miles. On Sunday, November 12th, the club will make a run to Frederick, Md., or Gettysburg, Pa. C. F. Y.

TACOMA (WASH.) MOTORCYCLISTS AT GOVERNMENT LODGE, MT. TACOMA

MOTORCYCLIST: "Great Scott! Can't they let up on me—even in the country?"

Aeroplane Easily Beats Motorcycle.

In connection with the benefit aviation meet arranged for the wife and children of the late Charles E. Frisbie, the Rochester aviator who was killed in Kansas early this fall, the Rochester Motorcycle Club put on several motorcycling events. Four thousand people were in attendance in Crittenden Park, and the races were all of them interesting. One of the events was a race between a motorcycle and an aeroplane—Edward Stauder, a local boy, riding a motorcycle against Lincoln Beachey in the aeroplane. The latter started first, and a few second later Stauder left the mark; both racers did a lap of the course and came past the judge's stand on even terms. The gun was fired and the men started on a 2½-mile journey. For a few seconds the spectators were undecided whom to watch, the aviator or the speeding rider on the track. Before long, however, Beachey was leading by a good margin and the majority of the crowd were gazing upward. It was announced that the aviator's time for the 2½ miles was 2 minutes 40⅖ seconds, or a little over 64 seconds to the mile.

Summaries of the other races were as follows:

Five mile single-cylinder machines—Won by Edward Stauder; second, R. J. Bishop; third, Arthur Rowland. Time. 6:31.

Five mile handicap—Won by W. G. Tassell; second, N. H. Lewis; third, Edward Stauder. Time, 6:23.

Ten mile handicap—Won by R. J. Bishop; second, Arthur Rowland; third. W. J. Tassell. Time, 14:24.

Novelty race—Won by Arthur Rowland.

George J. Wagner, referee. H. G. Hanmun, clerk of the course.

Canadian Riders in Army Maneuvers.

For the first time, motorcyclists took part in the annual fall maneuvers of the Toronto, Canada, garrison, which was held on Thanksgiving Day, October 30th. Five riders, members of the Canadian Signal Corps and of the Toronto M. C., participated in the engagement and were kept hustling every minute of the time, carrying important despatches from the chief of the staff to the outlying posts and stations. There were no speed limits for the riders, who burned up the roads in the vicinity of the fight, and who concluded the day's operations with a dash for home 50 miles away.

The officers in charge were highly pleased with the showing of the motorists, who proved their worth many times over. The major portion of the particular messages were carried by the motorcyclists, and that there was nary a hitch in the orders speaks well for the riders.

Those who took part were: C. Tye, Indian; P. Williams, Triumph; D. F. Forbes, Indian; D. Thompson, Bradbury, and W. Gladish, Excelsior. W. M. G.

Speed "Unlimited" in Toronto Streets.

The motorcyclists of Toronto are perplexed over the statement made recently by the City Solicitor regarding the speed of motorcycles within the city limits. The city's legal advisor is quoted as saying that "it is questionable whether it would be advisable to place a speed limit upon motorcycles, because the question of danger may not be dependent upon speed." The riders of that place are at a loss to understand this statement, which was made before the Board of Control, as it has been generally understood that the 10-mile-per-hour limit applied to the two-wheelers as well as the automobiles. If the law does not cover the buzz-carts, then the magistrate has been exacting fines without authority. The Toronto club may ask for a specific ruling in the matter. W. M. G.

ENGLISH DEALERS FEAR "INVADERS"

Want to Abolish Tourist Trophy Race—Sweeping American Victory the Cause—Amateurs May Save Event.

There is some doubt as to whether or not there will be any Tourist Trophy Race abroad. It is stated that dealers in England have taken a ballot among themselves with the result that the majority are in favor of discontinuing the race. In this connection, London Motor Cycling says:

"Are we not to have another Tourist Trophy Race? The dealers, it seems, have taken a ballot among themselves and have found that a majority of their members are in favor of discontinuing the Tourist Trophy Race, though they are prepared to support the two winter Quarterly Trials. We can well understand how this is, for those manufacturers who have been successful in the past say to themselves, if there are no more T. T. races we can rest on our laurels and save the expense, and those makers who know their machines stand no chance of shining in the biggest event of the year think that they will also be saved the expense of having to enter a few forlorn hopes. Thus the ayes in favor of the race come from a section who really believe their own goods would be well advertised by the holding of the Trophy. There are also a number of amateurs to reckon with; for instance, in the Senior race this year there were 25 amateurs out of 68 entries, and eight out of 38 entries in the Junior event. It is also reasonable to suppose that if the event were boycotted by the trade a much larger number of amateurs would come forward to compete. We have received a number of letters from private owners, who consider that the race does serve a very useful purpose, namely, that of improving the touring motorcycle, as witness the development of the variable-speed gear in the last T. T. race. Our own opinion is a very decided one on this point, as we hold the view that, once motorcycling loses its sporting nature, the interest will be decreased and enthusiasm will wane. We hope that the A. C. U. will go forward and organize the event as usual."

Could a greater compliment be paid the American motorcycle than to have the English dealers fear another Tourist Trophy Race would be a repetition of the one of this year, when the Indian took first, second and third place?

Preservation and Restoration of Rubber.

The Pharmaceutical Journal has recently been dealing with the problem of the preservation and restoration of rubber, which affects chemists and dentists even more intimately than motorists. It makes the following suggestions, applicable either to preservation or—within limits—restoration:

1. A cycle tube which seemed totally perished was made quite usable by immersion for half an hour in a bath consisting of one part of ammonia to two parts of water, and no doubt is expressed that any rubber article which was only a trifle hardened would soon recover elasticity by this means.

2. For the preservation of rubber articles in store (e. g., spare tubes), frequent washings with alkaline water should serve the same end. An alkaline bath may be obtained by mixing a little Scrubbs ammonia with water; the percentage of ammonia in a solution to be used as a rubber preservative may be much less than 50 per cent.

3. When the rubber articles are stored in casings or wrappings a little quicklime or ammonium carbonate will alkalize the atmosphere, and neutralize the tendency to the formation of acids, which cause the rubber to perish.

To Tax Motors for Road Maintenance.

According to the annual report of the Provincial Engineer of Highways at Toronto, Canada, more than $19,000,000 in cash and more than 22,000,000 days of statute labor, an aggregate exceeding in value $40,000,000, has been spent during the past 20 years on the roads in Ontario by township councils alone. Despite this seemingly enormous expenditure, the government official complains that enough is not being done to make the highways as they should be. In 1910 the expenditure amounted to over half a million dollars, the roads surfaced totaling 300 miles, of which 155 were covered with broken stone and the remainder with gravel. The taxation of motors and motorcycles for the maintenance of the principal roads, rather than the placing of speed restrictions, is advocated by the official. W. M. G.

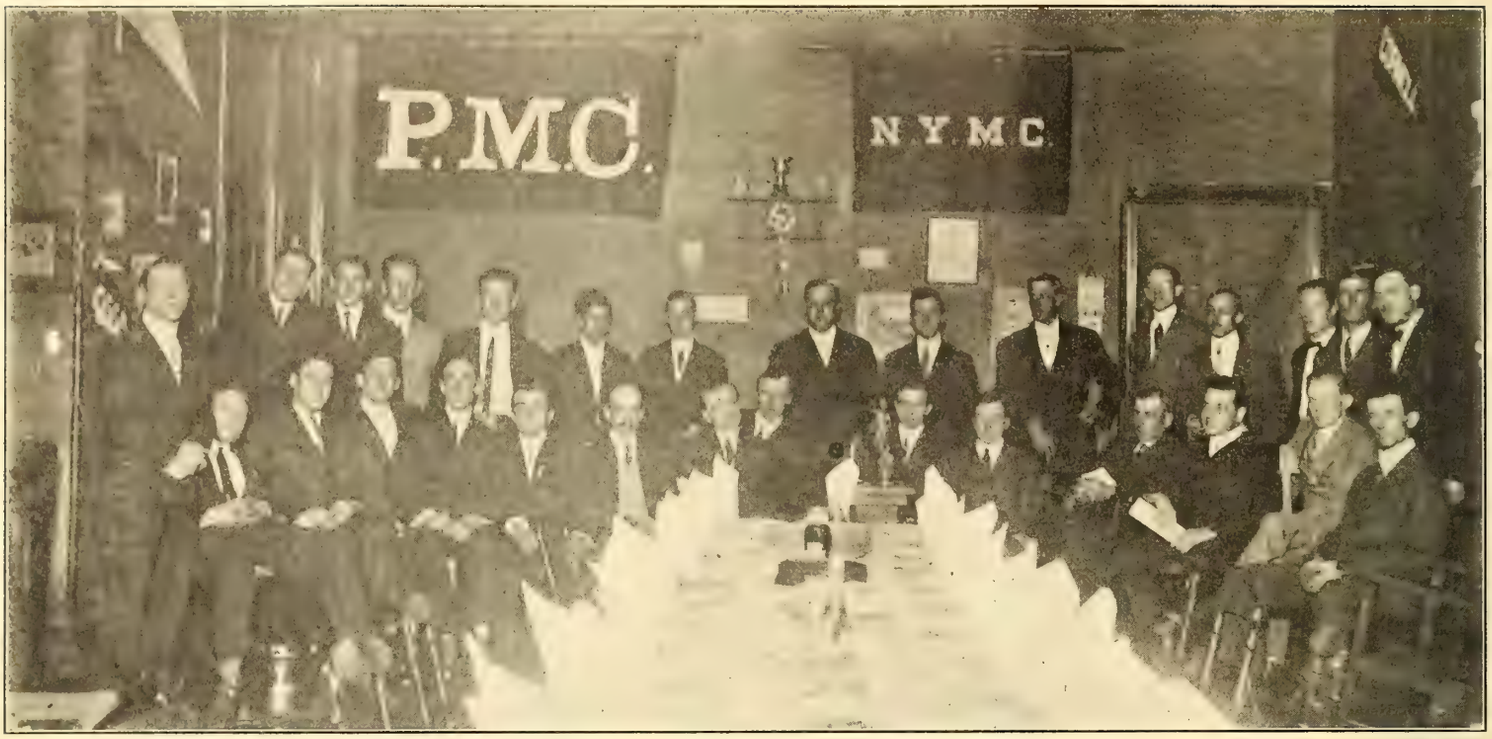
Millers Exchange Pedals for Motors.

Robert Shattock, proprietor of the West Side Motorcycle Exchange, of Detroit, Mich., has recently returned from an Eastern trip, during which he visited the offices of the Haverford Cycle Co., of which he is State representative, and also the Emblem Mfg. Co., of Angola, N. Y. Shattock has also been appointed the Detroit representative for the Flanders "4."

Mr. and Mrs. Harry E. Miller, who left Canada some months ago for a ten thousand mile bicycle trip through the United States, are now in Detroit as the guests of Shattock, and when they leave that city they will be riding Haverford motorcycles.

Two members of the Columbus (O.) Motorcycle Club are ambitious to set a new cross-continent record, traveling from their home city to San Francisco in 15 days. The men are A. J. Schuster and B. E. Claphan.

BROOKLANDS WANTS SILENT RACES



That Is, the Neighbors Do, and Management Obeys—All Racing Machines to be Muffled Properly.

The Brooklands Automobile Racing Club has sent out a notice that no motorcycle in the future will be admitted to the Brooklands track in England "unless it is fitted with an efficient silencer, which must not be provided with a cut-out and no form of an open exhaust whatever will be permitted." This has caused much consternation abroad. Previous attempts of this kind have been made to secure greater silence on the racing engines, but it is stated by a foreign contemporary that with the coming of Jake DeRosier and his match races with Collier this regulation was not enforced, and since that time it has been customary for the racing machines to have free exhausts.

In writing to Motor Cycling, one of the representatives of the trade in England says: "This new ruling, if carried into effect, will practically kill motorcycle racing so far as Brooklands is concerned. While we have admitted that motorcycles on the road should be fitted with an efficient silencer, you can hardly believe that anyone would think of running a machine at Brooklands with cut-out efficiently silenced; it would be the ruination of the best engine made. This new ruling also means that no one will now have an opportunity of going for records, which is most unfortunate. It hits us particularly here, as we were preparing to attack three of the hour records."

Major Lindsay Lloyd, clerk of the course, says:

"For ourselves, we were quite prepared to let the motorcycles go on as they had been, but the inhabitants of the houses within a wide radius of the track have made representations to us that the noise of the motorcycles should be reduced. We went into the matter thoroughly, and I was astonished to find that I could hear the sharp 'crack, crack, crack' of one little motorcycle much further away than even a big car when both were together on the track. We also found that while the long exhaust pipe extending to the rear of the machine quieted the noise of the car, it accentuated the sound of the exhaust gases on the motorcycles, making the noise more crackly. With regard to this crackly noise we had hoped that with the adoption of the ported cylinders these ports would so spread out that the exhaust, as it were, that the noise would be more gradual. Unfortunately there was no experience of this, the noise being just as crackly as ever. Consequently we were forced to act in the matter, for you must remember that we had trouble not so very long ago about

THE ANNUAL DINNER OF THE POUGHKEEPSIE MOTORCYCLE CLUB

using the track at night. In that case we had to stop all night racing, and so Edge's 24-hour record cannot be attempted, and so will never be beaten at Brooklands.

"We are very sorry that we should have to alter the regulations, but we cannot help ourselves. We fully realize that it will make a great difference at present with regard to attempts at records, but for myself I believe that the manufacturers will be able to make silencers that will really silence the exhaust without sacrificing any speed while doing so. At present it is a pity that we must make this regulation, but in the end it will be for the good of the sport."

Major Lloyd then went on to say that he thought there was a smouldering feeling throughout the country against the sharp noise of the motorcycle exhaust. It was more penetrating even than that of aeroplanes, which were going to be properly silenced in the future. "If," said he, "the A. C. U. does not really tackle this question there is no doubt that legislators will. I was staying in the summer near St. Albans, and I sleep with my bedroom windows open. In the early morning I could hear motorcycles sometimes two and three miles away coming nearer and nearer, until they had passed and gone a similar distance the other way. I also noticed that when they had passed the exhaust coming towards one, as it were, was louder than when the machine was approaching. Though it did not affect me, I can quite appreciate the feelings of those who object to the noise."

"We think that Major Lloyd is quite correct in his observations that the sharp 'crack, crack' of the motorcycle is more annoying than the continuous noise of the racing car, which is more efficiently silenced than ever a motorcycle has been," says Motor Cycling. "Our own opinion is also with him in thinking that manufacturers will be able to make an efficient silencer—one that not only dissipates the noise of the exhaust, but which, by not causing back pressure, does not interfere with the speed. Though we think that it is most unfortunate that the regulation has been made at a time when so many were going for record—we know of at least five firms—we welcome the restriction as one which will in time benefit the sport and give a pull to the industry in this country.

"The noise of a motorcycle, with its incessant pop, pop, or crack, crack, is far more penetrating than a continuity of noise such as issues from a four- or six-cylinder car, though the actual volume of sound may not be as much. If, as Major Lloyd thinks, the country is aroused, and will presently agitate against the unpopular motorcycle—unpopular because of its attendant noise—the law will be forced to step in, and the effect might be disastrous. The A. C. U. has formed a very definite opinion on the matter, and may request the motorcycle manufacturers not to fit cut-outs at all next year. If the trade accept this advice all will be well for the sport, because the efficient silencer will at once follow. Now it is when the engine is opened out that the modern silencer is so ineffective, its muffling power only being sufficient when the engine is well throttled down. We welcome this regulation as being one calculated to benefit the sport of motorcycling, and believe that, if the noiseless machine can be made to go fast at Brooklands, the noisy clatter-trap motorcycle will disappear."

Texas Tourist Visits Indianapolis.

Indianapolis was visited a few days ago by a Texas tourist, Henry Ragsdale, of the firm of Ragsdale & Smith, of San Angelo, Tex. Mr. Ragsdale is touring from his home town to New York, and, weather permitting, will make the return trip via motorcycle. Up to the present time he has covered a little more than seventeen hundred miles and is enthusiastic over the trip. He is riding a Reading-Standard and reports that outside of a few punctures and minor adjustments his machine has given him no trouble.

Detroit Riders in Canadian Races.

Three motorcyclists of Detroit took part in a five-mile race at Sarnia, Ontario, on Thanksgiving Day, the result being: Kirk, first; Clark, second, and Whitman, third—all Indian riders. It is probable that the Toronto club will ask for an investigation into the holding of this event, inasmuch as it was in Canada and practically under the jurisdiction of the Toronto organization.

W. M. G.

Fine Weather Attracts Marylanders.

The call of fine weather swept through the veins of a good number of members of the Maryland M. C., of Baltimore, last Sunday, and, not being able to resist it and aching from the inactivity of several weeks, they tuned up their motors and were off for Ridgeville, where they took dinner, returning late in the afternoon.

SINK WINS CENTURY FROM BAKER

Indian Rider Leaves Blazing Trail of Fire —Hoffstatter Lands Second Place— Track Soft and Dangerous.

John Sink, of Indianapolis, again demonstrated his versatility as a race promoter and a racer at the Shelbyville fair grounds track on Sunday, October 29th, when he won the 100-mile race from Erwin G. Baker and Ray Hoffstatter. A small crowd watched the three riders make the 200 circuits of the half-mile track, which was in very poor condition, the turns being extremely soft and treacherous. Due to the chilly weather, the entry list had dwindled down to three starters at three o'clock, when Referee Graff gave the signal to start.

Sink gained a lead at the crack of the pistol, with Baker gradually gaining on him. In the second mile Baker attempted to pass Sink on the turn, but the loose track would not hold and his machine went out from under him, but other than a severe shaking up for the rider no serious damage was done. Baker was up in an instant and had started in pursuit of the elusive Sink when his machine caught fire, the flames shooting high up in the air. Efforts to extinguish the blaze with gloves and coats proved futile, so the spectators were solicited and the fire was put out with numerous handfuls of dust, which, however, clogged the carbureter to such an extent that the machine during the remainder of the race did not run like it had in the earlier stages. Baker received an ovation from the grand stand when he pluckily resumed the race after a loss of about six minutes.

In the meantime Sink had been plugging along steadily, reeling off mile after mile with clocklike regularity, never showing any furious bursts of speed, but also never going slower than 40 miles an hour, finishing the hundrded miles in the splendid time of 2:16:30.

Ray Hoffstatter, mounted on a Merkel, captured second place by his consistent riding, making the century in 2:22:45. He was compelled to make two stops for oil. Baker finished 25 seconds behind Hoffstatter and was forced to make two stops for minor adjustments. Sink rode a steady race, but the long grind fatigued him to such an extent that after he had finished he ran into the fence, but the only damage done was a badly bent front rim.

The race held the interest of the Indianapolis fans because of the rivalry between Sink and Baker, but it can hardly be said that the race is a fair settlement of the dispute as to which is the better rider, as Baker's unfortunate accident spoiled what would have otherwise been an exceptionally close race, for both machines were running smoothly and both riders showed ability in negotiating the turns. The riders finished as follows:

First, John Sink (Thor-4), 2:16:30; second, Ray Hoffstatter (Merkel-4), 2:22:45; third, Erwin Baker (Indian-4), 2:23:10.

L. L. G.

Handicapping Good at Laurel Meet.

A thrilling novelty race was pulled off at the Maryland State Fair at Laurel, Md., on Thursday, October 26th. It was between a foot runner, two horses, an automobile and three motorcycles. The marathoner captured the race, but only by a narrow margin. R. Kennedy, a well-known ball player and manager, was the victor. It was a handicap affair, the motorcycles having the worst of it, one having to travel a mile and an eighth and two a mile and 70 yards against seven and one-half furlongs for the automobile, five and three-quarters furlongs for the horses, while the runner had only 520 yards to go. It was the most exciting event of the meet, and when the sprinter breasted the tape the winner the horses were only a few feet behind, while the motorcycles had passed the automobile and were coming strong. Had the distance been a little longer there would have been nothing to it but the motorcyclists.

C. F. Y.

WANTS 25,000 IN THE F. A. M.

Gibson Sends "Heart-to-Heart" Letter to Fellow Members—Each to Bring in One New Application.

Secretary-Treasurer G. B. Gibson of the F. A. M. has started a campaign for 25,000 members by sending out a request to each member to secure one application during the year, and says in the circular:

"Dear Fellow Member:

"We believe that you fully appreciate the rapid growth of our organization within the past two years, and also the great benefits that have been derived from the same, by uplifting and bettering the condition of motorcycling. In order that we may increase this great good to a more powerful standard it is absolutely necessary that we strengthen our organization by bringing into its fold a number of new and enthusiastic members.

"We are striving to reach the mark of 25,000 members by the time of the national convention, 1912, so we are going to put it up to you to put your shoulder to the wheel, advance the spark a little farther, and make the next 10 months count for

A STRETCH OF GOOD ROAD

HUDSON COUNTY, N. J., MOTORCYCLE CLUB. x CHIEF OF THE BOULEVARD POLICE

something, so that we may at the end of that time reach the goal of 25,000.

"We want you to bring in one member, and by doing this it will be a very easy for us to accomplish our task. So let our slogan for the coming 10 months be, 25,000 members.

"Special Offer—The choice of any F. A. M. novelty shown on circular will be given if you bring in five new members. If you send in these five at one time your reward will be promptly sent you when you express your choice. If you send them in one at a time your reward will be given you when the application blanks for the fiscal year are looked over at the time of the next annual meet; the recommender's name is what counts in the tabulation. These novelties are made in gold and enamel and show the reproduction of the official F. A. M. emblem. They are well made and each and every one has a permanent value and use.

"Detach the coupon and mail it to the address given, which will show your willingness to help us get results. Now let us all get into the saddle and burn gasolene. Yours truly,

"G. B. Gibson, Sec.-Treas. F. A. M.,
"Westboro, Mass."

Some time ago Dr. Gibson sent out honor membership cards for the F. A. M. founders, and he states that he has received good returns from the same. Several have suggested that a distinctive membership pin be secured for the holders of these honor cards and Dr. Gibson has secured such a pin. Between the tips of the bird's wings of the F. A. M. emblem, curving over the cylinder on an inverted scroll, is the word "Founder" in gold letters upon a blue enamel circle. The pin is of rolled gold of excellent quality and very durable. These can be obtained from Dr. Gibson for $1, which is practically the cost of production.

During the month of October Dr. Gibson reports 332 new members, 263 of whom are affiliated. The Lake District led with 98 affiliations, Atlantic District with 63, the Central with 46, New England with 18, Southwestern 17, Peninsula 8, Pacific 7 and the Gulf 6.

There were 102 renewals for the month, the Lake District leading with 40, the Atlantic District was next with 31, then the New England with 17, the Central with 6, the Gulf with 3 and Peninsula with 2.

A Modern Incident.

"It was outside the city limits and as the trolley car sped down a green, country lane, where every prospect pleased from the soft mist on the distant purple hills to the pink hedges of the wild, wayside roses, the occupants of the car had, added to the joy of riding, the opportunity to watch a race that pointed a moral. It savored a bit of the two fables of Aesop, 'The Hare and the Hedgehog' and 'The Hare and the Tortoise'—in other words, wit and persistence won out," according to a recent editorial in the Hartford Courant.

"Two boys on bicycles were racing with the car, the object of the race being to reach a certain point ahead of the car. From the start the heavier boy exerted every muscle, speeding each time the car stopped in order to gain distance. The other lad, less sturdily built, but with a look of determination on his face and calculation in his eye, plugged evenly and steadily along behind the car, relaxing his efforts each time the car stopped instead of speeding.

"A crowd of boys, the instigators of the race, were on the car and watched the contest with eager interest. The head boy was the favorite and was urged on, to the point of exhaustion, by his admiring supporters with cheers of 'You'll get there, kid,' and 'Don't play out like the other guy,' and so on. The people on the car also became absorbed in the race.

"The car careened recklessly along, its wheels taking an extra impulse from the enthusiasm of the motorman, to the dismay of a few timid ladies whom nobody heeded. Behold the composite moral of the fables! The rear boy knew that the car coming from the opposite direction was usually, according to precedent, late, and that the car with which he was racing waited some minutes on the siding. On this fact he was staking his chances with the gambling spirit of the modern financier. The boy in the lead was pretty well winded when the car slid on the sidetrack, but the other lad, with strength in reserve began to increase his speed. The head boy flagged, the boy behind still increased his speed, until he was no longer behind but in the lead. Then the boys on the car, forgetful of partisanship, stood up and cheered as they saw their favorite distanced, and watched the other boy slide easily over the goal. It was a case of head versus heels."

THE CHESTERS MOTORCYCLE ASSOCIATION, MT. VERNON, N. Y.

By BEN MERIWETHER AND HENRY HART

(Continued from issue October 21.)

Before leaving the little Spanish village of Viscarret, we spent some time wandering around the narrow cobblestone streets and examining the old houses. Every Spanish house has, engraved in a stone above the door, the year in which it was built, and although most of them here dated from the 17th and 18th centuries, we found a few that were of the 12th century.

CHATEAU ON LAKE GENEVA

Shortly after leaving Viscarret we had a steady climb for a couple of miles and then started on a wonderful descent. The valley lay away below us and the road leading down was unusually steep, winding around dangerous curves with drops of hundreds of feet on one side. We enjoyed the descent immensely, however, and our brakes held beautifully for the whole coast, which lasted over ten miles.

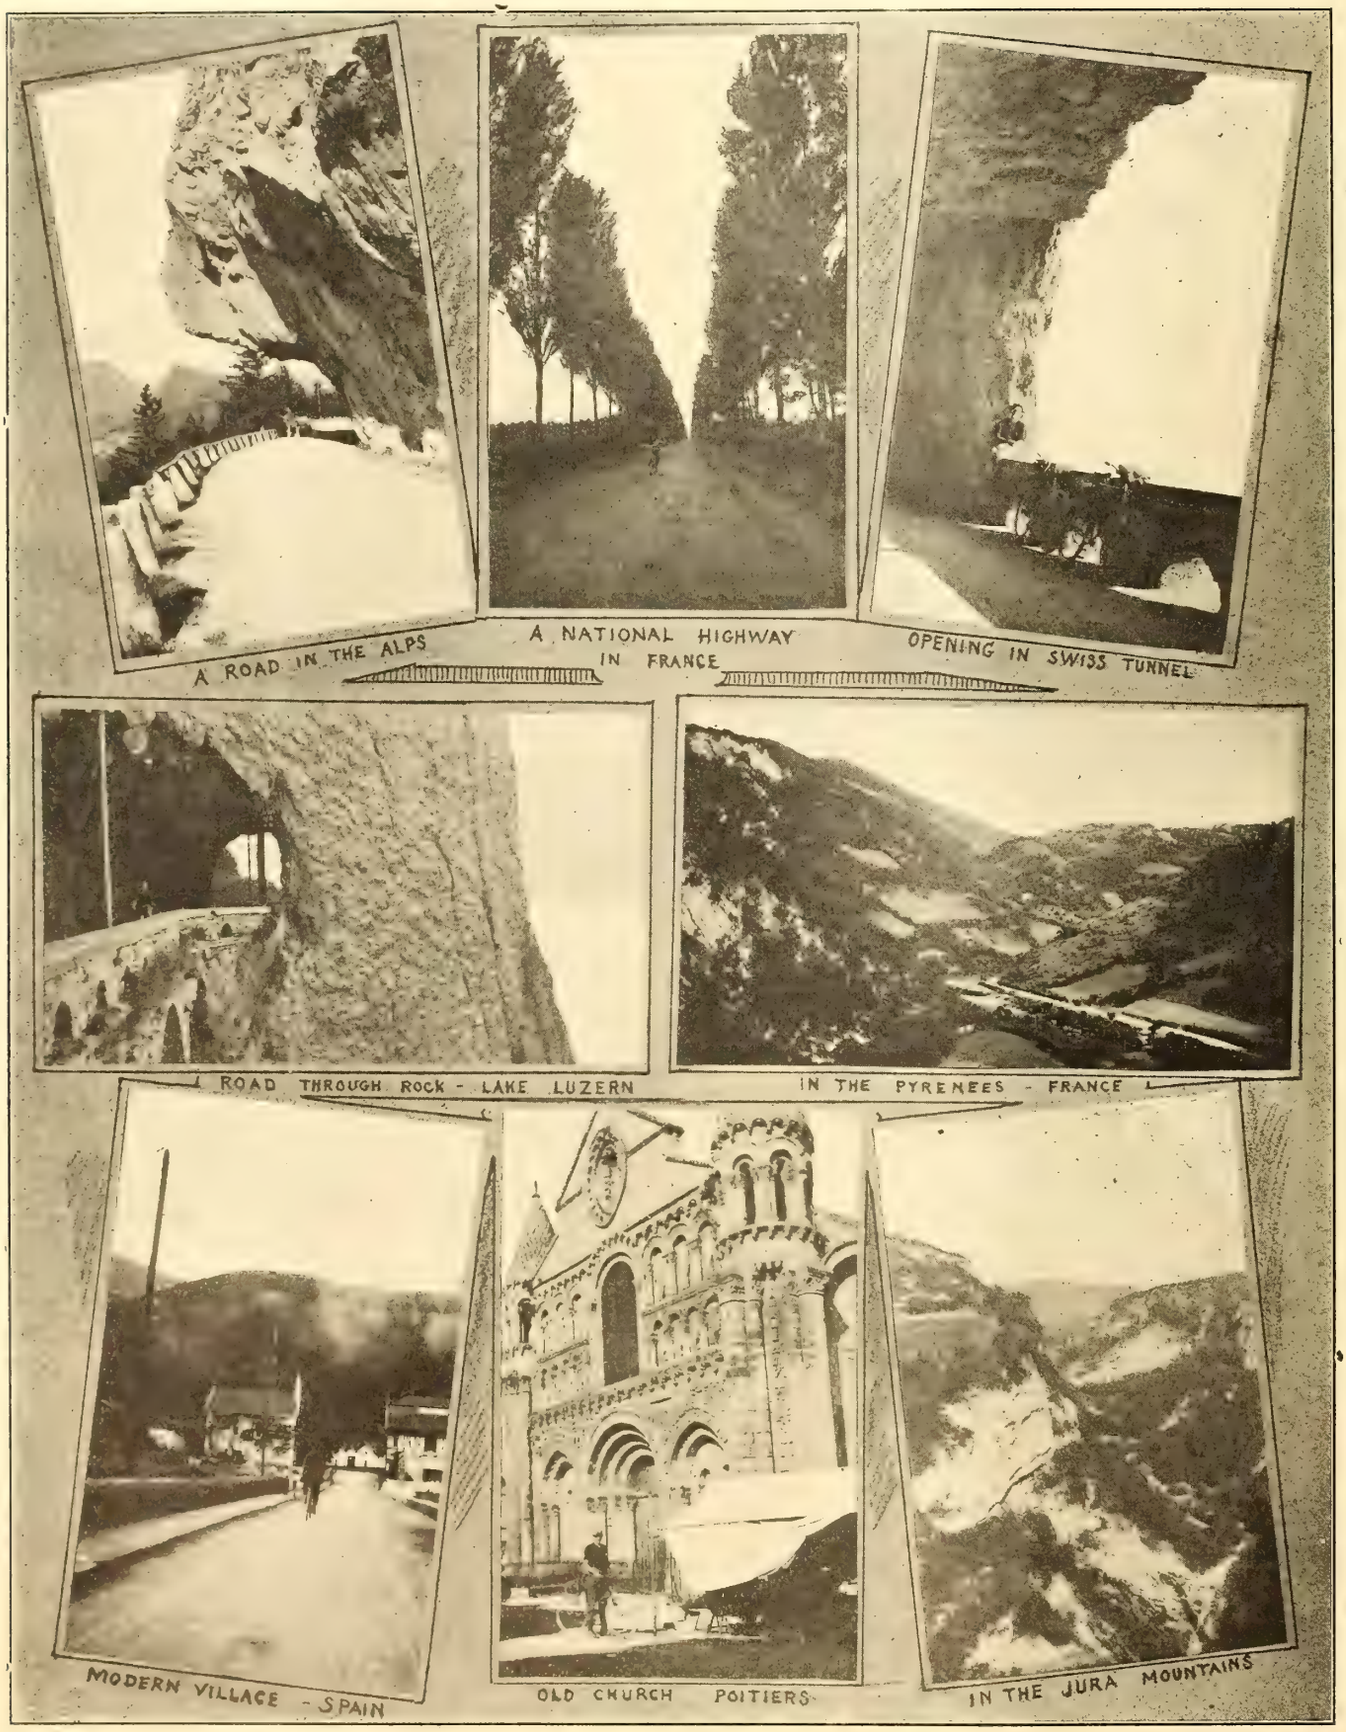
At the very bottom we came to the Spanish border. We were more anxious to see the custom officials than they were to see us, as we were looking for the 72 francs we had deposited upon coming into Spain. At first the officer merely glanced at our papers and nodded to us to go on. But we immediately reminded him of the money, at which he seemed very much surprised. After a little argument he informed us that we would have to go back up the hill for a few kilometers to see the head official about such things. So back we went, but found ourselves less welcome than at the first place. The little self-important official was just starting away on a stage coach and did not wish to waste any time on us. He said we would have to go back to the place where we left the money to get it back again, but, of course, we had no intention of doing that. We tried to argue with him, but he got mad and started to leave us. Knowing nothing better to say, we asked for an American Consul, although we did not believe there was one within 50 miles. This seemed to startle him (for the Spaniards have not forgotten the Yankees yet), and he came back to talk with us again. This time he said he had no money, but if we would meet him in the French city of St. Jean-Pied-de-Port he might be able to get some from the Spanish Consul there. We agreed to this, but had no intention of letting him get out of our sight, and so when the stage coach started we were with it.

All the way down the hill we kept right behind that slow coach, but when we were stopped by the French officials at the border the driver whipped up his horses and was soon out of sight. It was very aggravating to be stopped at this time, but we explained the situation to the officer and he let us go on. It took a few minutes of hard riding to overtake the coach, and although they endeavored to get away from us several other times by galloping up the hills, we stayed with them until we reached the city. Since the official saw that there was no way of getting rid of us he changed his attitude and was very polite as we were conducted to the Spanish Consul, who willingly gave us the money, after having matters explained to him.

This city and Navarre, where we stopped for the night, had both been strongly fortified and the walls were still well preserved.

The next morning, after crossing numerous foothills, we arrived at Pau, where we visited a fine chateau. That afternoon we took advantage of the first stretch of level road that we had seen in some time and made good time between Pau and Tarbes.

Most of the following day we rode along the foot of the beautiful snow-capped range of the Pyrenees, and that night stopped at a little country "Auberge," where we ate dinner with a band of gypsies, who were exchanging some of their goods for the food. We got quite "chummy" with them during the meal, but expected to lose everything we had before morning.



IN THE PYRENEES FRANCE

At Toulouse the next day we were led through the crypt of a famous Roman church by an old priest, who, believing we were Englishmen, took a great deal of pleasure in pointing out various things that had been taken from the English in war. But he didn't hurt our feelings half as much as he thought he did.

At Alby, the next city of importance, we spent some time in the cathedral that is considered to be the finest in Southern France. That night we found ourselves again in the mountains, in the city of St. Sernin, which is connected with the out-

"CYCLING THROUGH LANDS ACROSS THE SEA"

side world only by large double-decked stage coaches.

We started out in a drizzling rain the next morning; we soon started climbing and as the roads were very muddy, riding was difficult. A little farther on we found about 20 bicycle soldiers, who seemed to have given out entirely and were huddled up under some trees, while their wheels lay along the road. Farther up the mountain we met a whole regiment of two or three thousand men equipped with Red Cross and ammunition wagons set. These men were also soaked through but were singing and joking and seemed to be much happier. As we passed, we could hear the word "Espagnol" go down the line, accompanied by many laughs, they apparently taking us for Spaniards. The Red Cross department was doing its share of the work, as its wagons were all overcrowded with officers who seemed to be afraid of getting their elaborate uniforms wet.

It drizzled most of the day, but towards evening, as we were coming into the village of Boyne a heavy storm overtook us, and we drew up at the only inn in the place. But they evidently did not like our muddy appearance and said they had no room. In order to get rid of us they said there was another place back up the road. We started for it in the rain, but we went through the whole village without finding anything but a restaurant. Here we were told we could get nothing but a supper, and as the storm was getting more violent and the next village was eight miles away on the other side of a mountain, we decided to stop. After the meal things still looked bad for us, but with much persuasion we were finally able to get a room above the restaurant. The next morning, however, we found that the hostess had taken advantage of the situation and charged us about three times too much. But we were able to get even with her before leaving by filling our packs from a basket of large ripe pears which had been left in the barn with our wheels. This turned out to be a very fortunate find for us, as we were unable to get our usual morning bread until we had climbed the mountain. Here we decided to treat ourselves a little and bought some fresh milk from the driver of a goat herd.

Between Mende and Villefort we followed along a small river which had several interesting old chateaux. Passing through Valence we came to the valley of the Isere which we followed on through Grenoble till a few miles from the Chambery. Before we reached Grenoble we got our first sight of the higher Alps and enjoyed the beautiful scenery along the river.

At Chambery we took in the chateaux and then rode on to Aix-les-Bains, where we took an excursion to the lake. The next morning we met a company of French soldiers camped along the road, a bunch of whom seemed glad to pose for a picture. A little later we crossed the border into Switzerland, having ridden 1,362 miles in French territory.

At Geneva we were entertained at the house of some friends for a few days, during which time we took in some mountain climbing excursions near Chamonix, where we were able to get a find view of Mt. Blanc. The day we took the excursion and in one of the little villages they were having a very curious parade, of which we got a picture. It consisted of a few modern dressed soldiers; others in the fancy uniforms of earlier times with the tasseled and extremely high fur caps, and a few very old men with the uniforms and three-cornered hats of Napoleon's Guards.

We took the boat from Geneva to Villeneuve. After following up the Rhone Valley a short distance, we cut straight across the mountains over the "Col-de-Pillon," which is 1,550 meters high. The ascent extended for 15 miles, but we divided it into parts, stopping about half way up in the little Swiss village of Lepey for the night. Although we did not get our usual early start, we nearly froze before the sun got over the mountains, especially since we were practically in the snow. That afternoon we rode along the Thuner See into Interlaken, where we got a beautiful view of "Jungfrau" just as the sun was setting.

The next morning we followed a wonderful route along the Brienzer See. We passed several pretty little lakes and a little later in the morning we met two American cyclists who had been making a tour through Germany. These were the first Americans that we had a chance to talk with since leaving Paris and we were certainly glad to see them.

At Alpnach we took a little lake steamer through the Vierwaldstaedter See and Urner See to Fluelen, and from there rode back along the lake through the William Tell country by a most wonderful road cut out of solid rock. We passed through several tunnels, some of which had an opening cut out of the middle for light. On the opposite side the mountains rose straight up from the lake, forming a wonderful picture.

We spent an enjoyable evening at Brunnen, sitting on a bench on the shore of the lake, and listening to the music from one of the large hotels. The next day we rode along the Zuger See and on to Zurich, where we saw some noted aeronauts fly in a meet that afternoon.

We struck the Rhine near Schaffhausen, where we saw the famous Rhine Falls, and soon afterwards, just as we passed over two thousandth mile mark, we crossed the German border. Here we met two rather inexperienced custom officials, as tourists seldom take that road, and had our troubles. They insisted on going through our packs and one of the first things they came to was our little medicine case, which aroused their curiosity. They opened up each package and sniffed every little bottle as if they imagined we were trying to smuggle in some drug. They finally came to one in which they thought they detected the smell of peppermint and this seemed to allay their suspicions. While we were fixing up one of the packs they got hold of our kodak, probably thinking it was a contraband article, and took off the back, ruining several exposures before we could stop them. They finally let us go, however, and we soon entered the Black Forest country which we continued through by the way of Inberg to Strassburg, passing through many interesting German villages and enjoying the groves of trees. From Strassburg we started down the Rhine valley and the next day as we were coming into Karlsruhe in a drizzling rain, a big Zeppelin appeared, coming out of the clouds, glided over our heads and soon vanished.

Near Heidelberg we tried to make a short cut but got lost in the woods and wandered along an old abandoned road which was so rough and sandy that we had to walk a good part of the way. We followed it for several miles, finally coming out on a main road away beyond Heidelberg.

We took in the castle that night and the next day continued down the Rhine through Mannheim and Worms to Main. Between there and Bingen we passed through the famous Bingen country, where we would have liked to help ourselves to some of the precious grapes if it had not been for the armed guards standing around. The rest of that day we passed the ruins of many old castles and arrived at Coblentz that night.

We got into Cologne Saturday night and stayed over Sunday morning to see the Cathedral, but we did not enjoy it as much as we might have, as our faded and dusty clothes were so conspicuous among those well dressed people that we attracted a great deal of attention.

We continued down the Rhine through Dusseldorf, Wesel and Zanten, visiting a wonderful old gothic church at the latter place. We then crossed into Holland.

Our last day's run was one of the most interesting but tiresome of the trip, tiresome because we had to pump all day against the strong western wind which always blows over Holland. Our road for the most part followed along the tops of dykes, but often passed through very interesting old Dutch villages where we saw many thoroughly typically dressed Dutch peasants. During the morning we stopped at a farm house to try to buy some milk, and leaving the wheels along the road we entered the kitchen where we saw an old woman sitting near the door, sewing. We didn't seem to be able to make her understand what we wanted, but when we had asked several times, in German, she got up and returned with two copper pennies, offering one to each of us. Of course we declined this kind offer, and at that moment a young fellow came up who knew enough

German to understand what we wanted and explained it to the old woman, who had a good laugh over her mistake. They had to milk, but told us to go into their orchard and help ourselves to the ripe plums.

In most of the villages which we passed through we attracted a lot of attention and the little Dutch kids would come clattering down the streets after us, making as much noise with their wooden shoes as a troop of horses.

We pulled into Rotterdam late that afternoon, which completed our tour of 2,569 miles. We had made the whole distance without a single accident, with the exception of knocking out a couple of spokes. Our tires also gave splendid service, not having a blow-out of any kind, and only two punctures within the last 1,500 miles.

With the exception of the few occasions on which we were overtaken on the road by rain, our trip on the whole proved a most enjoyable as well as educational means of spending a vacation.

We sailed for American September 2nd on the S. S. Ryndam of the Holland-American Line, while our Columbias have a well-earned, although so far as appearances go, for them, unnecessary rest.

Except for this last expenditure the summer has not been very expensive for us, having spent a little less than $200 each from the time we sailed from Boston until our arrival in New York.

Chicago Club's "Semi-Annual" a Real Test.

Despite the fact that it was a cold, rainy fall day, only two of the 26 entrants failed to start in what truly proved to be an "endurance" run for both machines and riders—the semi-annual affair of the Chicago Motorcycle Club from Chicago to Milwaukee and return on the 22d ult. After the riders had been on their way for a few hours the sun chased away the rain that had been coming down steadily all of the morning, and the roads on the return trip were much better. The majority of the riders got "cold feet" before the turning point at Milwaukee was reached. The few that continued to the "city that made beer famous" were received by Harley-Davidson representatives and treated to a first-class dinner. Crocker and Leander were the first in line for the "eats" and also finished first at Chicago, checking in at 5.10 and 5.11 respectively. Only seven riders made the complete circuit, and the final scores were as follows: C. A. Leander (four-horsepower Indian), 956; A. H. Crocker (seven-horsepower Indian, two-speed), 955; A. L. Johnson (four-horsepower Harley-Davidson), 797; W. J. Moore (six-horsepower Excelsior), 756; A. T. Barlass (seven-horsepower Indian), 699; Russell Firkins (six-horsepower Excelsior), 597; J. P. Erick (four-horsepower Excelsior), 455. The winner was decided on penalties alone, as there were no perfect scores.

OSHKOSH RACES AND INTEREST KEEN

Despite Inclement Weather Conditions and Small Fields, Spectators Are Well Repaid With Close Finishes.

The Oshkosh (Wis.) Motorcycle Club held an interesting racemeet at the Driving Park track on Sunday, October 22d. The different events were exciting and of great interest to the fans, but the track, through the recent rains, proved very rough.

The field of entries was small, practically every race having but three riders, and the number of spectators was not as large as usual, as a chilly wind swept down in the afternoon. Interest in the different races was keen, however, and Koeck was warmly applauded for his victories. In the first race Elmer Scammon's front tire blew out and threw him badly right in front of the grand stand. He was bruised somewhat, but was soon on his feet again. The accident happened at the finish of the third mile in the first five-mile race. Scammon was gaining a long lead on the Oaks brothers at the time, but Karl Oaks circled the track again and was declared the winner. No time was taken of this event.

The second race was a four-mile novice event. Fred Smick, Guy Hanson and Guy Brundage were the entries, with Karl and Clyde Oaks riding to fill out. Through almost half the race Hanson led the field, while Brundage, with a poor start, crept up gradually. The Oaks brothers took the lead, but the race was between Hanson and Brundage, with Smick badly in the rear. Brundage passed Hanson in the last mile and won first place in the time of 6 minutes and 15 seconds. Hanson was second and Smick was third.

While Scammon's disabled machine was being repaired for Koeck to ride, Karl and Clyde Oaks rode a close three-mile match, the brothers see-sawing for the lead continually until the last lap, when they were running neck and neck, and at the finish the brothers crossed the tape in a dead heat in 4 minutes and 20 seconds. Racing off the tie, riding one mile, Karl Oaks led Clyde across the tape by a length in the time of 1 minute and 38 seconds from a standing start.

After some delay Koeck and the Oaks brothers got away for a five-mile match. Koeck jumped into the lead, getting a long start on the Oaks brothers, and was never headed. In the third lap Karl Oaks, who was having trouble with his engine, was lapped by Koeck and discontinued the race. Koeck won in 6 minutes and 56 seconds. Summaries:

Five mile—Won by Karl Oaks (Harley-Davidson), the only rider who stayed in the race; Scammon (Thor), thrown and disabled; Clyde Oaks (Harley-Davidson), dropped out.

Three mile match—Karl and Clyde Oaks finished at dead heat. One mile to race off tie—Won by Karl Oaks. Time, 1:33.

Four mile novice—Won by Guy Brundage (Minneapolis); second, Guy Hanson (Indian); third, Fred Smick (Yale). Time, 6:15.

Five mile—Won by William Koeck (Thor); second, Clyde Oaks (Harley-Davidson). Time, 6:45. Karl Oaks dropped out.

Five mile match awarded to Karl Oaks. Clyde Oaks dropped out; William Koeck disabled.

Three mile—Won by Koeck (Thor); second, Clyde Oaks (Harley-Davidson). Time, 4:07.

Timer, N. H. Huse. Judges, Walter Smick and Shields, of Fond du Lac. Starter, Edward Schrottke.

Busy Day for Kussmaul and Keeley.

Kussmaul and Keeley were the whole show at the Newark, O., race meet held on October 29th, which was the second successful meet held under the auspices of the Newark Motorcycle Club. In the 10-mile even event Kussmaul, in rounding a turn on the stretch, ran over a stick which caused his machine to skid and overturned both rider and machine in a number of somersaults. Fortunately, however, Kussmaul escaped being seriously injured, receiving a few bad bruises and a severe cut on the left arm. The machine was damaged to the extent of a broken pedal and badly bent handle-bars, which were quickly put into repair by R. E. Redman, Kussmaul's mechanic, and by this time the latter had his cuts and bruises bandaged up and was in the line-up for the next event, which he won with Keeley a close second. At this the audience went wild and gave Kussmaul a great ovation. Summaries:

Two mile novice—Won by Schenck (Excelsior); second, Kussmaul (Indian). Time, 2:47½.

Three mile, 30½ class, chain drive—Won by Keeley (Indian); second, Kussmaul (Indian). Time, 5:12.

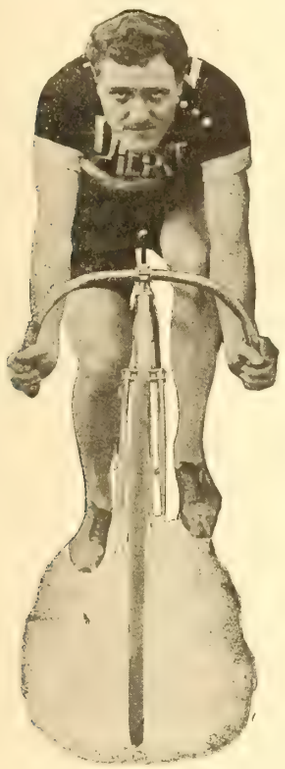
Three mile, 30½ class, belt drive—Won by Horchler (Emblem); second, Francis (Excelsior). Time, 5:28.

Two and one-half mile miss and out race—Won by Kussmaul (Indian); second, Keeley (Indian). Time, 2:57.

Five mile open—Won by Kussmaul (Indian); second, Keeley (Indian). Time, 6:56.

Ten mile open—Won by Schenk (Excelsior); second, Keeley (Indian). (In this race Kussmaul had a bad spill in the seventh mile and was put out of the running). Time, 13:34.

Three mile open, 30½ class—Won by Kussmaul (Indian); second, Keeley (Indian); third, Schenk (Excelsior). Time, 4:21.



Ten mile open—Won by Keeley (Indian); second, Kussmaul (Indian); third, Schenk (Excelsior). Time, 14:07.

CLOSES THE SEASON WITH VICTORY

Kramer Had His Old Kick With Him—McDougall Puts Up Fine Ride—Hunter Beats Turville.

Eleven times champion, Frank L. Kramer proved well-nigh invincible at the last meet of the season at the Newark Velodrome on Sunday, the 29th ult., by winning every event in which he entered; he also proved his superiority over A. J. Clark by defeating him decisively from a rear position in the mile open and again from in front in the team match race.

Donald MacDougall, the amateur who

FRANK L. KRAMER

has recently developed class, took the premier position in the one-third mile sprint, with Chester Smith second and the veteran, Carl Ericson, third. MacDougall also rode his first race from scratch in the two-mile handicap, and although he put up an excellent ride, closing a 30-yard gap between himself and Ericson in the first lap, he did not have left the winning gallop; the order of finish being Ericson (30), Smith (50), Pettit (60), MacDougall (scratch).

John Bedell proved best of the professionals in the mile invitation, winning by a narrow margin over Floyd Krebs, with Jumbo Wells third.

One mile open, professional—Won by Frank L. Kramer; second, A. J. Clark; third, E. F. Root; fourth, Menus Bedell; fifth, Walter De Mara. Time, 2:21⅕.

One-third mile open, amateur—Won by Donald MacDougall; second, Chester Smith; third, Carl F. Ericson. Time, 0:42⅕.

One mile invitation, professional—Won by John Bedell; second, Floyd Krebs; third, Jumbo Wells; fourth, Martin Ryan; fifth, Jacob Magin. Time, 2:05⅖.

One mile novice—Won by Herbert X. Arnold; second, Joseph Polcastro. Time, 2:35.

Two mile handicap, professional—Won by Ernest Jokus (140); second, Fred Jones (120); third, Floyd Krebs (135); fourth, Al. Halstead (110); fifth, Jacob Magin (130). Time, 4:01.

Three-corner team match race, professional; winning team must take two heats—First heat, one mile—Won by Kramer and Hill; second, Fogler and Root; third, Clark and Macfarland. Time, 3:29⅘. Second heat, one mile—Won by Kramer and Hill; second, Root and Fogler; third, Clark and Macfarland. Time, 4:09⅕.

Two mile handicap, amateur—Won by Carl F. Ericson (30); second, Chester Smith (50); third, William Pettit (60); fourth, Donald MacDougall (scratch). Time, 4:20.

Two mile motorcycle race—Won by James Hunter; second, Charles Turville. Time, 2:21⅖.

German Riders Overrule the V. D. R.

The intended trip of American cyclists to Europe, under the leadership of Macfarland, came very near being a failure before it started—at least as far as the German tracks are concerned. The Union of German Race Tracks (Verband Deutscher Radrennbahnen) last month decided to refuse admittance on its tracks to all foreign riders who are members of the International Cyclists' Union (Union Cycliste Internationale). In retaliation to this sudden and hostile action on the part of the owners of tracks, the promoters of the various six-day races scheduled for the fall and winter, decided to call these races off, as they considered a national six-day race too small an affair to warrant great expense and preparation.

The riders themselves, facing a practical boycott so far as six-day affairs were concerned, held an indignation meeting on October 23, at which the following resolution was passed unanimously:

"The Association of German Racing Cyclists (Deutscher Rennfahrer Verband) herewith resolves to permit its members to race against foreigners on any foreign track, and also to permit the appearance of foreigners on any German track. This resolution is taken in the interest of sport and in view of the vacillating, careless policy of the Verband Deutscher Radrennbahnen."

Walter Rutt is the president of the Cyclists' Association and he was in no way backward about expressing his views on the peculiar policy of the track owners. It is confidently expected that the strong stand taken by the riders will compel the Verband to admit the members of the U. C. I., whether they are favorable or unfavorable to the policies of the Verband.

DATE SET FOR SIX-DAY RACE

Seventeenth Annual Grind to Be Run in Madison Square Garden December 11 to 16—Kramer to Start.

After many days—in fact, weeks—the organization of a union, meetings, conferences, propositions submitted, arguments threshed out, charges of double-crossing among the riders, assertions and denials, it is finally decided by the "powers that be" that there will be after all a six-day race this year. Its date has been set for December 11th to 16th.

The first gun in the campaign was fired several weeks ago when the announcement that if the race were run it must be on a percentage basis came from P. T. Powers, the promoter of the annual grind, through his representative or envoy extraordinary, Floyd Macfarland, who has been endeavoring for several years to "get in" on the managerial end of the game, to the then just organized Racing Cyclists' Union.

Briefly, Mr. Powers' proposition was to dispense with all bonus arrangements which it has been customary for the top-notchers to receive in races of the past, and that the riders compete only for 25 per cent. of the gross receipts, this to be apportioned as usual according to order of finish. This was met, after much serious contemplation by many of the riders to pass up the race, by a demand for 35 per cent.

Then the battle was on. To and fro between the promoter's offices and the union's headquarters trotted the "Silent Committee," composed of Frank L. Kramer, E. A. Pye, Charles Turville, Joseph Fogler and Elmer Collins, in an effort to bring about a satisfactory agreement.

In the midst of it all J. D. Williams, the Australian promoter, with a six-day race in each of the two cities, Sydney and Melbourne, enters the field and signs up A. J. Clark, Iver Lawson and Worth. L. Mitten to ride his races. Alfred Goullet, P. O'S. Hehir and Fred T. Keefe, also top-notch six-day men, likewise decided to take in the Australian trip on their own account and without any guarantee. All except Clark, who had an unexpired contract to ride out at the Velodrome, departed at once for Australia.

Then the anxiety on both sides, Powers and the riders, to save the race if possible and give to it the class that is necessary to draw the gate receipts. With many of the big drawing cards of the game either started abroad, or at least talking in all earnestness of doing so, the obvious course left was to induce the national sprint champion, Frank L. Kramer, to enter the race. In addition to being almost the best, if not absolutely the best, bicycle rider that ever kicked a pedal, Kramer is a business man in every sense of the word.

His first request was for $2,000 bonus. Kramer also demanded, if he started, to be teamed with Jimmy Moran, the greatest six-day rider that the game has ever seen. Further, his decision would be influenced by the personnel of the other entrants. Here is where the other members on the committee, it is alleged, put one over on the champion. It seems that Clark was not to go to Australia; in fact, was and, as has developed is, to remain here and ride in the Madison Square Garden race. Naturally with Clark in the race Kramer's rosy chances of winning would be considerably diminished, and in like proportion would his insistence for a heavy bonus increase.

Kramer's four fellow members on the committee, it appears, knew that Clark was to start in the race—the champion did not. In view of the fact that the riders and not the promoter would in all probability be required to post the bonus out of their percentage, the cleverness of securing Kramer's signature without his knowledge of Clark's being signed is apparent. In addition to getting the desired class in the race, they would save to themselves a considerable sum of money. Finally Kramer was signed, and although he was defeated to some extent in the little game of tag with the riders, he will receive as bonus at least the price of a new automobile from the percentage, and it is intimated that the astute Mr. Powers must also "see" the champion.

The terms definitely agreed upon by the management and the riders as composing the American Racing Cyclists' Union are: Thirty per cent. of the gross gate receipts to $60,000; above that sum, 35 per cent. It is also practically assured that the management will defray the expenses of such foreign teams as may be entered; this latter being one of the contingencies of the deal.

With the sliding scale of percentage and the high-grade talent entered, the public will undoubtedly see one of the most hotly contested races ever held in the historic old Garden. The building permit has been issued and work will be started in the near future on the track.

The teams so far signed up are: A. J. Clark and Joseph Fogler, Pedlar Palmer and James F. Moran, Alfred Halstead and Peter Drobach, E. F. Root and Fred Hill, Norman Anderson and Jumbo Wells, Charles Stein and Lloyd Thomas, and Brocco and Lorenz, of Italy and Germany. Walter Rutt, of Germany, will in all probability ride in the race, but his partner is not yet selected.

C. R. C. A. Field Day HonorsD ivided.

Honors were evenly distributed at the annual field day and bicycle carnival held under the auspices of the Century Road Club Association on the Guttenberg, N. J., mile track, Sunday, the 30th ult.

Clear skies, with just a tang of frost in the air, brought out a good-sized crowd. Large fields were sent away in every event; keen finishes were the order of the day, and much enthusiasm was in evidence.

Owing to lack of time, three events—a five-mile tandem race for C. R. C. A. members, a four-mile four-man relay race and an unlimited four-man team pursuit race—were eliminated from the program. Of the events run off, the one-mile open was won by Gus Wohlrab; second, J. Townsend; third, Jesse R. Pike.

Five-mile handicap—Won by J. Morgan (1 min. 30 sec.); second, E. O. Spillane (1 min.); third, Sidney Dean (1 min. 30 sec.); fourth, A. Del Vechio. Time prize won by Franklin Fisher. Time, 15:12⅗.

Ten mile miss-and-out—Won by Franklin Fisher; second, J. Townsend; third, J. Morgan. Leader of most laps, Gus Wohlrab; 8 laps. Wohlrab also finished first, but was disqualified for crowding at the tape.

Races closed to C. R. C. A. members:

Slow race, one-eighth mile—Won by F. Lilienthal; second, J. Mitchell; third, G. Polacsy.

Novelty race, one-quarter mile run, three-quarter mile bicycle—Won by J. Clement; second, K. MacKensie; third, G. Polacsy.

Blaze-of-Glory Ending of Toronto Season.

The bicycle and automobile races held at the exhibition half-mile track at Toronto on Thanksgiving Day, October 30th, under the auspices of the Toronto Auto Racing Club and the Dunlop Tire Co., provided one of the grandest afternoon's sport ever witnessed in that city. There was nary a hitch or accident despite the great speed and hazard, but much of the credit for this state of affairs was due to the adoption of the rule of the American Automobile Association which prohibits spectators coming within 30 feet of the outside fence. Had the people been allowed to line this fence there might have been a fatality, as in one of the special races—racing car vs. motorcycle—the automobile dashed through the boards and turned turtle.

The 15 mile cycle team race for the Dunlop trophy saw Gord. McMillan and Scotty Wilson of the Tecumsehs finish one, two, with W. Smith and T. Bulger of the Torontos next in order. The winners avoided the early pace, and in the final stretch drive had no difficulty. The Tecumsehs keep the trophy for one year, while the members of the winning team each take a special medal. All who started received watch fobs of a special design. The showing of McMillan, the Tecumseh star, was a treat. He did not have a chance, it was conceded, as he had only recently come out of the hospital following his accident on the same track six weeks previous, when he broke his collar-bone; therefore, his victory was a surprise.

The 10-mile repechage saw a lively finish. Walter Andrews, the Canadian champion, rode from scratch along with Gord. McMillan, and the pair engaged in a great duel all the way. In the stretch, McMillan jumped first, but Andrews was there with the final kick and beat his rival home by half a length.

In the special auto-car and motorcycle five-mile race Charlie Orr on an Excelsior opposed Harry Borsch, who drove a Warren racer. The motorcyclist dashed into the lead at the crack of the cannon which was used to start the events, and was leading by about 20 feet at the end of the first mile. The autoist opened up his machine and almost ran down the rider, in averting whom the motor car turned turtle and went through the fence at the same time. When the car was lifted both the driver and his mechanician crawled out unhurt, much to the surprise of the shuddering spectators. The race had to be called off with the question of supremacy still unsettled.

This meet saw the last of the outdoor bicycle and motorcycle racing for the season. W. M. G.

Newark Team Wins Buffalo 10-Hour.

Before a crowd of 4,000 bicycle enthusiasts on Tuesday, the 31st ult., at the 74th Regiment armory, Buffalo, N. Y., Frank Cavanaugh, of the Cavanaugh-Heidrick "Newark team," won the final mile sprint of the 10-hour amateur team race by 30 yards; second, Joe Tanner; third, H. Kriegbaum; fourth, C. Dethloff; fifth, Al Krushel; sixth, Joe Schieder. Time, 2:32⅗.

The race was started at 1.20 p. m. and finished at 11.30. It was in the nature of a curtain raiser for the series that are now being run on the nine-lap track erected for the purpose and under the management of Floyd A. Macfarland. There will be a sprint meet during the evening of Saturday, the 4th inst., and an abbreviated six-day race for the professionals during the week of November 6th to 11th. The score by hours of the 10-hour race is as follows:

Hour.	Team.	Miles.
1	Schieder-Schell	23.4
2	Schieder-Schell	45.7
3	Kriegbaum-Arenz	65.8
4	Schudt-Krushel	86.5
5	Cavanaugh-Heidrick	107.2
6	Cavanaugh-Heidrick	128.3
7	Burke-Becker	148.1
8	Cavanaugh-Heidrick	168.4
9	Arenz-Kriegbaum	187
10	Arenz-Kriegbaum	203.4

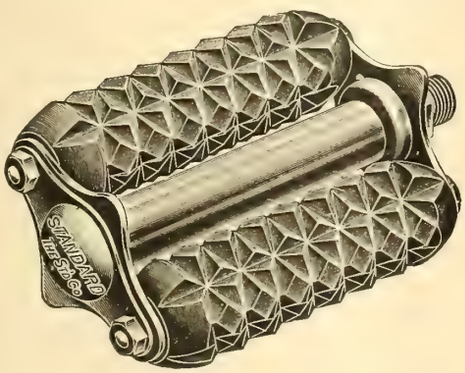
Arenz won the sprint before the reserve riders took the track for the finishing mile; Jack Tanner, second; Schudt, third.

Summary: Position and Riders.	Distance, Miles and Laps,
1 Cavanaugh-Heidrick	203.4
2 Tanner-Tanner	203.4
3 Kriegbaum-Arenz	203.4
4 Dethloff-Anthony	203.4
5 Krushel-Schudt	203.4
6 Schieder-Schell	203.4
7 Becker-Burke	203.3
8 Penseyres-Frank dropped out at.	106.4
9 Jerke-Streibich dropped out at...	38.1
10 Eberly-Kraus dropped out at....	14.4

The New R-S

Sold on Quality, Not on Price

Water seeks its level. The price of the Reading Standard was right in 1911 and, regardless of what others may do, will not be cut in 1912. When the New R-S was put on the market with all its exclusive and valuable features it was a foregone conclusion that other motorcycles would have to be improved in quality or reduced in price. We care not what others may do but shall build the R-S even better than in 1911 and the price remains the same.



THE READING STANDARD TOURIST

is the model De Luxe of single cylinder motorcycles with more great big points of superiority than we can begin to enumerate, but here are a few of them: Two Distinct Brakes, Two Oiling Systems, Real Shock Absorbing Seat Post, Adjustable Foot Rests, Two Compartment Gasoline Tank, Combination Hand and Foot Operated Belt Control, Ball Bearing Motor with interchangeable mechanically actuated valves, Removable Steel Luggage Carrier and Tool Box.

Our Advance Catalog Now Ready. Tells the Story of Three Models. Write for It Today.

READING STANDARD CO., 310 Water Street, Reading, Pa.

Member M. M. A.

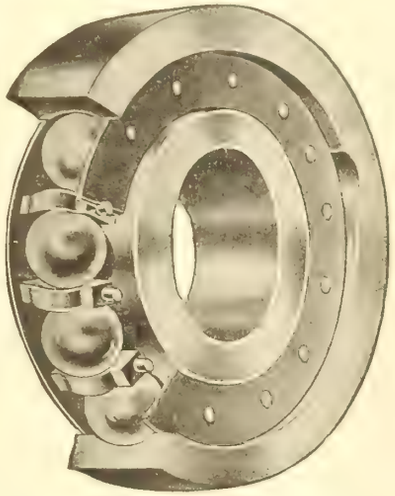
"Auxiliary Saddles"

The pedals are exactly that, as they bear part of the motorcyclist's weight, and the harder the bumps, the more the pedals bear. That is why one needs those big, generous, easy rubber cushions, that are a feature of the

No. 3 STANDARD MOTORCYCLE PEDAL

Deep corrugations in the soft rubber give the "cling" that makes the foot stay on. The pedals sell for $3 per pair.

Our products for the cycle trade include:



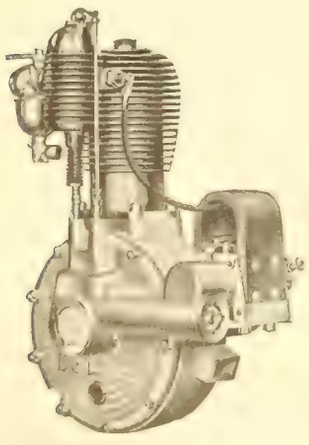
EMERGENCY AXLES, SAGER MOTORCYCLE TOE CLIPS, DIAMOND E SPOKES, BRIDGEPORT AND STANDARD PEDALS, SAGER AND STANDARD TOE CLIPS.

THE STANDARD COMPANY, Torrington, Conn.

Schafer Ball Bearings

(MADE IN GERMANY)

are the most suitable bearings for motorcycles



BECAUSE

They withstand vibration due to the strong cage and large number of steel balls.

SCHAFER BALL BEARINGS are used throughout the *De Luxe* motor and two speed transmission for motorcycles manufactured by F. W. Spacke Machine Company, which fact proves that SCHAFER BALL BEARINGS stood up under the most severe tests before being adopted and that the best bearing regardless of cost is used on the *De Luxe* motor and transmission.

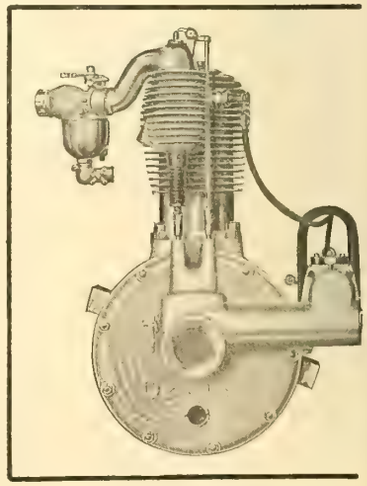
BARTHEL, DALY & MILLER, 42 Broadway, New York

A REVOLUTION IN MOTORCYCLE MOTOR DESIGN

In bringing out our DE LUXE line of motorcycle motors, we have introduced a large number of improvements, and offer these motors as the most advanced now before the trade.

NOTEWORTHY IMPROVEMENTS.

One piece crank shaft.
One part crank case with cover.
Improved cam and magneto drive.
Oil tight motor.
Large Valves.
Simplified design throughout.
Reduced number of parts.
Quiet running motor.
Large Ball Bearings mounted in steel lined pockets.



Equipped with Bosch Magneto.

These improvements in design, together with the high grade materials used in construction, the modern methods of manufacturing applied, and the remarkable performance of these motors in road tests mark a revolution in motorcycle motor building.

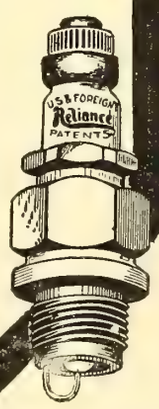
Reliance

(REG. U. S. PAT. OFF.)

Sparks in Water

Special Motorcycle Types

The fact that the "Reliance" plug "Sparks in Water" proves that it can't be short circuited.



As an automobile, motorcycle or motor boat owner, you will instantly appreciate the overwhelming importance of this one great point. Beside it other claims sink into insignificance.

Soot, carbon, and other fouling influences, have no effect on Reliance Plugs. They do affect all other plugs—**put them out** of business.

Other Reliance advantages are, lower current consumption, concentrated spark, heat-proof porcelains.

Reliance Magneto Plugs are especially recommended for oily engines. Satisfaction guaranteed or your money back. Sold by dealers everywhere, or sent prepaid on receipt of price. Get "Ignition and Spark Plug Talk"—a valuable pocket reference book—will make you master of your ignition system.

MORE Kokomo Tires will be made during the next twelve months than ever before, because those made in the past have proved so good that riders and dealers not only come back for repeat orders, but bring their friends as customers. That's the kind of business that we like. It is based on the merits of

KOKOMO TIRES

For bicycles two of the Kokomo leaders are:

Kokomo Defender Special

This popular guaranteed tire is specially designed and constructed for road use. It is made from the best materials obtainable, being carefully built up by hand with pure para inner tube, and, owing to the very high quality of the inner tube used, a puncture is very easily repaired.

Kokomo "New Oxford"

A medium price tire, yet so good in quality that it does not do it justice to call it a medium grade tire. We have built these tires so that in case of puncture they will not be worthless but can be repaired. Also furnished in smooth tread.

Every dealer handling these tires is doing a benefit to his customers and to his own bank balance.

Increase in Business for the Dealer

This is a business proposition of laying plans to secure a large volume of business– the only way a manufacturer can make profit. And to secure this, the question of the price is a big factor. When you combine a low price with high-grade goods as we have done, every one sits up and takes notice.

It's a simple problem for a great producer like Walter E. Flanders to solve. It's just a question of having nerve enough to go to it with a fine outlay of specially designed tools, jigs and machinery. Back it up with a good advertising and sales campaign, and the results are a good manufacturers' profit on a $225 motorcycle selling for $175.

The dealer who will have the Flanders "4" Motorcycles to sell during the 1912 season will have less questions to answer than the other fellow.

FLANDERS MANUFACTURING COMPANY, Pontiac, Michigan

PENNSYLVANIA "Guaranteed" INNER TUBES "No. 503"

For Motorcycles

AFTER months of experimenting, the Pennsylvania Rubber Company has at last evolved a genuinely serviceable motorcycle tube which sells at a reasonable price. This is the Pennsylvania "No. 503."

Each Tube is Guaranteed

So thoroughly tested is this tube, so well made and of such high quality material, that it carries an unqualified season's guarantee.

Pennsylvania "No. 503" Tubes are made in the most popular selling sizes:

26 x 2½; 28 x 2¼; 28 x 2½

NOTICE: In placing this tube on the market, we have contemplated an attractive margin of profit for the trade. Jobbers and Dealers, therefore, desiring to sell Inner Tubes for PROFIT should write to us.

Pope Quality Means Reliability of Performance

THE POPE MOTORCYCLE is absolutely reliable in practical road work. No motorcycle could be more reliable. It will run whenever and wherever you want to ride it and keep running at a low cost. It is a light, staunchly-built machine, weighing 150 pounds. No machine has a better equipment. For recreation or business it represents more real value than can be found in any other machine at any price.

Pope Quality has been put to the test and Pope Reliability is an established fact. This is the way the Pope Motorcycle shows up in practical road work:

Make Your Child Happy With a—Fairy

Here is a Christmas present that is *sure* to please the Boy or Girl—the famous "Fairy" Velocipede, Bicycle or Tricycle. Settle the question of "just the thing" now. Get a "Fairy"—or "Fairies"—for both or all of the children.

For twenty years the "Fairies" have been the aristocrats of vehicles for children.

They are made of the highest grade of steel, richly and tastefully finished—with full nickeled parts. Every "Fairy" is ball-bearing—the easiest running imaginable. Our strong guaranty covers each machine.

"Fairies" are the great successes in *safety* and *correct design*. Exercise on a "Fairy" can be only beneficial. It is so built as to cause the child to sit comfortably and to bring the muscles into play without fatigue. Physicians approve the "Fairies."

See the "Fairies" at Your Dealer's

"Fairies" are sold at most of the large stores of the United States. If you do not find the "Fairies" at a store near you, write us and we will see that you are supplied.

The prettiest, most durable, most serviceable Tricycle ever built.

"Fairy" Ball-Bearing Bicycles have the *style* that makes a hit with the boy.

Upholstered seat, adjustable to rider.

Be Sure You Get a Genuine "Fairy"

The success of the "Fairies" has brought out several imitations. Genuine bears the word FAIRY (our registered trademark) in the lettering shown at the top of this advertisement.

Send for Free Booklet, illustrating these high-grade children's machines.

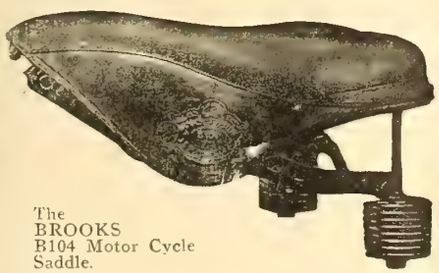
The Saddle that always helps to sell the Bicycle

Every aid to easy sales is worth consideration—

Every "hindrance" should be cut, as it reveals its handicapping influence.

Now there are Saddles and Saddles—roughly, the BROOKS and —the others.



The first is the Saddle that always helps to sell the bicycle—

It is the original and only genuine compound-spring saddle and, by its exclusive merits, proves at all times a real and constant aid!

Remember that, and when you reflect on the lines that help and hinder, in Saddles just select the BROOKS—the best.

Could Not Tell Them From New Tires After Hard Run.

October 14, 1911.

THE FISK RUBBER CO.,
Rochester, N. Y.
Attention C. D. Whitney.

Gentlemen—I have used your 2¾ Motorcycle Gripfast Tread Tire on a very hard run to Niagara Falls and in Canada and over 20 miles of macadam road with stones sharp and big, expecting a hole to be cut in my tires, but on examining, I found not a cut or mark, and I have run over 1,500 miles. If I wash the tires, I do not believe you could tell them from new tires.

Yours for success,
J. C. BOGARDUS,

MANY REFINEMENTS IN EMBLEM

Three Striking Models Are Offered for 1912 at Reduced Prices

(From Motorcycle Illustrated)

REFINEMENT of a pronounced nature is apparent in the 1912 Emblem motorcycle, manufactured by the Emblem Manufacturing Company at Angola, N. Y. This refinement applies not only to the general appearance of the machines, where it is most marked, but to mechanical details as well. Beginning with the frame, where the change from the 1911 model is most marked, there is much of interest and improvement to be noticed. The head cluster has been lowered one inch, and instead of two stems, the handlebars are now firmly held by three stems, the central member being held by an expander, making it impossible for the handlebar to work loose under any conditions whatever.

The top bar of the frame has been dropped and lowered 2½ inches at the seat post, making the design much more graceful and at the same time giving better balance and control to the rider. To add to the lowered position so much in vogue these days the spring seat post also has been changed to allow a still lower position, and the adoption of a special steel spring for the gooseneck seat post has made the lowered 1912 design even more flexible than that used on the 1911, which latter was considered one of the most comfortable designs on the market.

The lowering of the top member of the tube has made it possible to shorten the handlebars, thereby bringing the rider 1½ inches closer to the front. This makes the machine exceedingly easy to control in unfavorable road conditions, while the lowered saddle position will make a fall absolutely unnecessary.

Front forks are longer and give more clearance between the tire and mudguard, so that it is impossible to clog up the opening with mud, and which increased space also will give ample room for repairing a tire without necessitating a removal of the wheel. The same feature is applicable to the rear wheel. Rear fork ends also are of a different construction, the stand being fastened to the lower rear end, and when down is supported by a lug brazed to the lower rear fork. The stand is a considerable improvement over its 1911 counterpart, as it requires only a slight pull backward to lift the machine on the stand. The rear stays have two lugs brazed thereon to permit the attachment of the tandem.

The Emblem tandem is really one of the most startling developments in the Emblem line. Not only is it a graceful piece of mechanism, but its makers claim it is by far the most comfortable tandem attachment yet produced, and at the same time the safest, being integral with the machine. The upper support of the tandem consists of a yoke which fastens to two lugs, which are firmly brazed on all 1912 Emblem models, as previously stated. There also is a handlebar stem on which an adjustable bar is fastened. This bar can instantly be dropped when it is desired to use the tandem equipped machine as a single. The adjustable bars make it possible to carry a suitcase or other large package behind, or the saddle can be removed in a minute and a flat luggage carrier attached. The yoke that passes over the rear wheel is equipped with two large telescopic tubes on each side of the wheel, inside of which are specially made spiral springs 13 inches long and of ample diameter, which gives the tandem rider an up-and-down movement of 3 inches as a maximum, and the springs can be furnished for light, medium or heavyweight passengers. The pedal cranks are curved forward to give the most comfortable riding position possible. The rider is seated well over the rear wheel, so that steering a tandem model is as easy as controlling a single machine.

To return to the frame, the V-belt model is made with the rear stay in one piece, having no offset forgings in same. The flat belt frames have a forging at the pulley clearance, with a screw in it to permit the removal of the flat belt.

BIGGER SHOW BUILDING PLANNED

Despite Loss of Garden, Enlargement of Palace Will Provide Enough Room for Shows and Six Day Races.

When the announcement was made some time ago that Madison Square Garden had been sold and would be torn down to make room for a large office building it was at once wondered where the shows that are now held in the Garden will hold forth after this year, and the question also arose as to whether the six-day bicycle race of this year would be the last, for lack of a proper place in which to hold it. Now there comes a definite announcement that will settle for all time the show question and make the much-desired one-week-one-show not only a possibility, but a probability, as well as offering a better bicycle track for the six-day races.

For be it known the new Grand Central Palace, which has but recently been completed, will be about doubled in size. The New York Central Railroad Co., which owns the Palace, has completed practically all of the preliminary arrangements necessary for the erection of a twin building—so far as the exterior is concerned—which will be directly connected with the present magnificent structure. It will occupy the site fronting on Lexington avenue from 47th to 48th street, adjoining the present Palace, which runs from 46th to 47th street. Unlike the latter, however, the exhibition hall of the new building will be devoid of columns and posts. It will more closely resemble the interior of Madison Square Garden in that it will have a huge arena overlooked by two balconies, thus providing a seting for a public show which at present only Madison Square Garden provides. It will afford 160,000 square feet of floor space, which, with the room afforded by the present Palace, will be sufficient for almost any automobile or other exhibition not of a sweepingly general nature, and will permit an eight-lap track for bicycles, etc. A swimming tank 162 feet long by 45 feet wide is also provided for.

Like the present structure, it will contain a number of offices and permanent show rooms, and will be operated by the Manufacturers and Merchants Exchange. Of more direct concern to the motorcycle industry is the fact that for the purposes of automobile displays, which will no doubt include motorcycles and accessories, the present Palace and the addition that will be erected are under lease for a period of five years to the Automobile Board of Trade, which will have power to assign its lease if it so desires; in fact, so quietly did the Board of Trade go about it that only recently it leaked out that the National Association of Automobile Manufacturers' show which will occupy Grand Central Palace during January next will do so only by grace and assignment of the Board of Trade. The plans for the addition to the Palace are so well in hand that it can be authoritatively stated that the new building will be ready for occupancy next fall.

Marshall Joins Sutcliffe Staff.

F. B. Marshall, well-known racing man of Terre Haute, Ind., formerly connected with J. E. Sayre Co., of that city, has accepted a position with the Sutcliffe Co., of Louisville, Ky. Mr. Marshall states that prospects for the future in Louisville are more than promising and that the Sutcliffe Co. expects to dispose of not less than 200 machines the coming season.

CYCLE JOBBERS REVISE THEIR LISTS

Thirty-one New Names Added—Now Contains 156 Concerns—Who and Where They Are.

Having completed the revision of its list, the National Association of Cycle Jobbers has decided that there are now 156 concerns dealing with bicycles and bicycle supplies that are entitled to the designation of jobber. Thirty-one names have been added since the last list was prepared, and several have been weeded out. The new list is as follows:

Arkansas.

Little Rock—J. H. Martin Arms Co.

Milwaukee—Wm. Frankfurth Hardware Co., Philip Gross Hardware Co.

Handin to Direct Thor Sales.

J. A. Handin, formerly assistant to Sales Manager E. T. Roberts, of the Aurora Automatic Machinery Co., Chicago, manufacturers of the Thor, has been appointed to fill the vacancy of sales manager caused by the resignation of Roberts, who is now connected with the Troxel Mfg. Co. Previous to his connection with the Aurora people Handin was assistant branch manager of the G & J Tire Co., in Chicago. In his new position Handin will conduct an aggressive policy and will devote a great deal of his time to the development of the motorcycle as a commercial vehicle, not neglecting in any way, however, the pleasure rider.

Due to Mr. Handin the new 1912 Thor will be seen generally in white, instead of blue as heretofore, although the latter color can be obtained if desired. In this connection it is understood that all battery models, 1912, four horsepower, belt or chain drive, will sell for $175; and with the belt drive and magneto, at $200. A new trussed front fork will be used, which it is claimed will add greatly to the strength. There will aso be a free engine clutch on all chain models. Two new models will be placed on the market—a five horsepower magneto single at $250, and seven horsepower twin at $300. It is understood that both of the latter models will be equipped with two-speed gears.

Fisk Building Branch in San Francisco.

The Fisk Rubber Co. has placed contracts for the erection of a new building which will house its San Francisco branch. The structure will be a two-story and basement reinforced concrete building, and will be erected on the Fisk property at Van Ness avenue and Austin street at a cost of $15,000.

Weisenfeld to Enlarge His Quarters.

The building housing the sporting goods, bicycle and motorcycle establishment of Little Joe Weisenfeld, at Howard and Baltimore streets, Baltimore, Md., will shortly be altered and improved to meet the demands of the increased business.

M-M Agency Opened in Winnipeg.

The Canadian Port Huron Co., of Winnipeg, Canada, has secured the selling rights of the M.-M. motorcycles, manufactured by the American Motor Co., Brockton, Mass., for Western Canada.

W. M. G.

SMITH PATENT FINALLY BURIED

Long Legal Battle Finished and Pope Company Loses—Court of Appeals Decision in Full.

The decision of the United States Court of Appeals for the Seventh District, rendered by Justices Grosscup, Baker and Carpenter in Chicago, affirming the decree of the lower court in favor of Arnold Schwinn & Co., appealed by the Pope Mfg. Co., of Hartford, Conn., in the famous bottom bracket patent No. 392,937, is published herewith in full.

This case has been before the courts for the past 20 years, and now is finally settled by the decision of the Court of Appeals in affirming the decision of the lower courts, made by Judge Kohlsaat, sitting in the United States Circuit Court of Chicago in February, 1910. The patent was granted on November 13th, 1888, and expired exactly six years ago, after having been a cause of more or less commercial warfare in the cycle trade. A number of bicycle and parts manufacturers pooled issues and fought it at one time, and with the H. P. Snyder Mfg. Co. as the nominal defendant it was pressed to a decision before Judge Ray in the United States Circuit Court in 1905, who decided in favor of the Pope Mfg. Co.

Arnold Schwinn & Co. were one of the few manufacturers who did not at that time recognize the patent. Suit had been entered against them late in 1903, but for various reasons was not pressed to an issue until 1908, for although the patent had expired in the interim they yet were liable for a large amount of accrued royalty on several hundred thousand bicycles. The decision of Judge Kohlsaat in 1910 decided against the Pope Mfg. Co., and the following decision is that on the appeal taken by the Pope company to the United States Court of Appeals for the Seventh District:

Appeal from the Circuit Court of the United States for the Northern District of Illinois.

This cause comes here upon appeal from a decree dismissing a bill of complaint, in common form, alleging infringement of claims 1 and 6 of United States Patent No. 392,937, granted to William E. Smith on November 13th, 1888, on an application filed February 16th, 1888, for improvements in bicycles.

Before Grosscup and Baker, Circuit Judges, and Carpenter, District Judge.

Carpenter, District Judge:

The claims alleged to be infringed read as follows:

"1. In a rear-driving, front-steering bicycle, the frame or reach provided with the rigid transverse tube c, built rigidly into and forming an integral part of said frame, and adapted, substantially as described, to receive the pedal shaft."

"6. In a frame for bicycles and kindred machines, a transverse receiving tube, c, provided with necks, c^8 and c^9, to receive the front and rear ends of the frame or reach."

These claims indicate that the invention involves a pedal shaft bearing tube, so constructed transversely with the reach or frame of the bicycle that the whole forms a single rigid and integral structure.

The defenses are: (1) That Smith was not the first inventor, and (2) that the patent is, in view of the prior art, invalid.

In the view which we take of the case it will be unnecessary to discuss the question of whether or not Smith was the first inventor.

The record contains a number of English trade publications of a commercially general circulation in the United States, which indicate that the device of the patent in question was made public in this country prior to the date of the invention.

Certain papers were published in 1887 showing the so-called "Rover" type of bicycle, the bottom bracket of which, although it depended somewhat below the frame, was rigid and integral, the tube, however, being cut away between the two end bearings. It was, as defendants' expert says, a mutilated tube.

Griffin's Year Book for 1887, illustrating "The Ranger Centaur Dwarf Safety Ranger," shows a bottom bracket in rigid connection with the reach, but having a tubular journal or transverse tube underneath the reach. The Centaur Cycle Company's catalog for February 1st, 1888, shows a cut of the "Ranger" with the statement: "We produce in one solid steel forging the crank-bearing bracket with connections for the bottom fork and main backbone."

The "Cyclist" of May 25th, 1887, and the "Bicycling News" of February 4th, 1888, illustrating the "Raleigh" bicycle, show a rear-driving, front-steering bicycle, with what appears clearly to be a tubular pedal shaft, centrally located between the reach and the rear forks of the machine. This pedal shaft is shown to have been brazed solidly on the bracket.

Sturmey's Handbook, a standard bicycle publication, of date July 20th, 1887, described the "Raleigh" bicycle as having "the crank bracket constructed solid with the frame." Also, "solid crank bracket, impossible to work loose."

The cuts and descriptive matter in these publications show that certain safety bicycles were advertised as constructed mainly of tubing, with a centralized and rigidly built-in bottom bracket. Whether the tubular pedal shaft was completely enclosed does not appear.

Thus it seems that some months prior to Smith's application for the patent in suit, and which, by legal presumption, was a like period prior to his claimed invention, the standard bicycle publications of England, which had a trade circulation in this country, contained illustrations which, though from their nature not showing specific details, are so plain as to leave no possible room for invention in the subject matter of either the 1st or the 6th claim of the Smith patent.

The location of the bottom bracket with reference to the frame or reach, as shown in these publications, is identical with that shown in Fig. 1 of the Smith patent, save only that it cannot be said from the illustrations alone that the bottom bracket illustrated is a non-perforate tube. A bottom bracket, however, it is; and manifestly centralized and built into the reach or frame, so as to make an integral part of it.

The following cuts of the "Raleigh" bicycle, taken from standard bicycle trade publications, will serve as illustrations. The first appeared in the issue of the "Cyclist" under date of May 25th, 1887; and the second in "Sturmey's Handbook," which was published on July 20th, 1887.

The crank-axle bracket appears to be disposed centrally between the lower rear forks and the lower front member of the diamond frame. The bracket is solid with the frame. The lower rear fork and the lower front frame member extend radially from the crank shaft bracket, so that the bracket may be said to be centralized between them, built to form, in effect, an integral part of the frame, and is described in the text of "Sturmey's Handbook" as "solid crank axle bracket, impossible to work loose." This bracket is also described as provided with ball-bearings for the crank axle, from which it follows necessarily that the bracket must have been, in part, at least, tubular.

Sturmey's Handbook, as well as the other printed publications in the record, leave it uncertain whether the crank axle bearing there contemplated was in the form of a continuous imperforate tube or not, and the complainant insists that the patent in suit contemplates an imperforate tubular crank shaft. Complainant's counsel at the hearing on this appeal admitted that a perforate tube would not infringe the Smith patent. We agree with the learned trial judge that:

"With these illustrations and descriptive matter of the 'Raleigh' bicycle before him, showing every detail of the claims in suit except whether or not there was a perforation or opening in the under side of the bracket, and with perforate and imperforate axle supports to choose from, it is the opinion of the court that any person skilled in the art could as certainly have produced a bicycle involving the subject-matter of the claim in suit as if he had the Smith patent before him. If he chose a perforate axle bearing and found that it was objectionable, it is believed that, in view of the state of the art, the most ordinary mechanical skill would tell him to close the opening or adopt on old form of imperforate tube. With the state of the art in view, it is the opinion of the court that there was no patentable difference between the Smith bottom-bracket with a perforation on its under side, and a bracket of the same construction without a perforation."

Given a tubular frame and a "crank-bracket constructed solid with the frame," and bearing in mind that strength and lightness were the most desirable features in the construction of the so-called "safety bicycle," and bearing in mind also that the pedal shaft involved the point of greatest strain, it would not require inventive genius to take the perforate crank bracket, constructed solid with the frame, and convert it into an imperforate and consequently stronger tubular bracket.

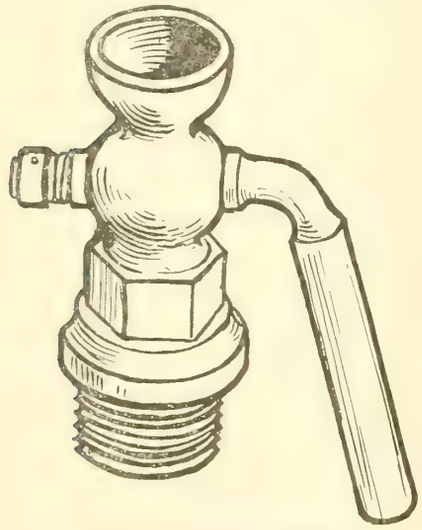
This case comes within the doctrine announced in Seymour v. Osborn, 11 Wall. 516, and Cohn v. United States Corset Company, 93 U. S. 366.

In Cohn v. United States Corset Company, the court said:

"To defeat a party suing for an infringement it is sufficient to plead and prove that the thing patented to him had been patented or described in some printed publication prior to his supposed invention or discovery thereof."

In Seymour v. Osborn, it was held:

"Patented inventions cannot be superseded by the mere introduction of a foreign publication of the kind, though of prior date, unless the description and drawings contain and exhibit a substantial representation of the patented improvement, in such full, clear and exact terms as to enable any person skilled in the art or science to which it appertains, to make, construct, and practice the invention to the same practical extent as they would be



enabled to do if the information was derived from a prior patent. Mere vague and general representations will not support such a defense, as the knowledge supposed to be derived from the publications must be sufficient to enable those skilled in the art or science to understand the nature and operation of the invention, and to carry it into practical use."

A patent to be valid must exhibit invention beyond what was known to the world prior to the advent of the patentee. The patent here involved falls short of this standard.

The decree of the trial court is affirmed, with costs against the appellant.

Swenson Offers New Priming Cap.

To facilitate easy starting of motors in cold weather, B. A. Swenson, 298 Blackstone street, Providence, R. I., is offering a neat priming cap, which is adapted for all motors tapped for two plugs, especially Indians. The primer is shown in the accompanying illustration, and is intended to be screwed into the center of the cylinder head directly over the piston, and has a metric thread so that it interchanges with metric plugs or blanks. The hand valve is retained by a friction spring and pinned collar, insuring it remaining as set, and the workmanship and finish are good.

THE SWENSON PRIMER

Night Shirt for "Retiring" President.

Fred I Willis, the popular ex-president of the F. A. M., announces his retirement from the presidency of the Indianapolis Auto Trade Association, and he will take up his active duties with the Kokomo Rubber Co. A "retiring reception" was given him by the members of the I. A. T. A. at the club rooms of the Hoosier Motor Club and a general good time was enjoyed. There was plenty to eat, more to smoke, and an abundance of jokes passed around. Mr. Willis was presented with a night shirt in view of the fact that he was "retiring." Good wishes of the Association for the future were embodied in a handsome Masonic emblem presented to the retiring president by C. A. Bookwalter of the Hoosier Motor Club. L. L. G.

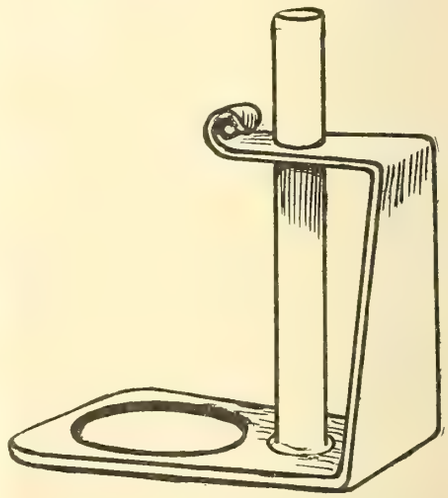
"Rider Agents" Bring in Business.

Wisely recognizing that the way to get business, and to keep on getting more is to go after it energetically, the hustling "live wire" motorcycle agents are busily planning new selling schemes. A plan that has to its credit many a sale is used by the G. H. Westing Co., of Indianapolis, Ind. Westing sends out a few of his men mounted on motorcycles to browse around anywhere on the country roads and in the towns and hamlets and give demonstrations to farmers and all persons whom they can interest in motorcycles. Names and addresses are taken, and catalogs and "make-you-want-one" letters then are sent to the prospects. After a reasonable interval these roving salesmen again visit the prospects whom they have interested, and endeavor to clinch sales, and have met with considerable success. The scheme is not copyrighted.

Goerke to Handle Pierce and Indian.

Following the example of his two old racing pals, Stanley Kellogg and Fred Huyck, Walter Goerke, of Brooklyn, N. Y., one of the most popular motorcycle racers which the sport has developed, is going into the trade. He has secured the agencies for Pierce and Indian motorcycles for Essex County, N. J., and is fitting up a store at 321 Washington street, corner of William, in Newark. The establishment will be 25x70, and a full line of machines and parts will be stocked and a repair department also will be maintained. Goerke has been on the staff of F. A. Baker & Co., of New York City, for several years, and has had a good schooling in the selling end of the business. Since last spring he has been inactive as the result of a serious accident sustained in a road race, but now has recovered sufficiently to re-enter business.

Four More Factory Branches for Fisk.



The Fisk Rubber Co., of Chicopee Falls, Mass., will soon open direct factory branches in Brooklyn, N. Y., Pittsburg, Pa., Cincinnati, Ohio, and Butte, Mont., increasing the total number of direct factory branches to 34 the entire list being as follows: New York, Boston, Providence, Springfield, Mass., Hartford, Philadelphia, Baltimore, Atlanta, New Orleans, Syracuse-Rochester, Buffalo, Brooklyn, Cleveland, Detroit, Milwaukee, Chicago, Indianapolis, St. Louis, Minneapolis, St. Paul, Fargo, N. D., Kansas City, Mo., Omaha, Denver, Seattle, San Francisco, Oakland, Sacramento, Fresno, Cal., Los Angeles, Pittsburg, Cincinnati, Butte.

Bidwell-Conklin Takes Baker Branch.

The Bidwell-Conklin Co. is the style of the new firm which has taken over the former uptown branch of F. A. Baker & Co., 2142 Broadway, New York City. The new interests include H. F. Bidwell, former manager of the branch for Baker, and Kennedy Conklin. The company will incorporate under New York laws with a capitalization of $10,000 The transfer became effective on the 1st inst., and the new management will continue the lines heretofore handled, viz., Indian and Pierce motorcycles. Having secured possession of the entire building, the company will maintain storage and repair facilities, and also carry a full line of parts and accessories. Special attention will be given to developing the sale of delivery vans, and the introduction of motorcycles in commercial lines.

Flagstaff Holder for Motorcycles.

Somebody once said, and very correctly, too: "There's a place for everything." This adage is as true of motorcycle accessories as it is of anything else, and working along this theory Hiram G. Baxter, 31 Washington street, Providence, R. I., local Excelsior motorcycle agent, has brought out a flagstaff holder designed to carry the staffs of pennants, which now are popular with tourists, particularly, as indicating the range of their travels. The holder, shown in the illustration, is designed to be attached to the top of the fork stem on the Excelsior machine, the stem passing through the large hole and the bracket being fastened by a headnut. The bracket is made with different sized holes for attachment to the handlebar or head stems of various machines.

A FLAG OR PENNANT HOLDER

Bluff Opens Store in Waterloo.

The Bluff Bicycle Co. is the title of a new concern at 517 Bluff street, Waterloo, Ia. Ellis Boggs, of that city, is in charge as manager. A complete stock of new and used bicycles will be carried. The firm also has secured the local agency for Indian motorcycles. A fully equipped repair shop will be maintained.

Mercier Becomes "His Own Boss."

Fernand Mercier, of New York, who recently resigned from the staff of F. A. Baker & Co. to go into business for himself, has opened a motorcycle repair shop at 530 Classon avenue, Brooklyn. He will do a repair business exclusively.

GRINBERG'S COMPANY GOES BROKE

Cut-Price Rubber Concern in Receiver's Hands—Couldn't Pay the Rent—Liabilities Are $25,000.

No more will cut-rate signs and bargain sale notices for tires and accessories cover the front of 57 Warren street, New York, for the Hayes Rubber Co., the occupant, has been unable, among other things, to pay the rent, and as a result an involuntary petition in bankruptcy against the company has been filed and S. Lawrence Miller has been appointed receiver. Its liabilities are $25,000 and the assets $1,000. The company was incorporated in February, 1908, with a capital stock of $3,000. Its sensational advertising of "factory and traveling salesmen's samples at prices two-thirds less than regular rates" attracted attention, and this company was known chiefly because of the fact of its financial backer, who is David Grinberg, of the firm of Morris & Grinberg, who carry on business under the nom de plume of "Manhattan Storage Co."

Reaching Out for Latin-American Trade.

O. T. Peckham & Co., Grand Rapids, Mich., manufacturers of bicycle grips and the Victor Pump Co., makers of self-measuring oil pumps, are having Spanish catalogs and other literature prepared by the Latin-American Service Co. A vigorous advertising campaign will be conducted by these companies with the object of getting Latin-American trade. The Spanish catalogs representing Grand Rapids goods already sent to the Spanish countries are producing excellent results, and when all the factories under contract with the service company have their Spanish catalogs distributed in Latin-America Grand Rapids will be one of the best advertised American cities among the importers of the southern republics.

Sessions New Standard Superintendent.

Frank S. Sessions has been appointed to the office of superintendent of the Standard-Welding Co., Cleveland, O. He is a graduate of the Worcester Polytechnic Institute, '89; member of the American Society of Mechanical Engineers and the American Institute of Electric Engineers. Mr. Sessions's experience with complicated manufacturing problems has been extensive and successful, and it has been stated that he is thoroughly equipped to handle his present business. F. H. Meyers, employed by the Standard-Welding Co. for a number of years, has been appointed assistant superintendent.

Opportunity for American Bicycles.

A dealer in bicycles in a populous mining suburb of a large European city has informed an American consular officer that he desires to correspond with American exporters of bicycles and parts with a view to making direct importation. There are no American bicycles sold in this district at present, but the consul is of the opinion that there should be a good opening for American products. It is reported that there would be some competition from local manufacturers, as well as from French and English manufacturers. The name and address of the inquirer can be secured by addressing the Bureau of Manufactures, Washington, D. C., referring to File No. 7226.

Strenuous? Yes!—But Not Always.

M. G. Littlefield, salesman for the Pope Manufacturing Co. for the territory em-

M. G. LITTLEFIELD—CAUGHT AT EASE

braced in the states of Indiana, Illinois, Iowa, Wisconsin, Minnesota, North and South Dakota and Kentucky, is considered such a strenuous worker by his friends that one of them, catching him at ease, as shown in the accompanying photograph, considered it so remarkable that he sent the photograph in for publication and with it says: "To prove that he takes his leisure moments and is a 'hard player' when circumstances permit, as well as an industrious, hard worker."

Troxel Re-elected Mayor of Elyria.

D. S. Troxel, of the Troxel Mfg. Co., was re-elected Mayor of Elyria on Tuesday last, carrying the town by a vote double the size of his nearest opponent.

F. C. Campbell, 485 Chenango street, Binghamton, N. Y., has secured the Flanders motorcycle agency for that city.

SERVICE BUILDING FOR PROVIDENCE

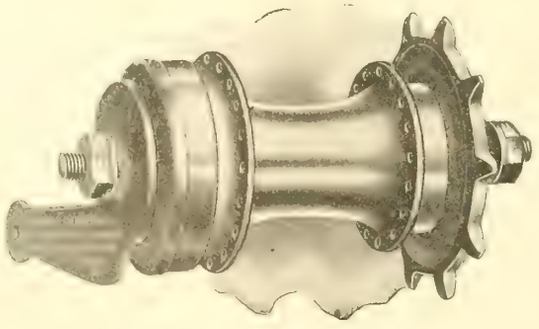
B. A. Swenson to Erect First Exclusive Structure of This Kind for Motorcycles in the East.

Consummating a deal which he has been endeavoring to put through for a long time, B. A. Swenson, of Providence, R. I., the leading motorcycle dealer of that city, has purchased a plot of land at the junction of Broad, Friendship and Blackstone streets, on which he will erect a large building to be devoted exclusively to the sale, storage and repair of motorcycles. Swenson at present is located on Blackstone street near Prairie avenue, where he occupies the first floor and basement of a three-story building, but he has outgrown these quarters some time since and has been looking around for a new location. The new establishment will be situated about a quarter of a mile from the present store, but will be in a much more central location and directly adjacent to two of the trunk line touring routes out of the city, so that it will be very convenient for tourists. The building to be erected will be of brick construction and will have handsomely appointed salesrooms, as well as a complete repair department and ample storage facilities for a large number of machines. Plans now are being made, and work will begin in a few weeks. It is expected to take possession of the new building April 1, 1912.

Waters Leaves Marvel Company.

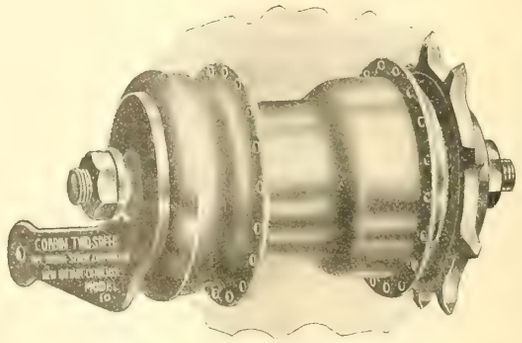
C. L. Waters has resigned from the Marvel Motorcycle Co. to accept a position as general manager of the Motorcycle Equipment Co., Hammondsport, N. Y. H. E. Longwell, formerly with the Curtiss Motorcycle Co., will become manager of the Marvel. Mr. Waters states that the change was necessitated by the rapid growth of the Motorcycle Equipment Co., which gained 42 per cent. in sales during the year 1911 over 1910, and now requires all of his attention. The offices and warehouse of the company are being doubled in size, and the value of stock carried by the company will be increased from $15,000 to $25,000. Shipments are being made all over the world, two recently having been made to China. The company will pay special attention to the wholesale business for next season.

Motorcycle Company Incorporated in Ohio.



The Cuyahoga Motorcycle Co., Cleveland, Ohio, has been incorporated with a capital stock of $10,000. The following are the directors named: George E. Hagenbach, H. A. Bluth, William S. Stuber, W. J. O'Neil and M. M. Sneyd.

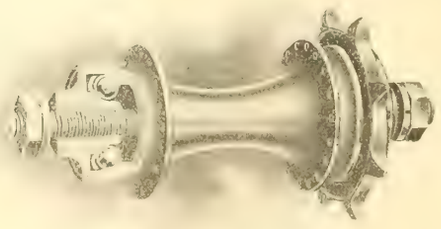
. . . "Don't stop my paper—could not do without it."—Frank S. Kulp, Goshen, Ind.



THE CORBIN SCREW CORP
CORBIN
NEW BRITAIN, CONN. U.S.A.

¶ Chief of the reasons why there will be no change in Corbin duplex coaster brakes and Corbin two-speed coaster brakes for bicycles for 1912 is that all the "1912 improvements" were put in a long time ago and have been in ever since. No one that we have found has been able even to suggest further improvements.

¶ Therefore, for bicycles the 1912 Corbin offerings are:



Corbin Duplex Coaster Brake

Corbin Two-Speed Coaster Brake

Corbin Front Hub

Corbin Rear Hub

NEW YORK, NOVEMBER 11, 1911.

The Value of Easy Starting.

Quite the most radical as well as the most advanced feature thus far disclosed in the offerings of the 1912 models of motorcycles is the foot starter. At first glance it may appear to the average rider as simply a "new-fangled thing" to help sell machines, but on further and deeper consideration its real utility cannot but be plainly apparent. To emphasize the real worth of the foot starter, it is necessary to trace the evolution in the methods employed in starting a motorcycle.

Not so very many years ago the two only ways in which it was possible to start a motorcycle, were either to mount the machine at the curb and pedal the cumbersome and heavy vehicle until sufficient momentum was obtained to bring the motor up to working speed, or else drag the machine along at a dog trot and make a flying leap into the saddle when the engine "took hold." The first operation often was a heart-breaking one, and the latter was dangerous as well as undignified. The difficulty of starting under such conditions was what kept and still keeps many people from taking up motorcycling.

Then came the addition of the rear stand, which made it possible to "jack up" the rear wheel and "warm up" the motor, which greatly facilitated starting. The direct coupling of the engine and transmission, making it necessary to propel the abnormal weight of the whole machine, in order to start the motor, still remained a great drawback to the pleasurable enjoyment of the sport by persons not endowed with Sandow strength. As an emancipation from this slavery the free engine clutch was offered, and for the first time in the history of motorcycling the starting of a machine became other than a heart-breaking ordeal for many.

There still was left something to be desired, and the foot starter supplies it. With the clutch alone it still was necessary either to start by running with the machine and making an acrobatic leap into the saddle, or else "jacking up" the machine and "turning over" the motor with the pedals, afterward throwing out the clutch and "unjacking" the machine.

Now 99 out of every 100 people who have seen a motorcyclist put his machine on the stand and prepare to start it have labored under the erroneous, but quite justifiable, impression that there was something wrong with the machine. The great green public does not know anything about the modus operandi involved in the starting of a motorcycle, and every time it sees a rider taking exercise with his rear wheel off the ground it quite naturally concludes that there is something wrong. When a person living in a city where a great many machines are used sees a large number of riders "pedaling the air," so to speak, every day, it is no wonder that he is convinced that motorcycles are unreliable. And most everyone who sees such gymnastics gains the same impression.

The foot starter offers relief from all acrobatic or other spectacular effort required to start a motorcycle, and therein lies its greatest value. All that is required is a push of the foot, while sitting in the saddle with all wheels on the ground, and if the motor does not start on the first push it is just as easy to give another, and another, if necessary. With the foot starter a motor can be "turned over" without attracting attention, without sacrifice of dignity and without abnormal physical effort, all highly desirable attributes from the viewpoint of the average rider, who wants to take his motorcycling medicine in the pleasantest and least strenuous form.

In spite of the great advance toward motorcycle perfection, which the foot starter represents, it is not to be inferred that perfection has been attained at a single bound. Simple, efficient and foolproof as it looks in its present form, it is quite certain that the foot starter is but in the first stages of development, and will undergo great changes as experience brings out any limitations and shortcomings contained in its present construction. But that it will survive in some form, and that it is very much needed on all motorcycles not in the featherweight class, are cold facts which admit of no well-founded contradiction.

Real "Reciprocity" With Canada.

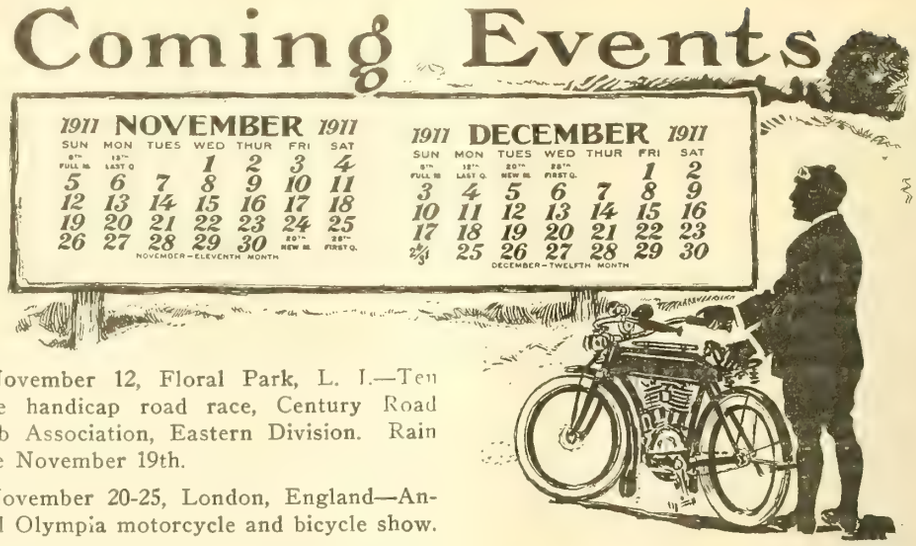
That the motorcycle riders of Canada and the Toronto Motorcycle Club in particular are beginning to realize what is really back of the action taken by the F. A. M. meet at Buffalo establishing a Canadian F. A. M. district is plainly apparent by the fact that that club has recently affiliated. Unfortunately the action taken at Buffalo was misunderstood for a time by the Canadians, as it was thought that the F. A. M. desired to dictate in Canadian motorcycle affairs. Anyone who attended the convention at Buffalo, however, knew that this was not true. The whole thought of the action was a result of the desire of F. A. M. members to do what they could to aid motorcycling in Canada in the promotion of motorcycle clubs and races, and simply extended an invitation to Canadian clubs to affiliate, thus giving them the benefit and the experience so far obtained in the United States by the F. A. M. officials. Now that the Toronto club has started the ball a-rolling by affiliating, it is stated that the Winnipeg club will soon follow suit and this will be followed by several others. It has been suggested that after several of the clubs have been attached to the F. A. M., then a Canadian controlling body be formed with their own officers, who will know the Canadian situation and be in a position to handle it to the satisfaction of all concerned.

Realizing that the adverse sentiment against the F. A. M. since the action taken by it at Buffalo was wholly the result of a misunderstanding, after consideration by the Board of Directors President G. H.

Hamilton has designated J. Leo Sauer, chairman of the Legal Action Committee, as representative of the F. A. M. to attend a proposed joint meeting of the Canadian clubs for the purpose of explaining to them what was exactly meant by the inauguration of a Canadian district and how the F. A. M. feels toward Canadian clubs. Without a doubt this will prove most effective and beneficial, as the matter can be considered at such a meeting to the fullest extent, questions can be asked the F. A. M. representative by the Canadians and the matter can be threshed out to the finest point.

The fear of the Canadians has naturally been that the F. A. M. desired to control their racing and motorcycle affairs and feared a sort of an annexation. This fear, however, is quickly being explained away and with the general opinion now prevailing in Canada it will be absolutely inadvisable for them to undertake the formation of a national organization at this time. It is assured that a satisfactory adjustment of affairs can be made, and that at any time in the future that Canadian motorcyclists feel that they should have their own association the benefits obtained by them by present affiliation with the F. A. M., learning from the experience of the latter organization's officials will be the best kind of preparation to such a step. As stated by a contemporary, "There is nothing to be lost and much that may be gained through an acceptance by the Canadians of the American Federation's invitation to enter the fold. This is a view of the situation which appears to be meeting with approval over the border, and one which the F. A. M. officials feel certain will pave the way for an arrangement calculated to work for the mutual advantage of Canadian and American riders."

We quote from a recent issue of our English contemporary, "Bicycling News and Motor Review," an extract taken from the columns of a late number of this publication and their remarks thereon:



"The following brief extract will give readers some idea of how they 'do' things in America in the cycle-racing line: 'Seven tandem teams whirling around a six-lap saucer to the tune of two miles in 3 min. 40[illegible] sec.; a four-corner match race between the four acknowledged top-notch sprinters of the United States; a novice race of 28 starters, in which were three spectacular tumbles; the ascent of a new amateur star; a referee very much on the job, and sizzling hot finishes in every event except one heat of the match race were just a few items served to over 8,000 bicycle fans at the Velodrome Bowl, Newark, on Sunday.' For a 'day of rest' program this would take some beating, especially the 'spectacular tumbles.' Do they pay extra for these? But what are 'bicycle fans'? Assuredly they move fast in America."

Yea, verily, "they do move fast in America." No, no extra charge for the tumbles; the novices charge them up to experience. "Bicycle fans" (plural), fan (singular); gender, feminine or masculine; bright-eyed, keen-witted, lusty-lunged; the ardent critic and loyal supporter of the game; the inspiration of his kind, the rider, the management and ye scribe. A prime necessity—he pays the freight.

In a road race recently held, the club promoting the same withdrew its time prize, a bicycle, at the last minute, just before the start of the race, because they stated there was only one man to ride from scratch, and hence they had the idea that there was only one probable winner for the prize. The prize was listed on the entry blank and advertised as in the hands of the committee. Naturally a man signing an entry blank had that prize before him. An entry blank is a contract entered into by the rider and the promoters of the race. The rider agrees to ride in consideration of the fact that he has a possibility of winning the prizes offered on that occasion. When a prize is withdrawn once at the last minute, a precedent is established, and it may be done again. If this is done, the rider is induced to sign an entry blank under false pretenses, for when he signs he hopes, naturally, to win a prize, and that is what induces him to go in the race. When a prize is withdrawn after he has signed it is plainly a case of geting him to ride under false pretenses. A prize offered on an entry blank should be given at all times to the winner of the event in which it is offered, and a club or promoter should not be allowed to withdraw that prize after entries have been received.

The organization that promoted the particular race in question is one that should do, and claims to want to do, everything possible to boost the sport, and fulfills this desire to a great extent, but withdrawing a prize when the contestants are on the tape ready to start, it is asserted, because a member did not have a chance of winning it, does more harm to the sport than a great amount of boosting could offset in other ways. The prize offered should be delivered to the winner at once, and by so doing the club will correct a mistake.

Coming Events

November 12, Floral Park, L. I.—Ten mile handicap road race, Century Road Club Association, Eastern Division. Rain date November 19th.

November 20-25, London, England—Annual Olympia motorcycle and bicycle show.

December 11-16, New York City, N. Y.—Madison Square Garden—Nineteenth annual international six days' professional bicycle race.

January 6-20, New York City—Twelfth annual automobile show in Madison Square Garden; motorcycle section included in first week.

January 20, New York City—Fourteenth annual ball of the Century Road Club Association, Eastern Division, at Alhambra Hall, Seventh avenue and One Hundred and Twenty-sixth street.

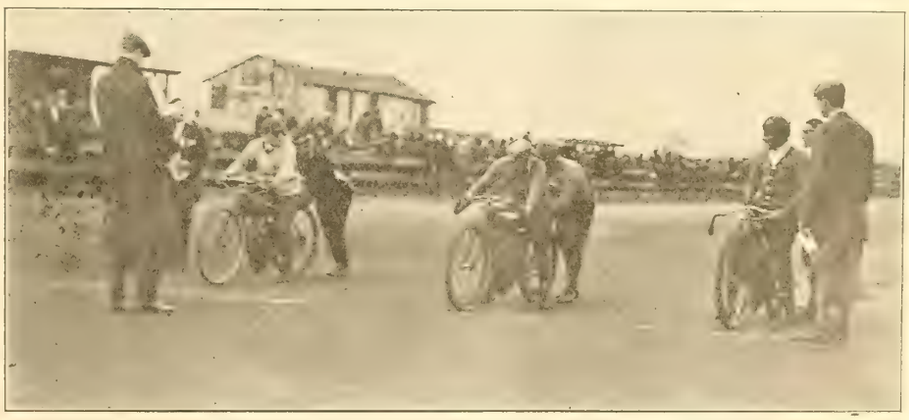
March 4th-11th, Denver, Colo.—Motorcycle and automobile show in Auditorium.

CONSTANT MAKES WONDERFUL SPEED

On Guttenberg Dirt Track Covers Mile in 55⅗ Seconds—Mercier Wins Match With Cox.

Emblazoned with new mile record figures for the track, the curtain fell on motorcycle racing in the New York district for the 1911 season, at Guttenberg, N. J., on Tuesday, 7th inst. J. U. Constant, of Brooklyn, the star of the meet, wound up the speed session by shaving two-fifths of a second off the old mile record of 56 seconds hung up by Walter Goerke two years ago. The new figures are 55⅗ seconds. Constant long has coveted this record, and on Tuesday when he found that his machine had worlds of speed for the track he asked and was given permission to attack Goerke's figures. His successful effort was greeted with cheers and he was much lionized when he pulled up after finishing.

ON THE TURN IN THE PRIVATE OWNERS' RACE



JOHN U. CONSTANT, THE POPULAR TRADE RIDER

Constant annexed both of the trade events, the five-mile miss-and-out and the 10-mile handicap. His most dangerous rival was Costello, on a Merkel, this pair ripping off some close and exciting brushes. Costello, who is developing fast into a mighty good rider, gained on the turns, but did not have the speed to hold his gains in the stretches. In the handicap he got a poor start, but had almost closed the one-eighth mile gap lost to Constant by the seventh mile. This was the best he could do, and then he gradually fell back, but easily took second in both events. "Smiling Bill" Teubner made his first appearance on an Indian, and took third in the miss-and-out.

There was the usual accident, and it occurred in the 10-mile professional handicap. Mercier, Graves and Cox were the starters. The fight all was between Mercier and Cox, with Graves trailing. Going into "Death Turn," the lower one, in the sixth mile, Graves skidded up the bank, a front tire let go, and he went down in a spectacular fall. He sustained face and body contusions and a shaking up, and was hurried to a hospital, but left the next day. That he was not injured more severely was due to good luck. His machine was foldled up in front. When the accident occurred, irresponsible spectators made their usual mad dash across the track to the scene, and to save them from the danger incurred by their own folly the race was stopped. After Graves was removed and the track cleared, as a substitute for the race Mercier and Cox rode a five-mile match, the latter winning. Mercier took the five-mile open, with Cox second.

W. M. Annis outran the field in the private owner event, and won as he pleased. Ralph DePalma again lent his presence as a star attraction, to help the promoters out, and drove a three-mile exhibition in a 90-horsepower Mercedes racing car, which was too powerful for the track, so DePalma took no risks. His time was 3:03⅗.

After heavy rain the previous night Tuesday broke clear and crisp, and fine weather seemed assured, but about two o'clock clouds came out of the West and vigorous showers broke, lasting for half an hour in the aggregate. For a time it seemed as if the meet would have to be postponed,

THE LINE-UP IN THE TEN MILE PROFESSIONAL

but by three o'clock the sun came out again, and the sky was clear for the balance of the day. The police who had been engaged failed to show up, and the promoters themselves "subbed" as track patrols. While about 1,200 people were present, the ticket returns showed only 450 paid admissions, and the promoters lost money. The "deadheads" came through and over the fences without any difficulty, as there was no one to prevent. Summary:

Five mile, miss-and-out, trade riders, 61-inch motors—Won by J. U. Constant (Indian); second, M. Costello (Merkel); third, W. J. Teubner (Indian). Time, 4:47⅗.

Five mile, professional, 61-inch motors, flying start—Won by Ferd Mercier (Indian); second, J. J. Cox (Indian); third, Albert Graves (R-S). Time, 4:51⅗.

Three mile exhibition—Ralph DePalma (90-horsepower Mercedes). Time, 3:03⅖.

Five mile, private owners, stock 61-inch motors—Won by W. M. Annis (Indian); second, J. B. French (Indian); third, G. C. Haas (Indian). Time, 5:47⅕.

Five mile match, professional, Ferd Mercier (Indian) vs. J. J. Cox (Indian)—Won by Cox. Time, 4:54⅖.

Ten mile, handicap, trade riders, 61-inch motors—Won by J. U. Constant (Indian), scratch; second, M. Costello (Merkel), scratch; third, W. J. Walker (Indian), 1:10. Time, 10:55⅖.

Mile time trial against track record of 56 seconds—J. U. Constant (Indian). Time, 0:55⅗. (New track record.)

Lancaster Sees Some Good Sport.

The motorcycle races held at the Lancaster (Pa.) fair grounds on Saturday afternoon, the 4th inst., furnished some good sport for the large crowd that attended. Unfortunately, in the first event, a five-mile novice, Charles Kautz ran into the fence. He was rushed to the Lancaster Hospital, where it was found that he was not very badly injured, and was out again on Monday. All of the events were hotly contested. John U. Constant, of Brooklyn, N. Y., riding an Indian, took three firsts, winning the five-mile open, the 20-minute race and the one-mile time trial. W. R. (Happy Days) Pitman was the referee. The summary:

Five mile novice—Won by Ira Herr; second, Elmer J. Eshleman; third, Ardis Hettinger. Time, 7:12.

Ten mile, private owners—Won by Henry C. Vollmer; second, C. L. Rinehart; third, G. G. Weidner. Time, 13:47⅖.

Ten mile open—Won by H. R. Williams; second, Ira Herr; third, H. C. Vollmer. Time, 13:39⅖.

Five mile open—Won by J. U. Constant; second, H. R. Williams; third, H. C. Vollmer. Time, 6:20⅘.

One mile time trial—J. U. Constant. Time, 1:20⅕.

Twenty minute race—Won by J. U. Constant; second, H. R. Williams; third, Ira Herr. Distance, 15⅝ miles.

BAKER AGAIN TRIES FOR RECORD

But Mishaps Cut Short His Attempt—Makes Single Mile in 48⅖ Seconds—200 Mile Race Planned.

Erwin G. Baker, one of the most consistent workers in the State in his endeavors to bring Indianapolis before the motorcycle race enthusiasts, added another leaf to his laurel wreath by smashing all "State records" from one to 55 miles on the Indianapolis Motor Speedway. With this speed trial on the famous Hoosier course Baker closes his racing dates for the season with a well-earned string of victories to his credit. Baker had obtained a sanction for a 200-mile trial, and was going to make an attempt to lower the amateur record for one to 200 miles. He was forced to make two stops on his Speedway trial, and had to content himself with the honor of breaking the so-called "State records" from one to 55 miles.

His time for the distance was 48:20, an average of 52⅘ seconds to the mile. The first two and one-half miles, or one lap, was made in 2.07, an average of 50⅖ seconds to the mile. Before starting on the trial the timers caught him in a mile time trial in 48⅖ seconds, which will undoubtedly stand as the motorcycle record for a mile on the Speedway for some time to come. When the present surface of brick had been put on the Speedway, Freddie Huyck came down from Chicago to ascertain if the surface was suitable for motorcycling racing. He rode the mile in 52⅘ seconds, the same time that Baker maintained as an average throughout the 55 miles. The cool weather and high wind resistance prevented better time, and the two mishaps spoiled an excellent chance to bring the amateur record to Indianapolis. The 50 miles were made in a little less than two minutes less than the record established by Huyck on a board track.

Harry Graff, president of the Indiana Motorcycling Club, refereed the event and was well satisfied with Baker's showing, as he says the trial proved that the surface is more than smooth enough for racing machines. While no definite action has been taken, it is the understanding that the Hoosier Club will make a bid for the 1912 F. A. M. meet, as they have Baker's trials to back them up and convince the public that Indianapolis contains "the best race course in the world." Local promoters are contemplating staging a 200-mile race on the 2½-mile circuit early in the spring.

L. L. G.

Wolters Fast on Dirt Tracks, Too.

"Farmer Joe" Wolters showed that he could ride fast on dirt as well as on boards at Sacramento, Cal., on the 29th ult., when he took both the five- and 10-mile money races and set a new local mile record of 49⅕ seconds in one lap of the five-mile race. Wolters was in fine form and rode in slashing style, while Balke was a close second. W. G. Collins, of San Francisco, skidded and turned a somersault in the 10-mile race, breaking a bone in a foot. Although the meet was sanctioned by the F. A. M., a race for ladies was run, Evelyn Morris beating Hannah McCarthy at the three-mile distance. Summary:

Five mile professional, best two in three heats—Won by Wolters (Excelsior); second, Balke (Excelsior); third, Collins (Indian). Time, 4:22. First heat fastest; time, 4:19⅕.

Ten mile Australian pursuit—Won by Shoemaker (Excelsior); second, R. Emery (Indian). Time, 12:34.

Mile time trials, professional, for track record—Wolters (Execlsior), time 0:50⅘; Balke (Excelsior), $:51⅕; Seymour (Indian), 0:51⅘; Collins (Indian), 0:53⅘.

Five mile novelty, amateur—Won by Andrew (Indian); second, Scott (Indian); third, Galloway (Excelsior). Time, 7:47.

Five mile, twin cylinders, amateur—Won by Scott (Indian); second, Andrew (Indian); third, Shoemaker (Excelsior). Time, 5:22⅗.

Ten mile, professional—Won by Wolters (Excelsior); second, Seymour (Indian); third, Balke (Excelsior). Time, 8:45.

Three mile, girls' race—Won by Evelyn Morris; second, Hannah McCarthy.

Haskins Best at Danville Meet.

Batting out four victories in as many starts, Fay Haskins, on an Excelsior, was the stellar performer at the closed club motorcycle race meet conducted by the Danville (Ill.) Motorcycle Club at Ellsworth Park on Sunday, 30th ult. Haskins made the fastest time of the day in the time trials, being clocked in 1:17⅖. T. C. Alexander bagged the remaining event, a five-mile open. All of the races were bubbling over with action and the good-sized crowd got its money's worth of excitement. Summary:

Two mile, private owners, 30½-inch class—Won by Fay Haskins (Excelsior); second, Peter Britz (Indian); third, Roy Branson (Indian). Time, 3:11.

Five mile open, 30½-inch class—Won by T. C. Alexander (Excelsior); second, Everett Chandler (Harley-Davidson); third, I. Haskins (Indian). Time, 6:51.

Two mile, private owners, 50-inch class—Won by Fay Haskins (Excelsior); second, Albert Dill (Excelsior); third, Everett Chandler (Harley-Davidson). Time, 2:44.

Ten mile, free-for-all—Won by Fay Haskins (Excelsior); second, Everett Chandler (Harley-Davidson); third, Albert Dill (Excelsior). Time, 13:27.

Mile time trials—Fay Haskins (Excelsior), time 1:17⅖; Everett Chandler (Harley-Davidson), 1:21½; T. C. Alexander (Excelsior), 1:21⅗; Albert Dill (Excelsior), 1:25⅘; Ivanhoe Haskins (Indian), 1:26.

TOO MUCH CONSTANT AT POTTSTOWN

Brooklynite Grabs Everything in Sight and Breaks "Track Record"—Bond Wins Novice and Private Owners.

Pottstown, Pa., had its first motorcycle meet on the 28th ult., and it was so successful in many ways that it is very unlikely that it will be the last. There were quite a few outsiders "among those present," the most prominent being J. U. Constant, of Brooklyn, and Harry Klebes and Charles Thompson, of "Philly." In spite of some rather formidable opposition the Brooklynite carried off "Boss" Murphy's share of the spoils, which, in the language of New York, means the big end. Constant hung up a new local track record of a mile in 56⅕ seconds, and won the half-hour grind and the pair of 10-mile trade events. There was nothing else for him to take.

In the 30-minute merry-go-round Constant spun off 28¾ miles, lapping the field and making the last two rounds on one cylinder. Thompson checked next with 27½ circuits, and E. Conroy "beat it" into third place with 23 laps credited to his account. In the 10-mile bout for 30½-inch motors Thompson had the race pocketed and nearly lapped Constant when a valve rocker arm broke, and Thompson saw his victory take wings to other shoulders. Mounted on a little "four," Thompson went up against the "big 'uns" in the 10-mile, 61-inch class and finished third, a very good showing. Constant and Klebes ran one, two, in this race.

Harry Bond, of Philadelphia, completed the clean sweep for the visitors by romping home first in the novice and private owner races. The only accident occurred in the half-hour grind when E. S. Hallenback skidded and fell and temporarily was "knocked out." He "came to" in a short time and stayed to see the finish, a scalp wound being the most serious of his injuries.

From a managerial standpoint the meet was a real crackerjack. George Freshley, a local dealer, promoted it, and he "did things up brown." Flagmen were stationed on the turns, the officials were provided with all necessary paraphernalia, ample police were engaged to keep the track clear and advertisements were inserted in local and out-of-town papers. Freshley overlooked nothing that contributed to the safety of the riders or the comfort of the officials, and all had good words of appreciation of his efforts. Summary:

Five mile novice—Won by Harry Bond (Marvel); second, John Savage (Indian); third, G. Weidner (Indian). Time, 6:14¾.

Five mile, private owners—Won by Harry Bond (Marcel); second, H. Griffin (Merkel); third, M. Reese (R. S.). Time, 6:17¼.

Ten mile, trade riders, 30½-inch motors—Won by J. U. Constant (Indian); second, H. C. Becker (R. S.); third, John Shilling (R. S.). Time, 12:22.

Ten mile, trade riders, 61-inch motors—Won by J. U. Constant (Indian); second, H. Klebes (R. S.); third, C. Thompson (Indian). Time, 10:05½.

Mile time trial for track record—J. U. Constant (Indian), time 0:56⅕ (track record); C. Thompson (Indian), 1:01½; John Shilling (R. S.), 1:04.

Half-hour open, trade riders, 61-inch motors—Won by J. U. Constant (Indian), 28¾ miles; second, C. Thompson (Indian), 27½ miles; third, E. Conroy (Excelsior), 23 miles.

Fatal Accident Mars Troy (O.) Races.

With Erwin Baker, of Indianapolis, Ind., his warmest rival, "not among those present," owing to injuries sustained at another race meet, D. L. Tullis, of Kenton, Ohio, made a "clean-up" of the open events at the joint motorcycle speed carnival of the Piqua and Troy Motorcycle Clubs at the fair grounds, Troy, Ohio, on the 1st inst. Tullis shook down first place plums four times in four starts, while Lloyd Reichard earned his novice diploma. In the mile time trials Tullis made the best time of the day, 1:12. The meet was marred by a fatal accident resulting in the death of George H. Forrer, a well known rider, of Springfield. Forrer went into a turn with his head down, and instead of following the curve went straight across the track into a fence. His skull was crushed and he died a few hours later. When the accident occurred the officials rushed to the scene, promptly forgetting about the race, and no time was taken. Summary:

Five miles, trade riders—Won by D. L. Tullis (Thor); second, H. Torias (Thor).

Four mile novice—Won by Lloyd Reichard (Indian); second, C. Fogle (Indian); third, A Spencer (Thor). Time, 6:10.

Five mile open, trade riders—Won by D. L. Tullis (Thor); second, W. McClain (Indian). Time, 7:59½.

Five mile handicap—Won by D. L. Tullis (Thor); second, H. Tobias (Thor); third, W. McClain (Indian).

Mile time trials—D. L. Tullis (Thor), time, 1:12; Harry Gross (Thor), 1:17½.

Elmira Club Has Membership Contest.

The Elmira (N. Y.) Motorcycle Club is one of the most progressive clubs of the section and is gaining ground daily. A membership contest has recently been started and the club member who secures the largest number of applications, over ten, by the first of the year will receive as a prize for his efforts a Fisk gripfast tire. This is proving successful, as a large number of new members have already been received. On Thursday, 2d inst., after the regular meeting, P. B. Rutan, of the firm of P. B. Rutan & Son, gave a dinner to the club which was greatly enjoyed.

MANCHESTER HAS PERFECT SCORE

Completes Full Series of Rhode Island Reliability Runs Without a Penalty—Three Tied for Second Place.

Successfully surviving 507 miles of hard road riding, A. E. Manchester, riding a Merkel, achieved the honor of making the only perfect score in the season's series of reliability runs conducted by the Rhode Island Motorcycle Club, of Providence, for which the final scores just have been announced. Three men—J. C. Loftes (Harley-Davidson), A. Fazzi (Harley-Davidson) and W. E. Johnston (Excelsior)—are tied for second place, each losing 25 points; 23 men participated in the prize award.

Only two of the 23 starters in the first contest came through without spotted scores. They were Manchester (Merkel) and Winslow (Indian). Six men were tied for second place. The course was 147 miles, over fine roads, but a run of tire trouble wiped out many otherwise perfect scores.

Accidents and penalties were numerous in the second contest, which went 157 miles. W. L. Hillman skidded into a telegraph pole and sustained a broken neck, but still lives. Winslow lost his perfect score by showing good sportsmanship and quitting the contest to help carry Hillman to a hospital. That left Manchester still unpenalized and alone in his glory.

For the final run of the series the mileage was set at 200, and a very hard course selected. The previous runs had taken the riders pretty much around the State, and out of it as well, and the last one was no exception, but much formidable sand was encountered. Manchester for the third time escaped the penalty axe.

In a pouring rain a hill climb was held on October 15, the event taking place on Dolly Cole hill. Only eight riders took part, the fastest time being made by Fazzi on a Harley-Davidson, who negotiated the half-mile up grade in 42 seconds. Following the climb the club held its annual chicken dinner at Harmon, and many of the riders forsook the climb in order to be certain of not missing the dinner. Although soaked to the skin, the riders did full justice to the tempting things set before them and returned to the club rooms in high fettle.

For an undiluted display of grit the honors go to Clarence Loftes, who rode through all but the first run with his left arm in a sling, due to an accident, and had the use of only one hand to operate his machine. Despite this handicap Loftes finished second.

Perhaps no motorcycle event of the year received such strong support from the trade in the matter of prizes, the following firms contributing: Goodyear Tire & Rubber Co.,

THE HEREAFTER OF THE CUT-OUT FIEND—A DOSE OF HIS OWN MEDICINE

United States Tire Co., Fisk Rubber Co., Empire Tire Co., Heitger Carbureter Co., Combination Ladder Co., Stewart & Clark Mfg. Co., Belcher & Loomis Hardware Co., Albert E. Goodby, H. G. Baxter, Hawthorne Mfg. Co., American F. N. Co., A. E. Manchester, H. & F. Mesinger Mfg. Co., Troxel Mfg. Co., J. M. Newton, A. W. Harris Oil Co., Corbin Screw Corporation, New Departure Mfg. Co., Persons Mfg. Co., Eclipse Machine Co., B. A. Swenson, Veeder Mfg. Co., Jeffrey-DeWitt Co., R. E. Hardy Co., The Standard Co., Nathan Novelty Mfg. Co., C. F. Splitdorf, Badger Brass Mfg. Co., and Post & Lester. The club extends thanks to the firms mentioned for their generosity in donating prizes. As a special award a spark plug was given to each rider who competed in all contests of the series. The final score:

A. E. Manchester, 7 Merkel	1,000
J. C. Loftes, 4 Harley-Davidson	975
A. Fazzi, 4 Harley-Davidson	975
W. E. Johnston, 4 Excelsior	975
W. H. Earnshaw, 7 Merkel	950
J. B. McLaughlin, 6 Merkel	895
M. E. Remington, 4 Merkel	883
J. T. McIntosh, Special	737
S. Koran, 4 Harley-Davidson	642
P. F. Remington, 4 Merkel	467
H. E. Winslow, 4 Indian	333⅓
L. J. Knight, 4 Harley-Davidson	333⅓
C. J. Walmsley, 3½ R-S	305
H. M. Jones, 7 Merkel	281⅓
H. G. Baxter, 4 Excelsior	279⅓
J. F. Cummings, 7 Harley-Davidson	249⅓
W. L. Hillman, 4 Harley-Davidson	221⅓
J. H. Shippee, 5 F. N.	221⅓
H. Weatherbee, 7 M. M.	138⅓
I. C. Hyllested, 3 Pope	125⅓
J. A. Akeroyd, 3 M. M.	116⅓
J. H. Thompson, 3½ R-S	111⅓
H. Potter, 4 Harley-Davidson	105

Rides 800 Miles to Take a New Job.

H. G. Bran, of Madison, Wis., passed through Indianapolis on his way to Memphis, where he will accept employment as an automobile and motorcycle repair man. Bran's mount is a four-horsepower Thor equipped with a free engine clutch, and he reports no engine or tire trouble. He has completed about 300 miles of his trip, and will pile an additional 500 miles before he reaches his destination. When he left Madison the snow was two inches deep and he found it rather heavy going until he reached Chicago. The Indiana roads, although rather soft from recent rains, afforded easy going for the 200 miles from Chicago. Undaunted by the winter weather experienced after he left Indianapolis, he continued his trip, which will take him through Kentucky and into Tennessee.

L. L. G.

Newcomer Challenges Louisville Racers.

H. H. Huntsbery recently toured from Cleveland, O., to Louisville, Ky., passing through Pittsburg, Allentown, Pa., Wheeling, W. Va., and Columbus, O., thence to the Merkel factory, on to Cincinnati and Louisville, and has located permanently in the latter place. Huntsbery has been doing some very successful racing on a special Merkel machine in various parts of the country, but has his personal stock machine in Louisville and has issued challenges to some of the local racing aspirants.

Terre Haute Club Elects Officers.

Terre Haute, Ind., Nov. 3.—At a special meeting of the Terre Haute, M. C. last Monday evening the officers for last year, with the exception of one, were re-elected for the ensuing year. They are: H. E. Baldwin, president;; C. O. Powell, vice-president; F. A. Houff, secretary, and E. Waggoner, treasurer. .

The Buying and Testing of Oils

After having the advice dinned into their ears for years by the manufacturers of motorcycles, a majority of riders now are pretty well convinced that "oil IS cheaper than parts." Those that were unwilling to take the manufacturer's word for it and thought they could beat him out of a little profit, by buying a cheaper lubricant than he recommended for use in his motors, invariably have found that it was pretty expensive "economy," when it came to replacing "seized" and scored parts. Nowadays comparatively few motorcyclists experiment with unknown oils and stick religiously to those brands recommended by the manufacturer.

Although many so-called "oil tests" appear remarkably simple to make, rarely does a motorcyclist bother to make such a "test." He prefers to leave that to the manufacturer of his machine and to accept the manufacturer's word for it. Even though a motorcyclist may be disinclined to delve into the technical side of the oil question it is desirable to know a little of the elementary principles of oils and their composition, as well as the meaning of such terms as viscosity, gravity, fire test, cold test and other familiar expressions used in connection with lubricants.

By viscosity is meant the cohesion of the oil globules, or in other words, the lubricating quality of an oil. To ascertain the viscosity of an oil there is used what is known as a Saybolt viscosimeter, which is the standard instrument used for the purpose in this country. This apparatus consists of a fine ground glass tube very accurately graduated, and tapered at one end to a fine point with a minute opening. A sample of the oil to be tested, 60 cubic centimeters, or approximately four and a half tablespoonsful, is placed in the tube and heated to a temperature of 100 degrees Fahrenheit. When the oil has reached this temperature is is allowed to flow from the small end of the tube, the time required for it to run out being noted in seconds, and the total time in seconds being equivalent to the degree of viscosity of the oil.

If it is desired to ascertain the viscosity of various or special grades of oil at different temperatures, of course the temperature of the oil in the test tube is brought to the desired degree before timing the flow. However, the viscosity of gasoline engine oils is taken at an arbitrary temperature of 100 degrees Fahrenheit. This figure is a standard adopted by oil manufacturers as a result of long and exhaustive experiments.

Ideal lubrication is that in which there always is a thin film of oil between the moving parts when the motor is at working temperature. This film of oil should only be of sufficient thickness to separate the working parts, under the maximum amount of pressure which they have to sustain. Experiments have shown that an oil with high viscosity should have a high gravity or thin body. It is the contention of some oil manufacturers that a low gravity oil of, for instance, 30, and a viscosity of 275, is a better lubricant than an oil of 20 gravity and 285 viscosity. In support of this contention it is argued that the loss of 10 points in gravity means a much heavier oil and that this increased density is not accompanied by an increase in lubricating quality through the increased viscosity.

By the gravity of an oil is meant the weight or density of the fluid, as compared with the gravity of distilled water. Gravity in oil is an important quality, and is an infallible guide as to the grade of the crude petroleum from which the lubricant is distilled. All lubricating oils with an asphaltum base, whether they be distilled or reduced, have a low gravity. Other oils free from asphaltum in their crude state, show a high gravity under distillation. The specific gravity of an oil may be greatly increased by filtration, and much stress is laid upon filtration by some manufacturers. Excessive filtration, however, is obtained at the expense of viscosity, and the reduction of viscosity in turn reduces the lubricating quality of the oil.

For obtaining the specific gravity of an oil, an instrument called a hydrometer is used. This is a thin glass tube, graduated, and having a small bulb at each end. The lower bulb is filled with mercury, which causes the tube to stand upright when placed in a fluid body. The oil to be tested for gravity is placed in a jar and heated to a temperature of 60 degrees Fahrenheit. A thermometer also is dipped in the oil, so that the proper temperature may be obtained. When the proper temperature has been reached the hydrometer is placed in the oil and allowed to float until it becomes stationary. The hydrometer is fitted with a Baume scale, which is the standard for taking the gravity test of oils. When the tube becomes stationary a reading is taken on the scale, at its position on the surface of the oil, and this gives the degree of gravity.

The flash test is the temperature at which the vapor of an oil will ignite in a flash and immediately dissipate in a puff of smoke. This test is not to be confused with the fire test, for the latter is the temperature at which the vapor will continue to burn, after being ignited. The fire test naturally must be higher than the flashing point. These two qualities deserve important consideration in the selection of an oil for a motor.

It is estimated that the gas in a motor burns at a temperature of about 1,500 degrees Fahrenheit. The interior of a motor cylinder of course remains hottest during its operation, for the wall temperature is reduced by cooling, either by air or water. Either of these cooling mediums is estimated to effect a temperature reduction of 350 degrees from that of the interior of the cylinder. As the friction occurs on the inner cylinder walls, it is therefore necessary to use an oil with a flashing point in excess of 350 degrees, in order that it may not be consumed by heat before its work of lubricating is completed.

To ascertain the flashing point of an oil a quantity of it is placed in a vessel in the open air, and a thermometer is suspended over the oil with the lower end of the instrument submerged in the fluid. The oil then is heated by introducing a gas flame or other form of heat under the vessel. While the oil is being heated a lighted match or taper is passed over the surface of the fluid frequently, until the oil reaches such a temperature that the vapor arising from it will flash when the lighted taper is passed over it. When a flash occurs the reading is taken from the thermometer, this being the flashing point. To find the fire test the heating of the oil is continued under the same conditions until the vapor burns steadily when ignited by a taper, and the reading of the thermometer will give the degree of fire test.

As oil thickens in cold weather, it is essential to know the temperature at which it will congeal. This is known as the cold test and is taken in two ways. The first is what is known as the "cloud test" and is made by placing a sample of oil to be tested in a glass tube in which is suspended a thermometer. The lower end of the tube has an outlet through a small faucet. After the oil is placed in the tube the latter is chilled with ice until a cloud appears in the oil, which indicates the approach of congelation. The temperature at which the oil clouds is the congealing point. Another cold test is made by chilling the oil in the same manner, and opening the faucet at the bottom of the tube, noting the temperature at which the oil stops flowing. The average cold test of gasoline motor oils is 20 degrees Fahrenheit. The congealing point of an oil can be reduced greatly by filtration, but only at the expense of viscosity, and is not to be desired.

Lubrication troubles may be defined as follows:—lack of oil, presence of sulphur in the oil, and carbonization. The first ailment may be due either to the use of an improper oil, the failure of the oiling device to work properly, or an empty oil tank. The remedy for either is obvious. Excessive sulphur in the oil may be avoided by the use of the proper oil, as advised by the manufacturer of the motor. Carbonization is caused by the use of a low grade of oil or over oiling. Perhaps the best and simplest remedy for carbonization is to put a teaspoonful of kerosene in each cylinder once a week and let it stand over night. The kerosene will cut the carbon and on starting the motor the residue will be blown out through the exhaust.

Crude petroleums, from which the higher grade lubricants are distilled, differ in elements and in quality acording to their territorial source. Oils from one particular district often are better adapted for certain uses than oils from any other field. However, the oil field boundaries are not as tightly drawn as is generally supposed, and the elements of oils from the same general field differ according to the section from which they are obtained. The Pennsylvania oil fields are not confined to that state, but also include West Virginia and Southern Ohio. The crude petroleum yields from these fields possess qualities not found in oils from other districts.

High grade gasoline engine oil should possess a high viscosity, gravity and fire test, respectively, with a low cold test, and be absolutely free from asphaltum. It also should contain only a very slight trace of sulphur and little of any carbon. There are two methods which are used to refine crude petroleum into lubricating oils: distillation and reduction. In the former process the distilled oil is removed from the still in the form of vapor through a series of pipes submerged in water and termed a condenser. The still is a large closed iron tank heated to a high temperature by a fire underneath. This vapor is condensed into a liquid and the different grades are separated. This method of refining leaves the oils as free from carbon as it is possible to bring them.

Oil known as reduced oil is that portion of the crude product which remains in the still after the distilled fluids have been taken off. The products which remain are the heavier oils, such as tar and coke, and contain much carbon. Reduced oils are not as good as distilled oils for gasoline engine lubrication. When the cylinder is properly lubricated the charred carbon is carried out with the exhaust to a large extest, but when the engine is overfed with oil the carbon not swept out with the exhaust forms a crust on the cylinder heads. Over oiling is indicated by blue smoke from the muffler.

It is a very good idea to strain oil before putting it into the tank of the machine. It either may have been exposed to dust and dirt through the cap of the can being left off, or at some previous time oil may have been poured into a dirty measure and the surplus poured back into the can. If an oil measure is exposed to dirt and dust it shrould be washed with gasoline before using. If there is an oil strainer in the tank it should be removed occasionally and washed out in gasoline. Unscrupulous dealers sometimes refill empty oil cans which contained a high grade oil with a lower quality lubricant and try to palm it off as the genuine. This practice has been circumvented to some extent by the use of non-refillable cans, and riders can be safe by refusing to purchase oil in cans other than those which bear the original seal.

On long runs oil tanks should be refilled frequently, especially with twin cylinder motors, for on cross country work oil is used with amazing rapidity. It is much more preferable to reload the oil tank two or three times a day, even though it may not require much to fill it, than to run on in the fond hope that there is plenty in the tank and suddenly find that it is dry and the motor is beginning to labor. Furthermore, desirable motorcycle oil is not to be had in every hamlet, and while automobile oil will do in a pinch, it is very unsuitable and burns up very rapidly, hence double quantity is required for the same distance.

Orioles Planning Lively Thanksgiving.

Baltimore is going to have some good motorcycle sport on Thanksgiving Day, November 30th. Howard A. French has arranged to run five races at Electric Park on that day, from one to five miles, with some bicycle events in between to enliven the occasion. A large entry list is expected and a number of crack riders from out of the city will be brought here to see what they can do in the way of breaking records on the half-mile track. The entry blanks will be sent out in about a week and a quick response is expected. The members of the Maryland M. C., of Baltimore, and the Crescent B. C. will be in the fore with their best riders. There will be plenty of of competition, and Mr. French is banking on pulling off one of the most successful meets ever held in Baltimore. C. F. Y.

INDIAN SEXTET ON SIDE CARS

Invades New York and Causes Mild Sensation—Party Has Exciting Trip from Springfield to Guttenberg.

Blase New Yorkers saw a sight this week that made them stop and stare, and when that strange thing happens in the "Big Village" it is an event worth chronicling. Three motorcycle side cars with passengers gliding down Broadway abreast were the cause of a mild sensation. It is rare that a single side car is seen on that famous motor way, so when three glide by in parade formation, with the passengers snugly ensconced under rubber lap robes and appearing perfectly content, the natives, quick to recognize something new, stop and speculate as to what it can be. In this case it happened to be five members of the sales staff of the Hendee Mfg. Co. and a Goodyear tire man out on a little "joy ride," as they were pleased to term it.

THE INDIAN SEXTET IN NEW YORK

It so happened that this party were at the Indian factory in Springfield attending a sales convention, and on Monday, 6th inst., finding some spare time on their hands, looked around to see how they best could spend it. Someone discovered that there was a race meet scheduled for Guttenberg, N. J., on Tuesday, 7th inst., so it was suggested that a side-car party be made up to "take in" the races. Once agreed on, no time was lost in getting under way, and the party of six pulled out of Springfield at 1.30 p. m., Monday. The party consisted of P. B. Whitney, Chicago branch manager; F. D. Shomo, F. L. Hunt and A. H. Crocker, travelers; Herbert Kipp, of the Toronto agency, and D. E. Dunn, a Goodyear tire man. All took turns at operating the machines.

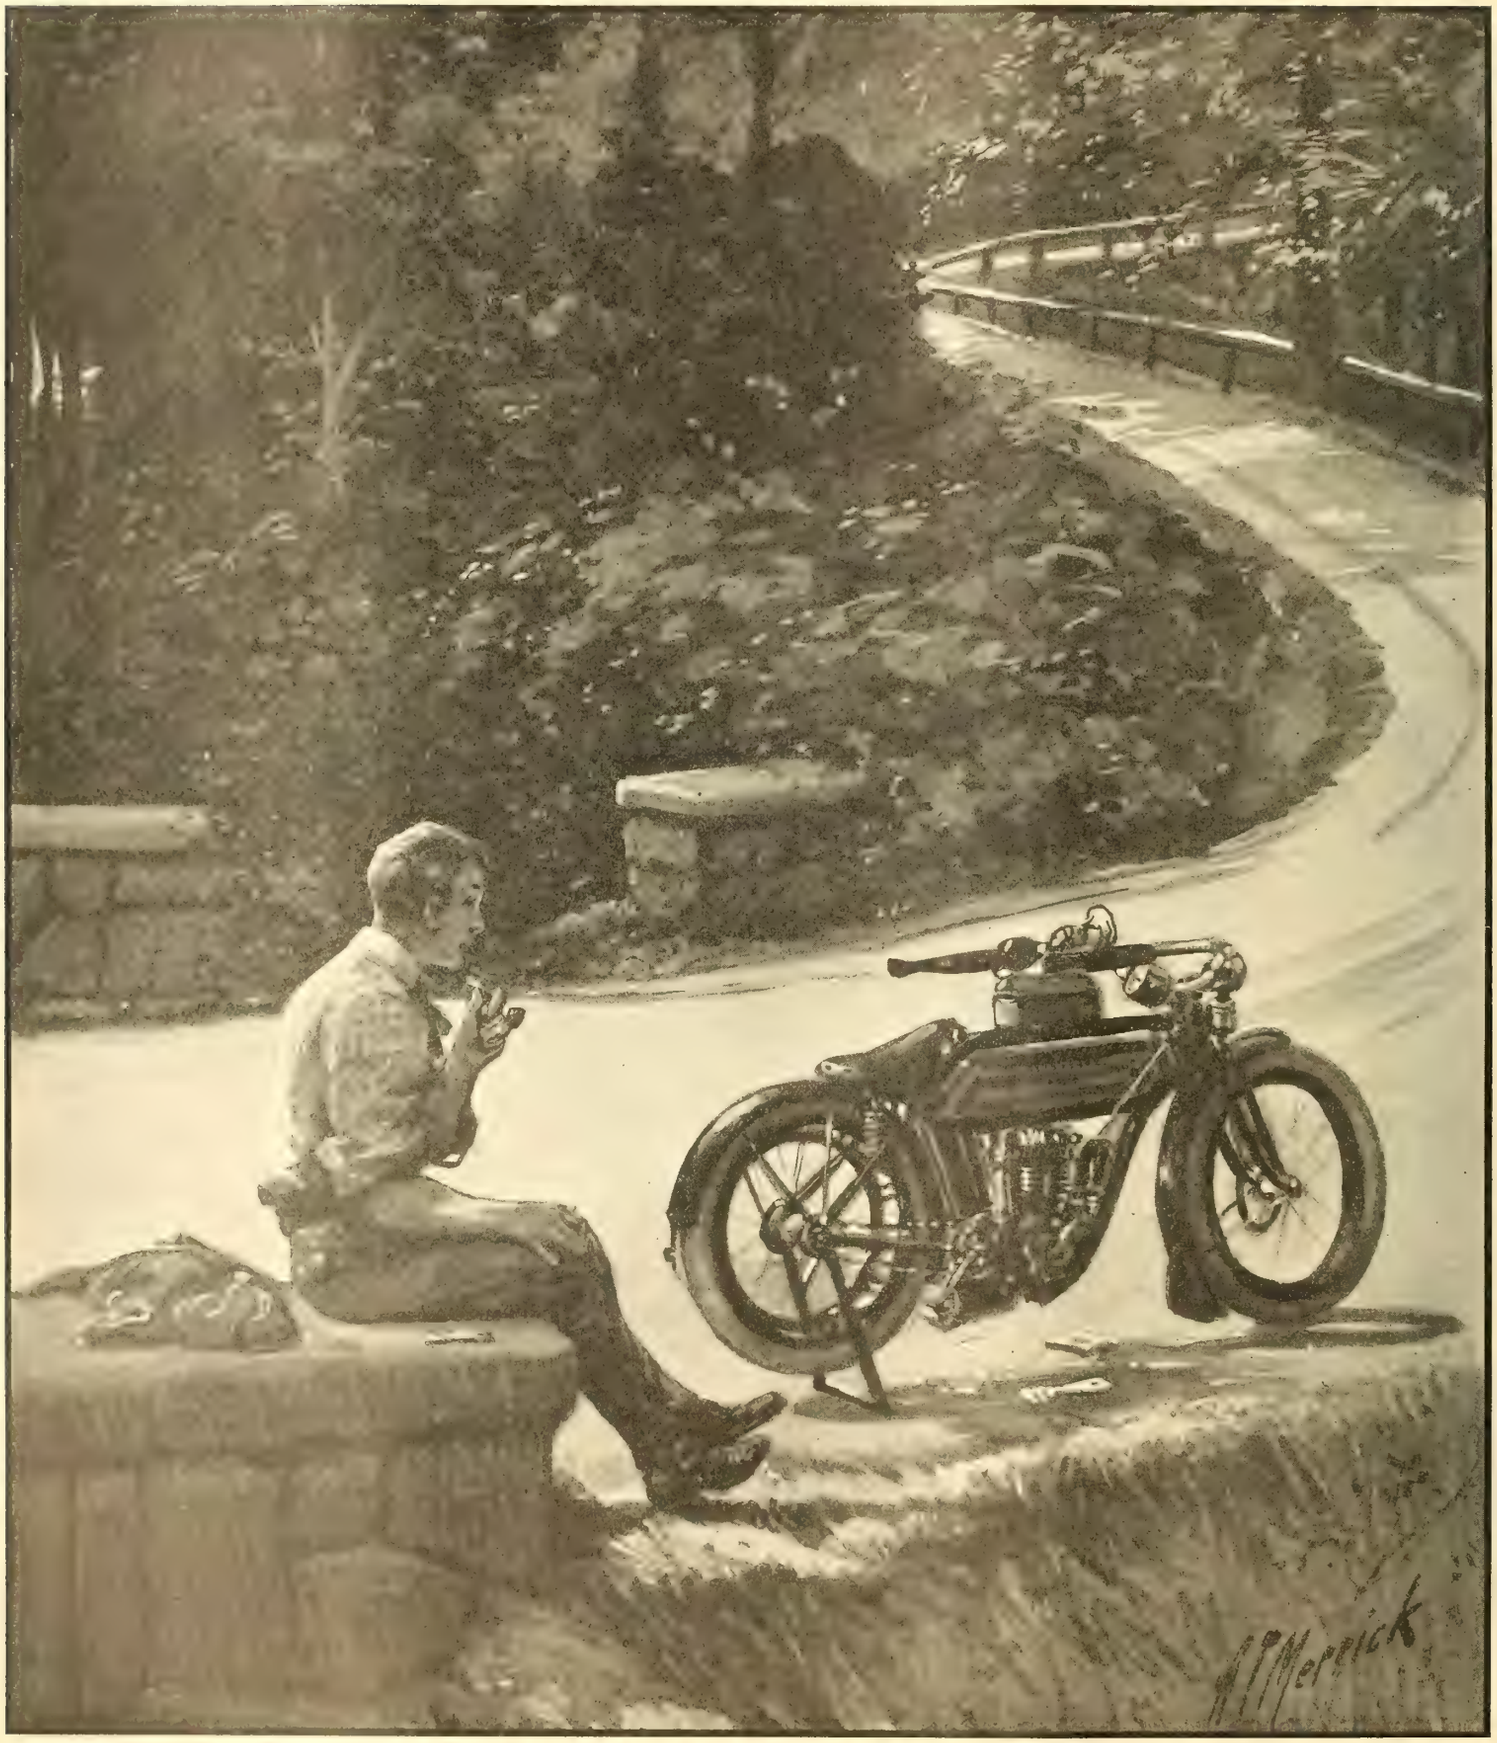
Rain was encountered all the way to Meriden, 45 miles out, where a stop was made for lunch, and the roads, which ordinarily are good, were exactly the opposite. During the stay at Meriden the rain let up slightly, but when the party reached New Haven, at 5.30 p. m., Nature's water works still were functioning healthily. It was decided to stay over for the night in the college town, and after garaging the machines and making themselves presentable the sextet went around to call on Agent Cox. Cox recognized them—that is, some of them, for Whitney used to rove around Connecticut once—but Cox could not recall any names. After being bantered for quite a while, and failing to place them, Cox demanded to be introduced, or reintroduced, and then all hands "had something."

Tuesday morning at 9 o'clock the party left New Haven, with Guttenberg 85 miles away. The roads were heavy from the rains, but the machines ploughed through without faltering. At Norfolk there is a steep hill going out of the city, and as the machines approached this a race started with a motor car and a trolley. Both the four-wheelers were trimmed, but as Whitney and Kipp were passing the motor car it plunged into a big puddle of water and drenched them. At the top of the hill they stopped to remove some of the mud and dry out a bit.

Whitney put his gloves on the cylinders to dry and forgot them while doing something else, and when he picked them up holes were burned in them. He decided to discard them, but Kipp decided that he could put them to a new use. He had on low shoes and his feet were well splashed with mud, so he cut the fingers from the gloves and used the remainder for emergency leggings. Outside New Rochelle the party got off the road, but soon got back again and reached New York about 3 p. m.

Even yet their troubles were not over. When they crossed the ferry to Jersey they were held up by a motorcycle officer who wanted to know where their numbers were. Explanations were in vain, and he tritely put it that if they wanted to go to the track with numbers it would cost $2, while the fine for going without would be $27.50. So the machines were left in the ferry house temporarily and the party hired a motor car and went to the track in style. After the races they returned to New York, and that night went around town and saw how New Yorkers observe Election Night.

The machines were 1911 Indians, with seven-horsepower motors, two-speed boxes and 1912 improvements. The side-car attachments were Milfords, made in England, and had wicker seats. They were very comfortably sprung, and all of the party reported that they experienced no fatigue while traveling over rough roads in them. The visitors started back to the factory on Wednesday afternoon, well pleased with their little outing.



"Girlies" Race at Woodstock Meet.

Woodstock, Ont., Nov. 7.—Woodstock had its first motorcycle races on Canadian Thanksgiving Day, October 30, when two events were run in connection with automobile races, and were highly seasoned with excitement. One of the two-wheel speed parties was a ladies' event, three miles to go, and brought out two starters, Miss "Dolly" Golden, "of Syracuse," and Miss Mack, of Toronto, both mounted on Motosacoches. Riding like veterans, the girls exchanged the lead and fought in real earnest, "Dolly" winning by two lengths in 5:59. The five mile open "blew up" when Billings, a Detroit (Mich.) rider was crowded to the fence, breaking a leg. This happened at 3½ miles, and the two other contestants quit immediately, just as Kerr overhauled Forbes, who was leading. The track was rough and unsuitable for fast work.—W. M. G.

Toronto Club Suspends Its Founder.

Toronto, Ont., Nov. 7.—It doesn't pay to flaunt the rules laid down by the Toronto (Ont.) Motorcycle Club, even though the offender is a founder of the club, as Charles Orr has found out to his cost. At the last meeting, Orr was suspended for one year for racing his motorcycle against a motor car at an unsanctioned automobile meet held in that city on the 30th ult., after the club had forbidden any of its members to do so. Before the Toronto club affiliated with the F. A. M., the local automobile folks recognized it as the arbiter of motorcycling in that section and secured its sanction for motorcycle events, but in this instance the car promoters conveniently or otherwise "overlooked" the formality, while the club is quite determined to retain control over local motorcycle affairs.—W. M. G.

At a regular meeting of the Rochester Motorcycle Club, held on October 25th, the resolutions against the use of the cut-out were unanimously adopted, setting the fine for violation by club members of one dollar.

At the foot of a long hill—both ways;
Pipe gone out—no matches;
A shower on the way;
Half an hour before sundown;
Only carbide ashes in the lamp;
Ten cents in his pocket;
Twenty-five miles from home;
And an empty tank.

NINE TEAMS START IN BUFFALO SIX-DAY RACE

Before a Record Crowd America's Top Notch Professionals Meet in the Season's First Long Grind—Interesting Situation Develops When Scores for First Day Are Announced.

The "little" six-day race in progress since Monday, the 6th inst., at Buffalo, N. Y., gives promise of developing into one of the most interesting situations the game has ever seen. From reports received there appear to be two scores, one, the actual, and the other, that given out apparently for the benefit of the "dear" public. This latter may be called the "box office" score, as the only explanation given for its existence by its sponsors is that record distance, or close to the record, is necessary to draw the all important "gate."

The process of deriving this "record" score is as interesting as it is original. During the evening of the first day, Monday, all of the riders were called from the track for a fifteen minute intermission, to give Charley Turville and Jimmy Hunter an opportunity to ride a match race on motorcycles, and for the latter to give an exhibition.

When the total score for the day of eight hours was announced, 15 miles and 4 laps was added to the actual score, it being figured that the riders would have covered that distance in the 15 minutes intermission. "Some" bicycle riding on a nine lap track! Floyd A. Macfarland is the nominal manager of the race and Louis Debo the N. C. A. "commissioner," according to a local paper, "is in charge as referee with a big corps of able officials."

First Day—Monday.

At 3:04 P. M. today, Starter Fred Vokes fired the shot that sent nine riders, lined up for their respective teams, on their journey of eight hours per day, to finish next Saturday night. Just previous to the start all of the eighteen riders competing in the race were assembled at the trackside and given their final instructions by Louis Debo, representative of the National Cycling Association for District "B."

Those who faced the camera brigade and the flashlight artillery and immediately following those preliminaries took up the initial work for their respective teams of sprinting and grinding out the miles in return for the Buffalonian dollars, were: Fred Hill, Eddie Root, Pete Drobach, Menus Bedell, Martin Ryan, Walter De Mara, Pedlar Palmer, Elmer Collins and Ernest Jokus.

A rolling start with a preceding one lap for line-up was given and the festivities began at once. A continuous series of sprints and jams were indulged in by all the riders, evidently for the purpose of trying each other out. Ryan and Carslake were the first to get frisky and were likewise the first to show distress, and during the later hours were several times in danger of being lapped by the field.

Twenty-four miles and seven laps was the distance covered in the first hour, with Joe Fogler of the Fogler-Root team, leading. The century was turned in 4 hours and 4 minutes, with Fred Jones, of the Jokus-Jones team, at the head of the line.

During the intermission Jimmy Hunter and Charley Turville furnished some thrills in a closely contested match race for two miles on the "gas ponies," Hunter winning by a narrow margin in 2:39⅕. Hunter also rode an exhibition mile in 1:16.

Various attempts at lap stealing came to naught, all of the teams finishing with even scores, Fogler winning the final mile from Menus Bedell in 1:59.

The scores for the first eight hours are as follows:

Hour	Team	Miles	Laps
1	Fogler-Root	24	7
2	Fogler-Root	49	5
3	Clark-Hill	72	8
4	Bedell-Bedell	96	5
5	Palmer-Stein	120	3
6	Jokus-Jones	140	0
7	Fogler-Root	161	1
8	Fogler-Root	183	4
	Announced score,	198	8

Second Day—Tuesday.

This being election day, the start of the second instalment was deferred until 5:05 P. M. For the first few hours the riders were content to change pace regularly, occasionally relieving the monotony by "near" sprints.

After 46 minutes of riding, the actual 200 mile mark was passed at 5:51 P. M. Ernest Jokus, of the Jokus-Jones team, led over the double century.

In the first hour, 23 miles 3 laps were covered, bringing the actual total up to 206 miles 7 laps; Ryan, of the Ryan-Carslake team, was in the lead at the time.

At 6:30 P. M., Root, Pye and De Mara opened a big gap on the field, but the effort fell flat when De Mara refused to set his share of the pace to complete the get-a-way.

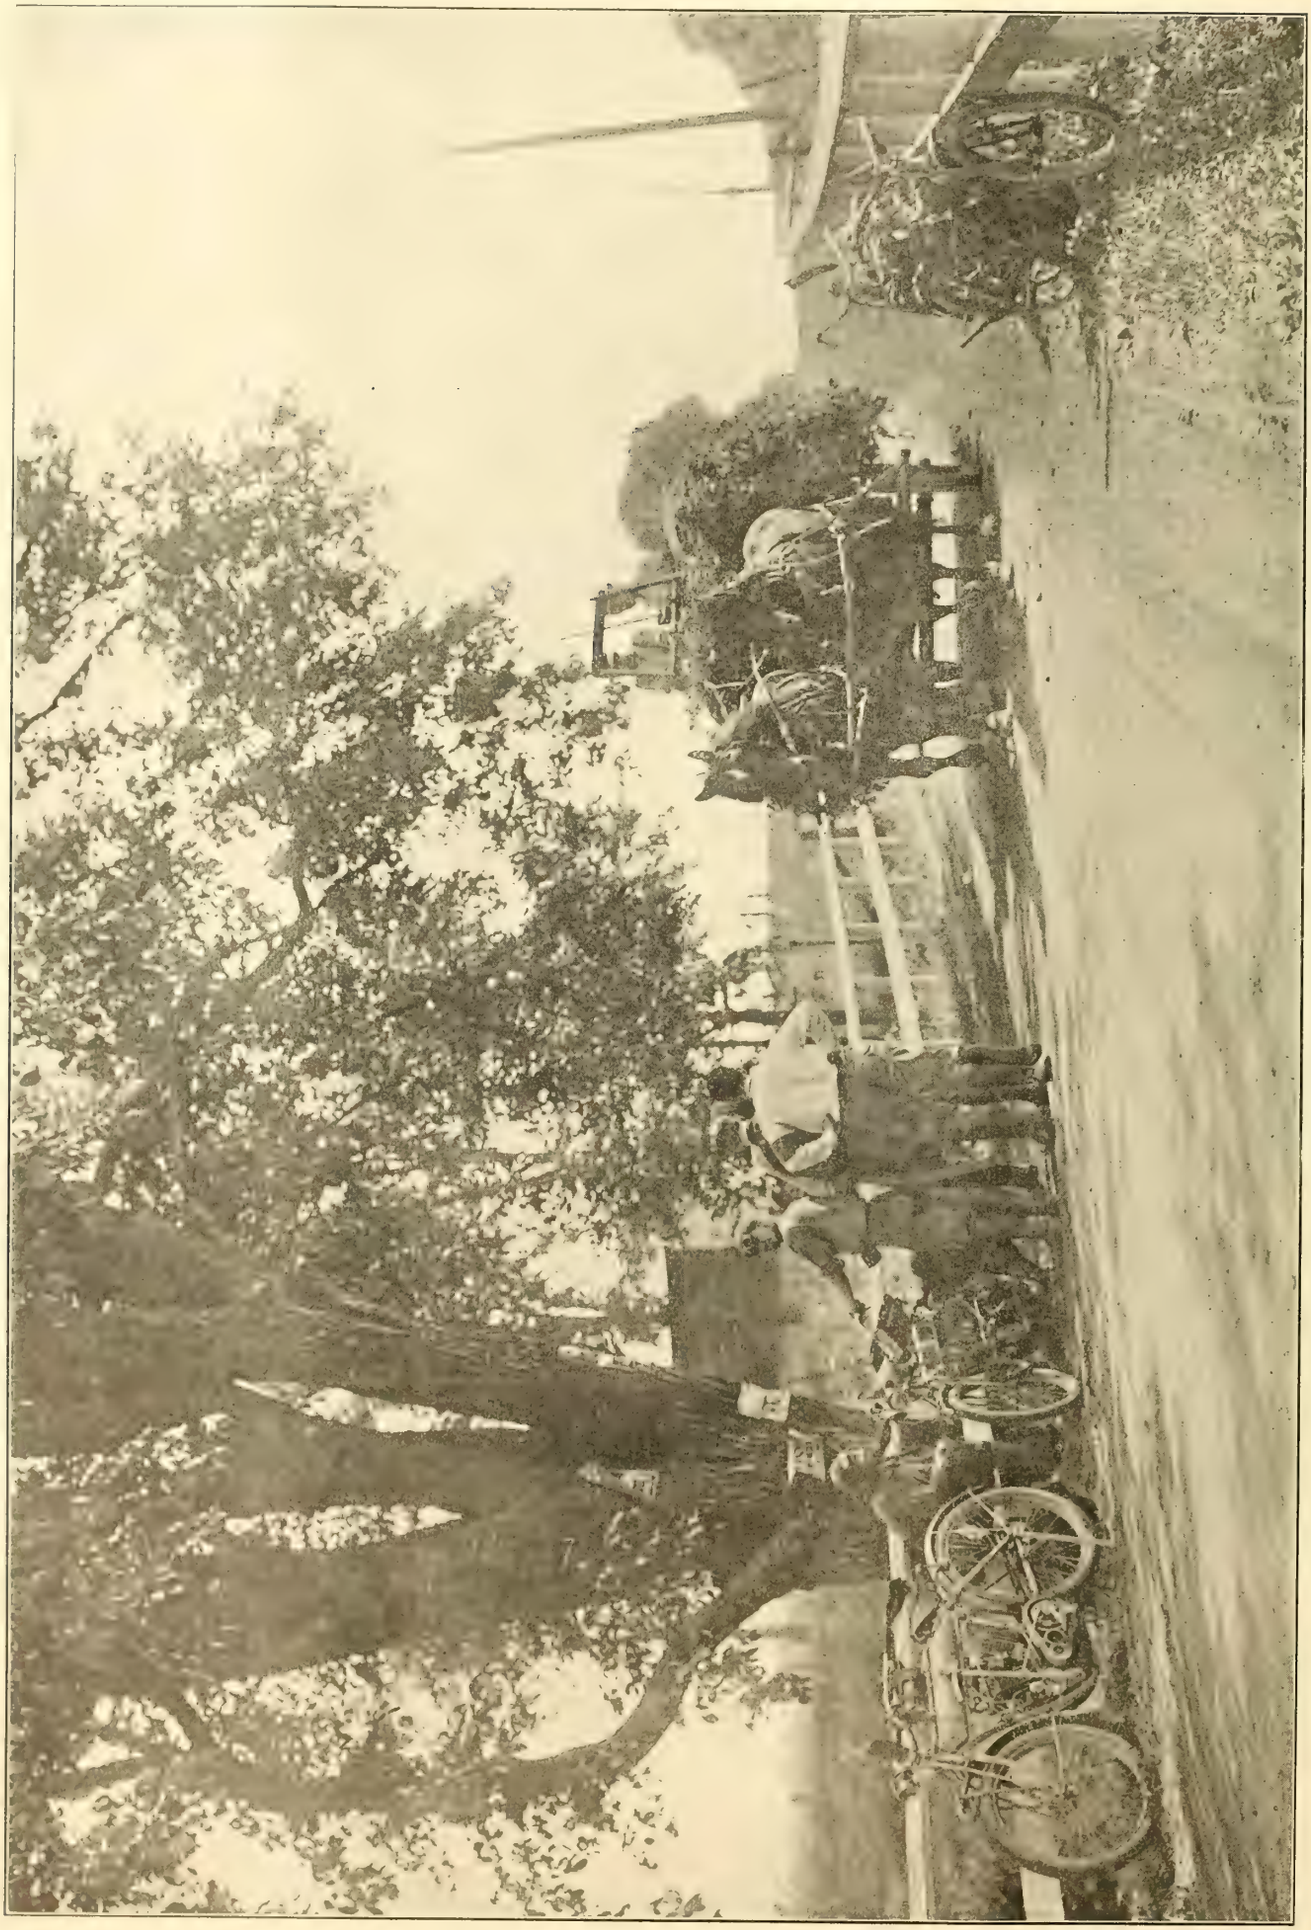
Turning the 306th mile at 9:50 P. M., Eddie Root started a jam which spelled disaster for the Ryan-Carslake team. Root jumped away and was relieved by Fogler in an excellent pick-up, and the team by rapid reliefs and sprinting soon had a promising lead, but the field eventually caught up, and the only team to lose distance was the Carslake-Ryan combination, it being set back a lap, although Ryan made a valiant attempt to maintain their position in the line.

During the lull following, Jumbo Wells bolted, and in two laps gained the length of the stretch on the field; his partner, Elmer Collins, took up the work and drew away for half a lap, when Fogler punctured and the referee called a cessation by ringing the bell, as is provided for in case of spills only, thereby depriving the Collins-Wells team of a lap gain on at least a majority of the teams, if not on the field. Ryan and Carslake were the only ones to suffer, they being set back another lap. Following the scramble and while all were riding clowly, Hill and Lawrence collided and fell but were uninjured.

At 11:15 Ryan and Carslake "regained" one of their lost laps amidst great cheering.

Eddie Root won the final sprint from Fred Hill, the time for the final mile being 2:09.

Jimmy Hunter won the two mile pursuit motorcycle race by 35 yards from Charles Turville, in 2:36⅗. Hunter also gave two one mile exhibitions, the first in 1:18⅗ and the second, 1:15.



The total actual score of 353 miles 5 laps and the announced score of 370 miles is held by eight teams, with the Ryan-Carslake team one lap in the rear. Score by hours:

Hour	Leader	Actual Miles	Actual Laps	Announced Miles	Announced Laps
9	Ryan-Carslake	206	7	223	1
10	Fogler-Root	223	7	245	1
11	Collins-Wells	252	8	269	2
12	Fogler-Root	274	0	290	4
13	Clark-Hill	297	3	313	7
14	Clark-Hill	320	0	336	4
15	Fogler-Root	340	8	358	3
16	Fogler-Root	353	5	370	0

A further discrepancy of 8 laps in addition to the 15 miles and 4 laps will be noted in the comparison of the scores of the 9th, 10th and 11th hours. On the scores of the 12th to 16th hours, inclusive, this discrepancy gains another lap, a total of 16 miles advantage the announced score has over the actual riding.

Final score for Wednesday is as follows:

Team	Distance (Actual Mileage) Miles	Laps
Bedell-Bedell	532	0
Pye-Drobach	532	0
Jokus-Jones	531	8
Hill-Clark	531	8
Fogler-Root	531	8
Collins-Wells	531	8
Palmer-Stein	531	8
De Mara-Lawrence	531	8
Ryan-Carslake	531	4
Announced score	547	5

RESTING ON THE ROAD TO BUFFALO

The World on Wheels: News Notes from Everywhere

W. J. Teubner, former amateur star of the Merkel racing team, has joined the Indian forces. He is at the factory acquiring an insight into the way Indians are built.

Tacoma's city commissioners are preparing a new motor vehicle ordinance, which will have a special paragraph on the operation of motorcycles within the city limits. It will be off the press in the course of the next few days. F. K. H.

Owing to a typographical error the account published in these columns, issue of October 7th, showed that Charles H. Thomas, of the Crescent B. C., Baltimore, Md., rode 35,334 miles during the year. The report should read that distance, including 86 centuries, as the total score of the club.

Terre Haute, Ind., Nov. 3.—The Central Union Telephone Co. to-day placed three more motorcycles in its work here for the "trouble shooters" in the suburbs of the city. The machines are of the "1912" model four-horsepower Excelsior make. They were purchased through the General Electric Co.

Fred Thompson, riding an Excelsior, won the five mile motorcycle race which topped the speed card at the automobile meet held at White Plains, N. Y., on Tuesday, 7th inst. His time was 7:56. Robert Moore (Flanders) outdistanced A. Todd (Yale) in the scramble for second. Skidding into the outer fence on a turn, Marshall Thompson, on a Merkel, was tossed over the fence and sustained a severe cut on the right leg which necessitated medical attention.

The annual chestnut run of the Racycle B. C., of Baltimore, was held last Sunday. Quite a few members took advantage of the fine weather to take a spin into the country. They obtained a good supply of chestnuts by invading some woods five miles off the main road, which had not been wiped clear by hunters of the nut. C. F. Y.

Members of the Elmira (N. Y.) Motorcycle Club enjoyed a smoker and lunch in their club rooms on the evening of October 26th. A fine lunch was served and the evening was passed in story-telling, music and cigars. The club has neatly furnished apartments and is preparing for increased membership. The Fisk Rubber Co. has contributed a tire to be awarded to the member of the club securing the greatest number of applications for membership before January 1st, 1912.

Seven members of the Louisville Motorcycle Club enjoyed a social run to Lexington, Ky., a total distance of 166 miles, on Sunday, October 29th. Punctures and blow-outs were the features of the day, although the roads were in fine condition. Five riders of Lexington accompanied the Louisville boys to Frankfort on their return trip. Those who participated were: J. B. Coblens (Thor), O. J. Kuhn (R-S), O. J. Hubbuch (Thor), John Gatz (Thor), R. J. Buxe (R-S), C. Fisher (Thor) and C. E. Rodgers (Thor).

Terre Haute, Ind., Nov. 3.—Guy Jackson has been elected president of the local Indian M. C. to fill out the unexpired term of Frank Marshall, who resigned to go to Louisville, Ky. George Splaty was elected vice-president. The club has remodeled its club rooms and purchased a lot of new furniture and fitted up an ideal lounging place for the members during the winter. None of the boys have laid up their machines yet, but the open fire in the club rooms feels good in the evenings and has proven a good drawing card.

The Chesapeake M. C., of Baltimore, recently organized, held an enthusiastic meeting last week at which several new members were admitted. The club is progressing nicely and the officers expect to have 50 members before the first of the year. The members will go in for a little sociability outside of motorcycling, and will give a dance on December 11th. Last Sunday a short run was made to Cockeysville. About 20 members of the Maryland M. C. went to Laurel last Sunday and took dinner. C. F. Y.

The last run of the Syracuse Motorcycle Club was held on November 5th, 27 members starting for Lake View House on Oneida Lake at 10 o'clock in the morning. The route was over the new State road through East Syracuse connected over the old State road near Chittenango to avoid a speed trap near East Syracuse. Canastota was reached about 11.30. Entering the town the roads were so muddy that it was impossible to ride and the members had a fine job pushing their machines to the sidewalk. Some of the boys tried riding on the

THE SYRACUSE MOTORCYCLE CLUB LINED UP FOR THE START OF THEIR LAST RUN OF THE SEASON

walk and came near being arrested on the appearance of a policeman, who guaranteed that it would cost anyone $25 for the offense. After leaving Canastota, however, good State roads to Oneida were used, and on reaching there found dinner awaiting them—fish, wild duck and wild rabbit. Superb! Returning it was necessary again to ride through Canastota, and several of the riders endeavored to go through the mud, with the result that one or two skidded and cleaned up the cross-walks for the town. After getting back on the State road the run was most enjoyable, and it was voted the best the club had ever had.

"In Seattle the City Council recently passed an ordinance prohibiting a second person from riding on the handle-bars of a motorcycle managed by another," said Frank P. Fentress, Tacoma agent for the Excelsior motorcycles, recently.

"Such an ordinance should be passed in Tacoma, as it is a practice that is very dangerous. Just because there is room on the handle-bars for such a feat, and because the machine will stand the weight, is no reason why it should be done. An extra person so mounted cannot help but obstruct the view of the operator of the motorcycle and accidents are liable to happen in consequence." F. K. H.

One of the greatest worries of the motorcyclist is dogs. Many have been the remedies suggested. embracing everything from carrying an ammonia gun to a pocketful of stones. The priming gun in the filler cap of the 1912 Indian motorcycle offers a very handy and efficient weapon, and it can be used as a repeater as long as the tank supply lasts, if necessary, but of course no rider with common sense would be so imprudent as to shoot all his fuel at a dog and leave himself stranded. The gun will carry 12 or 15 feet with good accuracy, and a charge or two in the eyes or down the throat of a canine is certain to make him slap on his brake and slide his paws.

CORRESPONDENCE

Jacob DeRosier To Date.

Editor of the Bicycling World and Motorcycle Review:

When and where was Jake DeRosier born. Please give a brief sketch of his racing career.

A CANADIAN READER,
Toronto, Ont.

Jacob DeRosier was born in Quebec, Canada, in 1879, of French parents, and therefore is 32 years old. His mother and a younger brother now reside in Springfield, Mass. DeRosier started his racing career on a bicycle in 1897 and participated in many road races in and around Taunton and New Bedford, Mass., with fair success. The following year Henry Fournier, the French racing man, brought the first motor pacing machines to this country, and DeRosier lost no time in getting on one. These were DeDion machines. For several years he paced such well known riders as Harry Elkes, John Nelson, Robert Walthour, Hugh McLean, James Moran and others. It was in 1901, when pacing Nelson, that DeRosier used one of the first pacing machines built by Oscar Hedstrom, who later was to build the Indian motorcycle. F. Ed. Spooner, now famous as an automobile and general sporting writer and photographer, was DeRosier's manager in those days. In 1902 Jake rode the first single pacing machine ever used in this country, in an exhibition at the six-day bicycle race in Madison Square Garden, New York. It was an Orient machine. He first rode Indian motorcycles in 1902, and soon after switched to the Warwick, also made in Springfield, and in appearance practically a duplicate of the Indian. At that time there was a board track circuit in New England, and DeRosier appeared at the Springfield, Hartford and Boston tracks. He left the Warwick people to take charge of an automobile garage in Springfield, and remained in this berth for several years, incidentally returning to the Indian, and riding that machine in various contests, between times. It was not until the F. A. M. national race meet of 1908 at Clifton, N. J., that DeRosier became regularly attached to the Indian racing staff, and from then on he rose rapidly, creating new records from one to 100 miles, and winning the world's professional motorcycle championship at Brooklands, England, in July of this year. The month following, shortly after his return to this country, DeRosier changed mounts, and now is riding an Excelsior.

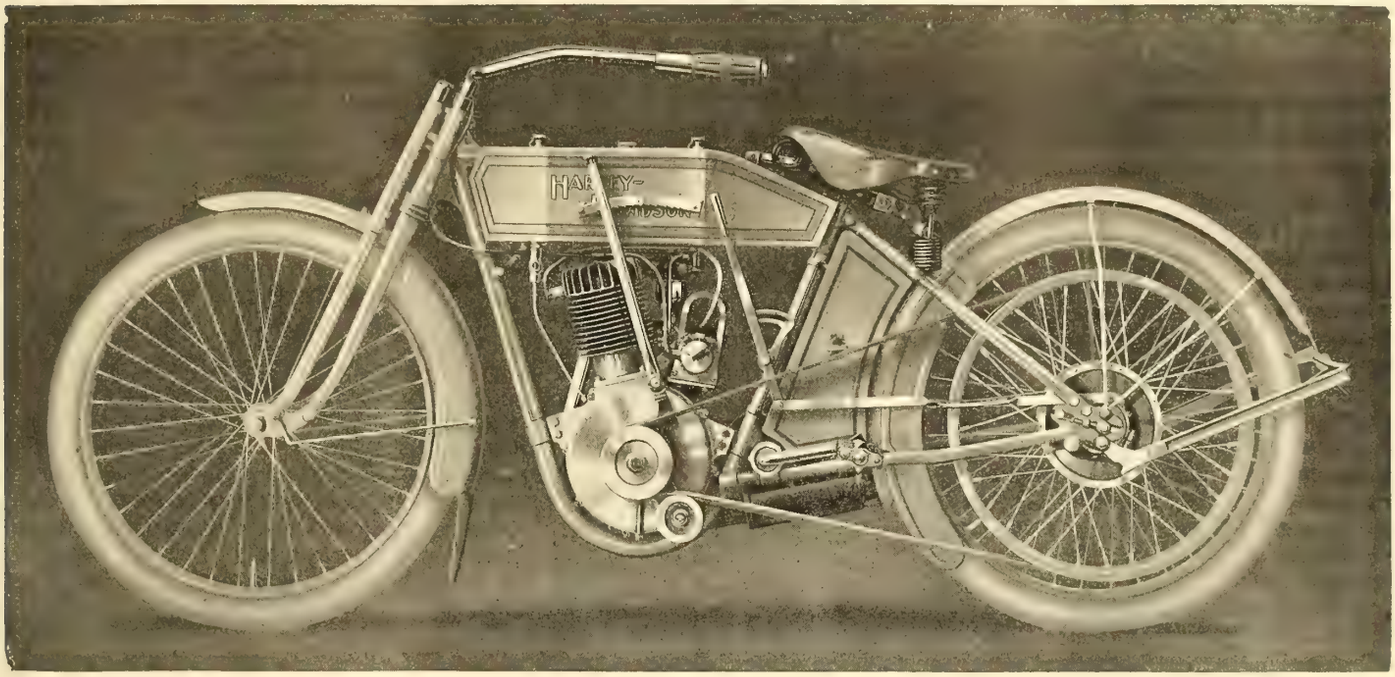
Plea for Low Gear Appreciated.

Editor Bicycling World:

Sir—The letter from Mr. Farwell on lower gears is indeed very timely. By all means let's have lower gears, especially for new riders and boys.

It must be very injurious to young riders to ride such high gears. And I practice what I preach and ride a 66-inch gear on the road.

Last holiday season I went the rounds to buy a bicycle for a long-legged boy. The lowest gear any of the dealers seemed to have was 81 inch, which each claimed to be standard. Now it is a sin to put a Pittsburg boy on so high a gear, for he cannot get up the steep hills at all, and only with difficulty can he get up the slight grades. Even if other districts are not so hilly as Pittsburg, still 81 is too high for a boy or new rider if he wants the greatest pleasure.



You published a very able article about a year ago. I wish you could publish it again and send each of the manufacturers a copy and then maybe our boys' Christmas bicycles would be a source of more pleasure to them. Very truly,

CHAS. E. MINNEMEYER.
Pittsburg, Pa.

THE WAKEFIELD, RHODE ISLAND, MOTORCYCLE CLUB

What Arthur Johnson Did

THE HARLEY-DAVIDSON looked good to a young dealer in Rockford, Ill., last year. Accordingly he went after the agency and got it. That young man was Arthur Johnson. He sold 44 Harley-Davidsons and built up a motorcycle business in one year that he can indeed be proud of. Now he has contracted for fifty 1912 Harley-Davidsons and says that he will sell from 75 to 100 if the factory will let him have that many. Johhson has always been an enthusiastic rider himself, but when he tried out the new model here at the factory about a month ago, his enthusiasm knew no bounds. He spent the best part of a morning riding the machine around. He picked out all the bumps and high spots he could and when he came back he wore a smile that would make Teddy Roosevelt blush for shame. Johnson's 1912 contract was the result of that ride.

Harley-Davidson dealers do not have to establish a reputation for the machine they handle. They do not have to make excuses of any kind. And when it comes to arguments, an actual demonstration of the machine itself is sufficient. Above all, remember that the Harley-Davidson is

"THE MOTORCYCLE WITH THE FUL-FLOTEING SEAT"

and that it is not a refinished 1911 model.

HARLEY-DAVIDSON MOTOR CO.

GLOBE TROTTERS" GET BAD START

Detroit Cycling Trio Meets Poor Roads on First Day of Three-Years' Tour—Will Sing and Sell Post Cards.

Starting on what is intended to be a world-girdling tour awheel, Henry J. M. L. Elskamp and John Hanenberg arrived in Jackson, Mich., on the 31st ult. from Detroit after a discouraging trip over muddy and well-night impassable roads for the first day of their long journey.

These globe trotters have mapped out a route through the United States along the Pacific coast through British Columbia, sailing from Vancouver for Japan more than a year hence. From Japan they go to China, thence to Russia, Germany, France and England. On the return trip to Detroit they will cycle through Canada.

Mr. Elskamp is a native of the Netherlands, having lived in this country but a short time, being employed as a draughtsman in an automobile factory at Detroit. He is an accomplished vocalist, having completed a musical education abroad. One of the means he has for revenue during the trip is singing in theaters, but was unable to obtain an engagement in Jackson. The tourists also sell post-card photos of themselves, promising to mail souvenir cards from Japan to all purchasers of cards along the route.

They expect to be on the road between two and one-half and three years. The third member of the party, Bieter Koolwyk, was injured on the eve of departure from Detroit, having sustained a sprained ankle while alighting from a street car. He expects to join Elskamp and Hanenberg in Grand Rapids, the trip to the Furniture City being made en route to Holland, where the cyclists will meet many friends.

While in Jackson Mr. Elskamp obtained the signature of Mayor Sauer to a document certifying that the travelers stopped over in Jackson en route.

Bicycles Compete at Pottstown Meet.

At the motorcycle race meet held at the Pottstown, Pa., track on the 28th ult., under the auspices of the Pottstown Motor Club, two bicycle races furnished some entertaining sport for those interested in the pedal-propelled mounts. The entries in both events were well filled and keen competition with close finishes marked both races. Summary:

One mile open—Won by Frank Hart, of Reading; second, Walter Reifsnyder, of Pottstown; third, John Ludwick, of Pottstown; fourth, Daniel Keene, of Pottstown; Time, 3:02.

Two mile open—Won by Paul Hart, of Reading; second, Daniel Keene, of Pottstown; third, Walter Reifsnyder, of Pottstown; fourth, John Ludwick. Time, 6:22.

Thompson Injured at White Plains.

Winning a motorcycle race and the plaudits of the crowd, and five minutes later being rushed to a hospital with a mangled leg, was the quick transition from glory to pain experienced by Marshall Thompson at the motorcycle races held in connection with the automobile meet at White Plains, N. Y., on Tuesday, 7th inst. Thompson won the five-mile event for singles, and in the next event for twins skidded on a turn, crashed into the fence and was tossed over it, severely injuring his right leg. Summary:

Five mile open, singles—Won by Marshall Thompson (Excelsior); second, Robert Moore (Flanders); third, F. Todd (Yale). Time, 7:56.

Five mile open, twins—Won by Ackerman (Indian); second, Ford (Curtiss). Time, 7:03⅘.

O. C. FOSTER STARTING FROM BIRMINGHAM, ALA., ON A 500 MILE BICYCLE TRIP

BUFFALO OPENS INDOOR SEASON

Pro's and Amateurs in Exciting Battles on Armory Track—Collins Wins Paced Match With Bedell.

Buffalo, N. Y., Nov. 4.—Large fields and keen competition with close finishes in every event except the second heat of the Kramer-Clark match race, at Buffalo, N. Y., on Saturday, the 4th inst., furnished 4,500 spectators with excellent entertainment and plenty of excitement at the first professional meet of the season on the new indoor track in the 74th Regiment armory.

Nineteen events in all were on the program, among which were an open and a handicap for the amateurs, and in which were entered all the locals as well as visiting talent from Newark, N. J., and Canada; a match race between Frank L. Kramer and A. J. Clark; a motor-paced race between Elmer Collins and Menus Bedell; "dare-devil" exhibitions by James Hunter on a motorcycle and two handicap races for the "big guns" who are here to ride in the six-day race during the week of November 6th.

The match race, mile heats, was easily the feature event of the evening, although there was but one heat, the first, in which there was a most interesting finish; in this heat Kramer forced Clark to the front at the start, and then jumped from the rear at half a mile to go, winning by almost a length. The start of the second heat was a duplicate of the first; the champion waited for the bell before making his bid, going around Clark in the back stretch and winning by 10 yards, Clark easing up when passed.

Elmer Collins also had little trouble in defeating Menus Bedell in two straight five-mile heats of their motor-paced match race, taking the first heat by 30 yards in 7.01⅕ and the second by 80 yards in 8.44⅗.

In the five-mile professional open Clark, with a good pull from Freddy Hill, took the premier position after a sharp duel with Joe Fogler down the stretch.

A "train" composed of Hill, Fogler, Root and Drobach was being operated in the final of the mile professional handicap, but was wrecked when Fogler punctured and Fell. Walter DeMara (55) won, Charley Stein (75) just nosing out Percy Lawrence (65) for second.

The amateur events looked "all Newark." Cavanaugh and Heidrich taking one, two, in the half-mile handicap from scratch and 10 yards, respectively. Their winning streak came to grief, however, in the mile open when both went down in a crash when Fred Schudt, of Buffalo, fell. Summary:

Half-mile handicap, amateur—Won by Frank Cavanaugh (scratch); second, Paul Heidrich (10); third, L. Safford (35). Time, 1.01⅗.

Three mile open, amateur—Won by Al.

Krushel; second, Joe Schneider; third, H. Kriegbaum. Time, 6.57⅗.

One mile handicap, professional—Won by Walter DeMara (55); second, Charley Stein (75); third, Percy Lawrence (65); fourth, Peter Drobach (35); fifth, Fred Wells (45). Time, 1.56⅗.

Five mile open, professional—Won by A. J. Clark; second, Joseph Fogler; third, John Bedell; fourth, Menus Bedell; fifth, Walter DeMara. Leader of most laps, Pedlar Palmer, 8. Time, 10.34⅗.

One mile motorcycle exhibition by Jimmy Hunter. Time, 1.20. W. A. B.

Sanborn Leads Crescents in Points.

Captain Huber, of the Crescent B. C., of Baltimore, in his report last week, announced the standing in the run attendance contest for 1911 up to the end of October. Four men are tied for first and second positions, and from present indications it will be necessary to continue the contest into next year in order to play off the tie.

A. Leimbach and Thoms are holding down first place with 170 points each, a perfect score, they not having missed a run, while W. Leimbach and Doc Sanborn are second with 165 points each, each having missed one run and holding the tie since last April.

The top-notch pluggers are clamoring for long runs, figuring that the possibilities of trouble overtaking each other are greater on long than short distances, and thus forcing the unfortunate man down. The remaining contestants and their points are: Langdon M. Sanborn, 160; Alfred J. Baker, 120; J. Fred Huber, 100; Thomas W. Baker, 80; C. Edward Berigtold, 60; George Peilstocker, 40; Charles Bagnol, 10; John Andreas, 5; Joseph F. Solan, 5.

The club held its last moonlight run of the season on Thursday, November 2, the members running out to Pikesville. The cool weather forced the discontinuance of these runs, it being customary to hold two of them every month during the warm weather. C. F. Y.

Royalty Enjoys Cycling as a Sport.

One occasionally hears the statement in certain quarters that cycling as a pastime is dead; that bicycles are used for business purpose only. The following named persons, all of whom use bicycles regularly, could scarcely be said to ride them for business purposes only: King George IV. of England, Princess Victoria, the Czar of Russia, the Czarina of Russia, ex-King

KING GEORCE, AN ENTHUSIASTIC CYCLIST

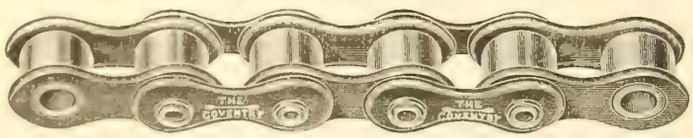
Manuel of Portugal, the Crown Princess of Austria, the Sultan of Morocco, the Duke and Duchess of Portland, the Duc d'Aosta, the Earl of Shrewsbury and Talbot, Baron Alverstone, Lord Dunedin, Lady Katherine Beauclerk, the Countess of Erroll, Lord Ingestre, the Earl and Countess of Onslow, and Sir T. D. Gibson-Carmichael, Bart. New evidence is presenting itself daily that cycling is gaining in popularity both in this country and abroad.

Affiliated Clubs Against Cut-Out Fiends.

The list of affiliated clubs that are passing the resolutions suggested by The Bicycling World and Motorcycle Review against the use of the muffler cut-out is growing daily, and it will not be many months before laws against this nuisance and detriment to the sport are passed in practically every city of every State throughout the country. The Oakland (Cal.) Motorcycle Club passed resolutions at its meeting held on the 25th ult., calling for a fine of 50 cents for the first offense and dismissal from the club for the second.

J. Leo Sauer states that he has under consideration proposed bills to be presented to the various legislatures throughout the country and suggests that the committees appointed by the various clubs as a result of the resolutions passed communicate with him. This, no doubt, will save a good deal of trouble and time on the part of the club members and assure them a proper law to be presented, as Mr. Sauer has given much attention and thought to the question. His address is 51 Chambers street, New York.

Century's Championship Contest.



On Sunday, November 5, at the Guttenberg race track, the Century Road Club of America held a set of races, the first of a series to decide the club championship. Three races in all were contested, a mile scratch and a three- and five-mile handicap.

By winning all three events Dawson finished with a total of 15 points and Markowitz, who was second in each, had nine points. Hintze, Kurdle and Frayzee scored a point each. All the events were hotly contested, 11 men making up the field in each

GREATEST VARIETY OF MODELS

All sizes for Bicycles, Motorcycles and Coaster Brakes.

THE PARISH & BINGHAM CO., Cleveland, O.

A New Prest-O-Lite Motorcycle Gas Tank, Equipped with Gauge, $10

The addition of a gauge makes our motorcycle gas tank similar to our famous automobile tank in everything but size. This gauge shows, at all times, the amount of gas in the tank.

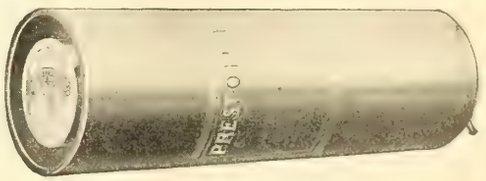
Our tank without gauge, which formerly sold at $10, will hereafter sell for $8. We have arranged with our dealers to take in this tank and exchange it for the new model with gauge, if the user desires, upon payment of the difference in price, $2.

Prest-O-Lite Tanks are now handled by nearly all motorcycle and automobile dealers in the United States.

Investigate Prest-O-Lite

Some of your friends are probably using this famous lighting system.

Ask them if it costs any more to maintain than the troublesome, treacherous generator.



Ask them about its convenience, safety and insurance against accidents. Ask them how much pleasure they find in having 40 hours of brilliant, unflickering, dependable light, turned on and off like a gas jet.

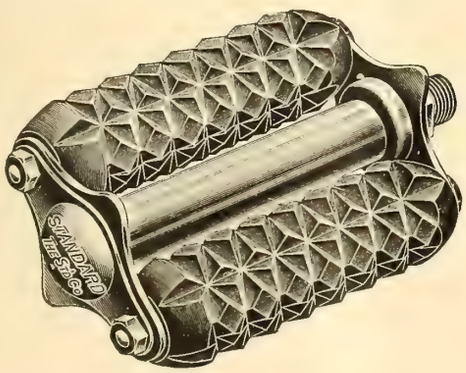
Just one accident due to poor light would probably cost you more than a year's supply of Prest-O-Lite.

But get the genuine. Imitations can be exchanged in very few places. Prest-O-Lite Tanks, when empty, can be promptly exchanged, anywhere and always.

FREE—Our Handy Ruler

Light, flexible, folding foot rule. Half of it is specially made for finding depth of gasoline in tank. Inches and centimeters. Measures tires, etc. Handy in a hundred ways. Sent free on request. Give name and address, and make of motorcycle.

Price of Tank **$10**



Length, 12 inches; diameter, 4 inches; weight, 7 lbs.

The Prest-O-Lite Co.

245 East South Street **Indianapolis, Ind.**

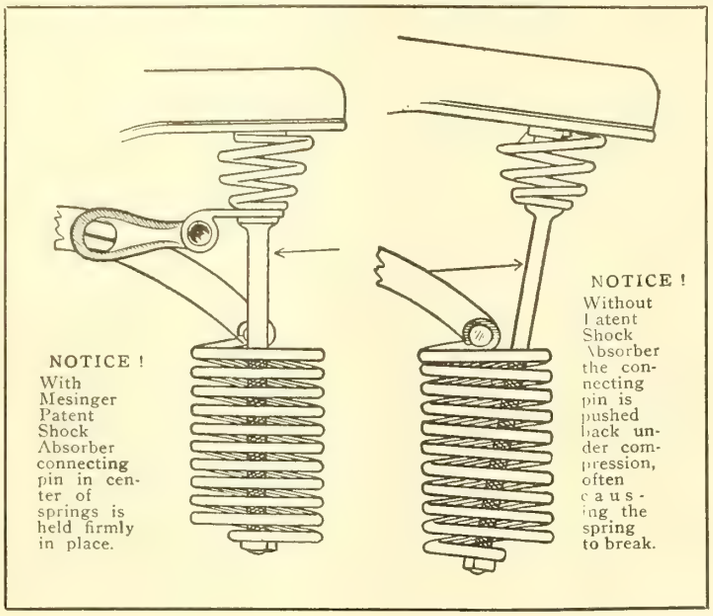
EXCHANGE AGENCIES EVERYWHERE

"Auxiliary Saddles"

The pedals are exactly that, as they bear part of the motorcyclist's weight, and the harder the bumps, the more the pedals bear. That is why one needs those big, generous, easy rubber cushions, that are a feature of the

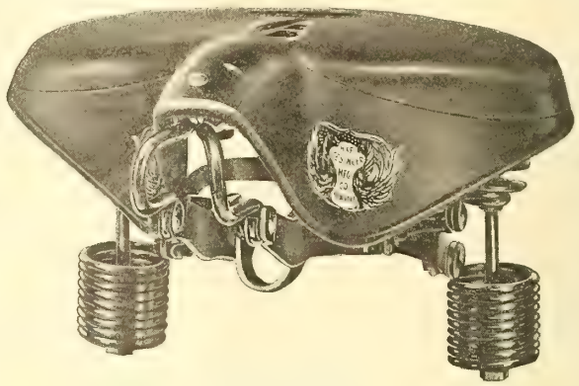
No. 3 STANDARD MOTORCYCLE PEDAL

Deep corrugations in the soft rubber give the "cling" that makes the foot stay on. The pedals sell for $3 per pair.



Our products for the cycle trade include:

EMERGENCY AXLES, SAGER MOTORCYCLE TOE CLIPS, DIAMOND E SPOKES, BRIDGEPORT AND STANDARD PEDALS, SAGER AND STANDARD TOE CLIPS.



THE STANDARD COMPANY, Torrington, Conn.

MESINGER SUPERIORITY

Strongly Recommended by All High Grade Motorcycle Manufacturers

The leading touring machines as well as the racing record breakers are fitted with Mesingers.

Standard No. 4 with Open Front Spring for Low Position

THE PATENT SHOCK ABSORBERS
constitute one of the many points of superiority which make Mesinger Saddles distinctive for comfort as well as endurance.

H. & F. MESINGER MFG. CO., 1801-1807 First Ave., New York

The New R-S

Sold on Quality, Not on Price

Water seeks its level. The price of the Reading Standard was right in 1911 and, regardless of what others may do, will not be cut in 1912. When the New R-S was put on the market with all its exclusive and valuable features it was a foregone conclusion that other motorcycles would have to be improved in quality or reduced in price. We care not what others may do but shall build the R-S even better than in 1911 and the price remains the same.

THE READING STANDARD TOURIST

is the model De Luxe of single cylinder motorcycles with more great big points of superiority than we can begin to enumerate, but here are a few of them: Two Distinct Brakes, Two Oiling Systems, Real Shock Absorbing Seat Post, Adjustable Foot Rests, Two Compartment Gasoline Tank, Combination Hand and Foot Operated Belt Control, Ball Bearing Motor with interchangeable mechanically actuated valves, Removable Steel Luggage Carrier and Tool Box.

Our Advance Catalog Now Ready. Tells the Story of Three Models. Write for It Today.

Just Romps Up The Hills—
Does The Powerful Emblem

Read what this 216 pounds of good American bone and sinew has to say about the Most Powerful Motorcycle built. Think of it the next time you pedal on a steep hill—then write us.

EMBLEM MFG. CO., Angola, N. Y.

Gentlemen:—I have been almost a constant rider of motorcycles since 1906 and must say that of all single cylinder 4 H. P. motorcycles your 4 H. P. EMBLEM leads them all when it comes to smooth running, ease with which it can be controlled and hill climbing qualities. I weigh 216 pounds and can climb a hill with ease that other 4 H. P. machines and a 150 pounds rider can just make with a lot of maneuvering. I never worry over a hill—just keep a-going.

H. P. HANSEN, Bakersfield, Cal.

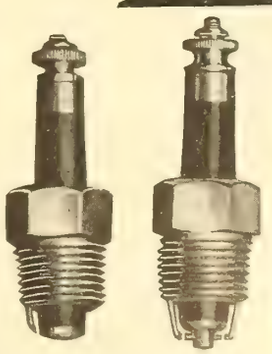
PITTSFIELD

Motorcycle Spark Plugs

Insulation is Always Perfect

PITTSFIELD PLUGS withstand heat without oxidization at the points. We have made a scientific study of spark plugs and know that ours are the best in the world.

Leakage is impossible. They cannot break. Nor do they soot like others. The large, hot, fat sparks occur with regularity.



Pittsfield Plugs are never found defective. *Motorcyclists have learned that they can depend upon them.* ***Write for Our Catalog***

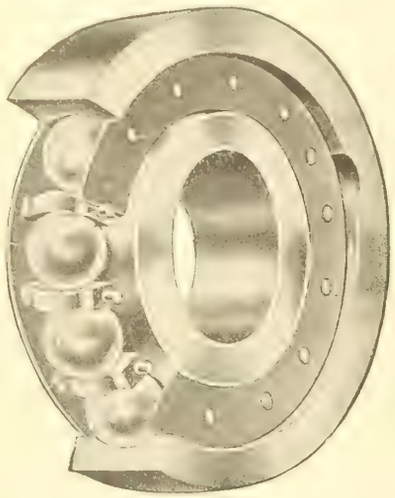
***Full line carried.**

Pittsfield Coils give the same excellent service as our plugs. They are unaffected by vibration, and moisture proof.



Battery Plug $1.00 Magneto Plug $1.25

Schafer Ball Bearings

(MADE IN GERMANY)

are the most suitable bearings for motorcycles

BECAUSE

They withstand vibration due to the strong cage and large number of steel balls.

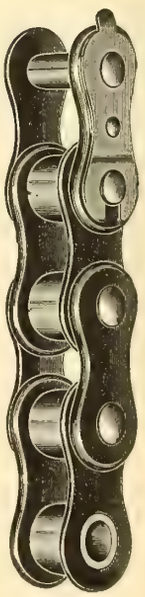
SCHAFER BALL BEARINGS are used throughout the *De Luxe* motor and two speed transmission for motorcycles manufactured by F. W. Spacke Machine Company, which fact proves that SCHAFER BALL BEARINGS stood up under the most severe tests before being adopted and that the best bearing regardless of cost is used on the *De Luxe* motor and transmission.

BARTHEL, DALY & MILLER, 42 Broadway, New York

"Whitney" Chains Are Dependable

THE WHITNEY MFG. CO., Hartford, Conn.

Dear Sirs:—Yours of February 28th at hand. In regard to old chains, I have now covered over 12,000 miles on one set of your chains and have not even exchanged drive chain for pedal chain. Not one link or roller broken. Have carried tandem lately, which is a strain on chains. Just think of what these chains have gone through! From Los Angeles to New York, besides myself pulling 150 lbs. of extra luggage, and then from Canada to Mexico, and all over California, and still stick together. It sounds impossible, but this being the fact.



I will send old chains by express next week, as I intend to put on a new set. The old chains have done their duty, and then some. I think they are still good for a few thousand miles.

Put me down as a booster for "Whitney" Chains, as I will have no other.

Respectfully yours,

A. H. HELGESON.

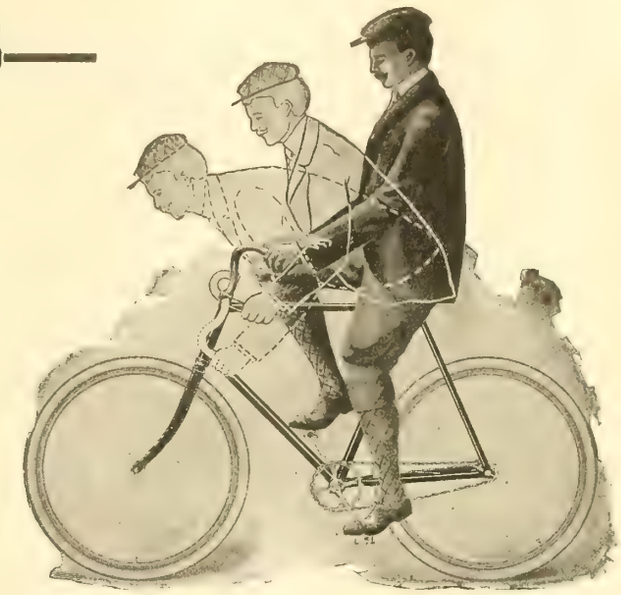
733 Ottawa St., Los Angeles, Cal.

These chains have been driven from the Pacific to the Atlantic, from Canada to Mexico, and all over California, through rain, mud, dust, and sand and are still good.

Can any service be more strenuous and severe than this?

What test could show more clearly the true strength and wearing qualities of "Whitney" Chains?

"Whitney" Chains Are Built for Strains

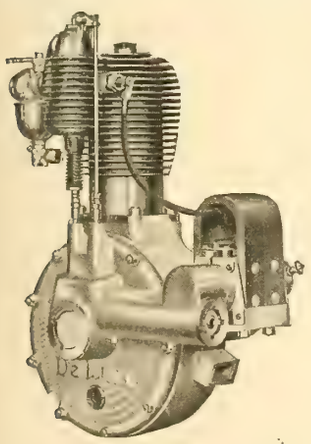


THE WHITNEY MFG. COMPANY, Hartford, Conn.

Assume two bicycles—

one with rigid, non-adjustable bars and the other with the Kelly bar, giving 25 riding positions. Which bicycle will sell more readily?

The Kelly adjustable handle bar is a real contribution to cycling and a positive feature of added value to the machine.



Sales are stimulated when the Kelly is an equipment feature.

The Kelly Bar Has 25 Riding Positions

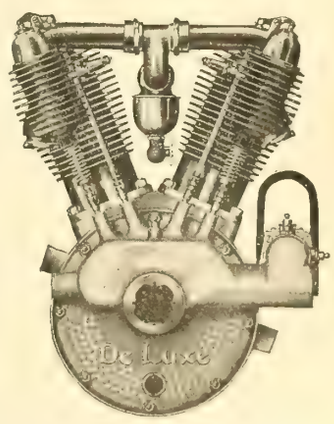
THE KELLY HANDLE BAR COMPANY, Cleveland, Ohio

A REVOLUTION IN MOTORCYCLE MOTOR DESIGN

In bringing out our DE LUXE line of motorcycle motors, we have introduced a large number of improvements, and offer these motors as the most advanced now before the trade.

NOTEWORTHY IMPROVEMENTS.

One piece crank shaft.
One part crank case with cover.
Improved cam and magneto drive.
Oil tight motor.
Large Valves.
Simplified design throughout.
Reduced number of parts.
Quiet running motor.
Large Ball Bearings mounted in steel lined pockets.



Equipped with Bosch Magneto.

These improvements in design, together with the high grade materials used in construction, the modern methods of manufacturing applied, and the remarkable performance of these motors in road tests mark a revolution in motorcycle motor building.

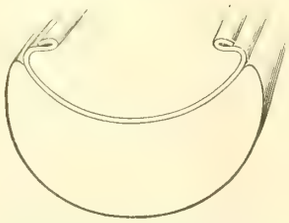
Real Money in This Tube for You

YOU are actually losing money if your stock of bicycle supplies does not include NEVERLEAK, the wonderful Tire Fluid that automatically heals punctures on the run without the rider having to dismount. Thousands of dealers are making big money handling

NEVERLEAK TIRE FLUID

which is the only legalized tire fluid sold to-day.

Besides the fine margin of profit that NEVERLEAK pays there is also a big list of premiums that have value written all over them.



It will pay you to investigate. See your jobber about it, or write us direct.

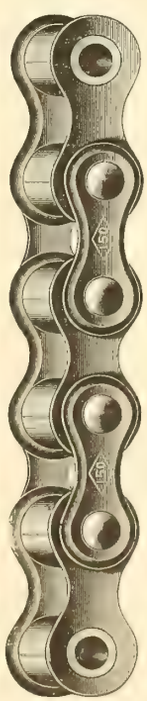
Reliance
(REG. U.S. PAT. OFF.)

In Special Motorcycle Type

A single drop of water will put every spark plug out of business—except one—the "Reliance." Put the Reliance in a glass of water and it continues to spark.

Do you appreciate the full import of this statement? Water is the greatest short-circuiting medium known; if water won't affect a plug, nothing else will. Carbon and soot have absolutely no effect upon "Reliance" Plugs. Its patented electrical action destroys them as fast as deposited.

When you realize that **ninety per cent.** of all plug troubles are caused by **carbon** and **soot** you begin to appreciate why the Reliance should be your first and last choice; you see why those who have once used Reliance troubleless plugs will have no other.



Regular Type $1.00
Magneto Type $1.25

For sale by most dealers, if yours does not carry, write and we will ship prepaid at prices quoted.

Bicycle and Motorcycle Rims, Mud Guards, Belt Pulleys, Etc.

THE MOTT WHEEL WORKS, Utica, N. Y.

For Safety and Service
It must be a SOLAR

That's the verdict of the users of 80 per cent of the high-grade American bicycles.

The test of experience has proved them to be the quality lamps for every purpose—the only lamps absolutely reliable and dependable at all times.

You should have Solars on your bicycles.

BADGER BRASS MANUFACTURING CO.
Kenosha, Wis. [48] New York City

MORE Kokomo Tires will be made during the next twelve months than ever before, because those made in the past have proved so good that riders and dealers not only come back for repeat orders, but bring their friends as customers. That's the kind of business that we like. It is based on the merits of

KOKOMO TIRES

For bicycles two of the Kokomo leaders are:

Kokomo Defender Special

This popular guaranteed tire is specially designed and constructed for road use. It is made from the best materials obtainable, being carefully built up by hand with pure para inner tube, and, owing to the very high quality of the inner tube used, a puncture is very easily repaired.

Kokomo "New Oxford"

A medium price tire, yet so good in quality that it does not do it justice to call it a medium grade tire. We have built these tires so that in case of puncture they will not be worthless but can be repaired. Also furnished in smooth tread.

Every dealer handling these tires is doing a benefit to his customers and to his own bank balance.

KOKOMO RUBBER COMPANY, Kokomo, Ind., U. S. A.

PENNSYLVANIA "Guaranteed" INNER TUBES "No. 503"

For Motorcycles

AFTER months of experimenting, the Pennsylvania Rubber Company has at last evolved a genuinely serviceable motorcycle tube which sells at a reasonable price. This is the Pennsylvania "No. 503."

Each Tube is Guaranteed

So thoroughly tested is this tube, so well made and of such high quality material, that it carries an unqualified season's guarantee.

Pennsylvania "No. 503" Tubes are made in the most popular selling sizes:

26 x 2½; 28 x 2¼; 28 x 2½

NOTICE: In placing this tube on the market, we have contemplated an attractive margin of profit for the trade. Jobbers and Dealers, therefore, desiring to sell Inner Tubes for PROFIT should write to us.

1912 M.M. Announcement

(Brief, But to the Point)

M.M. Twin (8 H.P.)

← $275.

M.M. "Four-fifty" (4½ HP)

← $200

Notice the Rakish Lines on These New Models.

Now that the big noises are all over, the agents of the country are ready to do business. That's just where the M-M always fits. We're ready to do business **now.** 1912 models can be delivered **immediately** for samples and demonstrating purposes.

We have no long story to tell and no great innovations to offer, simply standard reliable goods perfected by our thirteen years of manufacturing experience, at new prices made possible by the natural progress in factory economies and the greatly increased quantities we shall manufacture this year to meet the growing demand for M-M motorcycles.

All we ask is that you get one of our **1912 M-M CATALOGS, NOW READY,** and study the detailed construction of the 1912 M-M. Also look at one of the machines and ride it before deciding on any other make. The M-M speaks for itself. No eight page spread is necessary to convince the live agent that the M-M has points of superiority.

After a thorough comparison—point for point—with any and all other motorcycles made, you will find that the old reliable M-M averages up by far the best, everything considered, regardless of price or claims.

Every detail on the 1911 machine that could possible be improved has been perfected in the new 1912 models. Such as—

Lower saddle position with a special Cavalry saddle, very springy and comfortable.
Separate magneto control lever.
Heavier and better belts (stretchless).
Vanadian steel front fork springs (indestructible).
Lower, wider and longer handlebars with rigid clamps.
More tire clearance.
Long stroke motors (4½ H. P., the most powerful single made this year).
Longer cylinders and piston with four rings

and many other improvements, but still retaining all the good features previously possessed by the M-M. Such as:—

Simplicity of construction and easy accessibility for adjustments or repairs.
Truss frame dropped at seat post.
Bosch high tension magneto.
Schebler carburetor.
Spring tension hand idler.
Easy, comfortable riding qualities.
Positive grip control.
Silent and smooth running motors.
Low center of gravity.
M-M five leaf spring fork, the finest ever made.

It is a fact (and any M-M rider will tell you so) that the M-M will stand more hard service with fewer repairs than any other motorcycle made.

This is the result of the very best materials and workmanship and careful inspection of parts. An important point for the motorcycle agent to consider.

THE M. M. POLICY FOR 1912:

To make more machines and better machines for less money than ever before.
To sell through good agents on a liberal selling plan and use them white in every way.
To stand right back of every machine sold under the M-M guarantee.
To make immediate deliveries even if we have to run nights in rush season to do it.
To ship part orders same day received, which is a mighty important point for the agent to consider.

We Shall Close Up Agencies Fast From Now to January 1st. Get Your Name in NOW.

A New Prest-O-Lite Motorcycle Gas Tank, Equipped with Gauge, $10

The addition of a gauge makes our motorcycle gas tank similar to our famous automobile tank in everything but size. This gauge shows, at all times, the amount of gas in the tank.

Our tank without gauge, which formerly sold at $10, will hereafter sell for $8. We have arranged with our dealers to take in this tank and exchange it for the new model with gauge, if the user desires, upon payment of the difference in price, $2.

Prest-O-Lite Tanks are now handled by nearly all motorcycle and automobile dealers in the United States.

Investigate Prest-O-Lite

Some of your friends are probably using this famous lighting system.

Ask them if it costs any more to maintain than the troublesome, treacherous generator.

Ask them about its convenience, safety and insurance against accidents. Ask them how much pleasure they find in having 40 hours of brilliant, unflickering, dependable light, turned on and off like a gas jet.

Just one accident due to poor light would probably cost you more than a year's supply of Prest-O-Lite.

But get the genuine. Imitations can be exchanged in very few places. Prest-O-Lite Tanks, when empty, can be promptly exchanged, anywhere and always.

The Prest-O-Lite Co.

Goodyears—The World's Most Desirable Motorcycle Tires

Hold All World's Records for Speed and Endurance

Hold Contracts From All Leading Motorcycle Manufacturers for 1912 Output

Here are the 5 great tires. Here are the 12 leading motorcycle manufacturers who have recognized Goodyear superiority and made contracts for Goodyear Motorcycle Tires.

Render Most Service—That Is Why

Goodyear Motorcycle Tires are stronger, more enduring and speedier than any other motorcycle tires manufactured. They render greatest service.

Motorcycles with Goodyear Tire equipment also render greater service. This is why successful manufacturers **specify** them—why successful riders **demand** them.

Motorcycle tires, with treads as thick as Goodyears, are not built. Nor are tires made of better rubber and fabric of greater tensile strength. As a result they are tougher—more enduring. We **know** it because we test them by the side of all other tires.

There's a perfect tire for every road condition in the big Goodyear Line of Motorcycle Tires.

The tires are **made** perfect by the world's greatest auto tire experts—men whose crowning achievement is The Goodyear No-Rim-Cut, today's most popular Auto Tire. The same enduring service given by these premier Auto Tires is also given by these premier Motorcycle Tires. Yet Goodyear Motorcycle Tires cost no more than other standard makes.

GOODYEAR
Motorcycle Tires

Cater to the **best interests** of your **trade.** Secure the **most** for your **tire**-money. Specify one of

The Five Big Tires

1. Goodyear Corrugated Tread Tires—For the average give and take road.

2. Goodyear Studded Tread Tires—For mud, sand, snow and ice travel.

3. Goodyear Non-Skid Tires—For use on slippery pavements.

4 and 5. Goodyear Blue Streak Racing Tires—Hold all world's records. One tire for dirt tracks, another for cement or board.

These tires are fully described in our handsome booklet on MOTORCYCLE TIRES. Send for it at once.

EXCELSIOR SALE CONSUMATED

Schwinn Takes Control — Reorganizing Factory Management—Output to Be Doubled—Kirk and Robie Stay.

The sale of the Excelsior Motor & Mfg. Co. to Ignatz Schwinn, president of the Arnold, Schwinn Co., of Chicago, was consummated on Wednesday night of this week, at which time the checks and contracts were executed and passed. The new organization has applied for a charter and the personnel will be announced later. The price paid by Mr. Schwinn is approximately $150,000, and the lease on the property is arranged for three years with an option for an unexpired term of 18 years. Mr. Schwinn states that the new company will maintain and improve the high standard of Excelsior motorcycles and that the output will be doubled, probably from twelve to fifteen thousand machines manufactured during the coming year of the 4 horsepower magneto belt drive, the 6 horsepower belt drive and the 7 horsepower chain drive models. It is understood that H. N. Kirk will remain as sales manager and F. C. Robie will remain with the company. The factory management will be reorganized and it is stated that there will be a few mechanical changes and possibly a change in price.

Date Set for Trade Meeting.

The regular winter joint meeting of the Motorcycle Manufacturers' Association, Cycle Parts and Accessories Association and the Jobbers' Association will be held on Thursday, January 11th, at the Hotel Astor, New York. On Wednesday, January 10th, at 2 P. M., there will be a meeting of the Executive Committee of the Jobbers' Association and also a meeting of the joint committee on jobbers' list, composed of both the Cycle Jobbers' and the Cycle Parts & Accessories Association. Immediately following these meetings, there will be a luncheon tendered to the Jobbers', Bicycle & Motorcycle Manufacturers' and the Cycle Parts Associations at the Hotel Astor.

Space Alloted for Garden Show.

The space allotment in the 12th annual automobile show, to take place at Madison Square Garden, January 6th-20th, has been completed, and the following exhibitors will be seen in the motorcycle section, which is in the balcony on the 27th street side, during the first week. The numbers indicate the space allotted, which can be found on the diagram shown on another page.

MERKEL TO HAVE CHAIN DRIVE

Adopted for 1912 Models—Four Models Offered in Three Motor Sizes and Two Types of Frame—Prices Reduced.

For the first time in their history, Merkel stock motorcycles will have chain drive on the 1912 models. This "state secret" became public property this week with the announcement of the Miami Cycle & Mfg. Co., Middletown, O., of what it will offer for next year under the Merkel banner. The V belt drive, of course, will be retained, the two forms of transmission being optional on all models. By no means is this all of the new things that will stand forth in reflected glory on the "yellow fellows."

There will be four models, in three motor sizes, and in two types of frame. The new prices also are highly interesting. The complete line is as follows. Four horsepower single, with rigid frame, $200; four-horsepower single, with spring frame, $225; six-horsepower twin, with spring frame, $250; seven horsepower twin, with spring frame, $275. All models will be fitted with a free engine clutch and Bosch magneto at list price, but the rigid frame will be offered only on the four-horsepower single. There will be no battery models, this being the second year of magneto ignition exclusively for the Merkel.

Foremost of the new features is, of course, the adoption of the chain drive. Its adoption by such a leading maker, who heretofore has kept aloof from it, save on his racing machines, gives further convincing evidence of the slow but sure return to favor which this form of drive is achieving in this country. In the Merkel

the chain transmission is applied in the standard accepted form in this country, viz., double chains with countershaft reduction. The short chain is protected by a guard. On the countershaft is mounted an original form of compensating sprocket to absorb all unevenness in the power flow from the motor before it reaches the rear tire. Imported Renold chains, which are noted for their long life, will be used exclusively.

In connection with the use of the chain drive on a spring frame motorcycle, in which field the Merkel has blazed the way, there is an erroneous impression, quite generally existent, that such construction is attended by difficulties in keeping the chains from binding, on account of the contracting and expanding action of the spring frame on rough roads. It clearly is apparent that there is no change between sprocket centers on the short chain, for the motor shaft and countershaft always are in fixed relation to each other.

Similarly, the movement which occurs between the countershaft and rear axle might be likened to the swing of a clock pendulum, in that the radius between centers does not change, although the horizontal relation of the rear axle to the countershaft is changed in passing over a rise or depression. Just as a clock pendulum might have circumferential travel round any part of a circle, so the rear axle and stays of a spring frame machine may have an unlimited amount of travel either up or down, without altering the distance between centers. Thus there is no cramping or slackening of chains. The same reasoning applies to a belt drive.

On all spring frame models there has been incorporated a new shock-absorbing device, which is placed in the hanger bracket, where the lower rear stays are hinged. This shock absorber is of the friction disc type, which has proved highly successful on motor cars for checking the rebound of the springs. The friction discs are brass, and the amount of friction may be regulated by an adjusting nut. As a logical and desirable evolution of the spring frame principle, a new spring tandem attachment has been designed. This will be listed as an extra.

The clutches are mounted on the motor shafts on all models, but naturally the chain drive clutches are more compact by reason of the small driving sprocket required. Nine steel discs of large area, engaging directly, without any friction lining, form the driving mechanism of the clutches. The discs are engaged and disengaged by a worm, which in turn is actuated from the left handlebar through a Bowden wire line. Pressure is applied to the clutch discs by six compression springs.

On the belt drive models, V leather belts will be used as heretofore, but a standard size of 1¼ inches has been adopted for the entire line. Another of the important new features is a carbureter of Merkel design. It has a metal float, independent high and low speed adjustments, and a new form of spray nozzle.

In the motors the changes are very slight and of an extremely minor nature. Ball bearings are continued throughout the motors, this feature also being exclusive with Merkel. On the twins double ball races are fitted to the "big ends" of the connecting rods. Imported ball bearings are used. The cylinder sizes remain unchanged, and the piston displacement continues as heretofore, viz., four horsepower, 30.43 cubic inches; six horsepower, 53.92 cubic inches; seven horsepower, 60.86 cubic inches.

Such time-tried Merkel features as integral cylinders and heads, automatic inlet valves, "more speed, more oil" system of lubrication, big internal expanding brake, double trussed loop frame, trussed spring fork, double stem rigid handlebars and seamless brass fuel tanks all are retained, unchanged. In fact, it is noticeable that the only feature heretofore used which has undergone complete revision is the carbureter, the company "standing pat" on all other standards used in the past. In defense of the lower prices is advanced the fundamental manufacturing axiom of increased facilities and output making possible lower production costs. Quality standards will, it is emphasized strongly, be maintained.

Bosch Detroit Branch in New Home.

Offering increased facilities for taking care of its customers, the Detroit (Mich.) branch of the Bosch Magneto Co., of New York City, now is installed in its new home at 1250-1252 Woodward avenue. Recently completed, the building is of brick and terra-cotta construction, with large glass front, and stands on a plot 190 feet deep. The front of the building is devoted to salesrooms, in the rear of which is a well-equipped laboratory and repair shop, and, further back, a spacious garage. Coincident with the increased facilities, the staff also has been doubled. Manager M. Tost continues in charge.

Tucker to Carry Stock in Chicago.

For the greater convenience of the Western jobbing trade the Tucker Wood Work Co., of Sidney, O., has leased a warehouse in Chicago, where there will be carried at all times a full stock of the Tucker wood rims. The distribution of the rims in Chicago and vicinity will be cared for by the Chicago Cycle Supply Co., which has been coming fast in the Western jobbing field, and which about the first of the year will remove from its present location on North Clark street to Lake street, where the company will obtain room for expansion.

Flanders Placed in Brooklyn and Newark.

The Sun Motor & Supply Co., New York distributors for the Flanders "4," announces that the Central Motorcycle Co., of which Herbert E. Hillyer is the manager, has opened a store at 1220 Bedford avenue, Brooklyn, and has taken the Flanders agency for that part of Brooklyn lying south of Sands street and Flushing avenue and west of Nostrand and Ocean avenues. Charles Krebs, well known as a cycle dealer at 51 William street, Newark, N. J., for the past 12 years, has taken the agency for the entire Essex County, N. J.

Drouhards Emigrate to Wichita.

Drouhard Bros., located in the prosperous farming community of Danville, Kans., have spread out. There were originally five brothers in the business there, all more or less interested. The field, however, was not quite large enough for their combined efforts, so, commencing November 1st, Peter and August Drouhard opened a store at Wichita, Kans., and will handle Harley-Davidson motorcycles exclusively.

"Mitchel" Still Good Enough for Arthur.

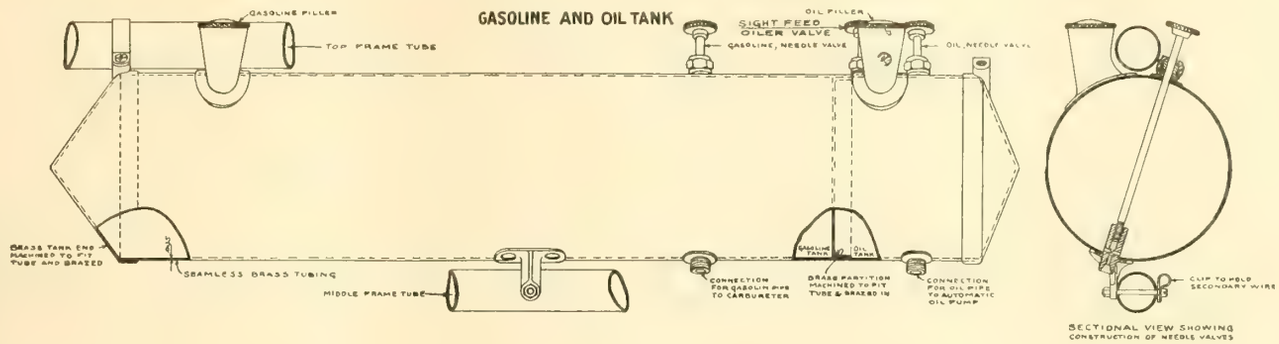
In the advertisement of the United States Tire Co. appearing in last week's issue of The Bicycling World and Motorcycle Review, through inadvertence the name Arthur "Miller" was used instead of Arthur Mitchel. An excellent photograph of Mitchel appeared in the advertisement, and because of this, to all who know him the typographical error was apparent and taken as such.

Hendee Warns Against Impostor "Neff."

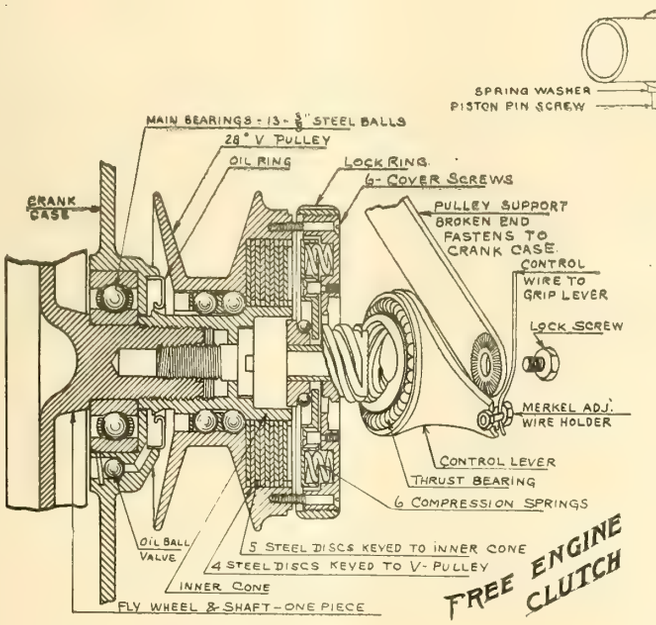
A party giving the name of Harry A. Neff and claiming to be "chief engineer" or some other employee of the Hendee Manufacturing Co., has been obtaining money in the Middle West by having worthless checks cashed. There is no such person in the employ of the Hendee company and dealers and riders are warned against him.

Peavey Changes Address But Not Tires.

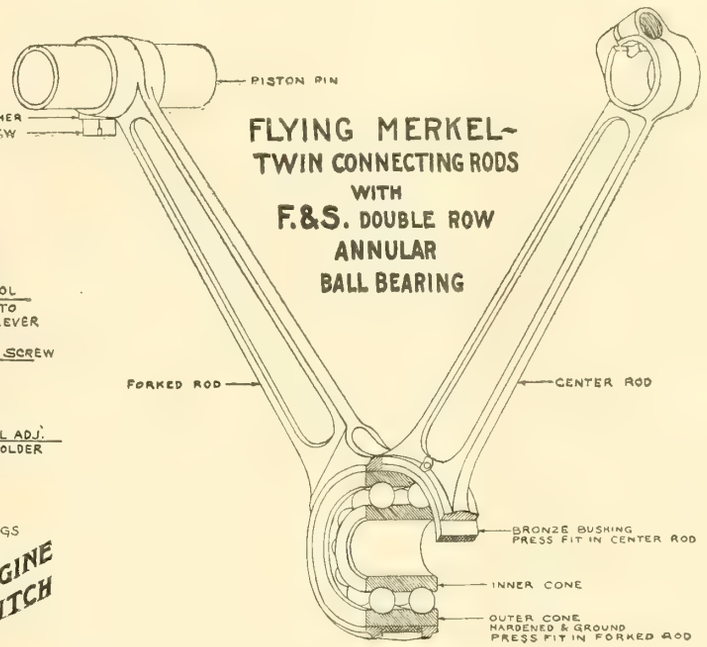
R. A. Peavey desires to correct the impression from an article recently published that he has resigned entirely from the United States Tire Co. He did resign from the St. Louis branch of the company, but is now manager of the Dallas, Tex., branch, which controls Texas, Louisiana, Mississippi and a part of Alabama.



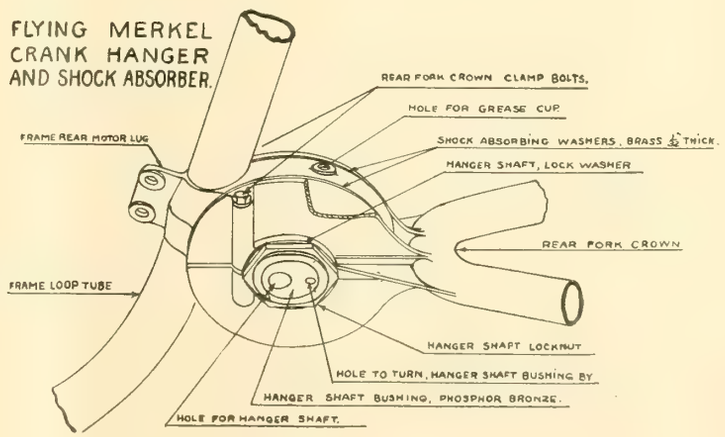
Hartford Motorcyclist Sued by Peddler.



Frank Meunier, a motorcyclist of Hartford, Conn., has been sued for treble damages for personal injuries, injuries to horse and wagon, and loss of trade and custom, by Aaron Korezy, a peddler. Korezy alleges that Meunier ran into his outfit, and wants financial balm on three counts.



Gets Pope Sub-Agency in Cleveland.



Arthur J. Herman, 2945 West Twenty-fifth street, Cleveland, O., has been appointed sub-agent for Pope motorcycles by Vincent Bros., local distributers. His territory will comprise the south and west sides of the city.

SOME OF THE 1912 FLYING MERKEL FEATURES

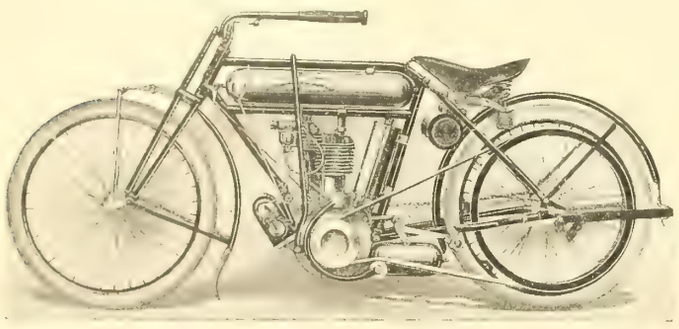
1912 M. M. IN FOUR NEW MODELS

Big Single and Twin the Leaders—Two Singles Listed at Sensational Figures.

Four models, three singles and a twin, offering greater power as well as numerous minor refinements, at attractive prices, comprise the 1912 line of M. M. motorcycles, which the builders, the American Motor Co., Brockton, Mass., will market. In keeping with the policy of other manufacturers, the makers of the M. M. have reduced prices, but in this instance the reduction has gone lower than that quoted for any other 1912 motorcycle. However, the makers announce their intention of concentrating their manufacturing and selling abilities on their higher-priced models.

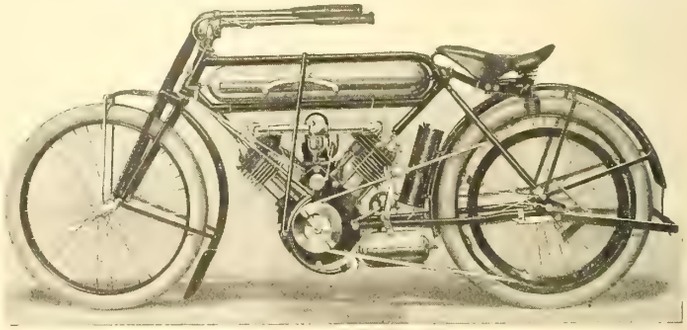
In the order of their size and price the new models are as follows: Eight-horsepower twin, $275; four-and-one-half-horsepower single, $200; four-horsepower magneto special, $160; four-horsepower battery special, $140. All except the lowest-priced machine will be offered with magneto only. Flat belt will be regular equipment on all models, and will be accompanied by a hand idler. V belt will be optional on all models, and will be furnished with an adjustable pulley. The M. M. free engine clutch of the expanding band type is offered at $15 extra, on V belt models with vertical engines.

Designated as the leader of the line, the four-and-one-half-horsepower single, officially termed the "Four-Fifty" because of its power rating, shows several changes over its predecessor. The bore remains at 3 inches, but the stroke has been lengthened to four inches, warranting the increased rating, and also qualifying for the long-stroke motor class, now gaining in popularity. Twenty-six-inch wheels will be regular equipment, with 28-inch offered for $10 extra



A new Schebler carbureter especially adapted to this model, priming cocks on the cylinders and flat belt and hand idler as regular transmission, comprise the individual new features on the twin. Twenty-six-inch wheels remain as standard equipment, with 28-inch listed at $10 extra.

On the four-horsepower magneto special the most important change is the driving of the Bosch magneto by a train of gears, instead of enclosed chain. The battery model is a twin brother of the magneto special, differing only in the type of ignition equipment.



In addition to the improvements cited, and applying to particular models, there also are a batch of refinements common to all models, such as lower saddle position, obtained by a special drop forged goose neck seat post cluster in combination with a special form of cavalry saddle having an extreme drop, lower, wider and longer handlebars, longer cylinders and pistons, with four rings instead of two as heretofore, more front tire clearance, longer fork spring uprights and heavier spring leaves, drop forged lower fork side rocker plates, with wider and hardened bearing, and drop forged one-piece flywheels and main shafts. Vanadium steel now is used in the fork spring leaves, and a vanadium iron alloy in the cylinder casting.

General specifications of the twin and big single are as follows: Twin—56-inch wheelbase; 2½-inch tires, 28 inches from saddle to ground; fuel capacity, seven quarts gasoline, three pints oil; hand pump lubrication; 1¾-inch flat belt; four to one gear; Mesinger cavalry saddle; red finish with nickel trimmings. Single—54-inch wheelbase; 2¼-inch tires; 29 inches from saddle to ground; fuel capacity, six quarts gasoline, three pints oil; hand pump lubrication; 1¾-inch flat belt; five to one gear; Mesinger cavalry saddle; red finish.
Mesinger cavalry saddle; red finish. The general equipment on all models includes Schebler carbureter, New Departure coaster brake, Standard pedals, Bosch magneto and Rough Rider grips.

Features peculiar to the M. M., such as the 90-degree cylinders with eccentric magneto drive on the twin, roller bearing main and crank shafts on the big single, and on all models seamless brass fuel tanks with central two-point suspension, bell crank grip control, automatic stand and large muffler, all remain unchanged. A leather tool box will be regular equipment on the twin, and singles will have metal boxes.

THE 1912 M. M. "FOUR-FIFTY"

THE 1912 M. M. 8 H. P.

ADDITION TO MOTORCYCLE FAMILY

Detroit Company Newly Incorporated to Manufacture the Bi-Car—Prominent Men Among Officers.

Every motorcycle heretofore built has embodied some features common to automobiles, but it has remained for the Detroit Bi-Car Co., Detroit, Mich., to deviate farthest from the beaten path of motorcycle design, and copy automobile construction in so far as it is practicable to apply it to a single-track two-wheel vehicle in the Bi-Car, which will be built in three models. As its name indicates, the Bi-Car is a combination of motorcycle and automobile design, in an attempt to construct a two-wheel vehicle embracing many desirable features of the automobile.

Described in moving-picture fashion, this newcomer in the motorcycle field employs a pressed steel frame, four-cylinder, four-cycle, air-cooled motor, enclosed shaft drive, full elliptic spring, individual clutch gearset, 30-inch wheels, automobile seat and motor hood. In fact, the bicycle type of construction is abandoned, in so far as it is possible to do so in a two-wheel machine. The Bi-Car will be built with single seat, with two seats arranged in tandem, and as a single-seat delivery van with package compartment.

Mechanically the Bi-Car is highly interesting throughout, and presents several original applications of automobile and motorcycle propelling units. Rated at seven horsepower under the A. L. A. M. formula, the motor is "square," or, in other words, the bore and stroke are equal, viz., 2¼ inches. The motor is set low and longitudinally in the dropped frame, and is cooled by forced draft, induced by surrounding the engine with a hood, flared in front to scoop in the air and conduct it past the cylinders with a funnel exhaust effect, thus giving strong suction and cooling. This induced or forced draft is claimed to give better cooling than would a natural air circulation among exposed cylinders.

In the right side of the hood, just below the operator's seat, there is a small opening

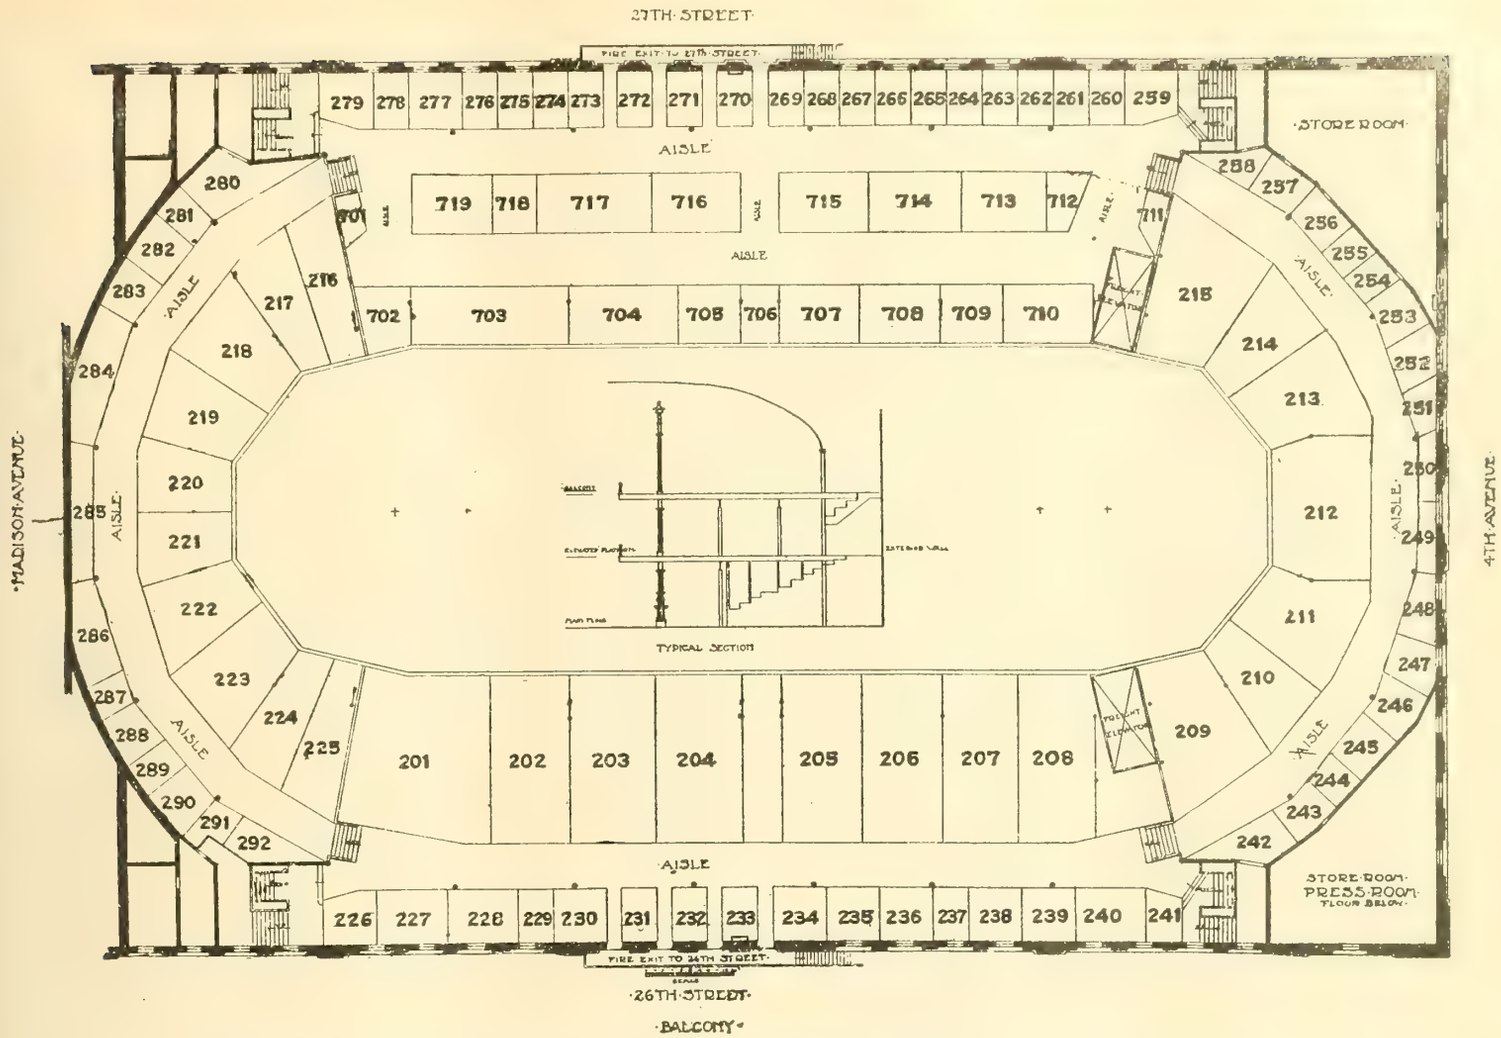


DIAGRAM SHOWING MOTORCYCLE SECTION OF MADISON SQUARE GARDEN SHOW, JANUARY 6-13

where the carbureter protrudes, rendering this important device easily accessible for adjustment. Magneto ignition is used. A permanently attached starting crank on the right side of the machine, back of the operator's seat, provides an easy method of starting the motor. Although no muffler cut-out is fitted, the machine is said to be very quiet, and yet easily able to show a speed of 60 miles. However, still further steps to secure even greater silence will be taken, it is said, as extreme quietness is deemed of prime importance.

On the right side of the operator's seat is the change gear lever. Moving the lever forward as far as it will go engages the high speed clutch, and moving it to the extreme rear engages the low speed clutch. The center position is neutral. Both clutches are spring pressed out of engagement, and are held in engagement by pawls in the lever engaging with teeth in a quadrant at the side of the seat. These pawls are released by pressure on a button in the top of the lever, so that when the button is depressed the lever automatically jumps to neutral position through the action of the disengaging springs in the clutches.

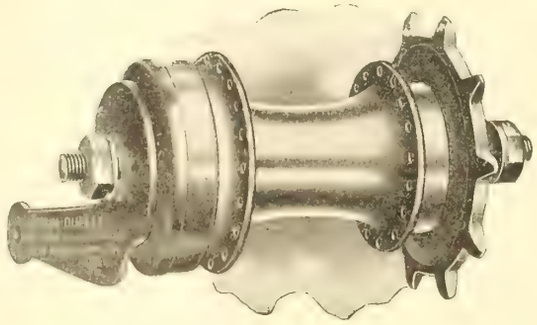
For the final drive a shaft with universal joints is employed, transmitting motion to an enclosed bevel pinion and large gear on the rear hub. This final drive is applied on the left side of the machine.

In the frame design there is much of interest. The two main members are of pressed channel steel, "upswept" at both ends in accordance with latest automobile practice. The stock is one-eighth inch thick, two inches deep and one inch lips, the sides tapering to 1¼ inches in width at the ends. The ends of the frame are carried on the tops of the supporting springs, while the central section is dropped considerably below the wheel centers, giving an "underslung" effect and tending to make the machine more stable and to hug the road better.

In front the frame members are supported by coil springs, and at the rear on full elliptics. At the point opposite the back of the front wheel the frame members are chambered outward to provide turning range for the wheel. The entire frame structure is attached to the axles through compound forks straddling the wheels, the method of suspension being the same both front and rear.

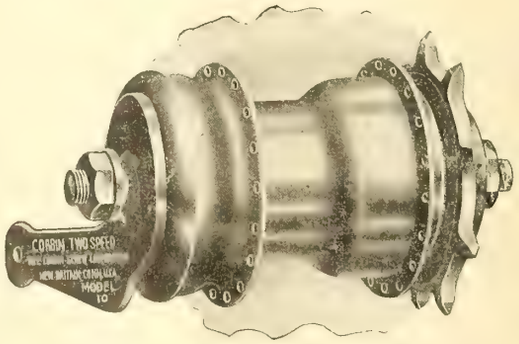
To explain the front suspension it first is necessary to take up the front axle construction. Here again radicalism in design is rampant. The hub substantially is in two parts. An internal hub which does not revolve is pivoted to the center of the front axle, the latter passing through the hub, which is free to oscillate only on its center bearing. The external hub revolves on ball bearings around the internal hub.

The axle is fixed securely to the front ends of two radius rods underneath the frame members, and is held in horizontal alignment with the machine by the rods. A compound fork straddles the front wheel, and is attached at its lower end to the internal hub. A yoke is attached to the forward ends of the frame members, and is held in position by a bent tube member, running from its head to a cross member of the frame back of the wheel. The head end of the fork passes through the head of the yoke, and thus is held in true alignment with it, thereby being free to play up and down through the action of the front coil springs, since the hub is connected rigidly to the frame, and the fork likewise connected rigidly to the hub of the wheel.



In addition to steering the front wheel the fork also holds the wheel in alignment with the frame, preventing unequal compression of the front springs. The same

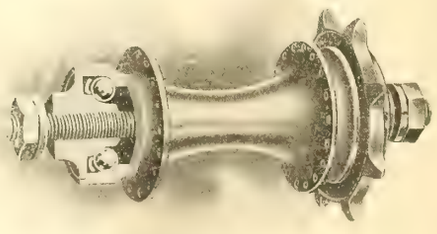
(Continued on page 390)



THE CORBIN SCREW CORP
CORBIN
NEW BRITAIN, CONN., U.S.A.

¶ Chief of the reasons why there will be no change in Corbin duplex coaster brakes and Corbin two-speed coaster brakes for bicycles for 1912 is that all the "1912 improvements" were put in a long time ago and have been in ever since. No one that we have found has been able even to suggest further improvements.

¶ Therefore, for bicycles the 1912 Corbin offerings are:



Corbin Duplex Coaster Brake

Corbin Two-Speed Coaster Brake

Corbin Front Hub

Corbin Rear Hub

NEW YORK, NOVEMBER 18, 1911.

Make the Cash Register Ring.

Comparatively few dealers recognize the value of their show windows to them as their best advertisement next to a regular advertisement in the newspapers. Many windows may be seen that are used simply as a storage place for stock, often even wrapped and piled up promiscously in the window. Often the window is not clean itself; is not lighted up properly and instead of being a good advertising feature is made the worst kind of a recommendation for the dealer. The merchants in other trades are waking up to the value of the window display more and more every day and many of them are paying expert window dressers extravagant salaries simply to make their windows attractive. A dirty, ill-lighted window that is used more as a storage place than anything else gives the impression to the general public today that the proprietor of the store is just as careless in his work as he is in keeping his window. Dust covered "junk" is a poor advertisement.

There are merchants in many trades, that because of the peculiar style of their goods, may have difficulty in making an attractive window display, but a bicycle and motorcycle dealer has the opportunity with his stock to make a most attractive showing. Now that the Christmas season is coming on, the time is particularly propitious for the dealer to give particular thought to the window. Next to the newspaper advertising the window can be made the greatest possible aid to sales. Illustrations will be shown from time to time in these columns with suggestions for window displays from now until Christmas.

The first and most important thing to consider, of course, is the base—the floor or platform covering. As the predominating colors at Christmastide are red and green these should be the main colors in the window. A green cloth or holly leaves would make a good base. The main feature, of course, should be a bicycle or motorcycle—one in each window if you have two—and accessories spread in an attractive manner around the machine, with holly or laurel intertwined and centered in the wheel. At night the window could be illuminated by bicycle and motorcycle lamps. An attractive sign here and there, with a suggestion for a Christmas gift, would go well.

Among the thousands of cyclists throughout the United States every one of them needs some accessory that the dealer can supply. In each case probably the relatives and friends are puzzling just what to give for a Christmas gift. The suggestion through a newspaper advertisement of some bicycle or motorcycle accessory, and then backed up by an attractive display in the show window, will no doubt be just what these people want and settle the perplexing question or them, at the same time making the dealer's cash register ring with the welcome note of another "well-worth" sale made.

This is particularly so with the juvenile trade. Every parent is beginning to puzzle just about now as to what to give Johnny or Susie for Christmas. The children are just that age when they are too old for toys and yet too young for the more sedate gifts of grown-ups. Perhaps Johnny or Susie hasn't been as well as he or she might have been the last few months. Perhaps they haven't had enough fresh air—been studying too hard. The mother and father are up a tree. They cannot think what would be a suitable gift and one that would gladden their hearts. Nine chances out of ten they would never think of a bicycle unless the seed of desire had been planted in the childrens' hearts previously and they had expressed the wish. But father or mother picks up the evening paper. They see a bicycle attractively advertised. "Why, that would be just the thing," they say, "Johnny or Susie by taking a good ride every day can get plenty of good, healthy exercise and fresh air. Let's go down to John Jones's bicycle store tonight and see what he has." And there the finishing touch reaches them with an attractive window display and the problem is solved, while John Jones's cash register rings again.

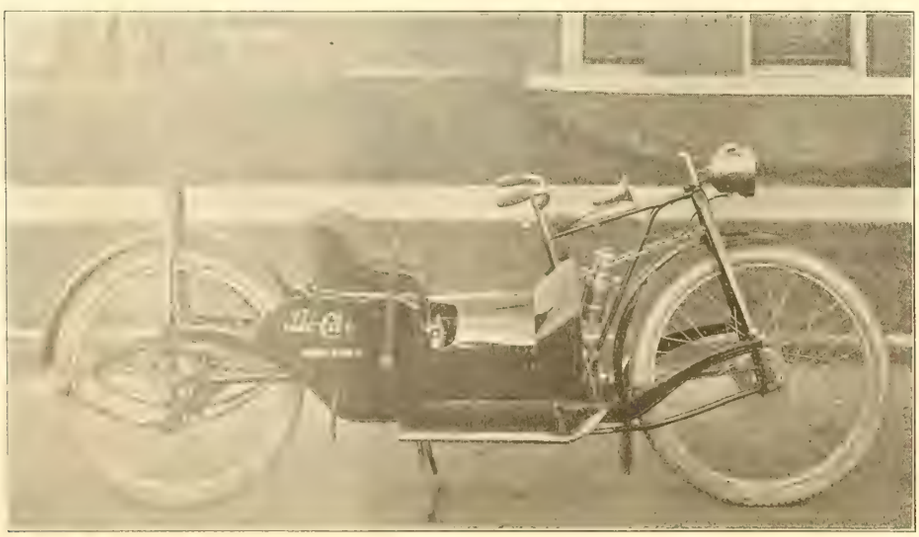
Perhaps Johnny and Susie already have bicycles or Big Brother has a motorcycle. But they need many accessories, and "it's the same thing over again." They see advertised a lamp or a cyclometer or a speedometer, or a pair of tires, or a saddle, or a sweater, or a—well, we could go on enumerating through the list. Then they go to the store and see the well lighted, well trimmed window, with these various accessories displayed, and—John Jones's cash register rings again. And this is not all. While these people are looking for others they may get the bicycle and motorcycle desire germ themselves, and then John Jones's cash register will ring some more—and a good big ring this time.

Mr. Dealer, because the winter season is here don't sit back and say "the hard times are here, a bicycle or motorcycle dealer can't make any money in the winter time." Just get a move on. Clean up your store and window. Fix up a good display in the window. Take a four or five inch space in your local paper daily from now until Christmas. Put in that space a well written advertisement. If you haven't got the idea for good ads get some one who has to do it for you. Then instead of getting rusty from misuse your cash register will be more likely to wear out from so much use and you will buy a bigger and better one in the spring. Don't let the ideas of 1800 stay in your head another minute. Live with the ideas of today—the twentieth century—and carry on your business by twentieth century methods. Try it out and then tell us about it afterward, so that some other dealer in another city may learn from your experience. Send us photos of your display.

ADDITION TO MOTORCYCLE FAMILY

(Continued from page 387)

fork and yoke construction is used in the rear wheel, the fork being attached to the axle and the yoke to the rear ends of the frame. Radius rods also are provided to hold the rear wheel in horizontal alignment.



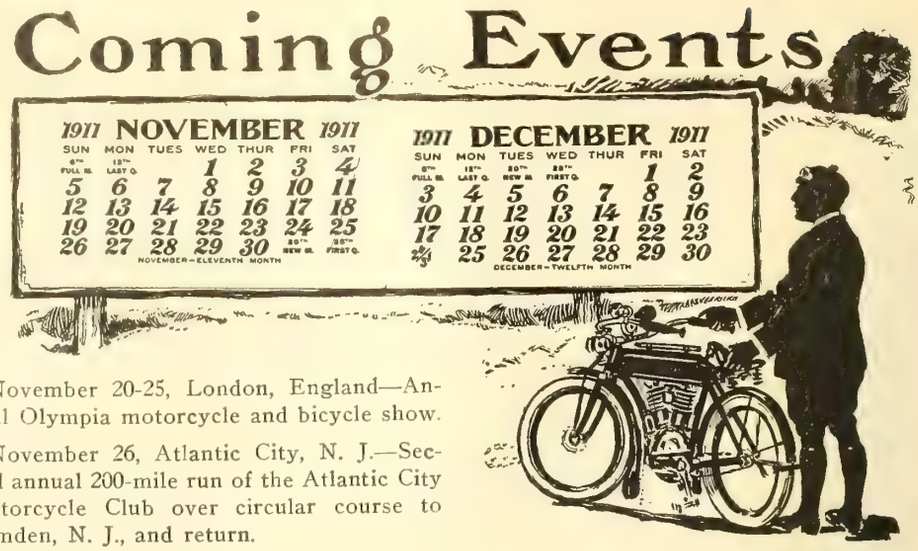
Motor control is versed in grip-operated Bowden cables. The change gear lever is operated by the right hand, and the band brake by a pedal on the right foot board. In the single passenger model an auxiliary steering post with regulation handlebar and tandem steering gear is coupled to the front fork to give steering control. In the tandem model this auxiliary post is removed, and the handlebars are inserted in the fork, leaving room forward for the placing of an additional seat.

Despite the 30-inch wheels, an extremely low riding position is obtained through the dropped frame. The seat is 24 inches from the ground, and is of the bucket type, with smooth upholstering, to make riding as comfortable as possible. It is possible for a person of ordinary stature to sit in the seat and place his feet on the ground. Low center of gravity also has a tendency to counteract skidding. The wheelbase is 68 inches, and the weight not much more than that of a big twin of equal power.

Accessibility has not been overlooked in the design, and provision is made for extremely quick demounting of either wheel for tire changes. The front wheel is removed by loosening four small bolts, when the wheel drops out without disturbing any other adjustments. By removing the nut on the rear axle and withdrawing the axle the rear wheel is freed.

Ordinarily there is little of interest in stand construction, but here again the exception is the rule. A very sturdy automatic stand is attached to the frame under the seat, being located just about in the center of gravity of the machine, so that if either wheel is removed the machine will stand without a jack or other support to replace the missing wheel. The stand does not raise either wheel from the ground, and the machine is perfectly balanced with either wheel dismounted.

In starting the machine the engine first is cranked, with the change gear lever in neutral, of course. The machine then is moved forward about six inches, when the stand automatically flies up against the frame. The operator then takes his seat, accelerates the motor, throws in the low speed clutch, and the machine takes on momentum, the step up to high speed being made after sufficient momentum has been attained.



THE NEW BI-CAR

Capitalized at $10,000, the Detroit Bi-Car Co. is composed of practical business men well versed in manufacturing. The officers are: J. J. Chapin, president; Alfred Roseroot, vice-president; J. J. Berkery, secretary; Frank Gorman, treasurer. Chapin formerly was connected with the Burroughs Adding Machine Co., and the Bi-Car represents three years of effort which he has devoted to its creation. Roseroot is identified with large brewing interests, so that the men back of the new enterprise are well supplied with capital.

Offices have been established in the Hodges building, and a temporary factory located at Greenwood and Baltimore avenues. The company plans to erect its own plant later. Production will be begun at once, and the output for the first year is expected to be 1,000 machines. Deliveries are promised for March 1st, and while no definite price yet has been fixed, it probably will be in the neighborhood of $300.

Coming Events

November 20-25, London, England—Annual Olympia motorcycle and bicycle show.

November 26, Atlantic City, N. J.—Second annual 200-mile run of the Atlantic City Motorcycle Club over circular course to Camden, N. J., and return.

November 30, San Antonio, Tex—San Antonio Motorcycle Club race meet.

November 30, Baltimore, Md.—Maryland Motorcycle Club race meet at Electric Park.

November 30, Jacksonville, Fla.—Jacksonville Motorcycle Club race meet at Moncrief Park.

November 30, Redlands, Cal.—Redlands Motorcycle Club race meet at Association Park mile dirt track.

November 30, New York City—First preparatory unpaced 25 miles handicap road race under the management of the American Olympic Bicycle Race Committee and the auspices of the United Cyclists.

December 8, New York City—Annual ball of the Cotham Cycle Club at Apollo Hall, 126 Clinton street.

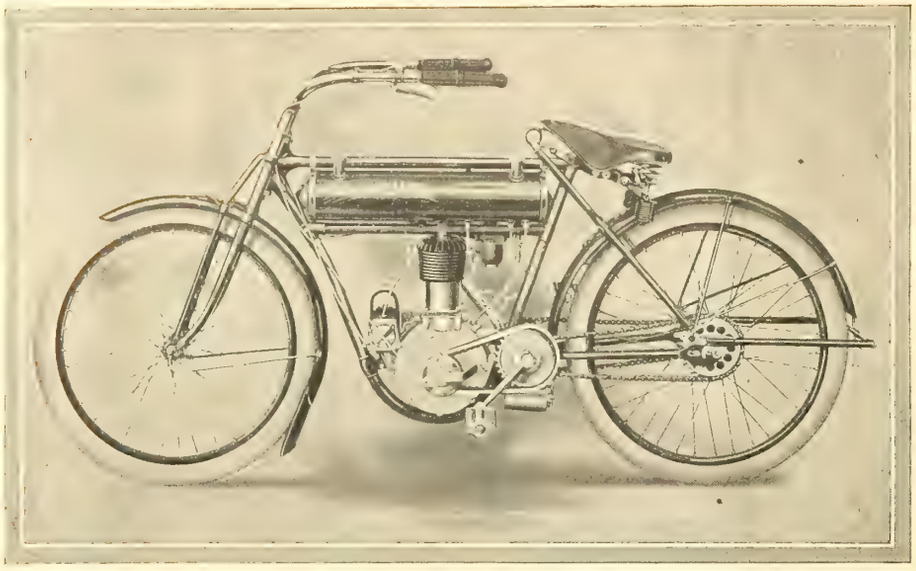
December 11-16, New York City, N. Y.—Madison Square Garden—Nineteenth annual international six days' professional bicycle race.

December 16, Brooklyn, N. Y.—First annual smoker-stag of the Atlas Bicycle Club at Stoetzer's Hall, 1213 Fulton street.

December 31, Brooklyn, N. Y.—Annual New Year's Eve midnight scorch from Bedford Rest to Coney Island and return.

January 6-20, New York City—Twelfth annual automobile show in Madison Square Garden; motorcycle section included in first week.

WORTH CROWING ABOUT!



1912 ANNOUNCEMENT of

THE FLYING MERKEL

REALIZING that "The Flying Merkel" has reached the top notch of mechanical perfection, and earnestly believing in a large and growing future for the motorcycle, this Company, the largest manufacturers of high grade bicycles in existence, absorbed the Merkel-Light Motor Co., of Pottstown, Pa.

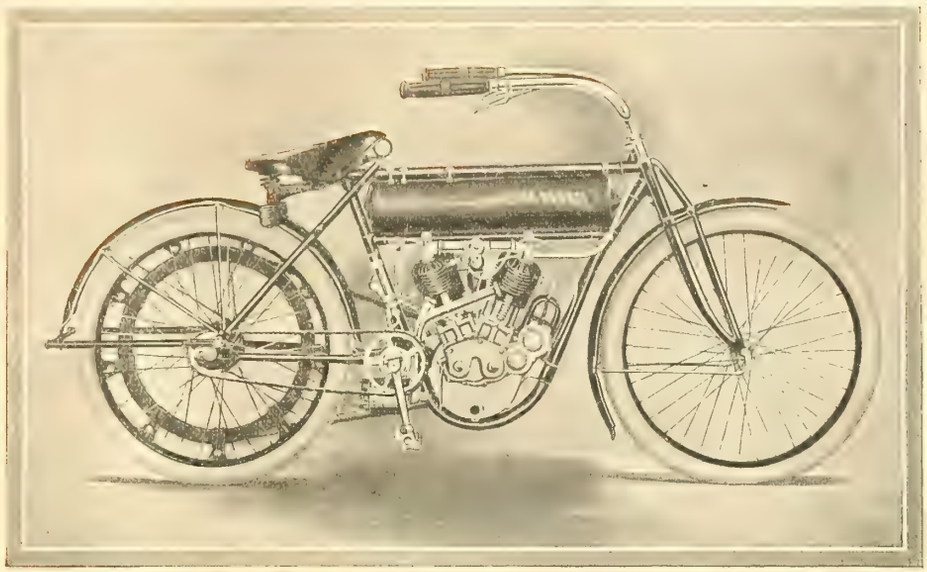
With bountiful financial resources and every manufacturing facility, we are in position to produce for 1912 a "Flying Merkel" that is in every respect greater in value and much less in price. The "Flying Merkel" of 1911 offered us but little opportunity for improvement other than some minor changes and refinements that make for greater comfort, convenience, economy of up-keep and ease of operation. Our unusually favorable manufacturing facilities, however, have enabled us to add a Free Engine Clutch as standard equipment, and to make the following remarkable prices:

Rigid Frame 4 H. P., Bosch Magneto, Free Engine, Belt or Chain	**$200**
Spring Frame 4 H. P., " " " " " " "	**$225**
Spring Frame 6 H. P., " " " " " " "	**$250**
Spring Frame 7 H. P., " " " " " " "	**$275**

THE NEW 1912 "FLYING MERKEL" SINGLE CYLINDER CHAIN DRIVE MODEL

1912 THE FLYING MERKEL 1912

POPULAR PRICES The secret of the "Flying Merkel" success in the past has been founded, first, on making a thoroughly good machine, and secondly, selling it at a fair price. Any one familiar with manufacturing, however, can readily understand that costs decrease as the output increases, and as the history of this company shows that it never does anything by halves, we have decided to manufacture "Flying Merkels" on a scale heretofore unknown and are thus enabled to greatly reduce the cost.



We have learned from experience that a certain class of riders, though perfectly willing to admit the superiority of the Spring Frame construction, are unable to meet the additional cost. To meet the wishes of this class of riders, we have, therefore, produced a new model, employing all of the well-known "Merkel" features, but without the Spring Frame, and offer this at the remarkable price of $200.

QUALITY MAINTAINED We wish to emphasize just as strongly as we possibly can that the lowering in price will not in any way affect the quality of the machine. It has taken us a number of years to reach our present high standing in the trade and our reputation is too valuable an asset to juggle with by putting out anything but a quality machine as before.

FULL BALL BEARING MOTOR This distinguishing "Merkel" feature will be continued in all models, and though certain manufacturers have at last reached a point where they use a limited number of ball bearings in their motor, the "Merkel" is the only motor made with complete ball bearings.

FREE ENGINE CLUTCH Our experience of the last season has convinced us that the modern motorcycle must have a Free Engine Clutch, and we shall, therefore, place it as part of the standard equipment on all machines.

HOW WE CAN AFFORD TO REDUCE PRICES We confess that it is somewhat of a revolutionary step to make the price reduction that we have done on all 1912 Models, but a company of this size must needs build for the future, and, judging from the history of the automobile industry, we are led to believe that, in the near future, it is those plants producing enormous outputs at popular prices that will prove the most profitable, and our position is such that we can build our plans with our eyes well riveted on the future. 'Tis true that, heretofore, we have never been able to manufacture "Flying Merkels" as fast as we could sell them, and the same would, undoubtedly, have held true during 1912, but this company has facilities

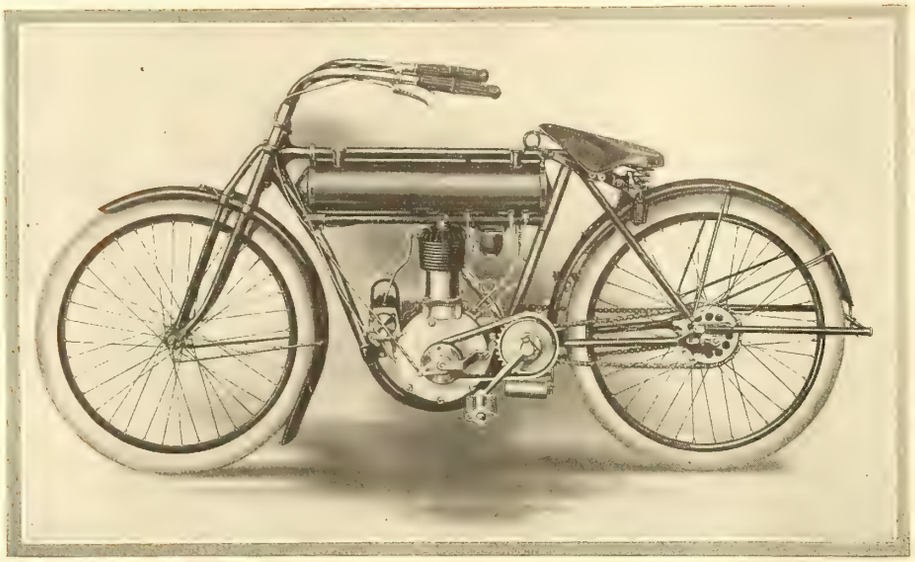
THE NEW 1912 "FLYING MERKEL" TWIN CYLINDER BELT DRIVE MODEL

and opportunities that the original manufacturers never dreamed of, so that we have thought it best to make a revolutionary price cut.

NO EXPERIMENTS In offering our 1912 Models to the favorable consideration of a critical Public, we call to your particular attention the completeness of our line —a four horsepower Single, a six horsepower Twin and a seven horsepower Twin in either V Belt or Chain Drive, all embodying in their construction as a standard equipment all of the latest up-to-date features. We offer no untried or experimental features at an additional cost. The discerning buyer who is looking for the best, after a careful analysis of the Motorcycle offerings for 1912, cannot fail to be impressed with the fact that he gets more for his money in "The Flying Merkel" than in any other machine on the market.

SPRING FRAME PATENTED Several motorcycle manufacturers have tried to imitate this distinctive Spring Frame and Spring Fork construction. A Spring Seat Post and various other make-shifts have made their appearance on the market, but these imitations only serve to emphasize the practical value of the genuine Spring Frame construction.

Mr. J. F. Merkel, who for a long time has been favorably known as a skilled motorcycle engineer, has probably spent more time along the lines of comfort in motorcycle construction than any other American designer. From the first he discarded anything in the nature of a Spring Seat Post as being impracticable. In 1903, he adopted our present Spring Frame type which has been in use ever since. The large and steady increasing sales for "The Flying Merkel" have, without doubt, proven the immensely superior advantages of this form of construction.



SHOCK ABSORBER Our Spring Frame construction for 1912 remains the same, with the added features of a shock absorbing device, which adds still further to the comfort of "The Flying Merkel." The shock absorber, having demonstrated its usefulness in automobile construction, has been adapted to motorcycle needs, the "Merkel" being the first and only machine using this device.

FREE ENGINE CLUTCH For 1912, all "Flying Merkel" models, both Belt and Chain Drive, will be furnished with a Free Engine Clutch as part of the standard equipment without extra charge. This Clutch is very simple in design and mechanism, has large clutch surface of the multiple disc pattern, is neat and compact, and is conveniently operated from the handlebar.

CHAIN DRIVE The Chain Drive model of "The Flying Merkel" will be equipped with a new style compensating Sprocket, doing away with all possible jerk from the engine. Imported Renold Chains will be used exclusively.

BELT DRIVE On "The Flying Merkel" Belt Drive models we shall use the same V Belt as used during the past season with such remarkable success, with the exception that in 1912 1¼-inch belts will be used on all models.

NEW CARBURETOR All Models are equipped with an entirely new design Merkel Carburetor. Metal float, independent adjustment for high and low speeds, new design spraying nozzle.

THE NEW 1912 "FLYING MERKEL" RIGID FRAME MODEL

Here are the 1912 PRICES of

THE FLYING MERKEL

Model "W-S"
RIGID FRAME
4 H. P. (30.43) Single Cylinder, V Belt or Renold Chain Drive, Bosch Magneto and Free Engine Clutch,
$200.00

Model "W-S"
SPRING FRAME
4 H. P. (30.43) Single Cylinder, Either Belt or Chain Drive, Bosch Magneto and Free Engine Clutch,
$225.00

Model "V"
SPRING FRAME
6 H. P. (53.92) Twin Cylinder, Either Belt or Chain Drive, Bosch Magneto and Free Engine Clutch,
$250.00

Model "V-S"
SPRING FRAME
7 H. P. (60.86) Twin Cylinder, Either Belt or Chain Drive, Bosch Magneto and Free Engine Clutch,
$275.00

1912 DELIVERIES

1912 Models of "The Flying Merkel" are now ready for delivery. This Company's past record is the best assurance of prompt and satisfactory service.

1912 Catalogs are now in preparation. Glad to mail you a copy on request.

EXCITEMENT A PLENTY FOR TEXANS

Fire, Falls and Fast Time at San Antonio Meet—Wickwire Takes Four Firsts.

Fire, falls and fast time furnished plenty of thrills for the spectator at the high tension speed party which the San Antonio (Tex.) Motorcycle Club gave at the International Fair on Sunday, 5th inst. Reckoning on the theory that "all the world loves a winner," the Wickwire family must be very popular in San Antonio, for practically every time one of them takes part in a race, he "brings home the big end of the bacon." This last gasoline session was no exception, for Bryson Wickwire gathered four firsts, including all the feature events and the Hendee Cup race.

B. WICKWIRE, THE TEXAS RACER

The cup is a challenge trophy and becomes the property of the rider winning it three times. Rex Wickwire, cousin of Bryson, has won it twice, and Cotton Derr and Bryson Wickwire each had one leg on it. The latter pair fought for it again on Sunday, and Wickwire redoubled his grip, Derr being thrown by a rut, but not hurt. Derr won the pursuit and a match with Miller and did some of the best riding of the day.

Otto Heikens also fell in the heat match and sustained a dislocated shoulder. The track was very rutty and the riders were forced to stay in a narrow path to find good going. H. Bohn's Merkel burst into flame at the tape before the start of the cup race and caused a lively scattering of riders and officials, but the fire was extinguished without damage.

Considering the poor condition of the track, the riders made very good time, and all of the events were hotly contested. Attendance, 1,000. Summary:

Twelve mile open, four horsepower motors—Won by O. Leoloff (Thor); second, Houston (Merkel); third, Offer (Thor). Time, 13:15.

Twelve mile open, seven horsepower motors—Won by B. Wickwire (Indian); second, M. Derr (Indian); third, H. Bohn (Merkel). Time, 12:20⅘.

Open pursuit, four horsepower motors—Won by B. Wickwire (Indian); second, Offer (Thor).

Fifteen mile match, L. Miller (Indian) vs. M. Derr (Indian)—Won by Derr at six miles, Miller quitting. Time, 6:20⅗.

Nine mile match—Won by B. Wickwire (Indian). Time, 10:00.

Three mile pursuit—Won by M. Derr (Indian); second, Eckenroth (Excelsior). Time, 4:04.

Nine mile free-for-all, Hendee Cup—Won by B. Wickwire (Indian). Time, 9:45.

Sociability Run of Savannah Club.

Savannah, Ga., Nov. 6.—Thirty members of the Savannah Motorcycle Club turned out on a sociability run on Sunday, 5th inst., with the Ogeechee river bridge as the rendezvous, where a fish fry was held. Everyone enjoyed the outing, and to help digest the "feed" there was a little oratory poured out as a sort of chaser. It went well and most everyone took it "straight." On the return trip, A. V. McGuire, one of the best known of the local riders, collided with another machine and was removed to a hospital in a critical condition.

O. A. M.

Mann Returns from the West.

William Mann, Portsmouth, O., a former bicycle repair man of that place who "went West," has returned, and contemplates the opening of a shop. After shaking the dust of Portsmouth from his feet, Mann located in Nebraska.

RELIABILITY RUN FOR CANADIANS

Secret Controls Wreck Perfect Scores—Only Four Finish With Perfect Scores—Three Day Run.

As a wrecker of perfect scores, secret controls were used with great effectiveness, in the first annual reliability run of the Toronto (Ont.) Motorcycle Club on the 28th, 29th and 30th, ult., inclusive, only four of the 31 starters coming through unpenalized. Twenty-four of the men finished officially. Perfect roads annd weather favored the riders, and on this account many of them threatened to preserve their clean scores to the end, but on the third day the officials decided that some havoc must be wrought in the penalty line and they introduced secret controls with gratifying success to them.

In the individual class, the perfect score men were S. Vogan (Minneapolis); S. License (Harley-Davidson); O. D. Cooley (Indian) and F. Craig (Merkel). Four teams competed, and finished in the following order, none of them perfect: Indian "7's"—Connor, Daniels, Lemon; Indian "4's"—Webb, Neilson, Case; Excelsior—Golden, McIntosh, Thompson; Harley-Davidson—License, Ottley, Johnson. The individual winners will have their names engraved on the $350 shield donated by the Dunlop Tire & Rubber Goods Co., while individual prizes will be awarded to the first 12 men and to each of the teams.

Starting from Toronto on Saturday afternoon, 28th, the riders made Hamilton, 45 miles away, that night and laid over. On Sunday they passed through Brantford, Woodstock and London, and stayed over night at Stratford. Penalties were practically nil for the day, and on the final day, Monday, the officials introduced the secret controls in order "to start something." They did. At the conclusion of the run the machines were inspected, and the winners evolved.

All supplies were furnished by the club, and the contest attracted wide attention and created deep interest in motorcycling in the territory which it embraced. The club has decided to make the run an annual affair, as it proved very popular with the members. Staged simultaneously with the club's application for affiliation with the F. A. M. it holds significance of the turn of the tide in Canadian affairs. The final score:

Perfect—S. Vogan (Minneapolis); S. License (Harley-Davidson); O. D. Cooley (Indian); F. Craig (Merkel).

Penalized and tied for second place—E. McIntosh (Excelsior); N. J. Davis (Indian); Frank Lemon (Indian); N. C. Dunn (Indian).

Tied for third place—R. Ottley (Harley-Davidson); M. E. Amoss (R. Whitworth).

A FEW MEMBERS OF THE BOSTON MOTORCYCLE CLUB BEFORE THE START OF THE CLUB RUN

Fourth—W. Hunter (Merkel).

Tied for fifth—R. M. Case (Indian); Charles Neilson (Indian); S. C. Daniels (Indian).

Sixth—Bert Webb (Indian).

Seventh—H. Thompson (Excelsior).

Tied for eighth—R. P. Connor (Indian); W. Driever (Thor).

Ninth—J. Golden (Excelsior).

Tied for tenth—L. R. Clark (Indian); A. W. Hampson (Pierce).

Eleventh—W. E. McCarthy (Bradbury).

Twelfth—A. H. Hoover (Pierce).

Thirteenth—H. Johnson (Harley-Davidson).

Fine Program for Baltimore Meet.

Indications point to some fine motorcycle racing at Electric Park, Baltimore, on Thanksgiving Day. Howard A. French, who is promoting the meet, has not put out the entry blanks as yet, but nearly all the crack Baltimore riders have said that they will be on hand when the gong rings. It is expected that quite a few of the Washington riders will come over and get in the game, and that is just what the Baltimore boys are looking for. There has been some intense rivalry, although good natured, between the two cities since the meet at Bennings, and the Baltimore riders are anxious to get a match with those from the Capital City in order to decide the real champions. A familiar face will be missed on the track when the gun is fired. Chic Thomas, the best racer in Maryland, who was hurt in August, will not be able to participate, but he will be on hand to encourage the others in an effort to lower some of the present marks. C. F. Y.

Boston Run Made Enjoyable.

There are a good many of the boys who, when they go on a club run, are inclined to try and make a road race of it. And for this reason and no other a good many of the older and saner riders do not go on these runs. The subject was brought up at the last regular meeting of the Boston Motorcycle Club and after considering the matter it was suggested that a slow run be called and the suggestion met with immediate approval.

Dr. Coulson, or Doc. Coulson as he is called by the boys, offered the club the use of his cottage at North Weymouth on the day of the run if they cared to make it their objective point. His offer was gratefully accepted. Over half the members of the club put in an appearance the morning of the run (Oct. 29), and for over an hour paraded through the principal streets of the city.

They then left the city and passed through Newton, Waltham, Brookline, Forest Hills and Quincy to North Weymouth. Upon their arrival at the cottage they found that Doc. Coulson and his son had been down all morning digging clams and preparing a crackerjack dinner, which the boys immediately proceeded to get away with. After a game of ball they started for home about 4 o'clock.

Toronto Club to Incorporate.

Toronto, Ont., Nov. 13.—In connection with the affiliation of the Toronto Motorcycle Club with the F. A. M. a delegation from the club is making arrangements to visit President Hamilton of the Federation in January, with a view to arriving at a complete understanding in regard to Canadian motorcycle affairs. The situation will be discussed from all angles at the conference.

Having affiliated with the F. A. M., the Toronto Motorcycle Club now is making ready to incorporate in order to protect its name and put the organization on a more businesslike basis. After securing a charter the club plans to hold boxing tournaments and other sporting events, acquire real estate, erect a club house and board track, and, what will be most alluring, float all these ambitious undertakings by selling stock to members.

Canadian magistrates are increasing the fines for motorcycle speeding. J. Burrell, a motorcyclist of London, Ontario, recently was assessed $50 and costs, with the alternative of 20 days in jail, for speeding on a country road. In Toronto first offenses generally cost $5, while second violations are taxed $20 and costs. Motorcyclists complain that these penalties are all out of proportion, and point to the fact that there is yet to occur a serious motorcycle accident in the city streets.

Motorcycles for army scouting are highly commended in the report of the umpire staff on the field maneuvers of the Toronto garrison, held on the 30th ult., when the machines were used for the first time, and with a high degree of success for maintaining intercommunication between the defending forces. The section of the report referring to the work of the motorcycle scouts is as follows: "The Red commander was well served by his scouts and received accurate information of the movement of the Gray forces. Special efforts were made by the Red force to improve its system of intercommunication, which in other years has been a weak point." W. M. G.

Invincibles Hold Second Election.

Completing their first year of existence, the Invincible Motorcycle Club, of Brooklyn, N. Y., held its annual election of officers on the 14th inst., with the following result: O. P. Warlick, president; M. M. Aiken, vice-president; J. U. Constant, secretary; D. R. Thompson, treasurer; J. C. Fawcett, captain. Executive board: O. P. Warlick, chairman; Walter Goerke, F. H. Chase, A. J. Rochow and H. Jerome Mann. Most of the officers were re-elected, and the term of the new administration begins January 1st, 1912.

Housewarming at Columbus Club.

The Columbus (O.) Motorcycle Club, on the evening of the 8th inst., gave a housewarming party, which was attended by 105 members. The party opened up the club's new quarters on East Eighth avenue and was attended by the largest assembly in the club's history. On Wednesday evening, the 15th inst., the club gave a reception to the members' friends.

WOLTERS QUITS SPEEDING MACHINE

At San Jose Meet Jumps Off While Going 80 Miles an Hour—Broderick New "State Champion."

Flashing across the finish line first in three straight heats, Ben Broderick, of San Francisco, the two mile national champion, added another title to his string at San Jose, Cal., on the 4th and 5th inst., and now holds the "State championship." Broderick and Bud Northrup were the contenders for the honor, and although Broderick made a clean sweep, Northrup always was close up at the finish.

However, the real thrills of the two days' meet, which was a much mixed affair with aeroplane flights, broncho busting and other stunts on the side, were supplied by the professionals, Wolters and Armstrong. They tore off some sensational miles, Wolters being credited with one circuit in 45 seconds, and both did several under 50 seconds. On the first day Wolters and Armstrong divided a pair of five mile heats of a match, and on the second day the final heat was flagged in the sixth mile of a 10 mile dash by a sensational acrobatic feat by Wolters, who parted company with his machine while traveling in the neighborhood of a 45 second gait.

It appears that some part of Wolters's control became deranged and he could not slow down for a turn. Headed for the fence, he threw himself off the machine and after a long and bruising slide brought up in a ditch. Well protected with a helmet and padded clothing, he escaped with lacerations of the forehead and knees and soon was fixed up at a hospital.

Summary:

First Day—Saturday, 4th.

Five mile match, amateur—Broderick-Northrup on Indians. First heat won by Broderick. Time, 4:58⅕. Second heat won by Broderick. Time, 4:53⅖.

Five mile match, professional—Armstrong-Wolters on Excelsiors. First heat won by Armstrong. Time, 4:34⅖. Second heat won by Wolters. Time, 4:27.

Mile time trials—Armstrong (Excelsior), time 0:49; Wolters (Excelsior), 0:50⅖; Broderick (Indian), 0:55⅖.

Second Day—Sunday, 5th.

Five mile match, amateur—Broderick-Northrup on Indians. Third heat won by Broderick. Time, 4:42⅖.

Five mile match, professional—Armstrong-Wolters on Excelsiors. Called in sixth mile owing to accident to Wolters Time for five miles, 4:16.

Five mile handicap, amateur—Won by Broderick (Indian), scratch; second, Oberg (Indian), 0:10; third, Baker (Indian), 0:15. Time, 4:50.

Five mile match, McVey-Bennett—Won by Bennett. Time, 7:15.

Mile time trials—Wolters (Excelsior), time 0:47⅗; Armstrong (Excelsior), 0:49⅖.

Prince to Build Another Track.

Los Angeles, Cal., Nov. 11—Jack Prince was here last week and had a conference with the officials of the Los Angeles Motorcycle Club regarding the new board track which he is to build, and which he claims will eclipse in speed any track now in existence. Prince painted such rosy pictures of his new saucer and its speed possibilities, and promised so faithfully to have it in commission by the first of the year, that he persuaded the club not to run any races in the interval, and in consequence it called off a meet which it had scheduled at Ascot Park. Prince said that he would tear down the Oakland motordrome and rebuild it in another and more accessible part of the city, and that he would have it running in a few weeks.

"Foolish Question No. 61,535,649."

A motorcyclist riding along Broadway the other day stopped, jacked up his machine and commenced to fuss with a tire. Along came a pedestrian, who stopped, took in the situation at a glance, and inquired: "Had a puncture, friend?" The motorcyclist looked up, and, swallowing his feelings with a huge gulp, replied: "No; I'm just changing the air in this tire. The other lot's worn out, you see."

TEXAN MOTORCYCLES TO SYRACUSE

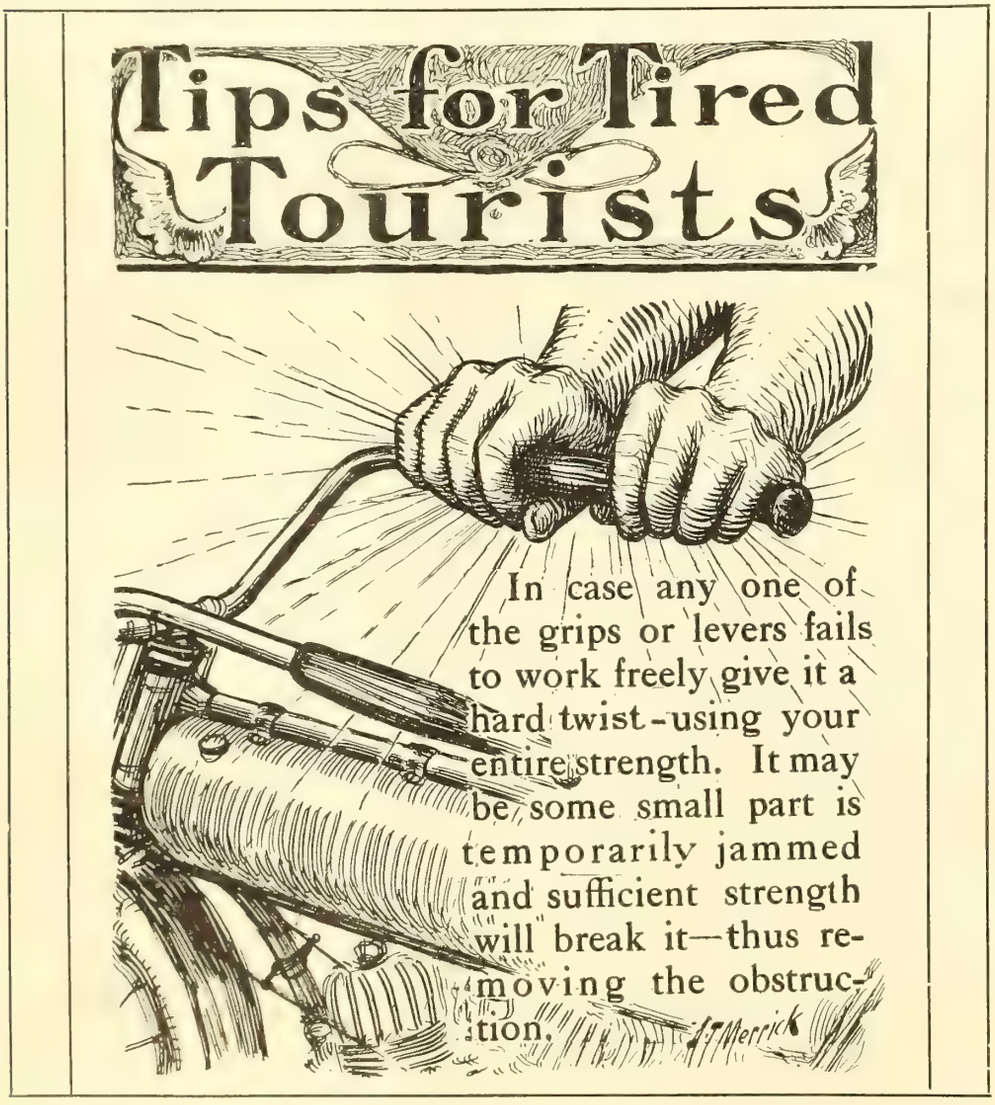
Ragsdale Made Trip in 18 Days Actual Travel—Illinois Mud Detained Him for Two Weeks.

That he might gain the experience as a repair man which is best obtained through a course in an automobile factory, Henry C. Ragsdale, of San Angelo, Tex., rode all the way to the Franklin automobile factory at Syracuse, N. Y., on a motorcycle. Starting September 27th, he was 44 days on the trip, spent 18 days in actual overland travel and averaged 160 miles for each running day, with a total of 2,850 miles.

HENRY C. RAGSDALE ARRIVING AT SYRACUSE

Mr. Ragsdale's route was through Fort Worth, Oklahoma City, St. Louis, Toledo, Detroit, Niagara Falls, Buffalo and Rochester. Difficult and dangerous traveling was encountered in a number of instances. At Mascoutah, Ill., Mr. Ragsdale was obliged to stop for two weeks because heavy rains turned the roads into thick, sticky mud.

In crossing the Canadian river near Oklahoma City the traveler rode over the ties of a railroad bridge a quarter of a mile long because there was no other bridge near and he hesitated to walk across lest a train arrive before he had reached the other side.



The earlier part of Mr. Ragsdale's trip was over roads heavy with sand and the days were hot, but this extreme was varied

when he passed from Detroit into Canada and struck several inches of snow.

"They charged me $13 to come through Canada," said Mr. Ragsdale. "I had to buy a license and various other things, and I was only there two or three days."

About 15 miles out of Indianapolis the repair man's ingenuity was taxed when he broke a valve stem, there being no repair shop near where the new valve might be ground; but Mr. Ragsdale sifted roadside sand through a burlap bag and with this fine corrorine ground the valve in with a screw-driver.

On his machine he carried numerous pieces of luggage. He wore leather leggings, corduroy trousers, a sweater, leather cap and a canvas hunting coat, of which the pockets were literally stuffed with small pieces of baggage.

No More Races at Olympic Park.

Motors will cough no more at Olympic Park, N. J., this season, for the New Jersey Motorcycle Club has wiped all unused schedule dates from its racing slate. Lack of riders at the last meet scheduled caused its abandonment and that of all races for the rest of the year.

CLOSE FINISHES AT SELMA MEET

Both Amateurs and Pro's Show Good Speed at Three Days' Racing Carnival —Joyce Best Professional.

With a small coterie of "Bobby" Stubbs's professionals from Birmingham as the top-liners, and some local amateurs also raising dust at an illegal gait, the first motorcycle races ever held in Selma, Ala., and which were part of the attraction at the Central Alabama Fair on the 25th to 28th ult., inclusive, gave the spectators all the thrills that were coming to them. Gail Joyce was the star of the visitors, and set up a new mile record for the local track, viz., 56¼ seconds. Joyce won a majority of the "pro" events, and Richard (Himself) Gayle was a capable imitator. Peacock and Owens, in the amateur division, put up some crack-a-jack scraps, and the finishes were fine enough to satisfy the most critical. Peacock had the best of the bouts. One day's program was postponed on account of rain. Summary of the three days' racing:

First Day—October 25th.

Five mile handicap, professional—Won by Gail Joyce (Indian); second, Richard Gayle (Indian). Time, 5:03⅕.

Five mile open, professional—Won by Richard Gayle (Indian); second, Gail Joyce (Indian). Time, 5:16.

Five mile handicap, amateur—Won by Owens (Merkel), half mile; second, Peacock (Indian), scratch; third, Turner (R-S), half mile. Time, 6:19.

Second Day—October 26th.

Mile for track record—Gail Jayce (Indian). Time, 0:56¼.

Five mile open, professional—Won by Porter Chambless (Indian); second, Gail Joyce (Indian); third, Richard Gayle (Indian). Time, 5:33.

Ten-mile handicap, professional—Won by Gail Joyce (Indian), scratch; second, Porter Chambless (Indian), quarter mile; third, Richard Gail (Indian), quarter mile. Time, 10:27⅕.

Third Day—October 27th

Rain. Races postponed.

Fourth Day—October 28th.

Five mile open, professional—Won by Richard Gayle (Indian); second, Gail Joyce (Indian); third, Porter Chambless (Indian). Time, 5:55.

Ten mile handicap, professional—Won by Gail Joyce (Indian); second, Richard Gayle (Indian); third, Porter Chambless (Indian). Time, 11:05.

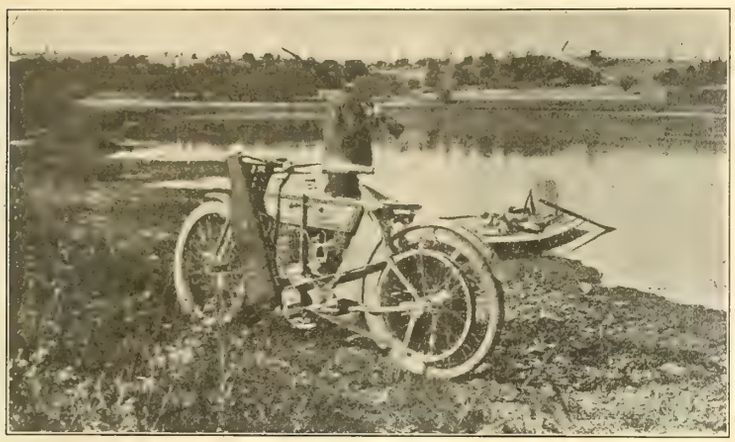
Five mile handicap, professional—Won by Gail Joyce (Indian). No others finished.

Five mile handicap, professional—Won by Richard Gayle (Indian); second, Gail Joyce (Indian). Time, 5:15.

Five mile handicap, amateur—Won by Owens (Merkel); second, Peacock (Indian); third, Turner (R. S.). Time, 6:02.

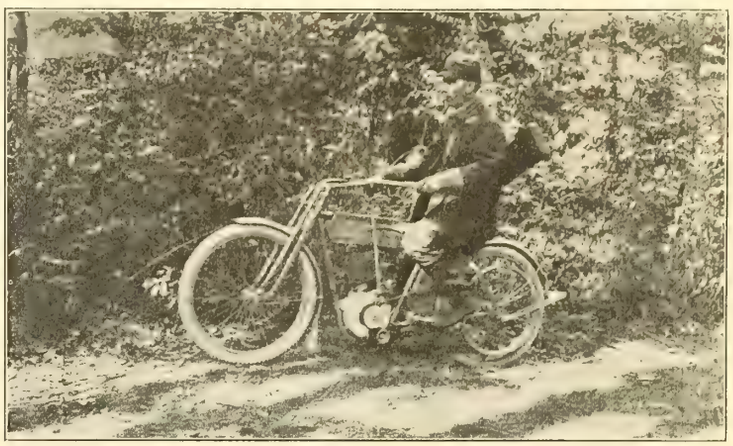
Ten mile handicap, amateur—Won by Peacock (Indian); second, Owens (Merkel); third, Fuller (Harley-Davidson). Time, 13:30.

Medals for San Jose Winners.



At the last meeting of the San Jose (Cal.) Motorcycle Club, handsome medals were presented to the winners in the recent 100 mile race conducted by Emile Agraz. Ben Broderick, Bud Northrup and C. E. Oberg, who finished one, two, three, each received engraved gold medals, while C. E. Reade, who made the fastest mile, was given a similar medal set with a diamond.

"Wifey" Won't Let Stubbs Race.



Birmingham, Ala., Nov. 11.—Robert Stubbs, the local racing man, who was seriously injured in the races at the State Fair last month, has recovered sufficiently to resume business cares. When asked whether he would continue his racing career, Stubbs smiled and said: "Not if Mrs. Stubbs can prevent it."

A MOTORCYCLE HUNTING TRIP

My brother bought a motorcycle, otherwise this little tale never would have been written. Shortly after his purchase we had one of those frosty October mornings when a subtle something tells you "they're flying." One of those mornings when, if you have any red blood in your veins, you wish you were free to follow your desires and not subject to that most critical of all mistresses—"business." That morning in particular I felt the lure of the rushes.

"EACH TOOK A SKIFF AND DECOYS AND PADDLED AWAY"

"THE AIR IN THE COUNTRY WAS DELIGHTFUL"

My dog, too, seemed to feel it and thrusting his wet muzzle into my hand tried in his own simple way to express his longings.

Going, however, was out of the question. My printing plant was rushed with the usual fall work and I knew I couldn't conscientiously leave even for a day. Then the thought struck me: "Why not at least enjoy the morning's shooting. You could run out in the cool of the evening, spend the night at the hotel and run to the grounds in time for the morning's shooting, returning to the city in time for the day's work."

Cautiously that day I led my brother on. How far was it by road to Muskego? How long would it take him to go there on his machine? How were the roads, etc.? Then I figured rapidly. According to him, I could make any hunting ground within a radius of 30 miles in a little more than an hour. That meant my scheme was feasible, provided I could ride and he would loan me his machine. This he willingly assented to. Two evenings' practice was sufficient to lend me confidence enough in myself and machine to undertake the trip. So the following night, with a friend, we started. He had his camera and the few pictures we took may raise to your mind, gentle reader, pleasant recollections of some past trip.

The air in the country was delightful and without mishap we reached the cottage which a friend of ours had built on the shore of Muskego Lake.

It scarcely needed the ring of our "Big Ben" the next morning to tell us it was time we were getting under way. A hasty cup of coffee and a sandwich or two sufficed to appease our appetites and we were off.

We decided to separate, so each took a skiff and decoys and paddled away. There was just enough "chill" in the air to make the exercise welcome. For 10 or 15 minutes I paddled steadily along and then in the dim dusk of the early morning I found

AMONG THE RUSHES, GUN AT HAND, WAITING

"TWICE MY GUN SPOKE AND THREE DUCKS ANSWERED"

just the spot I wanted—a long bending arm of rushes almost enclosing about 10 acres of open water. Quickly I headed past this point and placed my decoys.

With "blind" built and everything in readiness I lay watching the dusk softly change into the soft hues and colors of a coming sunrise. Slowly the somber shadows which had hung like gray clouds near the horizon turned into trees. In the distance a bird called, to be answered by its mate; the cattle lowed, the soft tints of the sky turned to brilliant rose, and then the sun appeared and it was day. Oh, you sleepy heads who daily miss this wonderfully thrilling sight!

Let me tell you there is only one thing grander than a sunrise on an October morning, and that is a sunrise that finds you among the rushes, gun in hand, waiting. Ten, 15 minutes passed, and then in the distance appeared my game. With a whirr of wings and chorus of calls they swerved downward toward my decoys. For a moment I watched them, and then, gun in hand, I rose to my knees. With a cry of warning the leader, a large drake, turned and away they soared. Twice my gun spoke and three ducks answered, among them the big mallard leader.

Oh, you brother trap shooters, if you never have tasted the ecstasy of such a moment, if you never have experienced the thrill and excitement of a real hunt, my advice is, "Do" with a capital D. Three times that morning I had shooting—not all as good as this, but good enough to make my bag seven ducks in all; three mallards, one pin tail and three blue bills.

Looking at my watch, I found it was half-past six, the time we had agreed to return to the cottage, so reluctantly I prepared to depart. As I was about to leave, my pal came up and snapped a few pictures, which accompany this narrative.

A second hasty bite at the cottage, for the morning air had roused an appetite—an appetite which, had there been time, would have been appeased with "game," and we were off. The mists had disappeared now and "Old Sol" was tempering the air sufficiently to make riding comfortable. There is something about that morning air that inclines you to take deep breaths, and there is something so vitalizing about each breath that it seems as if every fiber of your system was tuned to that pitch that you look forward with eagerness to the day's work.

Promptly at eight o'clock I stepped into my office, somewhat tired, I'll confess, for I was unaccustomed both to early rising and riding, but my tired was a "healthy tired," not a "nerve tired." In anticipation I am now looking forward to the hour when I may sit down to a feast fit for a king—a feast that has no equal for the sportsman, viz., the enjoyment of his own game at his own table, and possible for me only through the aid of a never-faltering motorcycle.

F. A. M. TO LIST REPAIR SHOPS

Old Roster Inaccurate and Revision Necessary—More Clubs Join the Federation Other F. A. M. News.

Latest F. A. M. news from the office of E. M. Estabrook, chairman of the membership committee, Bangor, Me.:

Newly affiliated clubs: No. 204, St. Louis (Mo.) Motorcycle Club, 26 members; No. 205, New Orleans (La.) Motorcycle Club, 100 per cent., 29 men.

With a big "feed" and some lofty speech-making, the Sidney (O.) Motorcycle Club was launched on the 1st inst. Fifteen members registered on the charter and each took away a list of prospects whom he has solemnly sworn to bring in. The club has voted for F. A. M. affiliation. There was enthusiasm and good fellowship in abundance at the formative gathering and the club has every promise of being a "live one." The officers elected were as follows: F. K. Lauterbur, president; Paul Monroe, vice-president; Kenneth H. Hutchinson, secretary; Samuel Knupp, captain; Howard Brautigam, lieutenant; directors, Clifford Allton, Elmer Unum, Alfred Yarber; Burt Foote, press agent.

Lawrence Hall, manager of the Hall Cycle & Plating Co., 417 Franklin street, Waco, Tex., has indicated his intention of organizing a local F. A. M. club and registering his establishment as an F. A. M. repair shop.

J. P. Wolf, R. S. agent in York, Pa., reports things nearly ripe for a club in that place. He has a good following of riders and prospects who "hang out" at his shop, and they are about ready to taste club life.

Latest F. A. M. registered repair shops which have been appointed are as follows: Kellington & Dieckhoff, Decatur, Ill.; Ballou & Wright, Portland, Ore.; G. T. Stream Co., Newark, O.; C. H. Marsh, Newark, O.; J. H. Poisson, Grand Rapids, Mich.; Neff & Malone, Rochester, N. Y.; DeGruchy & Correll, Columbus, O.; G. I. Stine, Fremont, O.; C. W. Bosustow, Racine, Wis.

Proprietors of registered F. A. M. repair shops who have made changes in the firm name, or location, since furnishing their name and address to Secretary Gibson at the time of enrollment, are requested to notify him of such changes at once, in order that the soon-to-be-published list of official repair shops may be as accurate as possible, and therefore of the greatest value both to the tourist and the repair man.

Owners of registered shops who are not in good membership standing in the F. A. M. have been sent renewal notices 30 days before the expiration of their membership, and later a circular letter giving information in regard to the proposed publicity campaign which has been mapped out will be sent to all shops in good standing. It earnestly is requested that all dealers who have allowed their membership to lapse will renew at once and thus remain eligible.

Quite a number of registered repair shops have been closed entirely or else have changed ownership, and it is absolutely necessary to weed these out before publishing a list of live shops.

There are no F. A. M. official repair shops in the following States: Arizona, Arkansas, Delaware, Idaho, Louisiana, Maine, Mississippi, Montana, Nevada, New Mexico, North Carolina, North Dakota, Oklahoma, South Carolina, Utah, Virginia, Vermont, West Virginia, Wyoming and District of Columbia. There is one registered shop in Canada—M. Scovill, 506 Richard street, Vancouver, B. C.

Not only in the promotion of interstate tours and race meets does the Short Grass Motorcycle Club, of Salina, and other parts of Kansas, shine bright, but it has an intensely practical and utilitarian side as well. This was forcibly illustrated on the occasion of a recent visit of B. J. Patterson, secretary of the club and vice-president of the F. A. M. Central District to Salina, when the club took a portion of the proceeds of a recent race meet and presented to the secretary a new and much-needed typewriter, the gift taking him entirely by surprise, but proving most welcome.

Tourist Trophy for 1912 in Doubt.

At the last meeting of the Auto-Cycle Union of Great Britain it was voted to hold the 1912 Tourist Trophy motorcycle road race in the Isle of Man, provided the necessary permission can be obtained from the island authorities. As the large number of visiting contestants and spectators at and preceding the races leave considerable money on the island, they are very popular with the Manxmen, and no difficulty is anticipated in securing the necessary permit. However, there is considerable opposition among several of the prominent racing makers to participating in the race if it is held on the island again, and under the existing rules. They take the stand that sending large racing camps to the island and maintaining them for two weeks before the race is a heavy burden financially, and they do not feel like shouldering it. On the other hand, there is no other place the race can be held without special Parliamentary legislation, and this is out of the question, for the race would be tolerated nowhere else in the United Kingdom. A suggestion to hold the race on Brooklands track has been advanced, but by no means has been received enthusiastically, and while some makers may stay out if the race is held in the Isle of Man it practically is certain to be held there. There is a whisper going the rounds that some of the British makers have got "cold feet" because an American machine won the three first places in the last T. T., and that because of this sound licking they don't want to risk getting another of the sort.

PROSPECTS ARE BRIGHT FOR AN OLYMPIC BICYCLE TEAM

United Cyclists' Activity Results in Important Steps Taken to Assure American Competition in the World's Greatest Road Race—Contributions Needed Urgently.

With the full active committee appointed, officers chosen and plans for a preparatory bicycle race set on foot, the American Olympic Bicycle Race Committee and the United Cyclists show that they intend to lose no time in getting under way the big undertaking of providing and sending an Olympic bicycle team to next year's games.

Following the installing of the remaining officers, the vice-president and treasurer and the completion of the board of trustees, every moment of the meeting of the United Cyclists at the Brooklyn headquarters, 1213 Fulton street, on Monday, 13th inst., was filled with action of a highly productive variety.

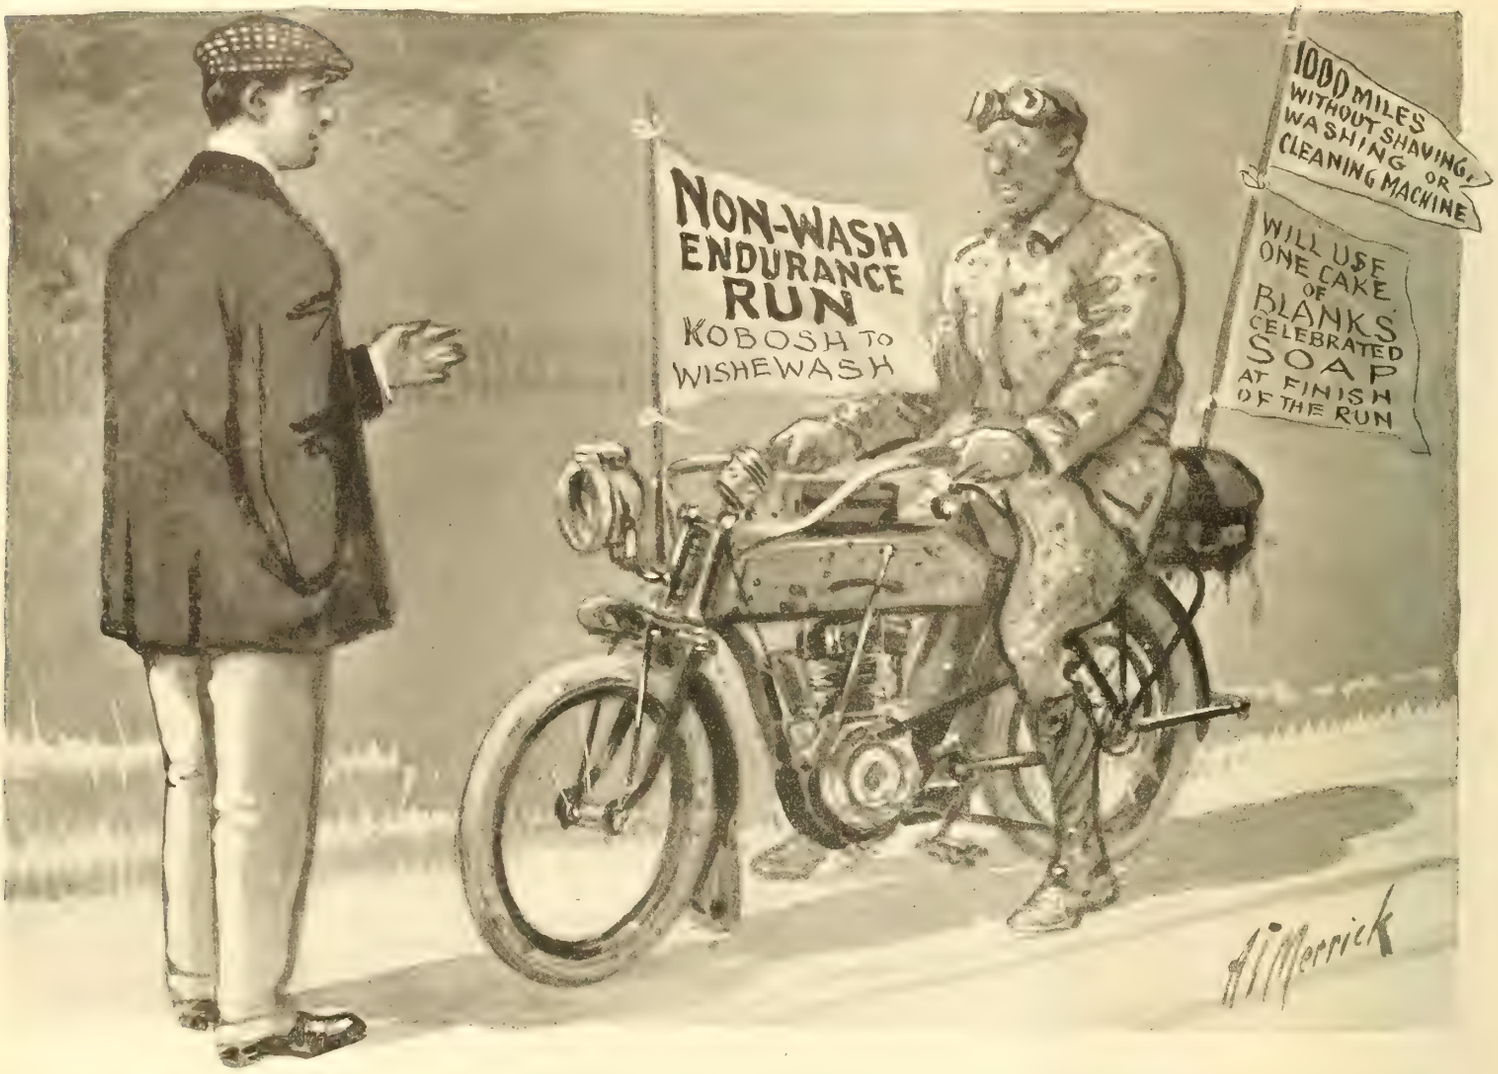
In completing the roster of officers, J. H. Patterson and Victor J. Lind, both of Brooklyn, were elected vice-president and treasurer, respectively, of the United Cyclists. The board of trustees, consisting of five, is as follows: Dr. J. P. Thornley, of Manhattan; O. P. Warlick, Franklin Fisher and Will R. Pitman, of Brooklyn, and Harold J. Dibblee, of Manhattan. The following were also elected to membership: F. A. Baker, Theodore M. R. von Keler, George Bieregal, Sylvain Segal, Robert Lawson, E. Le Ferguson, Albert Beguin, Henry Kest and W. Seegelkin, all of Manhattan; W. T. Farwell, Croton-on-Hudson; M. J. Julzer, Samuel Barnett, H. L. Lind, L. E. Wellman, George Hausenbauer, James H. Mangels, Joseph D. Cross, T. A. Kennedy, R. C. Bennett, Matthew Barnett, P. L. Kane, Thomas J. Murphy, C. B. Walker and John Becht, of Brooklyn.

The Olympic Bicycle Race Committee reported that at a meeting held on the 11th inst. the following officers were selected: Chairman, J. A. Hall; secretary, W. R. Stroud; treasurer, R. F. Kelsey. The committee also reported that plans for a bicycle road race to be held on Thanksgiving Day had been proposed and discussed; in fact, it had definitely decided to promote a race on that day, but it was considered best to ascertain the opinion of the riders as to what distance would be the most suitable for that date. This important point was decided and 25 miles fixed upon, and in addition the race will be run under exactly the same rules and conditions as will apply in the Olympic race in Sweden next July. All contestants to start singly at regular intervals of one minute, with the faster men leaving the mark first, so that there will be little possibility of riders giving or receiving assistance in the shape of exchanging pace; consequently every rider will of necessity be entirely responsible for whatever showing he may make in the race.

All those competing in this race whose time does not exceed by more than 25 per cent. the fastest time made will receive serious consideration for the elimination trials and for the team next spring.

In view of the fact that this will be but the second open race of the sort to have been held in this country, and considering that hitherto all contests on the road, with the exception of a few at short distances, have been handicap events, there also will be allotted time allowances in the prize distribution of this race, so that all will have an equal chance to win at least one of the 15 handsome prizes offered. The list will be topped with two highest-grade racing wheels, and the smallest prize offered will have a guaranteed value of $15.

The added members of the Olympic race committee are: M. J. Zulzer, Will R. ("Happy Days") Pitman, E. Lee Ferguson and Samuel Barnett. There will also be an honorary committee on which will be invited to serve the following-named gentlemen: Hon. William E. Prendergast, Hon. Ludwig Nissing, Hon. William M. Calder, Hon. Alfred E. Steers, S. A. Miles, W. J. Morgan, Milo M. Belding, J. Lovell Johnson, John C. Wetmore, A. B. Swetland, Alfred Reeves, A. J. Batchelder, Charles Henshaw, Alfred L. Pope, William F. Remppis, Robert Edgren, H. V. Valentine, J. P. Norton, William Hicks, A. Yager and John Foster.



The proposition of giving a dinner to the visiting motorcycle and bicycle manufacturers during the week of the coming automobile show was also discussed and favorably acted upon in that a committee, of which H. A. Gliesman is chairman, was appointed and instructed to arrange for and work in conjunction with a like committee of the Greater New York Motorcycle Dealers' Association. Wednesday, January 10th, 1912, is the date selected, and all plans are now being formulated to make this one of the leading social features of show week.

President J. A. Hall of the United Cyclists, who is also chairman of the American Olympic Bicycle Race Committee, has issued the following statement:

"The United Cyclists of New York have appointed a committee, known as the American Olympic Bicycle Race Committee, for the purpose of making arrangements to send 12 amateur bicycle riders to represent America in the bicycle road races to be held in Stockholm. Various elimination trials and finals will have to be held in every section of the country. The time is comparatively short in which to do this. For this work and to cover the expense of sending a team abroad about $4,500 is needed. The committee will have to depend greatly on voluntary contributions to raise this money. Every patriotic cyclist should do his part, no matter how small it may be; every club, which naturally is doing everything to boost the sport, should arrange for some kind of a benefit and send the proceeds to the treasurer of this committee; every dealer and manufacturer who is awake to the great possibilities that this event has in store for him as an advertisement for cycling, will send in his check immediately. We need funds at once in order to go on with the work."

James E. Sullivan, of the General American Olympic Committee, said recently: "There are hundreds of people who would be more than willing to join in the celebration of the great American victory next fall, but are backward in chipping in their share at this time. Others, and there are plenty of them, are holding off their subscriptions until the last minute. Let me tell you this: Ten dollars contributed to the Olympic fund now is worth $100 given at the last minute—say, the last of May. The committee must know real early where they stand financially." He states further that the committee must know not later than January how many are to be sent to Sweden and that they are already receiving notices from abroad asking how many men they will want accommodations for in the hotels, etc., for next July. They must also know how many to engage transportation for. This means that we must know definitely by January 1st at the latest whether or not we will have sufficient funds to send a bicycle team. We appeal to everyone interested in the sport at this time and ask that they send in their contributions at once. We appeal to every cycling club in the United States and ask them to arrange for some benefit, the proceeds to go to the American Olympic Bicycle Race funds. We wish that every bicycle dealer in every city would commence immediately to secure subscriptions sending the same to R. F. Kelsey, 914 Tribune Building, New York, the treasurer of this fund, and at the same time sending in names of prominent men in cycling in their city who would probably serve on a local committee.

Every bicycle and accessory manufacturer cannot help but realize what a great event this is for them, and what it would mean to their sales departments through the pub-

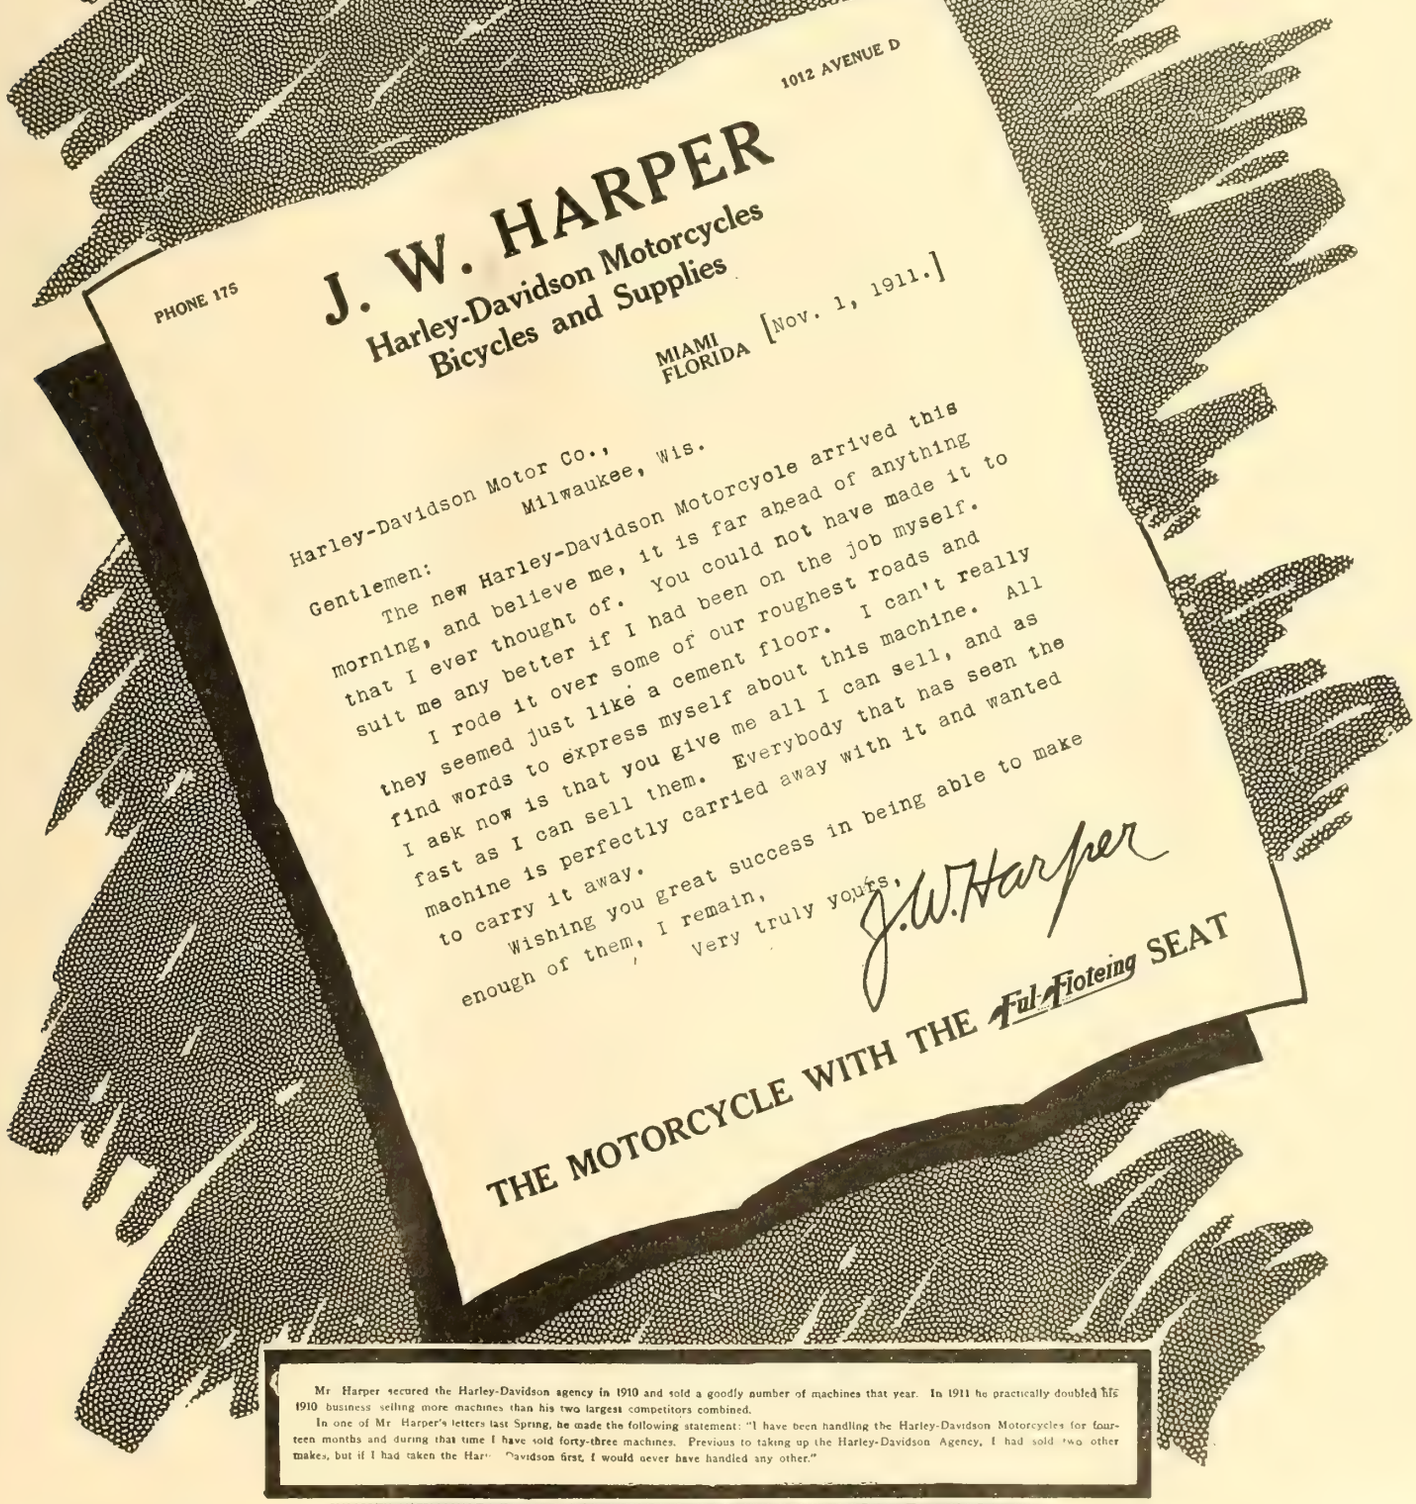
"Thanks for your invitation to go inside and clean up; but did you read my banners?"

licity obtained, and should send in at once substantial subscriptions to this fund, assuring the committee of their co-operation. Every newspaper in every city of the United States that realizes the importance of this event to its sporting columns and the readers of the same should take up this matter at once and give the committee in charge as much publicity and aid in raising these funds as possible.

The Bicycling World Co., in addition to a substantial cash contribution, has made a most generous offer. For every subscription to the Bicycling World that is obtained by the United Cyclists and sent through H. A. Gliesman, 782 Eighth avenue, New York, the company will donate one-half the subscription price of $2 to the Olympic Bicycle Race funds. These subscriptions must be sent, however, to Mr. Gliesman or the fund will not receive credit for them. This paper will also acknowledge, through its columns, every cash donation received. There are many members who do not feel themselves in a position to contribute as much as they might desire to do so. The offer of the Bicycling World Co. will appeal particularly to this class, because if they cannot contribute themselves, by securing a few subscriptions to the paper and sending the same to H. A. Gliesman they will be adding to the fund.

We appeal to you now for a prompt response. Funds are needed at once. What will you do to prove your patriotism and your interest in the sport? Send a check or money order to-day to R. F. Kelsey, 914 Tribune Building, New York, or start in adding to the fund by securing subscribers to the Bicycling World and Motorcycle Review, sending the same to H. A. Gliesman, 782 Eighth avenue, New York.

Maryland Riders Caught in Storm.



Two members of the Maryland M. C., of Baltimore, Messrs. Wood and Essex, are going to write a little playlet entitled "Lost in the Rain in a Strange Country." They have an abundance of material and a thrilling evening's entertainment can be provided. While a bunch of other members took to the road and traveled as far as Cockeysville, which is not very far from home, these two venturesome motorcyclists beat it for parts unknown. A kind farmer pointed out a new road and they started off to explore it. They did not explore very far when old Jupe Pluvius turned loose a mighty flood. They became stranded for sure, and, not knowing which way to turn, they sought a nearby farmhouse as a haven of shelter, and after being fed with much good and appetizing food at so much per, they were shown to the railroad station, where they shipped their machines back home and returned themselves as passengers on the same train. They are now saying that they will stick to the beaten path hereafter and let Roosevelt do the hunting in strange lands. The other boys who went to Cockeysville got back home before the rain came down in torrents, but they got some wet at that.

The projected run to Harpers Ferry, W. Va., has been called off for this year, and it is probable that it will not be taken until warm weather sets in again. The trip of several days to Staunton, Va., has also been called off indefinitely. C. F. Y.

Aeroplane Too Fast on the Turns.

In a four mile motorcycle-aeroplane race at Norfolk, Va., on the 26th ult., W. Fuerstein, the motorcyclist, was beaten by a quarter mile. The air craft swooped around the turns faster and easier than the land machine.

J. W. HARPER
Harley-Davidson Motorcycles
Bicycles and Supplies

MIAMI
FLORIDA [Nov. 1, 1911.]

Harley-Davidson Motor Co.,
Milwaukee, Wis.

Gentlemen:

The new Harley-Davidson Motorcyole arrived this morning, and believe me, it is far ahead of anything that I ever thought of. You could not have made it to suit me any better if I had been on the job myself. I rode it over some of our roughest roads and they seemed just like a cement floor. I can't really find words to express myself about this machine. All I ask now is that you give me all I can sell, and as fast as I can sell them. Everybody that has seen the machine is perfectly carried away with it and wanted to carry it away.

Wishing you great success in being able to make enough of them, I remain,

Very truly yours,

J. W. Harper

THE MOTORCYCLE WITH THE *Ful-Floteing* SEAT

Mr Harper secured the Harley-Davidson agency in 1910 and sold a goodly number of machines that year. In 1911 he practically doubled his 1910 business selling more machines than his two largest competitors combined.

In one of Mr Harper's letters last Spring, he made the following statement: "I have been handling the Harley-Davidson Motorcycles for fourteen months and during that time I have sold forty-three machines. Previous to taking up the Harley-Davidson Agency, I had sold two other makes, but if I had taken the Harley-Davidson first, I would never have handled any other."

Harley-Davidson Motor Company

CLARK FIRST IN SIX DAY RACE

Beats John Bedell in Final Sprint—Big Armory Crowded to Capacity on Last Day.

The third annual Buffalo, N. Y., six-day race came to a close last Saturday, the 11th inst., when Jackie Clark, of the Clark-Hill team, led John Bedell, of Bedell Bros., over the tape by half a wheel's length and the curtain was rung down on what, it must be admitted, was the most disappointing race of the three.

At the outset the race happened to be dated for election week, when there are so many attractions outside, and added to this is the fact that the competition was not as keen as it might have been, with the consequence that public interest lagged throughout the race with the single exception of the finishing night, Saturday, when a capacity crowd filled the huge 74th Regiment armory, where the race was held.

As noted in the account in last week's issue, the discrepancy between the actual mileage and the announced score was maintained throughout the week, and no attempt was made by those in charge to correct this or yet to give any additional reason for its existence other than that already stated.

Fourth Day—Thursday.

	"Announced Score."
Bedell-Bedell	722.6
Drobach-Pye	722.6
Clark-Hill	722.6
Root-Fogler	722.6
Carslake-Ryan	722.6
De Mara-Lawrence	722.5
Jokus-Jones	722.5
Wells-Collins	722.5
Palmer-Stein	Dropped out at 595.0

Fifth Day—Friday.

	"Announced Score."
Fogler-Root	898.3
Bedell-Bedell	898.3
Clark-Hill	898.3
Drobach-Pye	898.3
Carslake-Ryan	898.3
Jones-Jokus	898.2
De Mara-Lawrence	898.2
Collins-Wells	898.2

Sixth Day—Saturday.

	"Announced Score."
Clark-Hill	1,075.6
Bedell-Bedell	1,075.6
Root-Fogler	1,075.6
Drobach-Pye	1,075.6
Carslake-Ryan	1,075.6
De Mara-Lawrence	1,075.5
Wells-Collins	1,075.5
Jokus-Jones	1,075.5
Palmer-Stein	Dropped out at 575.0

Clark, John Bedell, Root, Drobach and Ryan rode in the last mile for the leading teams and finished in the order given.

Frayzee Proves Best Hill Climber.

The annual hill-climbing contest of the Century Road Club of America was held Sunday, the 12th inst., on Manhassett Hill, L. I. Good time was made in ascending the three-quarters mile rise, which is one of the stiffest grades in the vicinity of New York City. Keen competition marked the event from start to finish. E. E. Frayzee was first away from the mark, closely followed by E. Gerard and J. Hall. At the quarter-mile Charles Kudrle, with L. J. Massini on his heels, swung into the lead. With a quarter-mile to go Hugo Hintze worked to the front and held that position until within 100 yards of the finish, when Frayzee uncorked the winning sprint, nipping Hugo Hintze at the tape; third, Herman Hintze; fourth, Charles Kudrle; fifth, L. G. Massini; sixth, J. Hall; seventh, Emile Gerard.

Races Proposed for Savannah.

Savannah, Ga., Nov. 5.—Local motorcyclists are animatedly discussing the prospects for some motorcycle events between the big automobile races which will be held in that city during Thanksgiving week. The local club has appointed a committee to confer with the race committee of the Savannah Automobile Club to try and perfect arrangements for putting on some motorcycle events. When motorcycle races first were broached, a 100 mile event was discussed, but now sentiment has changed in favor of two 10 mile events, one for singles and the other for twins. Also there is talk of a special event for factory riders, and soliciting support for it from the manufacturers. If any races are held they will be run over the famous Grand Prize course, which is a 17 mile circuit and very fast. O. A. M.

Endurance Run from Atlantic City.

On November 26th the Atlantic City (N. J.) Motorcycle Club will hold its second annual endurance contest over a course of 200 miles as follows: Leave Atlantic City at 8 a. m., to Pleasantville, to May's Landing, to Maliga, to Camden, to Egg Harbor City, to New Gretna, to Port Republic, to Atlantic City. Course must be covered in nine hours. About 50 riders have already entered the run.

Cyclists to Race on New Year's Eve.

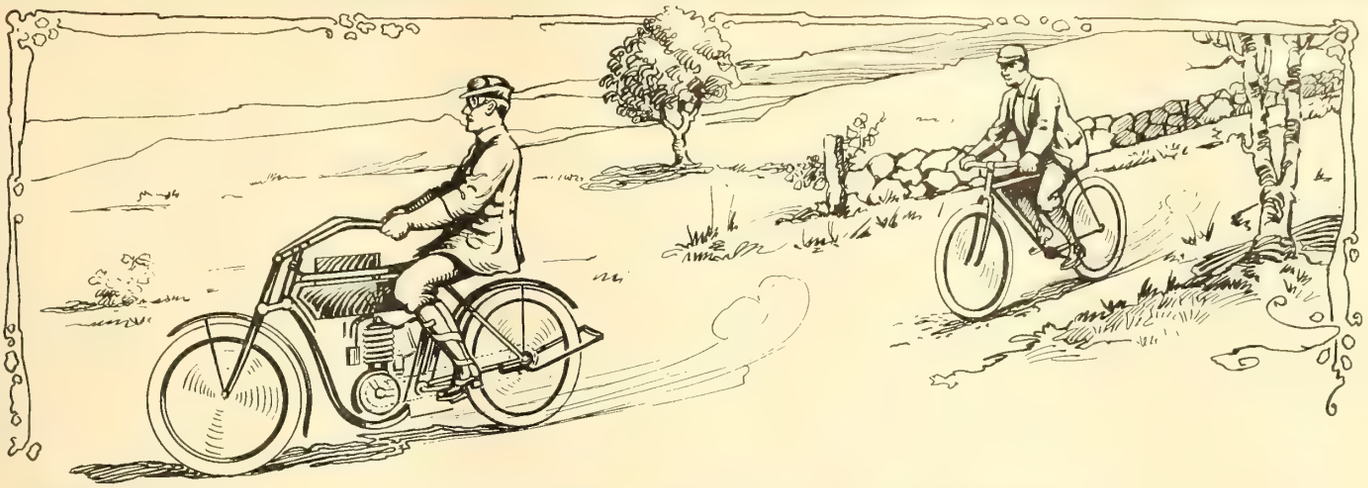
New Year's Eve, 12 o'clock midnight, under the auspices of the Empire City Wheelmen, will be run an open bicycle race from Bedford Rest, Bedford avenue and Eastern Parkway, to Surf avenue, Coney Island, and return. Three cups will be offered as prizes. Entry fee, 50 cents. Entries close with F. Fisher, 532 Pacific street, Brooklyn.

Loving Cup for C. R. C. of A. Ball.

The Century Road Club of America will hold its annual ball on Saturday evening, January 13th, 1912, at Lyric Hall, Sixth avenue, between 41st and 42d streets, New York City. A handsome silver loving cup will be given to the bicycle club having the largest representation.

"NIGHT RIDING" IN CALIFORNIA

San Francisco Club Holds 18 Hour Road Race—Racycle Team Finishes With Perfect Score.



Kentucky may be the birth place of the "night riders," but California saw considerable nocturnal prowling of a peaceable sort after the sun went down on the 28th ult., in the vicinity of Hayward, when the San Francisco Motorcycle Club staged its third annual "endurance" run over a 336 mile course, a 56 mile circuit being covered six times. It was an all night affair, starting at 10 o'clock, and when time was called after 18 hours of riding, 23 of the 37 starters were credited with perfect scores. The men rode in teams of three, and but one team, the Racycle, escaped penalization.

The honor men were the following: Christ Eike (Racycle); J. Pickerel (Racycle); D. W. McCarthy (Racycle); D. Hand (Indian); C. A. Gunn (Indian); A. Edington (Indian); H. Lorenson (Merkel); E. N. Moore (Pope); F. E. Karslake (Harley-Davidson); E. E. Leach (Merkel); L. W. Connor (Pierce); G. Van Nortwick (Pierce); Leo Martin (Indian); Frank Weitman (R-S); O. Walker (Indian); E. E. Stone (Thor); A. E. Young (R-S); G. E. Billesbach (Racycle); H. B. Uth (Racycle); Ben Broderick (Indian); P. Nash (Merkel); E. Matthews (Yale) and Al Makas (Racycle). The winning team consisted of Eike, Pickerel and McCarthy.

Quite the most interesting of the contestants was G. Takenchi, a Japanese, who rode a Thor, and completed the course, but was penalized for reaching a control ahead of time. Most of the riders who failed to finish were retired in the first two laps. Three hours were allowed to cover a lap of 56 miles, the route being from Hayward to Pleasanton via Mount Eden, Warm Springs, Mission San Jose and return. There were several accidents, all of a minor nature save that of W. G. Collins, an Indian rider, who fell from his machine while trying to turn out for a team and was severely cut about the head and shoulders. The roads were good and mechanical troubles comparatively few, but the puncture fiend was abroad with telling effect.

Weekly elimination runs will be held over the course in which the following will compete until all but one have lost their perfect scores: F. E. Karslake, L. W. Connor, G. Van Nortwick and A. E. Young. Just why the other perfect scorers should be left out of this run-off is not apparent from the official reports.

O'CONNOR A FOUR-TIME WINNER

Cuts Wide Swath in Prize List of C. R. C. A. Road Race—Scratch Lose Chances in Futile Sprinting.

Usually when one enters a bicycle race—or, for that matter, a race of any sort—to the natural pride of achievement, together with the opportunity of matching one's ability with that of others, the added incentive of the probability of winning a prize would be considered sufficient to spur one on to his utmost endeavor, and, should he be successful, justifiable cause for the resultant satisfaction. When, on Sunday morning last, the 12th inst., J. O'Connor, of the Century Road Club Association, crossed the tape in the 10-mile handicap road race under the auspices of that organization at Floral Park, L. I., his satisfaction—or shall we call it elation?—must have been of the, so to speak, "four-cylinder" variety, for not only did he make the best time in the race, but he qualified for three other prizes as well. O'Connor receives a gold watch for riding the course in the fastest time, a pair of Hartford tires for finishing in second position, a Bluemel pump for making the best time from the handicap marks of 1 minute to 2½ minutes, inclusive, and a medal offered to the first member of the promoting organization to finish.

By a margin of just 5⅘ seconds, H. Kaiser, 2 minutes handicap, a member of the Acme Wheelmen, won first place prize, a Columbia bicycle, over O'Connor. The latter in finishing second led Ed. Goerke, Empire City Wheelmen; A. Morgan, unattached, both on 2 minutes handicap, and J. Brexel, unattached, a co-worker on the 1½-minute mark, over the tape in a sprint in which the proverbial "inches" separated the riders. J. Brexel also pulled down second time prize.

What happened to the honor men, those riding from scratch, can be told in a few words. It is the oft-repeated tale of the lack of co-operation among the back-markers. As classy a field as could be desired was started from the mark, but instead of getting down to the work of riding the race a series of sprints were indulged in throughout the entire distance (evidently in attempts to kill each other off, with the result that Stanley Carman, New England Wheelmen, won the final "jam" from John Becht, of the Empire City Wheelmen, in a blanket finish for eighth and ninth place and third and fourth time, respectively.

When the times were announced, Carman appeared to be at a loss to understand how it was possible for any other than a scratch man to win first time prize, an opinion that has been aired in similar situations on previous occasions, but like his predecessors, a little demonstration eventually convinced him of his error.

The apparent slow time resulted from the heavy head wind encountered on the return journey over the five-mile course, the wind at times increasing in strength to a gale of 45 miles an hour.

The order of finish was as follows:

	Rider and Club.	Hdcp. M. S.	Time M. S.
1	H. Kaiser, Acme W.....	2:00	30:42⅕
2	J. O'Connor, C.R.C.A....	1:30	30:18
3	Ed. Goerke, Empire C. W.	2:00	30:48⅕
4	A. Morgan, Unattached..	2:00	30:48⅖
5	J. Brexel, Unattached....	1:30	30:18⅗
6	F. Mehrmann, Emp. C. W.	2:00	31:50⅕
7	G. Pepp, M.A.C.....	2:00	31:50⅖
8	S. Carman, N.E.W.....	Scr.	30:23⅘
9	J. Becht, Empire C. W...	Scr.	30:24
10	F. Fisher, I.A.A.C.....	Scr.	30:24⅕
11	J. Steinert, H'ksville A. C.	Scr.	30:25

24	P. Wo'nschlager, C.R.C.A.	3:30	43:01

Time Prize Winners

1	J. O'Connor, C.R.C.A....	1:30	30:18
2	J. Brexel, Unattached....	1:30	30:18⅗
3	S. Carman, N. E. W.....	Scr.	30:23⅘
4	John Becht, E. C. W.....	Scr.	30:24
5	F. Fisher, I.A.A.C.....	Scr.	30:24⅕

Special Prize Winners

The rider making the best time from handicap marks of 1 minute to 2½ minutes, inclusive—J. O'Connor.

The first member of the C. R. C. A. to finish—J. O'Connor.

New Cycle Club Issues Many Challenges.

Quality Wheelmen—that is the name of the latest cycling organization to spring into being in the Borough of Brooklyn, New York. A glance over the membership list reveals a quite imposing array of talent in the cycling line. Walter Raleigh, flat-floor rider and an Irvington-Milburn winner, is there; Hugh R. Brown, of the 23d Regiment; Jack Townsend, J. Murray and H. L. Lind, and experts in every branch of the pedal-pushing game.

The prime object of the "Qualities" is to promote social intercourse among the different cycling clubs in and around Greater New York, and with that point in view are out with a sweeping challenge for a pool match or tournament, three men to a team, preference given to Empire City Wheelmen, C. R. C. Association, Atlas Bicycle Club, C. R. C. of America, New York and New Jersey divisions, Acme Wheelmen, and New England Wheelmen. Further, a like challenge is posted for an inter-club bowling match and a team match for a flat-floor race; those desiring mental gymnastics will be accommodated with a pinochle team ready to meet all comers. Acceptances from any bicycle club in the metropolitan district may be addressed to Herman L. Lind, secretary, 223 Sixth avenue, Brooklyn, N. Y.

EMPIRES' CUP WINNERS ANNOUNCED

Joseph Orlando, Premier Man of Year in Club Events — Handsome Trophies Won by New Squad of Speedsters.

The winners in the seventh annual cup series of closed club races of the Empire City Wheelmen, Brooklyn, N. Y., have just been announced. The list shows an almost entirely new squad of speed merchants developed by this most active cycling club, there being but one rider, William Seegelkin, who was on the honor roll last year.

The cups, seven in number this year, are by far the most handsome ever posted by the club, and compare favorably with any trophies that have been offered for cycling competition at any time during the last dozen years. They range in size from 10 inches high by a width of six inches to the largest, it measuring 18 inches in height and the bowl being 10 inches in width at the top. All are provided with ebony pedestals. The total cost of the set is $150.

Forty-two members competed in the series, which consisted of handicap events at distances of one-half and one mile, two, five, 10 and 25 miles, the usual point system being used for scoring. The winners and the points scored are as follows: Joseph Orlando, 16; Frank Becht, 14; William Napier, 12; William Seegelkin, 12; Lawrence Happe, 10; Charles Fromeyer, 10.

The club's crack scratch bunch, among which are some of the most prominent track and road riders of the East, did not score a single point in the entire series. They are as follows: Carl F. Ericson, John Becht, Joseph Schuster, Joe Struber and Franklin Fisher.

Atlas Planning Busy Winter Season.

The Atlas Bicycle Club, of Brooklyn, N Y., is now giving the final touches to the arrangements for its first annual smoker, to be held at Stoetzer's Hall, 1213 Fulton street, Brooklyn, on December 16th, 1911. First-class talent has been engaged, an excellent course of refreshments provided for, and in all probability a set of home trainer races will be carded. In announcing the schedule for the coming winter season, on the list are noted a bowling tournament, pinochle tournament and a cross-country run. The club also claims to have the largest team in Greater New York of flat-floor riders; for these speed merchants a club point competition will be run. Road races are being planned for next spring.

Inclement weather conditions prevented the run to Lakewood, N. J., scheduled for the 12th inst., of the Atlantic City Motorcycle Club. If weather permits the run and attendant dinner among the "elite" at New Jersey's fashionable winter resort will be enjoyed to-morrow, the 19th inst.

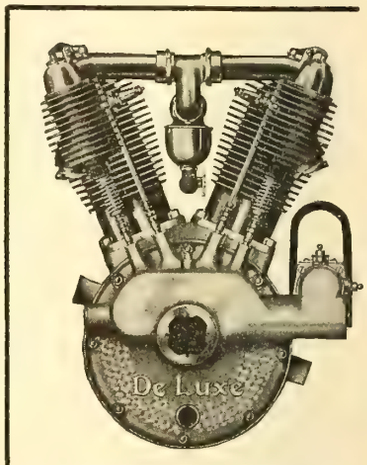
A REVOLUTION IN MOTORCYCLE MOTOR DESIGN

In bringing out our DE LUXE line of motorcycle motors, we have introduced a large number of improvements, and offer these motors as the most advanced now before the trade.

NOTEWORTHY IMPROVEMENTS.

One piece crank shaft.
One part crank case with cover.
Improved cam and magneto drive.
Oil tight motor.
Large Valves.
Simplified design throughout.
Reduced number of parts.
Quiet running motor.
Large Ball Bearings mounted in steel lined pockets.



Equipped with Bosch Magneto.

These improvements in design, together with the high grade materials used in construction, the modern methods of manufacturing applied, and the remarkable performance of these motors in road tests mark a revolution in motorcycle motor building.

Starts Next Week Do Not Miss an Issue

An American Team Can Win The Olympic Bicycle Road Race

to be held in Stockholm, Sweden, July 7th, 1912, and the UNITED CYCLISTS, the new, hustling, cycle boosting organization of New York, is going to raise the necessary funds to send the twelve best amateur bicycle riders of America to ride in the Olympic bicycle road race of two hundred miles. Several trials, elimination races and finals will have to be held in various parts of the country. For the purpose of doing this preliminary work and paying the expenses of the American team, about

$4500 Is Necessary

This fund will have to be raised largely through contributions from the various cycling clubs in all parts of the country, through their holding benefit race-meets, entertainments, etc., and from individual riders, dealers, manufacturers, and others who realize what the fact of an American team winning this race would mean to cycling in America and who have enough patriotism and interest in the sport to do their share.

The Bicycling World and Motorcycle Review—

America's oldest and leading cycling journal, a paper that has always led in every movement toward the improvement and best interest of the sport, once more comes to the front in the matter of raising funds for this Olympic bicycle racing team and has offered to donate to that fund, in addition to a substantial cash contribution, fifty per cent., or one dollar, on every yearly subscription to THE BICYCLING WORLD AND MOTORCYCLE REVIEW, secured by the UNITED CYCLISTS at the regular rate of TWO DOLLARS PER YEAR, and sent through H. A. Gliesman, Secretary of the Special Subscription Committee, from this date until May 1st, 1912. This is a most generous offer and

The One Big Opportunity for American Cyclists

If they will get busy at once among their friends and secure two, three, four, five or more subscriptions to THE BICYCLING WORLD AND MOTORCYCLE REVIEW, sending the same to H. A. Gliesman, 782 Eighth Avenue, New York City. In order that the Olympic Bicycle Race Fund shall receive credit for the subscriptions received in response to this offer they MUST be sent to Mr. Gliesman, who has charge of this matter for the UNITED CYCLISTS. THERE WILL BE NO CREDIT GIVEN TO THE FUND FROM ANY SUBSCRIPTIONS SENT ELSEWHERE THAN TO MR. GLIESMAN. Special subscription blanks may be secured from him upon request. Send for some today and get busy.

America Can and Must Win the Olympic Bicycle Race

WHAT WILL YOU DO, MR. CYCLIST, MR. DEALER, MR. MANUFACTURER as your share in contributing to this fund? In order to go on with the work we must have funds at once. Send in your contribution today. Draw checks to the order of R. F. Kelsey, Treasurer of the Olympic Bicycle Race Committee, Room 914, Tribune Building, New York.

SPLITDORF MAGNETO

"Always There"

SPLITDORF PLUGS are standard plugs among motorcyclists because of their marvelous efficiency.

An endless chain of records on the tracks and in road events during the 1911 season by the crack riders is striking testimony to the real quality of SPLITDORF EQUIPMENT.

Look out for the SPLITDORF MAGNETO! One of the largest manufacturers equips entirely with SPLITDORF and his choice is confirmed by the year's phenomenal successes achieved by SPLITDORF in the motoring world.

BE CONVINCED—SPLITDORF IGNITION is the IDEAL IGNITION and ALWAYS THERE. Insist upon SPLITDORF EQUIPMENT.

SCHAFER BALL BEARINGS

(MADE IN GERMANY)

are the most suitable bearings for motorcycles

Because

They withstand vibration due to the strong cage and large number of steel balls.

SCHAFER BALL BEARINGS are used throughout the *De Luxe* motor and two speed transmission for motorcycles manufactured by F. W. Spacke Machine Company, which fact proves that SCHAFER BALL BEARINGS stood up under the most severe tests before being adopted and that the best bearing regardless of cost is being used on the *De Luxe* motor and transmission.

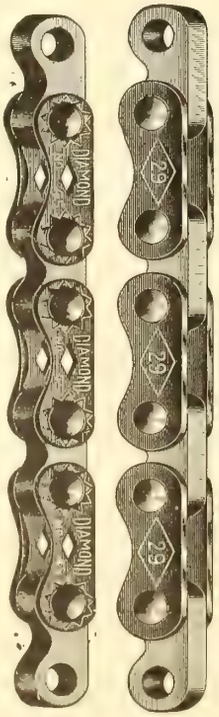
DIAMOND CHAINS

For Bicycles and Motorcycles



Our types and sizes meet every service condition. With a good record extending over twenty-one years and with the most practical connecting link ever offered, Diamond Chain is the logical equipment.

Diamond Motorcycle Chains do their work right in bad weather as well as good and are in every way a mighty good investment in a place where it pays to be careful.

We recommend the following for motorcycle work:

For main drive, Diamond No. 150 Roller Chain
For starting, Diamond No. 29 Block Chain

Of course, we make other sizes. Better start with Diamond Chains than come to them later.

Reliance

(REG. U. S. PAT. OFF.)

SPARK PLUGS

Sparks in Water

Take less battery power than any other plug.

Are absolutely proof against soot in any form. Dirty motors won't affect them. Patented electrical action destroys soot fast as deposited.

Carbon does not affect them. No cylinder knock means longer life to your motor.

Gives HOT concentrated spark. Means more power—greater fuel economy.

Reliance porcelain stands fifty to ONE HUNDRED per cent. greater voltage than any other.

Regular Type $1.00

Reliance plugs are positively and unconditionally guaranteed to satisfy.

Try Reliance plugs. Regular type, $1.00; Magneto type, $1.25. Sent prepaid on receipt of price if dealer can't supply. Write for our great book, "Ignition and Spark Plug Talk"—tells all ignition secrets; makes you master of your ignition system. Pocket size—convenient to carry. Sent free.

Kokomo "New Oxford"

The wear-resisting qualities of Kokomo Tires due to the extra quality of materials used in their making, illustrate the reason why so many manufacturers of high grade bicycles are using them; also, why dealers all over the land are busy supplying the demands of experienced riders who require only the highest grade tires manufactured.

KOKOMO TIRES

will be sold in greater lots during 1912 than in previous seasons. Kokomo "New Oxford," a popular guaranteed tire that is especially designed and constructed for road use. It is made from the best materials obtainable, being built up by hand with pure para inner tube, and, owing to the very high quality of the inner tube used, a puncture is very easily repaired. Kokomo Defender Special, a medium price tire of more than ordinary quality. It is popular among riders. Also furnished in smooth tread.

PENNSYLVANIA "Guaranteed" INNER TUBES "No. 503"

For Motorcycles

AFTER months of experimenting, the Pennsylvania Rubber Company has at last evolved a genuinely serviceable motorcycle tube which sells at a reasonable price. This is the Pennsylvania "No. 503."

Each Tube is Guaranteed

So thoroughly tested is this tube, so well made and of such high quality material, that it carries an unqualified season's guarantee.

Pennsylvania "No. 503" Tubes are made in the most popular selling sizes:

26 x 2½; 28 x 2¼; 28 x 2½

NOTICE: In placing this tube on the market, we have contemplated an attractive margin of profit for the trade. Jobbers and Dealers, therefore, desiring to sell Inner Tubes for PROFIT should write to us.

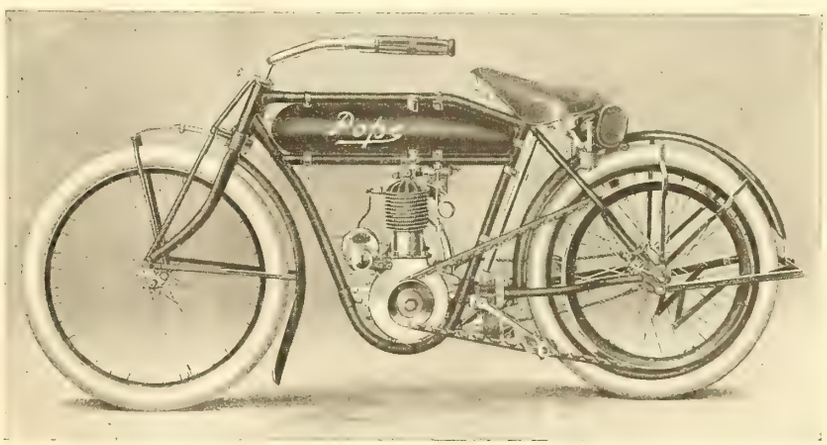
Put a POPE MOTORCYCLE

In Your Show Window

THE Quality, Workmanship and clean-cut design of the Pope Motorcycle are so obviously of the very highest grade that the average person accustomed to high-priced machines could hardly be expected to guess the Pope price.



Therefore be sure to have it posted conspicuously in your show window as follows:

Pope Motorcycle
Price, with Magneto
$175

LET the people of your town have a look at the only rational, reliable, medium priced machine on the market. Order a Pope Motorcycle now before some one else gets ahead of you and arrange to exhibit it in your show window for a few days, if you can stave off buyers that long. You can't count on keeping it very long, but you can count on booking orders for future delivery.

You may expect to see a big crowd standing in front of your show window, admiring the machine that is making motorcycling popular. Don't be surprised if they block the sidewalk.

If you want to ascertain further, how the public regards the Pope Motorcycle, mix with the crowd once in a while and note the various comments. Favorable? How could they be otherwise, when a $250 machine of Pope Quality is offered for $175? We would never have made this suggestion, had we not been certain of that.

One of our dealers who followed the plan outlined above writes: "It pleases us very much to say that in all our 27 years' selling experience, there has been nothing that has caused so much interest and favorable comment among the riding public in our city, as the Pope Motorcycle. When we placed it on exhibition, it caused a sensation—people fairly blocking the sidewalk awaiting their turn to view the machine."

Another dealer writes: "It also pleased me to hear the remarks about the machine while on display in my show window."

Another dealer writes: "I have never had anything in my windows which has attracted so much attention."

Here's what another dealer writes: "I am unable to keep it on exhibition, having sold it the day after delivery."

Why don't YOU test the drawing and selling power of the Pope Motorcycle, Mr. Dealer? Then wire us your order. Let us hear from you today.

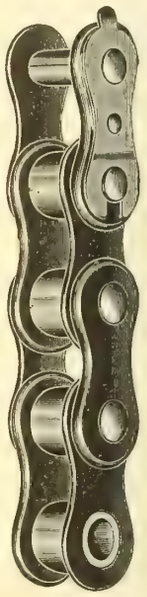
"Whitney" Chains Are Built for Strains

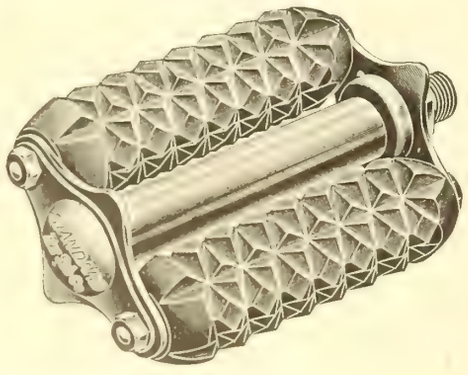
THE WHITNEY MFG. CO., Hartford, Conn.

Dear Sirs:—Yours of February 28th at hand. In regard to old chains, I have now covered over 12,000 miles on one set of your chains and have not even exchanged drive chain for pedal chain. Not one link or roller broken. Have carried tandem lately, which is a strain on chains. Just think of what these chains have gone through. From Los Angeles to New York, beside myself pulling 150 lbs. of extra baggage, and then from Canada to Mexico, and all over California, and still stick together. It sounds impossible, but this being the fact.



I will send old chains by express next week, as I intend to put on a new set. The old chains have done their duty, and then some. I think they are still good for a few thousand miles.

Put me down as a booster for "Whitney" Chains, as I will have no other.



Respectfully yours,

A. H. HELGESON.

733 Ottawa St., Los Angeles, Cal.

THE WHITNEY MFG. COMPANY, Hartford, Conn.

"Auxiliary Saddles"

The pedals are exactly that, as they bear part of the motorcyclist's weight, and the harder the bumps, the more the pedals bear. That is why one needs those big, generous, easy rubber cushions, that are a feature of the

No. 3 STANDARD MOTORCYCLE PEDAL

Deep corrugations in the soft rubber give the "cling" that makes the foot stay on. The pedals sell for $3 per pair.

Our products for the cycle trade include:

EMERGENCY AXLES, SAGER MOTORCYCLE TOE CLIPS, DIAMOND E SPOKES, BRIDGEPORT AND STANDARD PEDALS, SAGER AND STANDARD TOE CLIPS.

THE STANDARD COMPANY, Torrington, Conn.

THIS IS A SAMPLE

Make Your Child Happy With a—Fairy

Here is a Christmas present that is *sure* to please the Boy or Girl—the famous "Fairy" Velocipede, Bicycle or Tricycle. Settle the question of "just the thing" now. Get a "Fairy"—or "Fairies"—for both or all of the children.

For twenty years the "Fairies" have been the aristocrats of vehicles for children.

They are made of the highest grade of steel, richly and tastefully finished—with full nickeled parts. Every "Fairy" is ball-bearing—the easiest running imaginable. Our strong guaranty covers each machine.

"Fairies" are the great successes in *safety* and *correct design*. Exercise on a "Fairy" can be only beneficial. It is so built as to cause the child to sit comfortably and to bring the muscles into play without fatigue. Physicians approve the "Fairies."

See the "Fairies" at Your Dealer's

"Fairies" are sold at most of the large stores of the United States. If you do not find the "Fairies" at a store near you, write us and we will see that you are supplied.

The prettiest, most durable, most serviceable Tricycle ever built.

"Fairy" Ball-Bearing Bicycles have the *style* that makes a hit with the boy.

Upholstered seat, adjustable to rider.

Be Sure You Get a Genuine "Fairy"

The success of the "Fairies" has brought out several imitations. Genuine bears the word FAIRY (our registered trademark) in the lettering shown at the top of this advertisement.

A New Prest-O-Lite Motorcycle Gas Tank, Equipped with Gauge, $10

The addition of a gauge makes our motorcycle gas tank similar to our famous automobile tank in everything but size. This gauge shows, at all times, the amount of gas in the tank.

Our tank without gauge, which formerly sold at $10, will hereafter sell for $8. We have arranged with our dealers to take in this tank and exchange it for the new model with gauge, if the user desires, upon payment of the difference in price, $2.

Prest-O-Lite Tanks are now handled by nearly all motorcycle and automobile dealers in the United States.

Investigate Prest-O-Lite

Some of your friends are probably using this famous lighting system.

Ask them if it costs any more to maintain than the troublesome, treacherous generator.

Ask them about its convenience, safety and insurance against accidents. Ask them how much pleasure they find in having 40 hours of brilliant, unflickering, dependable light, turned on and off like a gas jet.

Just one accident due to poor light would probably cost you more than a year's supply of Prest-O-Lite.

But get the genuine. Imitations can be exchanged in very few places. Prest-O-Lite Tanks, when empty, can be promptly exchanged, anywhere and always.

FREE—Our Handy Ruler

Light, flexible, folding foot rule. Half of it is specially made for finding depth of gasoline in tank. Inches and centimeters. Measures tires, etc. Handy in a hundred ways. Sent free on request. Give name and address, and make of motorcycle.

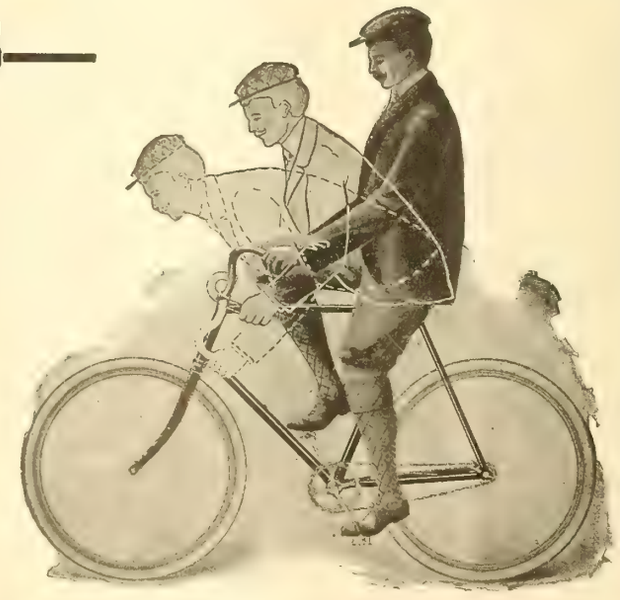
Price of Tank **$10**

Length, 12 inches; diameter, 4 inches; weight, 7 lbs.

The Prest-O-Lite Co.

245 East South Street **Indianapolis, Ind.**

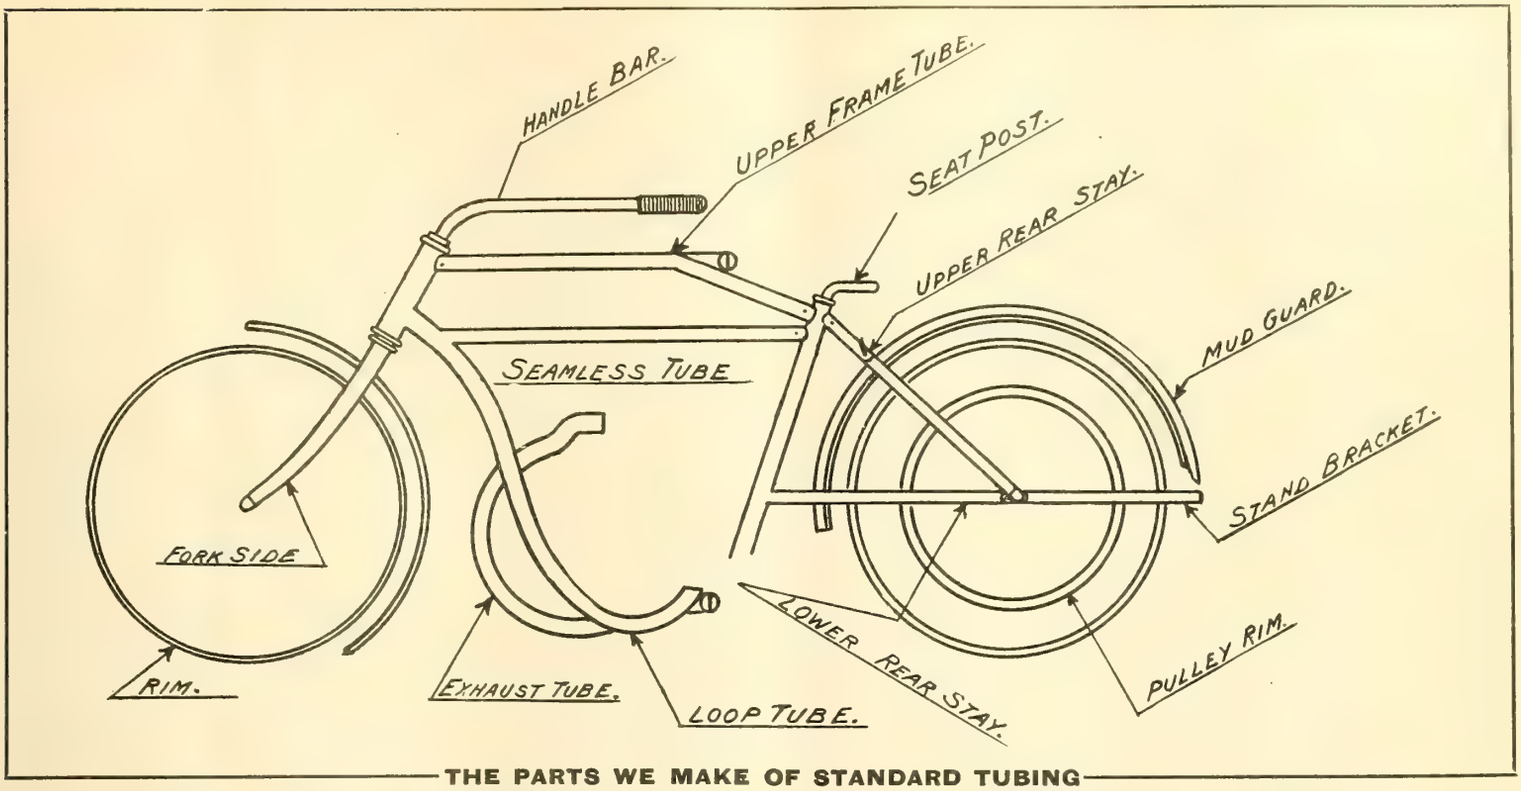
Branches at Atlanta, Baltimore, Boston, Buffalo, Chicago, Cincinnati, Cleveland, Dallas, Detroit, East Cambridge, Jacksonville, Kansas City, Long Island City, Los Angeles, Milwaukee, Minneapolis, New York, Oakland, Omaha, Philadelphia, Pittsburg, Providence, San Francisco, Seattle, St. Louis and St. Paul.



EXCHANGE AGENCIES EVERYWHERE

Assume two bicycles—

one with rigid, non-adjustable bars and the other with the Kelly bar, giving 25 riding positions. Which bicycle will sell more readily?



The Kelly adjustable handle bar is a real contribution to cycling and a positive feature of added value to the machine.

Sales are stimulated when the Kelly is an equipment feature.

The Kelly Bar Has 25 Riding Positions

THE KELLY HANDLE BAR COMPANY, Cleveland, Ohio

THE PARTS WE MAKE OF STANDARD TUBING

"STANDARD" SEAMLESS STEEL TUBING

¶ You will undoubtedly be surprised to know that 75% of the motorcycles and bicycles that pass you have frames and parts made of

Standard Seamless Steel Tubing

¶ No other branch of industry requires a similar product of so great strength, accuracy, density and possibilities of finish as do manufacturers of these two wheeled vehicles.

¶ Their reasons for employing Standard Seamless Steel Tubing are therefore obvious, inasmuch as they are at all times on the lookout for new materials and methods to improve their product.

¶ To better acquaint you with their reasons we shall show from time to time various machines, telling you their salient features, of which in all cases, Standard Tubing is the most prominent.

These Manufacturers Put Faith in Goodyears—They Specify Goodyear Motorcycle Tires for 1912 Output.

Aurora Automatic Machinery Co..Thor	Harley-Davidson Motor Co.....Harley-Davidson
Black Hawk Motor Co.....Black Hawk	Hendee Mfg. Co.....Indian
Consolidated Mfg. Co.....Yale	Miami Cycle & Mfg. Co..... Merkel
Emblem Mfg. Co.....Emblem	Minneapolis Motorcycle Co..... Minneapolis
Excelsior Supply Co.....Excelsior	Thiem Mfg. Co..... Thiem
Flanders Mfg. Co..... Flanders	Wagner Motorcycle Co..... Wagner

Don't overlook the deep and vital **significance** of the proof given above. It applies equally to those who sell and those who buy motorcycle tires. It signifies that tire-perfection has developed from a fog into a **fact**—that tire-service has passed from a **conjecture** into a **certainty.** No longer can skeptical minds be doubtful. A certainty of service on a maximum basis **can** be the only foundation on which these great and well known concerns have built their allegiance to Goodyear Motorcycle Tires. As a result of this authoritative recognition of tire-superiority, motorcyclists will be thousands of dollars **in-pocket.** Tire-trouble days are passed.

Prime Tires for Winter—and All the Year Around

The Goodyear Studded Tread is the ideal tire for icy travel. Because of its great and unequalled endurance and road-gripping qualities this thick-treaded tire promises the utmost in service.

This Studded Tread Tire as well as all the Goodyear Motorcycle Tires, are the boiled-down results of over 13 years' tire building experience. All that is known about Successful Auto Tire-Building has been summed up in these motorcycle tires. They are built on the same machines of the same high grade material and by the same skilled, conscientious workmen who worked such wonderful service into famous Goodyear No-Rim-Cut Auto Tires.

Is it any wonder that motorcycle manufacturers should be willing to pay tribute to such tires? Is it any wonder that successful, far sighted dealers gladly specify them?

Goodyear Motorcycle Tires hold all world's records for speed and endurance. They are the most resilient tires and they are built with thickest treads. This means a greater certainty of service and a lesser liability of punctures. Yet Goodyears cost no more than lesser-service Motorcycle Tires.

GOODYEAR
Motorcycle Tires

To do full justice to yourself and render most service to your trade specify one of

THE FIVE GREAT TIRES

1. **Goodyear Corrugated Tread Tires**—For the average give-and-take road.
2. **Goodyear Studded Tread Tires**—For mud, sand, snow and ice travel.
3. **Goodyear Non-Skid Tires**—For use on slippery pavements.

4 and 5. Goodyear Blue Streak Racing Tires—Hold all world's records. One tire for dirt tracks, another for cement or board.

Send for Our Book on "Motorcycle Tires." It Describes Them All.

DAVIDSON ON PRICE SITUATION

Milwaukee Motorcycle Manufacturer Expresses His Views—Inevitable Parting of the Ways, He Says.

Walter Davidson, also Arthur Davidson, of the Harley-Davidson Motor Co., were in New York during the present week. The object of their visit was two-fold. En route from Milwaukee they had dropped off at several points to say How'dy' to their agents, which was one of their purposes. The other was to select and purchase additional machinery that is required in their big new plant. They expressed themselves as well satisfied alike with the portion of trade that had come their way this year, and with the larger share that is ahead. They declared that the recent flurry in motorcycle prices caused them no concern.

"We were first to fix our prices for 1912 and they were not altered," declared Walter Davidson, "We lopped off $25 and at the same time we added $25 to the value of our machines. That free-wheel clutch of ours, and that 'Ful-floteing' spring seat—there's nothing in the same class with them—are worth every cent of $25, and most of our agents realize the truth, and are going right along doing business as if no manufacturer ever had cut his price to the bone. Personally, I'm rather glad that our price is just where it is. There was bound to come a time when there would be a parting of the ways—a time when the various motorcycles would seek or fall into their respective and proper price classifications. It is so in all other industries, and why not in the motorcycle trade? No one expects to receive the same value, nor can he obtain the same service, or the same comfort and general situation from an automobile costing, say, $600, that he secures from a car costing $1,600 or $3,600. It simply can't be done. It all is a question of values and common sense. There simply has been a proper readjustment of values in the motorcycle business, and we are happy to find what we always knew, that the Harley-Davidson is in the $1,600-$3,600 class, and not in the $600 set, so to speak."

Talking generally of the new features of the Harley-Davidson, Walter Davidson laughingly remarked that the Ful-floteing seat came near causing a small strike on the part of their testers. Several of the latter had been permitted to use the new seat and were then required to go back to rigid frame machines to test out a particular feature. In the course of a day or two, three of the testers declared they would ride rigid frames no more—that they must have the new Ful-floteing seats or they'd quit their jobs.

"And how about that agent who wrote that the new seat was so comfortable that he rode on a punctured tire and didn't know it until he got home?" interjected Arthur Davidson, as his elder brother was telling the "strike" story.

Tucker Leases New York Warehouse.

Following his action in locating a warehouse in Chicago,—Tucker, who is the Tucked Wood Work Co., of Sidney, Ohio, came to New York last week and leased a similar storehouse in the big city where ample stock of Tucker wood rims will be carried for the convenience of Eastern jobbers. So far as the metropolitan trade is concerned, the distribution of the rims will be in the hands of the New York Sporting Goods Company, one of the best known distributing houses in the East.

SOUTH WAKING UP TO MOTORCYCLES

Chapple Returns With Glowing Report of Prospects for 1912—Dealers Grasping Their Opportunities.

Returning from a two months' trip through the South, A. G. Chapple, of the Miami Cycle & Mfg. Co., Middletown, O., arrived in New York City early this week, bubbling over with enthusiasm over the prospects for the growth of motor cycling in Dixie next year. In his travels through the Carolinas, Georgia, Florida, Alabama, Mississippi and Louisiana, Chapple says he found dealers highly enthusiastic over the outlook for next year, and predicts that the number of motorcycles that the South will absorb in 1912 will be a big surprise to those who have not their ears "close to the ground."

"While Georgia is the banner motorcycle State of the South at present, its sister States are coming up strong, and the Southerners are just waking up to the possibilities which the motorcycle holds for them in a commercial way, and for enjoyable recreation too," says Chapple. "The New Orleans (La.) police department just has put in commission a squad of 10 motorcycle officers, and in the short time they have been out, they have done such good work that the department heads are wondering why they did not investigate the motorcycle before, for police work.

"Over in Tampa, Fla., J. D. Hanna, a dyed-in-the-wool rider, is lieutenant of police and supervises the local motorcycle fleet. Incidentally Hanna is a great F. A. M. booster, and does not confine his boosting to Tampa alone but spreads it as far

around the State as he can cover. Fruit brokers in Florida have found motorcycles the last word in transportation for covering the orange groves. Heretofore these brokers have used light automobiles of the watch charm type for this purpose, but even with these toy cars they had to take to the roads which in many places are none too good. With motorcycles they follow paths through the groves, and not only save time and distance, but do not have to tackle bad roads in covering the groves.

"Jacksonville is a live motorcycle town, and the local club is booming its race meet set for Thanksgiving Day. But Savannah, Ga., is 'the' motorcycle city of the South. Heretofore the local dealers have been at war with one another, and as a result the whole trade suffered. Now however, they have buried the hatchet and passed round the pipe of peace. There are more motorcycles in use there than in any other place below the Mason and Dixon line. Several things tend to bring this happy condition about, among them the good streets, the fine roads in the suburbs, the ideal 17 mile race course, and the general prosperity of the inhabitants, particularly among the class to whom motorcycles appeal.

"Strange to say Augusta comes ahead of Atlanta when motorcycles form the basis of rating. Augusta is overflowing with enthusiasm, largely due to the efforts of F. A. M. State Commissioner Watson, who also is a dealer. The reason for the slow growth in popularity of the motorcycle in Atlanta is that it is the leading automobile city of the South, and the prestige accruing from the ownership of a car, a notion strongly fostered by automobile dealers, has led many people who might have considered a motorcycle, to take a car instead. However, the situation is changing rapidly, for the motorcycle has forced recognition for itself, and now is "taking on" rapidly with Atlantans. J. D. Miller, who succeeded R. H. Colburn, in the local Merkel agency, has just established a motorcycle messenger service which has become quite popular.

"Despite the low price of cotton, the Southerners are buying motorcycles heavily, and where finances are limited, do not hesitate to deny themselves something else in order to have a motorcycle. While both agents and owners are 'from Missouri' and 'have to be shown,' once they are convinced they do not have to be pried from their money. When they have made up their minds the dealers sign contracts and place deposits without dallying, and they have big strings of orders and prospects on file. The belt drive, either flat or V is preferred to the chain in the South. Every city and town has its local champion, and swarms of races have been held at the local fairs this fall. Racing is very popular down there, and there are a few of the Southern riders who could hold their own with the Northern stars on dirt tracks.

"Practically all of the big Southern bicycle jobbers who heretofore have carried motorcycles, as a sort of side line, and regarded them as the tail of their business, now have waked up and made it the head. There are big opportunities throughout the South for live men to sell motorcycles. Here is just one instance: Last spring J. F. Greenough, a New Yorker, went South and located in Charleston, S. C., and opened a motorcycle store. Heretofore Charleston had been asleep as far as motorcycles were concerned, but Greenough soon woke it up and has kept it awake. He has one of the best motorcycle stores in the South, carries several leading machines, and is progressive and a hustler. There is room for a great many more Greenough's down there.

"New Orleans may have some motorcycle races this winter. John Chapman, the bicycle promoter, and Arthur Mitchel, the motorcycle racer, have gotten together and are talking of running weekly meets at the Fair Grounds. Chapman has abandoned his intention of building a bicycle track in New Orleans and now is regarding Jacksonville favorably as a location. Homer George, the automobile promoter, is going to run a big meet at the Mardi Gras in February, and of course, motorcycle events will figure big on the card.

"Satisfied with my trip? I should say yes. It was the best I have ever taken, from a business standpoint. I signed up a great many good agents, and as a result, Merkels will be more plentiful than ever in the South next year."

Manhattan Storage is Now Insolvent.

Another severe jolt, if not the final blow, was delivered November 22 to the business careers and operations of David Grinberg and Adolph Morris, by a petition alleging insolvency being filed against the Manhattan Storage Company, the elder child of their active intellects. Following as it does, the death last month of the Hayes Rubber Company, another Grinberg-Morris industry, it looks like the final roll call.

The petition was filed by the Lovell-McConnell Mfg. Co. and two other creditors. The first mentioned creditor's claim was for $1,693, and the aggregate of the two others amounted to $188. The liabilities of the defunct company are given as $3,000, and the assets at $500.

For some time past the Grinberg-Morris combination has not been dealing in bicycles, but has devoted its energies to second-hand automobiles and automobile supplies and parts. It has also dealt in motorcycles.

May Use Motorcycles for Repair Men.

For the puprpose of testing the suitability of motorcycles for the use of its inspectors and repair men, the Atlantic Blaugas Co., of New York City, has purchased and put in service an Excelsior twin. If the machine comes up to expectations the company will purchase more next spring. The company supplies compressed gas for lighting suburban homes, and constantly has a staff of men on the road. Finding railroad expenses rather stiff, the motorcycle method of transportation is being investigated in the hope of enabling the travelers to cover their territories with less expense. The sale was put through by T. J. Sixsmith, New York distributor for the Excelsior.

Western Electric to Buy Machines.

The Western Electric Co., of New York City, is contemplating the purchase of more motorcycles for use in the telephone service. The company is closely allied with the Bell telephone interests, supplying them with all operating equipment, and already has furnished a number of machines for the use of the New York Telephone Co. Any prospective purchase of machines simply would be in the nature of increasing the present fleet, for motorcycles have been used in the New York telephone service for several years.

Canada to Have F. A. M. Repair Shops.

Toronto, Ont., Nov. 21.—This city will be well represented in the F. A. M. list of official repair shops, several of the local motorcycle dealers having taken out certificates. Apparently the dealers have seen the handwriting on the wall, in the general trend toward affiliation with the F. A. M. now evident among Canadian clubs and riders, and consequently figured that it would be a wise move on their part to get aboard the F. A. M. band wagon also.

Chicago Branch for Continental.

The Continental Rubber Works, of Erie, Pa., have decided to open a branch in Chicago, and have secured quarters at 31 North Canal street. Fred W. Fee, formerly manager of the Chicago branch of the Corbin Screw Corporation, and well known by bicycle jobbers and bicycle and motorcycle manufacturers in the Middle West, will act as the manager of the new branch of the Continental company and handle the Middle Western territory.

Gas Company to Use Motorcycles.

The Elyea-Austell Company, local distributors of the Indian in Atlanta, Ga., recently furnished three four horsepower machines to the Atlanta Gas Light Co. The Elyea-Austell Co. have supplied "Indians" to a number of business houses in their city and all report that they are doing extremely satisfactory work.

Glasser Succeeds Hart in R-S.

W. B. Glasser, formerly of Denver, Cal., has been appointed assistant sales manager and advertising manager of the Reading Standard Co., Inc., of Reading, Pa. F. B. Hart is no longer with the company.

Motorcyclists of Galveston, Tex., held a meeting last week and organized the Galveston Motorcycle Club.

GERMAN MOTORCYCLIST'S TROUBLES

Red Tape Responsible for Astonishing Conditions in the Trade—Export Only Salvation of Most Manufacturers.

Apropos of the Berlin automobile show last month a question as to the present condition of the German motorcycle trade was put by Prince Henry to the managing director of the N. S. U. company (Neckarsulmer Fahradwerke), and it was answered in a way which nearly took the questioner's breath away. According to the statement of the manufacturer—and he surely ought to know, there are today less than 18,000 motorcycles in use in the Fatherland, while as late as three years ago one of the largest clubs alone had fully 10,000 members, and about 70,000 machines ran the roads. What is the cause of this loss?

In an endeavor to answer this question the Allgemeine Deutsche Automobil Club appointed a technical commission, whose duty it was to find means by which the efficiency, economy and reliability of the motorcycle might be increased and improved. Valuable prizes were set aside to be given to the manufacturer whose product showed the greatest technical improvement in a given time and made the biggest numerical gains in the German home trade. To the surprise of everyone connected with the trade, the commission reported itself unable to greatly improve the present high efficiency of the motorcycle and—what is still more remarkable—also unable to award any of the prizes, as no manufacturer had made any gains in the home trade, when the commission examined the factory sales records. On the other hand, wonderful strides were made in in export of the two-wheelers, proving conclusively that the trouble lay not so much in the technical part of the matter, but in some social or politico-economical conditions peculiar to the German empire.

The commission then applied itself to the solution of this problem with astonishing results. It was found that over 30,000 motorcycles were slumbering in sheds, barns and backyards, in cellars, garrets and stables all over the country; that more than 10,000 has been sold across the frontier after having been used a little while, and that hardly any dealer in motorcycles in Germany made a living out of the sales on machines. The manufacturers worked full speed, but their product went abroad; had it not been for the greatly grown export trade, many of them would have been forced out of business. And it was also discovered that the whole trouble started in the first few months of 1911, when the new motorcycle regulations for Germany went into effect.

These regulations make the riding of a motorcycle a thing to be dodged and dreaded instead of desired. In order to be allowed to mount a machine in Germany the would-be motorcyclist has to furnish the following papers and go through the following examinations:

		Cost, Marks
1	Certificate of the factory giving power, brake arrangement, etc., in the manner required by the government	1.50
2	Certificate of having acquired a thorough theoretical and practical education in the riding of a motorcycle	80.
3	Birth certificate	.50
4	A special unmounted photograph of applicant	3.
5	Physicians' certificate as to absence of bodily ailments	5.
6	A petition to be permitted to ride	.20
7	An oral examination before government officials	15.
8	A petition to government to allow the motorcycle to be ridden on the public highways	.20
9	In case factory does not give certificate required under No. 1, an official certificate testifying to power, brakes, etc.	15.
10	Paying the license fee	10.
11	Identification papers	3.50
12	Personal appearance at tax office, to have identification card stamped	.50
13	Personal visit to police department to get license card and number	....
	Total	134.40

After reading through the foregoing regulations, it hardly is any wonder that the German would rather go without a motorcycle than fulfil all these fancy rules. As a result the trade suffers, the sport dies and the world laughs at German red tape.

If Omaha (Neb.) motorcyclists see an exhibit of 1912 models, either a joint show week in dealers' stores or an independent motorcycle show must be held, as lack of space in this year's automobile show prevents combination.

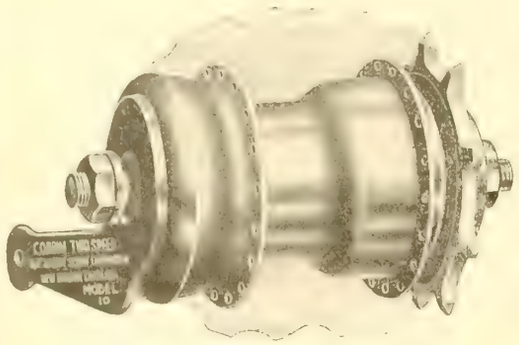
BREED LOCATES AT BAY CITY

Report States That Manufacturers of "G. W. Breed" Motorcycle Will Move from Detroit.

Having let the fact be known some time ago, that it could be wooed and won from Detroit, Mich., by any city that would erect a $15,000 plant for its occupancy, the G. W. Breed Mfg. Co., which was organized several months ago to build the G. W. Breed motorcycle, has given its heart and hand to Bay City, which has complied with the terms imposed. Bay City is keenly alive to the desirability of luring new industries to the city, and when its improvement association learned that the Breed company, like Barkis, was willin' to come if a factory was erected for it, no time was lost in circulating a subscription paper.

At a meeting of the association last week it was reported that practically all of the amount required had been subscribed, and bids will be called for without delay. It is expected to have the plant ready 30 days after construction work is begun.

This Comes by Aerial Post from London.



Carried by the first aerial post from London to Windsor, the postcard shown herewith was received by The Bicycling World and Motorcycle Review. The following message appeared on the reverse side:

"Compliments by the first aerial post. Brown Brothers, Limited, the world's largest cycle and motor material manufacturers and merchants, present their compliments to the editor of The Bicycling World and Motorcycle Review on the occasion of the inauguration of the first U. K. Aerial Post and trust that their pleasant business relations will always be maintained. Great Eastern street, London, E. C."

NEW YORK, NOVEMBER 25, 1911.

ANNOUNCEMENT.

Development of forces harmonious to the attainment of successful ends are essential to the production of a publication devoted to the enlargement and conservation of a specific industry. The Bicycling World and Motorcycle Review has for many years enjoyed the confidence of the trade and the user of the trade's productions, and it is the purpose of the publishers to retain that confidence for all time.

With this week's issue two well-known newspaper men become affiliated with this publication, both of whom have had wide experience in publishing and editorial work, and whom we briefly introduce to our readers and advertisers.

A. Eugene Bolles, who assumes the duties of vice-president and general manager of the Bicycling World Company, made his entrance into the publishing business 30 years ago, and has a practical knowledge of its varied branches. He entered the field of class journalism some 15 years ago, and has since that time, been connected in an executive position with such notable publications as the Marine Review, Hardware, American Exporter, Horseless Age, House Furnishing Review, Glass and Pottery World, and Advertising and Selling. He was vice-president and general manager of the last named publication prior to accepting his present position.

Richard F. Kelsey, who assumes the duties of managing editor with this issue, is also a practical newspaper man of wide experience, and is well known in the field of cycling sport, having served as an official of the National Cycling Association since its inception, and was, prior to that time prominently identified with the League of American Wheelmen. He was one of the original editorial staff of the American Wheelman, and was later an editor of The American Cyclist, which was subsequently absorbed by the Bicycling World. From 1906 until 1910 he was associate editor of the Automobile, and up to assuming duty on this journal, managing editor of the American Motorist, the official organ of the American Automobile Association.

J. A. Hall, who has been acting editor-in-chief for the past six months will continue his connection with the publication as associate editor.

It is the purpose of the new administration to pursue an aggressive business and editorial policy, broad and liberal in treatment, the results of which we hope will meet the approbation of our host of readers and the trade at large.

American Must Be Represented.

Lovers of the sport of cycling will be pleased to learn of the wide interest that is being taken in the movement to send an American team to combat for honors in the 200 mile road race around Lake Malar during the Olympic games at Stockholm, Sweden, next July. This is the only cycling event held in connection with the games, but its importance in determining the standing of American athletes is so marked that the opportunity cannot be passed over without considerable loss of prestige to this country as a whole.

The contest around Lake Malar calls for riders of peculiar stamina and staying power, but there is every reason to believe that we have on this side of the water just the material that can win the race, and the distance is to our liking. Victory for an American team, on American wheels, would give an impetus to the trade that is pleasant to contemplate. Manufacturers as well as the club should awaken to the possibilities of an Olympian victory, and assist in every possible way in the development of a representative team. It is time to think about it now.

Heavy Penalty For Noisy Riders.

According to a news item the deputy city attorney of Los Angeles, Cal., has drafted a lengthy new ordinance for that city which contains many provisions effecting the motorcycle, and the most important of which is the mandate against the use of muffler cut-outs in the public streets. The penalty for anyone violating any of the provisions of this act is $500 fine, imprisonment for not more than six months in the county jail, or both. What a wonderful aid to the promotion of the interests of motorcycling it would be if every city in the country was to pass a law similar to the Los Angeles act. Then we would really see motorcyclists going through our streets as they should, quietly, without jarring any one's nerves, scaring horses or giving the impression that the motorcycle is nothing but a dirty, noisy machine. Los Angeles motorcyclists are to be congratulated upon having such a progressive city official who, acting in such a manner does so much for the best interests of the sport. Let other cities follow.

How Air Leaks Upset Mixture.

One of the most puzzling causes of erratic motor action is due to leaks in the inlet manifold, caused by straining in drawing up the unions or disalignment of the pipe mouths when coupled. Any opening in the manifold other than the regular one at the carbureter allows extra air to be drawn in, upsetting the mixture and causing "surging" and skipping of the motor. Such leaks may be detected easily by resorting to what is known as the "smoke test," a trick of the plumbing trade used for determining the tightness of pipe joints. In applying the "smoke test," a short length of rubber tubing is attached to the air intake and tobacco smoke blown into the tube. If smoke emerges from the manifold it, of course, is sufficient evidence that an air leak exists. For non-smokers the test is made by applying soap suds to the manifold and unions with the motor running, when leaks will be indicated by the suction drawing the bubbles inward.

CORRECT SETTING OF THE MAGNETO

Many Factors Which Determine It — No Fixed Rule But Experiment Necessary in Each Case — Small Spark Plug Gap Required for Slow Speed — Erroneous Theories.

It is a well known fact that the accurate timing of the ignition spark in relation to the position of the piston is an important factor in the efficiency of a motorcycle engine, and as the magneto has been adopted almost universally by motorcycle manufacturers throughout the entire world, the proper timing of its spark should be given close attention. Although frequently requested, no set rule can be given for timing, inasmuch as the proper point of ignition varies according to the peculiarities and characteristics of the individual motor.

In an article recently published in several of the motor trade journals it was stated that the correct ignition point is one-eighth of the engine stroke; on this basis, with a motor, for example, having a stroke of four inches, the proper amount of ignition advance would be four-eighths of an inch, or one-half inch before top dead center. It is true that some motors having a four-inch bore would require the spark to occur one-half inch before top dead center to obtain the most efficient results, but it is equally true that this advance would be quite incorrect in other motors having the same stroke.

If an engine is so constructed that the ratio of compression is high and the combustion space is rather small, the required advance would be considerably less than would be the advance for an engine of low compression and having large combustion space. The normal speed of the engine is one of the great factors in establishing the proper time for the ignition spark, as it readily can be understood that a greater advance would be required if a motor was running 1,200 R. P. M. than if the same motor revolved at 600 R. P. M. maximum speed.

The time required for the complete propagation of the flame through a given mixture in a given combustion space is the same whether the motor runs at 1,200 R. P. M. or 600 R. P. M., but the interval between the time the spark occurs and the complete combustion of the mixture naturally is lessened when the motor operates at a higher rate of speed. Bearing this fact in mind it readily can be understood that a greater advance would be required for high speed motors than for those operating regularly at from 500 to 600 R. P. M., in order to allow time for complete combustion of the mixture after its ignition and before the piston starts on the explosion or power stroke.

Another item that must be taken into consideration is the length of the piston stroke of the motor, for the longer the stroke the greater must be the spark advance, other conditions, of course, being equal; thus for an engine of three-inch bore and four-inch stroke the ignition advance would be greater necessarily, than if the engine was constructed with the bore and stroke equal viz.; three and one-quarter inches. This is what is known technically as a "square" motor.

Still another determining factor in the degree of spark advance is the location of the spark plug. If the plug is located in the cylinder head with the points or electrodes projecting into the center of the combustion space so that they are in the path of the incoming charge, a small advance naturally would be required, whereas, if the plug location was such as to bring it on one side of the combustion chamber, and, due to form of construction or otherwise, the electrodes were in a more or less pocketed position, the advance required would be greater, so that this conclusion easily may be drawn, viz.: that the exact time when the ignition spark should occur in order to obtain maximum efficiency cannot be determined by rule, but only by experiment.

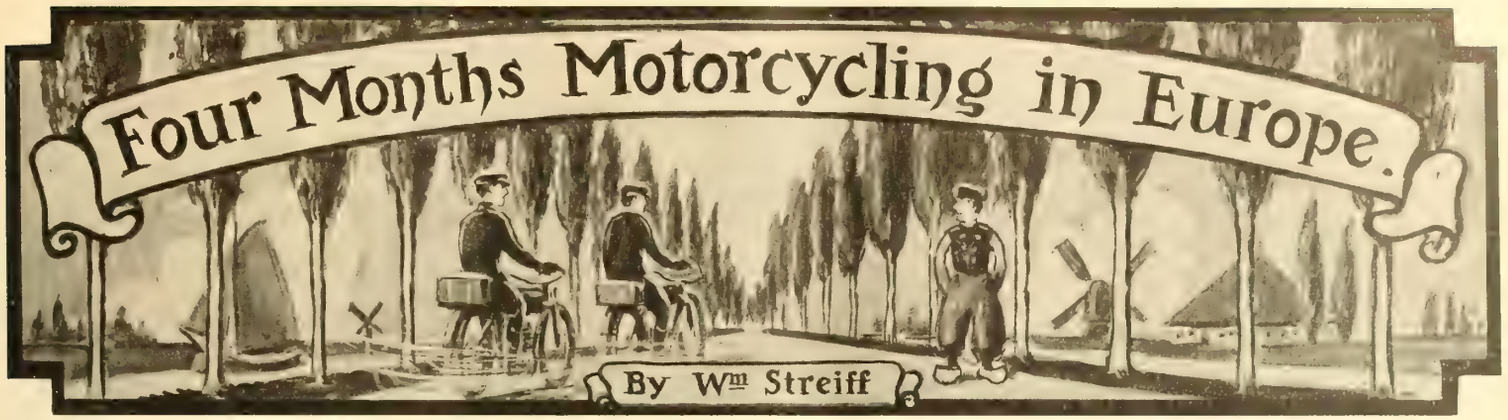
In timing the modern type of motorcycle magneto, the best results may be obtained by so setting the contact points—with the circuit breaker box of the magneto in full retard position—that they will separate and cause the ignition to occur when the piston is at top dead center. Whether or not the advance position then will be correct, only can be determined by actual trial, and if, after the experiment, it is found that the motor does not run as efficiently as it should, the relation of the magneto armature to the main shaft of the motor can be changed, and, in accordance with carefully noted tests, satisfactory results may be obtained.

Another statement that is quite untrue, and which has attained considerable circulation in motor trade journals is that, if it is desired to operate the motor at very slow speed the spark plug points should be opened until they are a full one-sixtenth inch apart. This statement is exactly contrary to the actual condition which the following of such advice would bring about, and the majority of motorcyclists are quite aware of the fact that it would be mighty difficult to start their motors if the spark plug points were so adjusted.

When the magneto runs at slow speed, as is the case in starting or running a motorcycle slowly, it does not produce a current as intense or of as high a voltage as is the case when it operates at high speed, and, in consequence, the current would be insufficiently strong or powerful enough to jump across a wide gap; thus, if it is desired to operate the engine slowly the spark gap of the plug should be smaller than if the motor was operated only at high speed.

In its instruction book of its motorcycle magnates, the Bosch Magneto Co. advise that the best results for normal operation can be obtained with the spark plug points separated one-half of a millimeter or one-fiftieth of an inch. This distance is equal approximately to the thickness of an ordinary visiting card. It is quite true that certain characteristics of an engine will influence the proper width of the spark gap, but it is rare indeed, when conditions require this gap to be greater than one-thirty-second of an inch under any circumstances.

A. H. BARTSCH.



Dealers' Association Growing.

Three new members were elected at the regular meeting of the Motorcycle Dealers' Association of Greater New York, on Tuesday, 14th inst. The new recruits are as follows: C. Krebs, Newark, N. J.; Callwell Motorcycle Agency, Newburg, N. Y.; J. Steele, Midland Park, N. J. The meeting was called at 10:30 p. m. by President Gliesman. Secretary Rotholz read the minutes of the last meeting, which were approved. President Gliesman reported that in behalf of the association a letter of sympathy was sent to Frank Hart, the injured racing man.

The advertising committee reported having inserted advertising in the Guttenberg race programs, and also that 10,000 circulars giving the names and addresses of members, and machines handled, had been printed and distributed among the members for general circulation. The suggestion of compiling a log book for free distribution to motorcyclists, containing a list of the members of the association and their lines, was favorably received.

President Gliesman referred to the dinner which the United Cyclists proposed tendering to the motorcycle and bicycle manufacturers during show week, and as the association had intentions along the same line, it was suggested that both organizations co-operate in the matter. A committee to represent the association will be appointed at the next meeting.

Agitation regarding the securing of uniform ferry rates for motorcycles and riders in Greater New York, was introduced. It was brought out that ferry rates were widely dissimilar, ranging from five to 20 cents, according to the particular ferry used. A committee will be appointed later to look into the matter. The association voted to hold its first annual dinner during the first week of December, and a committee will be appointed later.

Having made up my mind to tour Europe by motorcycle last summer, I decided that such a trip would be more pleasant and congenial for two than for one, so I started out to find an acceptable companion before leaving, if possible. After considering several applications received in response to my advertisement, I finally decided that Joseph Esler, of Quincy, Ill., would prove an agreeable riding partner and notified him of his selection, and he came to New York, where we made final arrangements.

Esler had a five horsepower Indian of 1911 vintage, while I decided to use my trusty N. S. U. four horsepower single, which had carried me across the continent from San Francisco last year. We left New York June 28, and were fortunate enough to secure passage on the giant new Olympic, the largest steamship in the world, on her maiden trip eastbound. This leviathan has accommodations for over 2,500 passengers, and is the last word in luxurious ocean traveling.

After seven days out of sight of land we touched Plymouth, and discharged a number of passengers. Cherbourg was the next stop, where we lay over several hours, and next day we docked at Southampton, the last port of call, at one of the largest piers we ever had seen, being nearly 1,000 feet long. When we arrived the great dock strike was in progress, and we experienced considerable difficulty in landing and getting our effects ashore. After passing the customs, we were bundled into a special train, which in comparison with an American train, seemed like a toy. The coaches are smaller and lighter, and the roadbed is narrower. In passing through cities, the English railroads cross on embankments and bridges, so that there are no grade crossings and few fatalities. The locomotives carry no headlights.

At the World's Metropolis.

We arrived in London on the evening of July 5, and at once sought a hotel. It is the custom over there to make a flat rate for a night lodging and breakfast. Because of the temporary loss in transit of Esler's machine we were delayed in London several days and passed the time visiting the leading motorcycle and accessory firms, among them the Indian and N. S. U. branches, and the Bosch magneto, Jones speedometer, Shamrock Gloria belt and Peter Union tire stores, where we were cordially welcomed.

Saturday, July 8, we visited famous Brooklands and saw DeRosier hang up some English records. Of course it was necessary to have licenses before attempting to ride in Great Britain, and we called at the magnificent headquarters of the Auto-Cycle Union in the Royal Automobile Club building to procure them. The A. C. U. is the motorcycle branch of the R. A. C., and the motorcycle governing body of Great Britain, being similar to our F. A. M. Memberships and touring cards were issued to us for $1.20 each, and we also had to get driving licenses, which cost another $1.20 for license and number plate. The assistant secretary, Mr. Bradley, was very courteous, and escorted us through the building. I believe it is the most luxuriously fitted club in the world, and contains everything the heart could desire to add to one's comfort.

HISTORIC WESTMINSTER ABBEY

Having finally recovered Esler's machine we put both in readiness and started forth from London July 20 on the first leg of our tour. We followed the Great North Road, which is hundreds of years old, and is a trunk touring line, so naturally it is kept in superb condition. Mr. Rieger, of the N. S. U. London branch, accompanied us for 15 miles or so. Our first stop was at Biggleswade, where we had dinner and filled our tanks. Over there gasoline is known as "spirit," a designation also universally used on the Continent, but for some little time we found it difficult to accustom ourselves to the use of this term.

Northward Through Peterborough.

Peterborough, 83 miles from London, and famous for its pottery and cathedral, held our presence for a brief time, and after a pleasant late afternoon ride we came to Newark, 183 miles from London, where we decided to spend the night. Our first day's run had been through hilly country, studded with pretty scenery, with the foliage a deep green as a result of recent rains.

Up betimes at 6 o'clock the next morning we were in the saddle an hour later, starting without breakfast. We stopped at Doncaster and appeased our now keen appetites. Here Esler decided to invest in another rain coat, the one on the steamer having been "borrowed" by some person who thoughtlessly neglected to return it. At York, where we took dinner, we found the old cathedral and forts, the latter now used as army posts, quite interesting. This city has the crooked streets typical of all English cities, and strangers experience considerable difficulty in finding their way about.

Leaving York behind we began to climb the English foot hills, and made our next stop at Stockton, a city of 75,000, and a coal mining center. Continuing on we reached Durham, on the River Weir, and found some pretty stiff hills on entering and leaving the place. Durham also is in

the heart of the coal mining region, and also is noted for its old churches, being one of the most ancient of English cities. It naturally is rich in historical interest.

Beyond Durham we passed side cars in great numbers, these vehicles being very popular there, while in America they are rare indeed. On the other hand the American tandem attachment is very scarce in England. We reached Newcastle, famous as a shipbuilding center, and for its coal, in the evening, and received a cordial welcome from the N. S. U. agent. We had supper at the quarters of the Newcastle and District Motorcycle Club, and learned that the club had a quarterly trial on the day following. It was a non-stop test over a 160 mile course.

At a "Temperance" Hotel.

We stopped that night at a "temperance" hotel. There are two classes of hotels in Great Britain, those with "bars" and those known as "temperance" and the latter are strictly "dry." After seeing the local riders off in the morning we also took to the road, headed for the Scottish border. After a two hour climb in which we covered 47 miles we stopped at the summit of the Grampian hills and took some excellent panoramic views. Then came a long slide down the other side for several miles, bringing us into Jedborough, our first stop in Scotland. After filling our tanks, we continued, traveling through some very scenic territory and late that afternoon rolled into Edinburgh, the capital of Scotland. After garaging our machines we took a stroll about the city to see the sights and soon had a crowd at our heels, being mistaken for "fleeing mon" (flying men), as a newspaper contest for a $50,000 aviation prize was running and the aviators were expected that night.

AT THE BOUNDARY DIVIDING ENGLAND AND SCOTLAND

Although the next day was Sunday we decided to cross over and see Ireland without delay and pulled out of Edinburgh at 10 o'clock. After a 46 mile spin, some of it over cobble, we reached Glasgow, and found very few places open, and it required quite some scouting before we could secure anything to eat. After leaving the city we passed a military camp of the Scottish Territorials, where over 20,000 men were stationed. They correspond to our state militia, and many of them wore the picturesque "kilts," so we stopped and took pictures. After covering 60 miles of winding road along the coast, and incidentally, where Esler had his first puncture, we sighted Stranraer, where we took the boat for Ireland. We put the machines aboard ship which lay at the dock over night, after having drained our tanks as ordered. Instead of throwing the "spirit" away, however, we took the precaution to preserve it in bottles which we carried with us, and so were enabled to start easily after landing on the other side. We were aboard ship betimes next morning, as it sailed early, the passage taking two hours.

It was raining when we landed at Larne, but nevertheless we started for Belfast, the largest city of the Emerald Isle, passing through some very pretty country. Upon arriving there the N. S. U. agent greeted us warmly, and introduced us to Secretary Kearney of the Belfast Motor Club. I hunted up an old friend, who gave us a royal reception at his fine residence in Sydenham, a suburb.

Early next day our party of five, two in a side car, went for a day's outing in the suburbs. After two hours of enjoyable riding we were caught in a rainstorm which delayed us quite a bit, and we returned to the city late in the afternoon, being guests of my Sydenham friend for the night. That night a dance was held in our honor. It was with regret that we bade good bye to our Belfast friends and set out for Dublin.

STATUE OF THE DUKE OF WELLINGTON, IN LONDON

Trying Dublin's "Rocky Road."

Among the interesting places where we stopped were Newry, Dundalk and Drogheda, the latter boasting of a famous gate, attached to an old wall, which surrounded the city in past centuries. We "fired" a couple of films at this. It was over the famous "rocky road" that we entered Dublin late in the afternoon, and we agreed that the 25 miles of this nerve racking highway which we traversed, fully deserved its name. As usual the N. S. U. agent proved a most cordial host and took it upon himself to be our guide. We had the pleasure of meeting J. C. Percy, of the Irish Cyclist, who was much interested in our narration.

LIVERPOOL AS SEEN FROM ITS WATERFRONT

As is well known Ireland, among other things, is the land of potatoes, better known as "Murphies," and our craving for them, which had been little satiated in England and Scotland, now was appeased to the full. One of the most interesting sights of Dublin was the jaunting car, a two wheel cart with a seat on each side and a motion like a ship rolling in a storm. We also observed that the little donkeys often dragged loads far heavier than themselves.

After waiting all morning for the rain to stop, we left in mid-afternoon and took glimpses of Noas, Kildare, Maryborough, Mountrath and Rosrea, stopping for the night at the latter. Early next morning we again were abroad on the king's highways, but had not been out long when it began to rain in true Irish style, and we soon were drenched, but kept struggling along over slippery roads until we arrived at Limerick on the River Shannon, in anything but a pleasant frame of mind.

It continued to rain for several hours after we arrived, but finally old Jupiter's reservoir ran dry, and we dared poke our noses out. After a quick survey of the city we turned our front wheels toward the famous Lakes of Killarney. We found them fully as beautiful as the poets and writers have painted them, and also visited the historic Blarney Stone, but did not kiss it as it is a dangerous feat, requiring considerable nerve. After leaving the lakes we changed our plans and took steamer from Cork to Liverpool.

A Second Noah's Ark.

It was a cattle boat, and I guess, a pretty close duplicate of Noah's Ark, for it had a big cargo of sheep, horses, cows and chickens ,and what a racket they made. We left on Saturday night, and arrived in Liverpool early Sunday afternoon. It took us an hour to find a garage that was open before we were able to get gasoline, and rain also started about this time. However, when we were ready to leave, the rain had subsided a bit, and we struck out for the English lakes of which we had heard so much.

Some steady riding brought us to Kendal on the edge of the lake district. We wound around through that section, and near Lancaster again passed many side cars as well as single machines. We noted that tire trouble was plentiful although we escaped it. Early next morning we skirted Lake Windemere, the prettiest of the chain, and climbed some rather steep grades. Coming out of the lake section we touched Ambleside, a famous lake resort. Returning to Liverpool we ran on some cobble road which almost drove our spines through our skulls, but by very slow riding we survived the torture, and reached Liverpool at 6 in the evening, with a mileage of 124.

For our destination the next day we selected Birmingham, the famous cutlery and steel city. En route we passed the ancient cities of Chester and Wrexham, and by accident managed to pick out a 12 mile stretch of cobble which proved anything but pleasant, as you may believe. We did not tarry long in Birmingham, and the day following found us headed for Coventry the center of the English motorcycle industry. Here we visited the immense plant of the Humber Company.

At Shakespeare's Birthplace.

At noon we set out for Stratford-on-Avon, the home of the immortal Shakespeare, where we took some photographs. Our next stop was the university city of Oxford, but we continued on to Courtenay, a small village, where we were the guests of the postmaster that night. With the idea of making London before traffice was at its height we started early next morning but were doomed to disappointment. After passing through Henley, of regatta fame, and when only six miles from the heart of the city, I was caught between a dray and a tram car, and the front of my machine wrecked, although I was fortunate enough to escape.

There was a great hub bub for awhile, and a hive of "bobbies" (police) sprung up as if by magic, and took copious notes. The driver of the dray admitted having been on the wrong side of the road, and an accident insurance company, which carried protection for the dray company, settled with me for $25. Once back in the N. S. U. agency we pulled down our motors and prepared for our continental trip.

Emblem Manufacturing Company

(Member N. M. A.)

ANGOLA Erie County NEW YORK

From Denver to New Orleans Awheel.

Louis Camboy, who is taking a trip awheel from Denver, to New Orleans, is a Teuton youth of 17 years, who has made the greater part of his journey, from Denver to Indianapolis, without any serious mishaps and very little expense. Two sets of tires constitute his running expense up to the present time. He left Denver August 7 and will probably reach his destination early in February.

His object in making the trip on a bicycle was to save expenses naturally incurred in riding on the trains and the young German is a thrifty lad. Louis was born in Germany and came over to this country with his parents when he was two years old. He is an industrious person, and worked his way in life until he obtained a good position with a ranch owner near Colorado Springs. Camboy's trip to New Orleans is for the purpose of seeing his mother.

Hoosier Tourists Florida Bound.

Indianapolis, Nov. 21.—Three tourists from Frankfort, Indiana, passed through this city last week bound for Florida, and the route they have laid out should take them through some of the most picturesque districts in the middle Southern States. The travelers were well dressed for the cold weather they were bound to encounter in Indiana and Kentucky. Joe Thompson, Lloyd Wolf and Frank Thompson who compose the trio, are making the trip on Indian mounts. Joe Thompson is the Indian agent in Frankfort, but has closed up his shop for the winter, and will probably locate an agency somewhere in the Southern States.

From Indianapolis the tourists will proceed through Louisville, Nashville and Atlanta to Jacksonville, Florida, where Frank Thompson and Lloyd Wolf will probably locate until next spring. It is Joe Thompsons's intention, however, to continue the trip southward and west, taking in Cuba, California and the other Pacific Coast States. Joe cannot be separated from his camera, and as he is an enthusiastic shooter with the little box, the pictures he gets en route should be interesting as well as educational. All three riders' machines were equipped with Goodyear studded tires and a placard on their machines proclaims that they were traveling from "Frankfort to Florida."

Los Angeles' New Motorcycle Ordinance.

Motorcycles and autos must muffle their exhausts, and must do divers other things to conform to the new ordinance drafted by the deputy city attorney recently of Los Angeles, Cal. Some of the regulations are as follows:

Outside of the business districts all motorcycles and other vehicles must slow down to ten miles an hour at busy crossings.

Between 4 and 6 o'clock in the afternoon in the congested district, it will be unlawful for any vehicle to block the curbline.

All motorcycles, taxis, cabs, etc., must carry lamps.

In the congested district and elsewhere, all vehicles must stop at once when signaled by the police, and in stopping must allow a space of six feet between themselves and the next nearest vehicle. This is intended to prevent motorcycles and autos from sliding along by the car tracks and preventing people from boarding cars or disembarking from them.

The penalty for not muffling the exhausts, forgetting speed rules, omitting lamps, or violating any of the provisions of the ordinance will be a fine of not more than $500, imprisonment for not more than six months in the county jail, or both.

A reception, followed by entertainment and dancing, were the ceremonies which attended the dedication of the new club rooms of the San Jose (Cal.) Motorcycle Club on November 10. Cosy quarters are located at 79 W. Santa Clara street.

FRANKFORT (IND.) MOTORCYCLE TOURISTS START LONG TOUR

Get-Married-Quick Scheme for Dealer.

With characteristic energy and "rapid fire" decision, Charles A. Van Doren, the Atlantic City, N. J., dealer, recently took unto himself a wife. Miss Frances D. Hickey, the charming daughter of Mr. and Mrs. R. Hickey, of Paterson, N. J., is the young lady who so materially participated in the consummation of this latest important negotiation.

After an acquaintance and courtship throughout a two weeks' vacation spent by Miss Hickey at the famous seaside resort during the season just closed Mr. Van Doren gained her consent to wed. While calling on her at her Paterson home shortly after her return there it was decided a longer delay was unnecessary, and accordingly they journeyed to Wilmington, Del., and were married, a telegram from there to the bride's parents being the first information received by them.

After a short honeymoon Mr. and Mrs. Van Doren proceeded to Atlantic City, where the exigencies of his flourishing business required the groom's attention. Incidentally it appears that it was principally due to the then Miss Hickey's views concerning the occupation of traveling salesman, at which calling Mr. Van Doren was then engaged, and due to her wishes that induced him to abandon "the road" and take up the proposition in the retail bicycle business where he is now located in Atlantic City. Mr. Van Doren's host of friends in the cycling industry will no doubt be surprised and pleased to hear of his latest important alliance and all undoubtedly will join in the chorus of the host of well wishers.

Long Distance Record for Motorcycling.

What undoubtedly is the world's long distance motorcycle record for road work, for one season, and for one machine, recently was completed by Harry Long, an English motorcyclist, who covered 40,037 miles in 44 weeks. Long commenced riding January 4, as a raw novice, and finished November 2. He circumvented the coast of Great Britain, and motored over practically every road on the island. He had 35 idle days and averaged over 1,000 miles a week. He rode a 3½ horsepower Triumph single, fitted with Bosch magneto and speedometer ,and finished in excellent physical condition.

Winner of Tourist Trophy Injured.

O. C. Godfrey, the winner of this year's Tourist Trophy race on the Isle of Man, was riding to business in London on a motorcycle a short time ago when he was run into by a taxicab coming out of a side road and was badly hurt. He is now in Hampstead Hospital with a broken right forearm and internal injuries. Latest reports state that he is doing as well as can be expected, but the extent of his injuries, at the time of the message, had not as yet been definitely stated.

Latest F.A.M and Club News.

THORNLEY ON STOCK MACHINES

States His Defense of the "Stripped Stock" Class—New Ruling on Motor Measurements.

Vigorously defending the "stripped stock" class of racing motorcycle, against its scathing denunciation by a writer in one of the trade journals, Chairman Thornley of the F. A. M. competiton committee, asserts that this class is tolerated and protected because it is the nearest thing to the legitimate "stock machine" that it is possible to compel the manufacturers to use in races nowadays. In other words, he frankly admits that there is no such thing as a "stock machine" as the term generally is understood, in motorcycle racing circles to-day.

"The stock class is a scandal and a delusion," he says. "The manufacturers claim all sorts of things for their stock machines on the track, and those very machines, or the model that they are supposed to be built upon, when bought in the open market from an agent, nine times out of ten, do not live up to the reputation acquired on the track. If I had my way in the matter, any manufacturer or rider who attempted to put in competition any machine represented as stock, and which did not comply with the stock definition down to the very last nut and spoke, would be barred from racing under F. A. M. sanction permanently.

"The fundamental principle of the stock class is to enable the manufacturers to show what they can do in the way of turning out fast and efficient machines in large numbers. As a matter of fact, there hardly is a race run but that some manufacturer or dealer tries to "ring in" a machine as "stock" that has been tuned to the highest notch by an expert. This is dishonest and unfair, but it is beyond the power of the competition committee to prevent it, so, in my opinion, the best solution is to let all manufacturers tune their machines and lighten them to the best of their ability and then let the best one win. This seems to give all an equal show, and this is why the "stripped stock' class was created and what it aims to do.

"Of course such tuning makes the "stripped stock" machine in a trade event much too fast for the average private owner riding his own machine, which usually is a genuine stock outfit. Then often the private owner starts in to "strip" his machine, and of course gets assistance from his local agent, but he says nothing about this. As a matter of fact a private owner has no business competing against factory machines and expert trade riders, but the rules permit him to do so, and he should not complain if he is beaten, for the odds all are against him from the start, unless he 'rings in' a factory machine himself.

"While I should be very glad to see races between legitimate stock machines, I do not believe this condition ever will obtain, for there always will be some one ready to take advantage of the confidence reposed in the entrants in legitimate stock events, and try to 'put something across.' Usually the private owner rides an honest stock machine, but in my opinion, a trade rider never rides an honest machine under any conditions, and it is to try and guard against such crookedness that the 'stripped stock' class prevails.

"Concerning the piston displacement rating of their machines, I would suggest to manufacturers that they adopt a hyphenated rating that would cover the minimum and maximum displacement which would be possible for a machine to attain under ordinary conditions. This would protect them in case of protest, for if a machine is cataloged as having a certain and particular piston displacement, and such a machine is protested for measurement, and found either over or under the cataloged size even so small a fraction as one one-thousandth of an inch, this office will sustain the protest and the machine will be disqualified in a race in which it may have been used.

"As this is an important point I wish to make my ruling perfectly clear. For example: If a stock machine is cataloged at 60.75 cubic inches, entered in a stock race, protested for size, measured, and found to be 60.80 cubic inches. it will be disqualified from that race, and still be eligible for events under 61 cubic inches, the maximum limit. Alleged stock machines, found to have been tampered with and enlarged, immediately will be thrown out of a stock event if protested. All stock machines of a certain size, are given a certain piston displacement, but this increases through wear. Nevertheless this machine has a factory rating which, as the machine is used, becomes further removed and less than its actual displacement, and if such a machine is protested for measurement on this ground, and found not to tally with the factory rating to the last fraction of a cubic inch, it will be disqualified. Here, then, is the chance for the manufacturers to protect themselves from wholesale disqualification of their machines by adopting the hyphenated displacement rating."

How Americans May Ride in Canada.

Inflicting the sentence imposed by a majority vote of the F. A. M. competition committee, Chairman Thornley has suspended William Staudt, of Reading, Pa., for three months for violating the competition rules by riding in Canada without first securing permission from the committee. The punishment takes effect from the date of violation, almost two months ago, so that Staudt's sentence will have expired long before the racing season opens next spring. It is the first punishment inflicted for an offense of this sort, and the chairman intimates that future offenders will be dealt with more severely.

Incidentally the Staudt case has provoked some new rulings concerning American riders competing outside the United States. In view of the apparent clearing up of the Canadian motorcycle situation with regard to the F. A. M., and to facilitate a closer relationship between the riders of both countries the chairman announces that henceforth all F. A. M. members have permission to compete in Canada at events promoted by Canadian motorcycle clubs which are affiliated with the F. A. M., provided such clubs hold their events strictly under F. A. M. competition rules.

To avail himself of this privilege an F. A. M. member in this country now has only to assure himself that the promoting club is affiliated. No plea of ignorance or other flimsy excuse for violation of this requirement will be accepted.

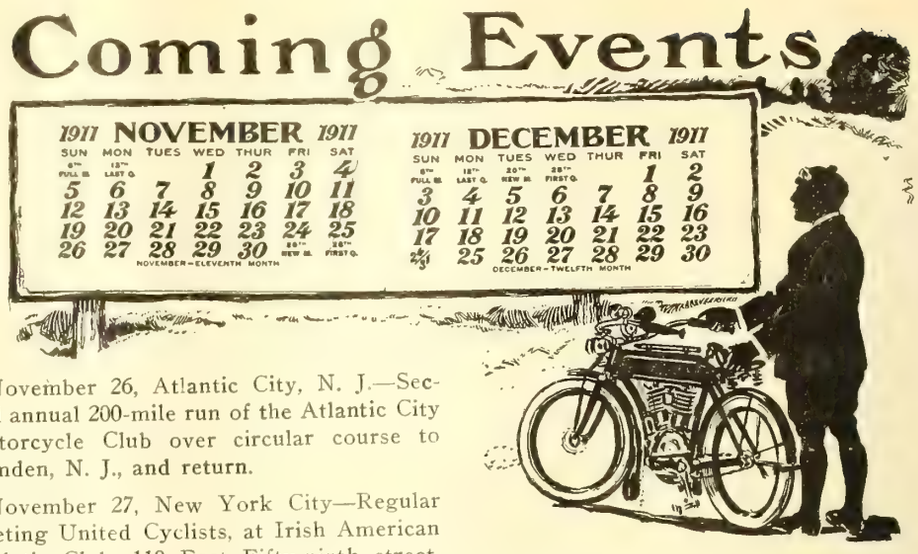
No sanction is required or will be issued for any motorcycle event held outside of the United States, as the chairman holds that the F. A. M. has no jurisdiction outside of this country, but Canadian F. A. M. members wishing to compete in this country may do so only at sanctioned events. Affiliation and the use of the F. A. M. competition rules are the prime and

only requisites of a Canadian club to secure American F. A. M. riders at its contests. American riders under suspension or expulsion in this country cannot compete in Canada, under F. A. M. rules, and vice versa. Any controversies between Canadian clubs must not involve either American riders or the F. A. M., and neither may be used as a weapon. No records of any sort made in Canada will be recognized by the F. A. M.

Crocker Suspended in the Tormey Case.

Echoes of the recent Western F. A. M. endurance run reverberated through the mails this week in a communication from Chairman Thornley rendering decision in the protest of J. S. Tormey against G. H. Crocker, and punishing Crocker. In his letter to Crocker the chairman said: "For bringing discredit upon the F. A. M. and its Competition Committee, and for conduct prejudicial to the sport of motorcycling, in that you turned back after having reached a secret control in an endurance run, and retraced the course a sufficient distance to have given warning to oncoming spectators of the location of the control, whether or not you did give such warning, you hereby are suspended for one year from the date of said contest."

Ruling on Tormey's protest in the above case, the chairman said: "After having carefully considered your appeal in the matter of the recent western endurance run, I feel that while I cannot entirely sustain it to the extent of deciding against the winners on the ground that the evidence was sufficient to implicate them in a corrupt practice, nevertheless, I feel that you had sufficient ground for your appeal to warrant making such, and for that reason I return the $5 fee which you deposited in accordance with the rules."



The circumstances of the above case are as follows: The Western F. A. M. endurance run was held September 8, 9, 10, starting and finishing at Chicago, and the team trophy was won by the Indian team, consisting of A. H. Crocker, R. W. DuSell and S. W. Nicholson. G. H. Crocker, a brother of A. H., competed as a private owner. Upon reaching a secret control and checking in, G. H. alleges that he became very hungry, and doubled back on the course a short distance to a farm house to get something to eat. The winning team reached this control exactly on time, and later when it became known that Crocker had doubled back, Tormey protested the award of the trophy to the Indian team on the ground that Crocker had warned them of the exact location of the control. Both Crocker and all members of the team swear by the beard of Allah that they did not see each other when the former retraced the course, and there is no proof to the contrary. Therefore there was nothing else to do but accept the word of the parties concerned that there was no cheating, but nevertheless there is a strong suspicion in certain quarters that Crocker conveyed valuable information regarding the location of the control to the winning team by secreting a note in a manner agreed upon beforehand, when he retraced the course, and that the team found the note as arranged and profited by the information.

However, Crocker's punishment is inflicted for his indiscretion in retracing the course, and casting suspicion on the honesty of the award and the governing body, and not because of any theory that he actually was guilty of crooked work.

Thornley Condemns Women's Races.

With regard to the recent motorcycle races for women which have been held in several cities, Chairman Thornley of the competition committee, has condemned vigorously the participation of women, in speed events, and contends that, while at first it may cater to the sensation loving populace, that as soon as a woman is badly mangled the spectators will turn in disgust and loathing, and bitterly censure the promoters. He asserts that a man who will persuade women to endanger their lives by racing on motorcycles for glory or money is of too brutal and degraded a character to associate with motorcyclists and should be ostracized. Any club or promoter who, having been granted an F. A. M. sanction for races, attempts to conduct races for women under that sanction, will be made an example of.

Coming Events

November 26, Atlantic City, N. J.—Second annual 200-mile run of the Atlantic City Motorcycle Club over circular course to Camden, N. J., and return.

November 27, New York City—Regular meeting United Cyclists, at Irish American Athletic Club, 110 East Fifty-ninth street, 9 P. M. Report of American Olympic Bicycle Race Committee. All cyclists invited.

November 30, San Antonio, Tex—San Antonio Motorcycle Club race meet.

November 30, Tampa, Fla.—Tampa Motorcycle Club race meet.

November 30, Baltimore, Md.—Maryland Motorcycle Club race meet at Electric Park.

November 30, Jacksonville, Fla.—Jacksonville Motorcycle Club race meet at Moncrief Park.

November 30, Redlands, Cal.—Redlands Motorcycle Club race meet at Association Park mile dirt track.

November 30, Baltimore—Maryland Motor Association race meet at Electric Park; open.

November 30, New York City—First preparatory unpaced 25 miles handicap road race under the management of the American Olympic Bicycle Race Committee and the auspices of the United Cyclists.

November 30, New York City—First preparatory 25 mile handicap road race on Pelham Parkway, 9:30 A. M., under the management of the American Olympic Bicycle Race Committee of the United Cyclists. Open. Entries may be made with W R. Stroud, 914 Tribune Building, New York.

December 8, New York City—Annual ball of the Gotham Cycle Club at Apollo Hall, 126 Clinton street.

December 11-16, New York City, N. Y.—Madison Square Garden—Nineteenth annual international six days' professional bicycle race.

December 31, Brooklyn, N. Y.—Annual New Year's Eve midnight scorch from Bedford Rest to Coney Island and return.

December 16, Brooklyn, N. Y.—First annual smoker-stag of the Atlas Bicycle Club at Stoetzer's Hall, 1213 Fulton street.

December 16, New York City—Fall athletic games, Fourteenth Infantry Athletic Association, at Armory, Eighth avenue and Fifteenth street, Brooklyn. Open bicycle event, two miles handicap, N. C. A. sanction.

January 6-20, New York City—Twelfth annual automobile show in Madison Square Garden; motorcycle section included in first week.

January 13-27, Philadelphia—Eleventh annual motorcycle and automobile show in First and Third Regiment armories.

CHAIRMAN ESTABROOKS'S BUDGET

Continued Activities in the Field of Organization Work—All Parts of Country Heard From.

The weekly bulletin issued by Chairman E. M. Estabrook of the F. A. M. Membership Committee, with headquarters at Bangor, Me., shows an active trend despite the approach of the winter in most parts of the country. The gist of the weekly report may be summed up as follows:

The Sacramento (Cal.) Motorcycle Club has affiliated with 18 men. E. A. Shoemaker, 1025 Tenth street, is secretary.

Ministerial duties do not monopolize the time of Rev. R. J. Mattingly, Miltonvale, Kan., to such an extent that he can't preach motorcycle club gospel. Some time ago he sowed some club seed, and looked for it to come up in the spring. He had the name all selected too—Cloud County Motorcycle Club. The other day an inspiration struck him that spring was too far off and that the club ought to be accelerated into being, so he called a preliminary meeting. Road conditions were so bad that several who started for the meeting had to quit before reaching their destination, but some of the faithful showed up and organization was perfected by the election of officers as follows: Mr. Burnes, president; Mr. St. Pierre, secretary; Clyde Shaw, captain. When road conditions improve the club will meet again and expects to rund up 20 members, when things will be ripe for affiliation. Rev. Mattingly receives his reward in the appointment of county commissioner, a berth in which he will find plenty to do.

According to W. S. Cranford, 27 Selvidge street, Dalton, Ga., there are quite some motorcyclists in those parts, but none are F. A. M. members. Somebody is to blame, but Crawford, who is a dealer, has volunteered to try to swing a club and get it to affiliate.

Waynesburg, Pa., will have to find room for a motorcycle club within its borders soon. A. R. Bell has threatened to start one, and the prospects are so good that he will have little difficulty in "making good."

Vern Squier, 112 W. Third street, Jamestown, N. Y., is busily engaged in collecting and jotting down the names of all the local motorcyclists. He is not going to summon them for speeding or opening cut-outs, but they will be asked to help form a club soon.

Uptown Branch For Motor Equipment Co.

In addition to its main headquarters at 55 Warren street, New York City, the Motor Car Equipment Company is opening an uptown branch at 238-240 West 56th street, which will be ready for business about December 10. The branch is purely for the convenience of the uptown trade, and in accordance with the company's policy, will be devoted exclusively to wholesale trade.

When the F. A. M. registered repair shop book of names closed for last week there were 377 shops throughout the land. Latest appointments are the following: J. B. Trossel, 663 Michigan avenue, Detroit, Mich.; P. J. Wyeth, 103 N. Hill street, Champaign, Ill.; F. P. Danzur, 1116 Kewaunee street, Racine, Wis.; Hurck Motor & Cycle Co., 109 N. Twelfth street, St. Louis.

Violator of Cutout Ordinance Fined.

This is the open season for the persecution of the open muffler fiend, but justice has been meted out two-fold to a violator in Indianapolis. A young man was recently slated for colliding with a pedestrian on one of the down town streets. When arraigned before the judge, his defense was that he had signaled his approach by kicking open his cutout, and the noise, he explained, should have been more effective than that produced by horn, siren or bell. The judge could not get his opinion to coincide with that of the defendant, however, and assessed a fine, saying at the same time, that an additional fine should be assessed because the motorcyclist had violated a city ordinance, which states that open cutouts are not permissable within the corporation limits. The case has been appealed and the result will be watched with much interest.

Big Motorcycle Gathering in Los Angeles.

Los Angeles, Cal., Nov. 24.—Five thousand active and associate members of the Los Angeles Motorcycle Club will celebrate their first annual meeting at Luna Park, Sunday, the 26th. The big pleasure ground will be transformed into a modern "fairyland" in honor of the occasion and a crowd of fully 25,000 is expected to be on hand to witness the entertainments provided. Promptly at one o'clock the fun and exercises will begin. There will be slow and pedaling races and other motorcycle sports, to say nothing of a score or more of unique features in competitions of skill and swiftness.

Among the stars that are expected to shine at the meet is Paul Derkum, known as "Dare Devil Derkum," who not long ago broke the record between Los Angeles and San Diego, making the trip in 3:15:00.

Live "Don'ts" from Toronto's Live Club.

Credit for sending out come of the livest and hardest hitting publicity facts regarding motorcycles that yet has appeared belongs to the Toronto (Ont.) Motorcycle Club. In the form of a series of "Don'ts" the club disseminates some very illuminating information of value both to the rider and the man in the street. The motorgrams are as follows:

"Don't think a motorcycle is uncomfortable until you have ridden one. You will soon find it is not.

"Don't think all motorcycles are noisy because a few riders keep the cut-out open instead of carrying a horn.

"Don't think a motorcycle is hard to run and keep in order. Just ask some of the club members for their experiences on all kinds of roads and in all kinds of weather.

"Don't think motorcycles are dangerous. They are not. You have the speed to get out of the way, or you have powerful brakes to stop quickly. All you have to do is to keep cool and you can't get hurt.

"Don't think a motorcycle is expensive to run. Tires will last two seasons, if used carefully and kept hard. A gallon of gasoline and a pint of oil to every hundred miles. How's that for economy?

"Don't think that there is no speed limit or you will get pinched.

"Don't grouch but get a motorcycle. Smoking allowed on the rear seat.

"Don't cuss the crowded cars, but travel like a gentleman, when you please and where you please; get home for lunch every day and all the rest of it. It's fine.

"Are you thinking of a motorcycle? Join the club and meet the riders now. A few hints from experienced riders may save you money and trouble. Come to a meeting of the club and get ideas.

"Suppose you get a machine. You go out for your first ride thinking you understand your mount. The first steep hill you come to you get stuck. What's the matter? Certainly not the machine, for a motorcycle will climb almost anything. Along comes another rider. He belongs to the club; gives you the "glad hand," shows you what's wrong and away you go. We've all been through this and know what it is. Don't play the deuce with a new machine, but learn about it before you start.

"Join the club. The fee is nominal, only $2 per annum. The social evenings alone are worth more than it.

"Boost the sport! It's great."

Manufacturers, dealers and clubs profitably can reprint and use this matter for missionary work in luring new riders and club members.

Canadian Neighbor's Social Season.

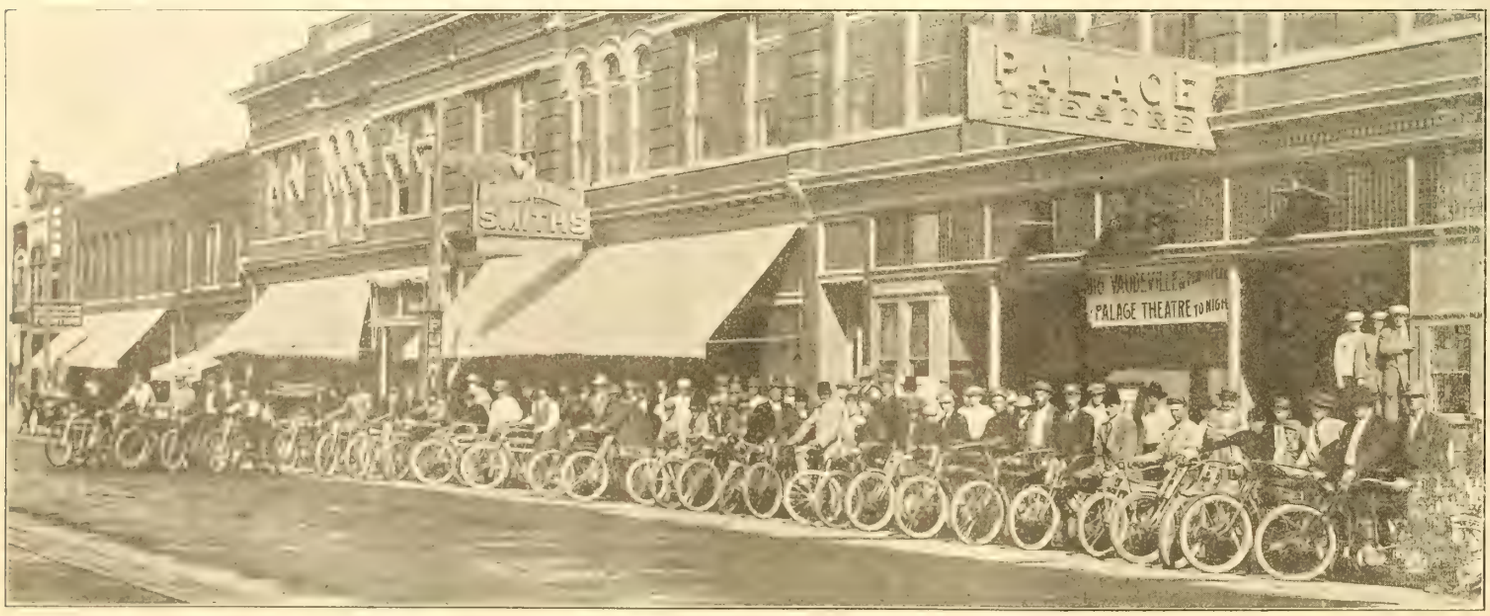
Toronto, Ont., Nov. 21.—Plunging into the social sea with a big splash, the Toronto Motorcycle Club held the first of a series of winter evening socials on the 15th with gratifying success, over 150 persons being present. This is the largest attendance ever drawn to a function of the local club. Professional vaudeville talent furnished several entertaining musical numbers, and a surprise was sprung by the presentation of a solid gold medal to Harold Cole, a 16-year-old member of the club's racing staff, in recognition of his victory in the 25-mile Canadian championship for 1911. Of course Cole was called on for a speech, and while floundering for words, a floral wreath was placed on his neck and he sat down hastily amid applause, with his acknowledgements unspoken. The club has arranged a schedule of entertainments for the closed riding season, and issued a program so that members may keep in mind the dates of club functions when making engagements. As planned at present the first half of these affairs, which will be held every two weeks, will be devoted to business matters.

Clubs Continue Cut-Out Campaign.

The Atlantic City Motorcycle Club has taken up the "war" against the open muffler "fiend" and has gone so far as to ask the assistance of the police, requesting the arrest of anyone using the cut-out or open mffluer in the seaside resort. Each and every member has joined this movement with a 'vim and dash" that presages no good for the one caught offending. Shortly over a month ago the "cut-out fiend" was rampant here, and it often seemed as if an invading army had landed and opened fire on the city.

Now one can walk the entire city over and motorcyclists pass as they should without that wild banging so often heard. This town is an example of what can be done if the local clubs go after the question with the proper spirit. C. A. V.

Prominent Tradesman Condemns Cut-out.



A. B. Coffman, vice-president and sales manager of the Consolidated Mfg. Co., Toledo, Ohio, writes:

"I find that there is a general feeling on the part of the public at large that the muffler cut-out fiend is a nuisance and the disagreeable noise he makes the worst enemy motorcycling has.

"Only just recently in Los Angeles, Cal., I noticed in the papers where the City Council was framing an ordinance prohibiting riding a motorcycle through the streets of the city with the muffler open. This I think a very good thing.

"With the united effort on the part of trade publications, manufacturers, dealers and the majority of riders, I think it is only a question of a short time when this nuisance will be removed."

Resolutions condemning the use of the muffler cut-out in the city, and advocating legislation prohibiting its use, have been adopted by the Louisville (Ky.) Motorcycle Club.

GATHERING OF THE SALINA (KANSAS) MOTORCYCLE CLUB BEFORE RACE MEET OF OCTOBER 12

GREAT GOING AT OAKLAND OPENING

Wolters and Balke Get Inside Record Times—This Pair "Clean Up" in Pro. Class.

Oakland, Ca., Nov. 13.—Record breaking speed marked the opening of the Elmhurst motordrome for its second season, on Sunday last, the American official professional records for five and ten miles being beaten several times. Wolters and Balke, of the Excelsior team, were the record wreckers, the former cutting the five mile figures twice, and the 10 mile once, while Balke barbered the five mile numerals once. The new times, however, are records only for the local track, and have not been accepted by the F. A. M. Nevertheless they give a "good line" on the gait which the Excelsiors can hit. Wolters easily was the star of the meet, taking three of the four money events, and spun the bowl regularly at close to 90 miles an hour.

Opening the attack on "Pop" Time in the very first event, a five mile open, Wolters led the field all the way, and got under DeRosier's records. Armstrong, put another Excelsior home second, and William Samuelson and Albright of the Indian tribe battled for third money, Samuelson cashing the place. Wolters and Balke buzzed at each other like a pair of giant bees in the 10 mile free-for-all, and after a Tabasco mixup all the way Wolters finished in front by a wheel. Armstrong was going good and seemed to have third place sewed up when his motor "struck" and W. Samuelson again collected third money.

Balke had things his own way in his five mile match with W. Samuelson, and won hands down. Seymour and Ward were billed for this event but failed to appear. Wolters, Balke, Armstrong, all Excelsiors, and Samuelson, on an Indian, clashed in a fie mile sprint. Wolters set the pace, and a warm one it was. Balke tried hard to go by but had all he could do to hang on in second place. Armstrong wrested third place from Samuelson. This event again saw the fall of the five mile record figures, Wolters being clocked in 3:27. Both the Samuelsons, William and T. M., and John Albright, went two miles for consolation money, and it was distributed in this order: W. Samuelson, Albright, T. M. Samuelson.

Although the Indian riders were licked right and left in the professional events, their amateur brethren partially eased the sting of the whitewash by "cleaning up" in the trade rider and amateur classes. In the six mile event, O. A. Walter, a local boy, defeated Northrup and Oberg, of San Jose. Owing to the big field of 11 starters it took some skill to launch the five mile special, and W. Norman was returned the winner, with Leon Martin playing the understudy. A big crowd attended the reopening of the saucer, which started its second season. Summary:

Five mile open, professional—Won by Wolters (Excelsior); second, Armstrong (Excelsior); third, W. Samuelson (Indian); fourth, Albright (Indian). Time, 3:27⅘. Record, 3:29⅕. New figures not official.

Five mile open, professional—Won by Wolters (Excelsior); second, Balke (Excelsior); third, Armstrong (Excelsior); fourth, W. Samuelson (Indian). Time, 3:27. Record, 3:29⅕. New figures not official.

Five mile match, professional—Won by Balke (Excelsior); second, T. M. Samuelson (Indian). Time, 3:28⅗. Record, 3:29⅕. New figures not official.

Ten mile free-for-all, professional—Won by Wolters (Excelsior); second, Balke (Excelsior); third, W. Samuelson (Indian). Time, 6:58. Record, 7:01⅘. New figures not official.

Two mile consolation, professional—Won by W. Samuelson (Indian); second, Albright (Indian); third, T. Samuelson (Indian). Time, 2:15.

Six mile open, trade riders—Won by O. A. Walter (Indian); second, C. H. Northrup (Indian); third, C. H. Oberg (Indian). Time, 4:37⅗.

Five mile special, amateur—Won by W. Norman (Indian); second, Leon Martin (Indian). Time, 4:22.

Baltimore to Have Thanksgiving Races.

The Maryland Motor Association has sent out the entry blanks for the motorcycle races at Electric Park, Baltimore, on Thanksgiving Day. There will be six events for motorcycle riders with an Australian pursuit race for bicycles. The meet promises to be one of the biggest events ever held in this section of the country. The dealers in Baltimore are working hard with their respective factories, as they want the crack riders of the country to compete with the best talent in Baltimore. The Monumental city has the reputation of being one of the best motorcycle towns in the United States, and the sport in that city will be greatly boomed by the coming meet. An attractive program has been arranged.

Eckel Enlarges His Wigwam.

Earle S. Eckel, Washington, N. J., who has the Indian agency, has such faith in next year's prospects for business that he is putting up an addition to his present establishment.

Bartsch Resting at Bermuda.

A. H. Bartsch, advertising manager of the Bosch Magneto Co., New York City, sailed November 18 for Bermuda, to take a brief rest. He will return to his desk December 1.

Baker Receives 1912 Indians.

F. A. Baker & Co., New York City, Metropolitan distributers, have received samples of the 1912 standard "4" Indian.

NEW STARS SHINE AT OAKLAND

Armstrong and Samuelson Put Rivals in Eclipse—Former in Terrific Speed Duels With Balke.

Oakland, Cal., Nov. 20.—Lured by the promise of a repetition of the sizzling sprints around the saucer, which marked the opening day, the week before, another record crowd thronged the Elmhurst motordrome, Sunday, the 19th, and while they did not see any records shaved, they were served bountifully with sensations. Tire and mechanical troubles were the siamesed jinx which put Wolters in eclipse early, and helped make Armstrong, his team mate, "speed king" for a day. Armstrong captured two firsts and two seconds.

There was no such monopolizing of honors in the professional events as marked the opening day, probably due to the early elimination of Wolters. Balke, Seymour and Samuelson all gathered long ends of purses, as well as some middlings and "chicken feed." The spectators saw some sport that had the electric chair short circuited as a sensation factory, when Armstrong and Balke crossed wires, or rather tires. The 10 mile free-for-all was a scorcher all the way, with Armstrong first across at the finish, followed by Balke a second later. The duel in short form was duplicated in the three mile special.

Wolters and Albright withdrew in the first mile of the first heat of the six mile open, and the latter being unable to conquer his hoodoo, became a spectator for the rest of the afternoon. Seymour, swathed in bandages, won the two mile special, beating Ward and Albright, and W. Samuelson led the field home in the final of the six mile money chase. Oberg batted out a victory in the five mile trade rider handicap, and Martin jogged home a winner in the two mile amateur. Summary:

Ten mile free-for-all, professional—Won by Armstrong (Excelsior); second, Balke (Excelsior); third, W. Samuelson (Indian). Time, 7:15.

Three mile special, professional—Won by Armstrong (Excelsior); second, Balke (Excelsior). Time, 2:04⅕.

Two mile special, professional—Won by Seymour (Indian); second, Ward (Indian); third, Albright (Indian). Time, 1:37⅗. ..

Four mile special, professional—Won by Balke (Excelsior); second, Armstrong (Excelsior); third, W. Samuelson (Indian). Time, 2:17¾.

Six mile open, professional, three mile preliminary heats—First heat won by Armstrong (Excelsior); second, W. Samuelson (Indian). Second heat won by Balke (Excelsior); second, A. Ward (Indian). Time, 2:09⅗. Final won by W. Samuelson (Indian); second, Armstrong (Excelsior); third, A. Ward (Indian). Time, 4:34⅕.

TEAMS FOR GARDEN "SIX-DAY"

Eleven American and Three Foreign Pairs Already Signed—Kramer Makes His Entry—New German Pair.

For the nineteenth time, as an annual fixture, the doors of Madison Square Garden will be opened for the International Six-Day Bicycle Team Race, which is scheduled this year to take place December 11-16. The usual Saturday evening preliminary sprint meet will be held on December 9. As usual the big garden's amphitheater will be open on the evening of December 10, where the crowd will be entertained by a band concert until the race starts at five minutes past the hour of midnight.

Interest naturally centers in the teams which will compete in the long grind. At this writing the list has not been fully completed by the management, but contracts have been signed by eleven American teams and by three foreign teams. The American teams so far announced unofficially are as follows:

Kramer and Moran, Root and Hill, Clark and Fogler, John and Menus Bedell, Halstead and Drobach, Pye and Collins, Cameron and Magin, DeMara and Lawrence, Galvin and Wiley, Ryan and Jokus, Stein and Thomas.

Kramer makes his debut this year as contender in the annual classic, and his many friends will wish him well in his departure from his chosen field of short distance sprinting. He is not a novice at long distance racing by any means, having competed in several team races of the eight and ten hour a day order. Moran, his team mate, a last year first place winner, is a regular "bear cat" at the game and the team should be a surprisingly strong one.

The foreign contingent will be made up of "Pedlar" Palmer, of Australia, and "Jumbo" Wells, of New Zealand, both of whom are well known Antipodeans, who have been competing for several years on American tracks and have competed in previous six-day races at the Garden. Brocco and Leon Georget will compose a team of French riders, both of whom have competed here on previous occasions. The newcomers will consist of Lorenz and Saldow, a team of German riders, of whom much is expected. Lorenz is noted as a high class finisher in long distance events, having a great deal of speed as well as endurance, and Saldow is a noted long distance track man of exceptional staying power.

At this writing arrangements have not been concluded with Rutt and Stol, the famous German-Holland team who won the race in 1907 in a sensational finish. They have entered as a team annually each year since that time, and in 1908 finished in second place. In 1909 the team was broken up during the race by an accident to Stol, and a rejuvenated team composed of Rutt and the famous Australian rider, Clark, won the race. Rutt and Clarke again formed a team during the race of 1910 but were beaten out in the finish by Moran and Root.

Record Breaking Australian Road Race.

Breaking the previous record for the course by 16 minutes, in a performance that, taking the nature of the road into consideration, is said to be the best ever put up in the State of New South Wales, Australia, D. Kirkham covered the 133 miles of the Goulburn-Sidney road on September 23, in the remarkable time of 6:19:31. Kirkham rode from scratch and, with J. W. Wilson (14 min.), who finished third, took second time in 6:33:32; beating the record by 1 minute 30 seconds. They missed first place by only 2 minutes 49 seconds; W. Rennie (30 min.) winning in the by no means to be despised time of 6.46.42. The race was followed throughout by officials in motor cars who reported that at times the riders reached a speed of better than 35 miles per hour, over a course very rough in parts and dotted with mountainous hills. The average distance per hour is nearly 21 miles. Seven riders got through inside of 7 hours; 31 others were inside of 8 hours. There were 100 starters and 70 finishers. The handicap limit was 45 minutes.

Tasmanian Wheelmen's 120 Mile Test.

The tenth annual test race, under the auspices of the League of Tasmanian Wheelmen, to determine the Tasmanian representative to ride in the Warrnambool-Melbourne race was held September 23. The race is known as the Launceton-Hobart race of Tasmania, the distance, about 120 miles, with the terminii at the two cities named.

Riding into a head wind all the way, C. J. Keenan (12 min.) and A. Kean (12 min.), both of Hobart, finished in that order in a sprint in which they were separated by a length at the tape, having ridden the distance in 6:22:14, a record for the course. Keenan also made the fastest time of the race; the pair finishing ten minutes before the third man was sighted, B M. Duffy, Launceton. The first scratch man in was checked for sixth position in the time of 6:24:30.

New York's Indoor Racing Season Opens.

The indoor cycle racing season of the Metropolitan section will open to-night, at the general athletic meet under the auspices of the Twenty-third Regiment Athletic Association.

The event served the cyclists will be a handicap race of two miles, with the veteran flat floor rider William Van Den Dries on scratch. Over 20 riders already have sent in their entries.

Mc FARLAND TO RUN SALT PALACE

Closes Contract with Owner and Will Take Clarke, Fogler, Root and Lawson With Him Out West.

Floyd A. McFarland, the veteran racing man, who for the past seventeen or eighteen years has competed on every cycle track in America, and on practically every track in the world, has just signed a contract with the owners of the Salt Palace track at Salt Lake City, to act as manager for the season of 1912, with the option of having the management of that track for the two succeeding seasons.

McFarland's contract is a broad one and he will be in complete control of the business policy of the track, making engagements with the riders and investing the capital for running the track. He has signed contracts with A. J. Clarke, Iver Lawson, E. F. Root and Joe Fogler, all of whom are of championship timber, and who will make a strong bid to restore cycle racing to old time popularity in the Utah metropolis.

In addition to completing his plans for the Salt Lake saucer for the coming year, Manager McFarland will take Fogler, Root, Fred Hill and Elmer Collins, the paced champion, with him to Europe for a three month's campaign on the European winter tracks. McFarland will act as booking agent for the riders only, the men paying their own traveling expenses. They will sail from New York December 21, and return to this country early in April in time for the opening of the outdoor racing season. It is possible that Clarke will also accompany the party to Europe, in the event of his being unable to make satisfactory arranbements with the Australian promoters with wrom he is negotiating for a winter engagement.

New England Wheelmen Elect Officers.

At the annual meeting of the New England Wheelmen of New York City, the following officers were elected for the ensuing year: President, C. B. Ruch; vice-president, Benjamin Boyes; treasurer, B. Glemba; recording secretary, H. W. Zarr; financial secretary, J. McIntyre; sergeant-at-arms, Charles Waldo; trustees, B. Baker, Stanley Carmen, J. Clement, J. Boyes, Emil Koster; captain, George Polacsy; first and second lieutenants, F. Waldo and B. Baker; color-bearers, G. Lautenschlager, F. Loeb.

The result of the club championship races, recently held, was as follows: J. W. Clement, first; Charles Waldo, second; George Polacsy, third; J. Boyes, fourth.

Bicycle Handicap for 14th Infantry.

A two mile bicycle handicap will be held at the Fourteenth Regiment games, Brooklyn, N. Y., December 8.

OLYMPIC COMMITTEE TO RUN THANKSGIVING DAY RACE

Twenty-five Mile Event on Pelham Parkway — Excellent Prizes Offered — Funds Needed by Committee to Go on with Campaign — Cycle Manufacturers, Dealers and Riders Should Respond at Once — Acceptances from Prominent Men as Members of Honorary Committee.

Plans are rapidly progressing for the first preparatory 25 mile bicycle road race to be held on Pelham Parkway, New York, on the morning of Thanksgiving Day, under the auspices and management of the American Olympic Bicycle Race Committee of the United Cyclists, and it is expected that this will be the greatest affair of its kind ever held. There is every indication that an extremely large number of entrants will face the starter, and as the course for the race is exceptionally fine the riders are expected to make particularly good time. Exceptional, is a fitting term to apply to the event in every way, and the prize list is also most exceptional, there being fifteen prizes in all, headed by two $50 racing bicycles. Because of the fact that the rules governing the road race around Lake Malar in Stockholm, Sweden, have been somewhat changed by the Swedish Olympic Committee, which will allow pacing between competitors, the American Olympic Bicycle Race Committee decided to change the race on Thanksgiving Day to a regular 25 mile handicap.

The course selected will give opportunity for one of the most spectacular races ever witnessed. The length is but 1,080 yards and 20 round trips will be required to complete the full distance of 25 miles. Thus it is evident that a continuous string of riders will cover the entire course throughout the race from the time the limit men complete the first lap; in fact about the first half of the race will overlap the second half—a situation unparalleled in the annals of cycling, and one that will require a special system of checking which is now being evolved.

That a high rate of speed will result is assured. The riders on the back marks, when overtaking those on long marks, will undoubtedly extend themselves to the utmost to prevent a "pick-up," and in like manner those favored by handicap starts will not throw away any chances for a "sleigh-ride." Another and most important feature contributing to the possibilities of speed is the fact that the road surface has just been completed and may be described as of the "billiard table" order.

Field headquarters for the race have been provided at the George Peters Hotel, 2227 White Plains avenue, Williamsbridge. Arrangements have also been completed with the park commissioners to have the entire course vacated for the sole use of the race, and a thoroughly efficient police patrol will be provided.

To reach the course by public transportation the best route is via Third Avenue "L" to Tremont and Pelham Parkway station and a short walk from there to headquarters at the head of the course, White Plains road and Williamsbridge road.

Acceptances from Prominent Men.

Letters have been sent out during the past week requesting prominent men in all parts of the country to serve as honorary members of the American Olympic Bicycle Race Committee and the following replies have been received:

"I have no objection to the use of my name as that of one of the Honorary Committee for the American Olympic Bicycle Race Committee of the United Cyclists, as requested in your esteemed letter."—St.

UNITED CYCLISTS EMBLEM, ADOPTED AT LAST MEETING

Clair McKelvay, editor-in-chief, Brooklyn Daily Eagle, Brooklyn, N. Y.

"In reply to your letter of November 21, will say that I will be pleased to act as a member of the United Cyclists Committee and will do all in my power to help the project along."—Joseph P. Norton, sporting editor, Newark Evening News, Newark, N. J.

"I am willing to serve on your committee, if I can be of any assistance to the bicyclists."—John B. Foster, sporting editor, The Evening Telegram, New York City.

"Replying to your kind invitation regarding committee will say that I am ready and anxious to do everything in my power to help."—A. Yager, sporting editor, Brooklyn Daily Eagle, Brooklyn, N. Y.

The following have been asked to form sub-committees of the American Olympic Bicycle Race Committee of the United Cyclists, in their respective sections: O. F. Hassemer and C. L. Barr of St. Louis, Mo.; H. G. Reynolds and J. J. Donovan of Boston, Mass.; B. A. Swenson, Providence, R. I.; Louis Debo, Buffalo, N. Y.; C. Ross Klosterman, Baltimore, Md.; Gus Castle, Atlanta, Ga.; Prince Wells, Louisville, Ky.; O. A. Meyer, Savannah, Ga.; R. M. Whitney, Los Angeles, Cal.; L. J. Pinkson, San Francisco, Cal.

Meeting Next Monday Evening.

The next meeting will be held on Monday evening, November 27, at the Irish American Athletic Club, 110 East Fifty-ninth street, New York. Further details regarding the Thanksgiving Day race and the general work of the American Olympic Bicycle Race Committee will be discussed, and other interesting matters will be taken up. After the regular meeting it is expected that some entertainment will be furnished as usual. All interested are urged to be present.

Through the activities of Franklin Fisher, a member of the United Cyclists, and also of the Irish American Athletic Club, P. J. Conway, the president of the latter organization, has very kindly consented to allow the use of the Irish American club rooms to the United Cyclists on Monday evening, November 27. Mr. Conway says:

"I have just received your letter and in reply thereto let me say that the United Cyclisits may meet at the Irish American club house on next Monday evening, November 27. Incidently, I shall be pleased to serve on your Honorary American Bicycle Race Committee and do whatever I can in furtherance of your efforts. I shall try to be present at your meeting Monday evening. Good wishes and success to your movement."

Immediate Contributions Necessary.

Over five hundred press notices to the various newspapers throughout the country have ben sent out during the past week regarding the work of the American Olympic Bicycle Committee of the United Cyclists and presenting the need of immediate contributions to the fund. The committee cannot go on further with the campaign for a bicycle team to represent America in the Olympic road race unless contributions are made at once. There is no time to lose in the matter and every one interested should get busy without delay. The committee suggests that the various clubs in all parts of the country should arrange some kind of a benefit at

once, remitting the proceeds to the treasurer of the committee. Those who can are also urged to send in contributions at once, whether it be $1.00 or $100.00, to the treasurer, R. F. Kelsey, 914 Tribune Building, New York. The Bicycling World and Motorcycle Review has made a most generous offer to aid the fund by allowing one-half of every two dollar subscription to that paper secured by the United Cyclists through its committee, H. A. Gliesman, 782 Eighth avenue, New York City, to be turned over to the treasurer of the Olympic Committee at once. If one thousand people in all parts of the country would get one yearly subscription to the Bicycling World and Motorcycle Review during the coming week, sending the same to Mr. Gliesman, the committee could at once go on with the campaign and without a doubt carry it to a successful end, for then they would have $1,000 cash with which to work. The new slogan is: "Join the United Cyclists 1,000 Club,' by being one of the thousand in all parts of the country to get one subscription to the Bicycling World and Motorcycle Review, sending the same to H. A. Gliesman and thus doing your share toward placing $1,000 in cash in the hands of the American Olympic Bicycle Race Comittee with which to carry on the work.

Plan for Big Dinner in January.

Plans for the United Cyclists dinner to be held in New York City on Wednesday evening, January 10th, which will be during the automobile and motorcycle show at Madison Square Garden are daily assuming more definite shape, and it is expected that this will surpass all previous affairs of the kind in any part of the country. The committee hopes to have one thousand cyclists from all over the United States at the dinner, the tickets for which will not be at a prohibitive cost to any one. The following have been invited to be present and speak: Governor John A. Dix, of New York State; Mayor W. J. Gaynor, of New York City; Controller William A. Prendengast, of New York City; Borough President Alfred E. Steers, of Brooklyn; Hon. St. Clair McKelvay of Brooklyn, and various other prominent men in public life and connected with cycling interests.

Australian Handicap "100" in 304 Minutes.

The 6th annual 100 miles handicap road race under the auspices of the Victorian Traders Association of Australia, took place on Saturday, October 7. The event, which is one of the largest held in the land of the kangaroo, this year drew an entry list of 294 riders, of which 212 started and 150 qualified inside the time limit of 6 hours 15 minutes. Won by L. Clark (28), time, 5:23:32; second, J. Beasley (9), 5:06:01; third, H. Dondel (17), 5:14:09; fourth, C. Snell (17), 5:17:03; fifth, V. Brown (9), 5:10:05. Fastest time, D. Kirkham (scratch), 5:04:04. Fastest time, 1910, I. R. Munro, 5:01:30.

FIFTEENTH WARRNAMBOOL RACE

Interesting Details of Great Australian Event—Collins Wins First Place and O'Shea Takes Time Prize.

With the latest mail from Australia comes the details of this year's Warrnambool road race, the fifteenth of the series under the auspices of the Dunlop Rubber Company, held October 14. This race has come to be recognized as the leading road cycling event of the Antipodes and in magnitude ranks among the greatest in the world. The distance of the race is 165 miles, the course is from Warrnambool through Terang, Camperdown, Colac, Winchlsea, Geelong, Werribee to Melbourne.

The race is a handicap affair, sixty minutes being the limit; the riders are sent off in squads at two minute intervals down to the eight minute division, after which there is a gap of three minutes and the five minute men get the word, followed by those on two minutes, with the honor men next.

The winner of this year's event proved to be A. R. W. Collins, riding with a 34-minute handicap; his riding time being 8 hours 45 minutes 11 seconds. J. Tebbs (42 min.) was second by half a wheel's length, and the same distance separated the third man, F. Lessing (40 min.).

The fastest net time, 8 hours, 18 minutes 44 seconds, was made by P. O'Shea (scratch); he also finished in 15th position. The next scratch man to finish was A. B. L. Smith, 44th place; the third and last of the back-markers, P. J. Gascoyne, was scored for 142nd position. Out of 335 entries, 290 riders started and 195 finished within the time allowed for scoring, 10½ hours.

All the arrangements are carried out by the Dunlop company. One of the principal items is that of providing food and drink, gratis to the competitors, by the promoters. At 43 miles a food bag containing one beef sausage, three oranges, three bananas, several pieces of celery, and a quarter pound each of slab chocolate and raisins, is served out to each contestant. This is followed about a half hour later with a pint tin of warm biscuits and milk; at 72 miles, a pint of warm cocoa and one beef sausage; at 84 miles, a pint of warm milk; at 95 miles an egg flip. At 119 miles the food bag as furnished in the first ration, together with that of the second is given to each rider. About midway between this point and the 145 mile mark two oranges, two bananas and a pint of milk are supplied; at the last point mentioned, a pint of Bovril is passed out. The cost of the provisions alone is about $2,500. The checking and feeding requires 150 officials.

After the finish of the race, hot baths were furnished gratis, cabs were in waiting to convey the contestants away immediately after they crossed the tap The competitors' street clothes are transported free by rail from the starting point. Motion pictures were taken of the start and finish. But one wheel was allowed a contestant, no change of mount being permitted under any circumstances.

The winner, Collins, is 22 years of age, has been riding in races for two years and finished fifth in the race of last year. The value of first prize is $180.

P. O'Shea, the time prize winner, is 22 years of age, five feet eight inches in height and weighs 156 pounds. He rode an 89 gear with seven-inch cranks. O'Shea never touched the ground after leaving the starting mark until the finish 165 miles away. His reward was a "Silver Ribbon" Massey racing bicycle and the title, Australian Road Champion.

The score of the first 20 follows:

	Rider	Hdcp. Min.	Time H. M. S.
1	A. R. W. Collins	34	8:45:11
2	J. Tebbs	42	8:53:12
3	F. Lessing	40	8:51:13
4	W. J. Hughes	34	8:45:15
5	W. J. Slaney	44	8:55:17
6	R. Harker	42	8:53:20
7	O. Colvin	24	8:36:20
8	W. J. Ledger	44	8:56:30
9	H. V. Duncan	36	8:50:37
10	C. Snell	30	8:44:38
11	C. H. Clancey	40	8:57:17
12	W. P. Wigg	28	8:45:56
13	P. Grundell	30	8:48:42
14	H. Gaings	40	8:58:43
15	P. O'Shea	Scr.	8:18:44
16	A. P. Pianta	2	8:20:45
17	L. Ambler	16	8:34:46
18	L. H. Parkinson	20	8:38:51
19	D. T. Cupples	24	8:42:52
20	H. J. Frederick	24	8:42:53

Prebble Wins New Zealand Test.

Riding from the handicap mark of 35 minutes, G. W. Prebble won the annual test race of 112 miles from Timaru to Christ Church, New Zealand, under the auspices of the Dunlop Rubber Co., on September 7th. The winner's time was 6 hours 22 seconds; the second man, E. Slow, a co-marker, required just 24 seconds more to cover the course. The entries numbered 121, of whom 107 started and 57 finished.

The winner of the fastest time and the title of Road Champion of New Zealand that goes with it was P. O'Shea (scratch), time, 5.37.31⅕. The record for the course is 5.30.27⅘, made in the race of 1910 by A. B. L. Smith. All three riders are residents of Christchurch, New Zealand.

South Australian Test Goes to Grigg.

The South Australian Dunlop Test Race, over a course of 100 miles, between Burra and North Adelaide, September 30, was won by W. E. Grigg (scratch), who also made the fastest time, 5:39:00. Grigg gave away handicaps up to 43 minutes, and with one co-marker was at the rear end of a gap of 15 minutes at the start. The second man to finish was S. J. Tobin (28 min.), time, 6:07:00⅖; the third rider, L. Gilbert (30 min.), was over 10 minutes behind them at the finish, time, 6:19:11⅕.

What is a 1912?

ALL the 1912 announcements are now out. Compare them. What do you see—how many real 1912 models? Just one—the new Harley-Davidson.

A person would almost think, from the advertisements that have recently appeared, that any much heralded announcement of a cut in price constituted the announcement of a new model. But don't fool yourself—it doesn't.

Just put yourself in the place of our competitors when they saw our 1912 announcement. What would you have done if you had no more to offer than they have? Here was the new Harley-Davidson, with Ful-Floteing Seat and Free Wheel Control, at the same price that they were figuring on getting in 1912 for an out-of-date type of machine with rigid seat and a dinky little makeshift clutch of the "slip 'em in easy" or "grab" variety stuck on to the engine or countershaft, presumably as an after thought. Yes, just ask yourself, what would you have done in the same case? Just what they did—the only thing they could do—cut their price below that of the new Harley-Davidson, thereby admitting as they admitted, that their machine was an obsolete model.

If the other motorcycle manufacturers had known what we were going to bring out for 1912, you would have seen one grand scramble on their part for some shock absorber or spring frame contraption to meet the fierce competition on all sides that the new Harley-Davidson has brought about. Mind you—by one stroke all rigid seat motorcycles, all spring frame models and all engine or countershaft clutches were made obsolete. And one simple announcement did it all, namely, that the big Harley-Davidson company was coming out with an entirely new model, embodying the Ful-Floteing Seat and Free Wheel Control. The unfortunate manufacturers who had planned for 1912 to carry over their warmed over 1911 stuff as 1912 models and "get away with it" were badly disappointed.

Manufacturers who made their 1912 announcement before the appearance of the new Harley-Davidson have added their little mite in the way of testimony to the already over-whelming evidence of the superior merits of the new Harley-Davidson, by making a second 1912 announcement to the trade, cutting their prices again, this time below that of the new Harley-Davidson.

Now as for our part, ours is an altogether different story. Our entire 1911 output was sold before October first, 1911, and we are now making only genuine 1912 machines. We have absolutely quit building any rigid seat machines and are making exclusively,

"The Motorcycle with the Ful-Floteing Seat"

Kirby Now Heads the A. A. U.

Athletic legislators composing the Amateur Athletic Union of the United States gathered in annual convention at the Waldorf-Astoria, New York City, November 20. As both the National Cycling Association and the Federation of American Motorcyclists are affiliated with the A. A. U. the general results of the meeting will prove of interest.

The attendance was large, all sections of the country being represented and many new measures were adopted, the minor details of which will be disseminated through the official channels. The prospects of sending a representative American team to the Olympic games at Stockholm next year were thoroughly discussed and a substantial sum was donated toward the fund to defray expenses of the athletes.

Election of officers resulted in the choice of Gustavus T. Kirby of New York to the presidency to succeed Everett C. Brown, of Chicago, who has held the office for the past two years. Mr. Kirby is the youngest man who has ever held the office, having been born in Philadelphia in 1874. He is a graduate of Columbia University, and has been noted in athletic circles as a runner, fencer and cyclist. He has been connected with the Intercollegiate Athletic Association since 1894. In 1895 he was its president, and has been chairman of its advisory committee since 1896.

It was decided at the meeting that all national championships for the year 1915 should be held in connection with the international exposition which will be held in San Francisco to celebrate the opening of the Panama Canal. This means that inducements will be offered to run the national cycling and motorcycling championships in connection with the other athletic events during the progress of the exposition.

France Keeps Saltonstall Trophy.

It looks as though France has a permanent hold on the Saltonstall Trophy, that nation's cyclists having scored the greatest number of points at the world's championship races in 1909, 1910 and 1911. The Trophy, under the terms devised by the Union Cyclists Internationale, since the death of the donor, stipulate that it must be contested for at five world's championship meets, and that the nation securing the greatest number of points retains permanent possession.

An official announcement by the U. C. I. gives the point results of the international meet held at Rome, June 13-19, 1911, by nations as follows: France, 8; England, 6; Italy, 4; Denmark, 3; Holland, 3; America, 1. James F. Moran was the only American rider competing at Rome and he secured third place in the 100 kilometres motor-paced championship event.

The next competition for the Trophy will be in the United States in 1912.

1000 PATRIOTIC AMERICAN CYCLISTS WANTED AT ONCE

The United Cyclists of New York is going to send a bicycle team to represent America in the two hundred mile road race to take place in Stockholm, Sweden, July, 1912, in connection with the Olympic Games. The best twelve American amateur bicycle riders from all parts of the country will be sent. It will cost approximately $4,500. This will be the biggest thing attempted in American cycling circles, if not during the history of the sport here, at least in recent years. We must have this fund pledged by or about January 1st. There is no time to lose.

The Bicycling World and Motorcycle Review

has offered to aid the United Cyclists in this work by contributing one-half of the amount secured by that organization for yearly subscriptions to the Bicycling World and Motorcycle Review at the regular rate of $2, sent through H. A. Gliesman, Special Subscription Committee of the United Cyclists, 782 Eighth Avenue, New York City. This means that for every subscription that is sent through Mr. Gliesman, for the United Cyclists, the American Olympic Bicycle Race Committee will be credited with one-half, or one dollar. This committee is in urgent need of funds at once to go on with the work.

WE WANT 1000 MEN AT ONCE

to send to H. A. Gliesman, Special Subscription Committee for the United Cyclists, 782 Eighth Avenue, New York, one yearly subscription to the Bicycling World and Motorcycle Review at the regular rate of two dollars per year, and thus the American Olympic Bicycle Race Committee will have $1,000 to carry on the campaign for this team in the necessarily active manner, without being hampered for lack of cash.

Will you be one of the thousand to send in one new subscription to Mr. Gliesman during the coming week and thus aid the Olympic Committee in going on with their work? Doing this, you will be credited with one dollar contribution to the Olympic Fund. You can secure the subscription in a few minutes. Do so and DO IT NOW. Fill out the attached blank and mail it with the two dollars to H. A. Gliesman.

Date.....

H. A. GLIESMAN, Special Subscription Committee,

Some Facts Regarding Hour Record.

Editor of the Bicycling World and Motorcycle Review:

I wish you would please give me some facts concerning that one-hour motor-paced record made by Paul Guignard. What date, time of day, name of motorcycle and gear of same, size of track, pacemaker, fastest mile or part thereof, nationality of Mr. Guignard.

If you have any data concerning this which I have not mentioned, I will be pleased to learn of it.

W. W. SHIFFER.

Newark, N. J.

The world's hour motor-paced bicycle record, held by Paul Guignard, was ridden on Wednesday, September 15th, 1909, on the cement track, 728 yards to the lap, at Munich, Germany. Distance, 63 miles, 189.8 yards.

The motorcycle used was of special build, fitted with an Anzani three-cylinder motor giving about 30 horsepower. The pacemaker was Franz Hoffman; a windshield, 12 inches wide and 24 inches high, was fitted to the rear of the machine. The bicycle ridden by Guignard was of German make (name not obtainable at the present writing); weight, 24½ lbs.; gear, 160.

The start was made at just about noon, the rider getting away from a standstill so quickly that he was tacked on behind the pacing machine before the first turn was reached; the first lap was ridden in 46⅖ seconds, about 31 miles per hour; the first 10 kilometers (6 miles 376 yards) in 6:18⅕; the second in 5:51; the third and fourth, in exactly 5:49 each.

Twice during the hour the timers recorded laps in 22⅘ seconds, which is at the rate of a mile in 55⅖ seconds, or 65 miles per hour. Guignard is a Frenchman by birth, is now 36 years of age, and has been riding in competition since 1894.

The following table shows the time made at each intermediate distance of 10 kilometers:

Distance	Time
10	6:18⅕
20	12:08⅘
30	17:57⅖
40	23:46⅕
50	29:34⅗
60	35:25⅖
70	41:18⅕
80	47:13
90	53:07
100	59:01

½ hour, 50 kil. 761 m.—31 miles 919 yds.
1 hour, 101 kil. 919 m.—63 miles 189.8 yds.

Nominations For C. R. C. Association.

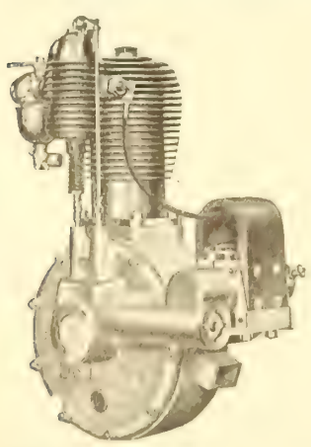
Announcement comes that the annual election for the ensuing term of officers of the Century Road Club Association will be held as usual by mail ballot, date of closing, December 16, 1911. The nominees are as follows: National—President, Paul Thomas, New York; first vice-president, E. Lee Ferguson, New York; second vice-president, D. W. Moore, New Jersey; treasurer, R. A. Van Dyke, New York; recording secretary, Sylvain Segal; financial secretary, H. W. Zarr, New York.

New York State Division—Centurion, A. R. Cooley; treasurer, George Bieregal; secretary, H. W. Zarr; captain, Sylvain Segal.

Connecticut Division—Centurion, J. W. Mitchell, Greenwich; secretary, Henry Robinson, New Haven.

C. R. C. of America Championship.

A. D. Dawson, with a total of 26 points won the 1911 series of club championship races of the Century Road Club of America, when on November 19 he finished in the premier position in one race and second in the other two, that day, which marked the termination of the series.



The scores are as follows: Two miles open—Won by B. Markowitz; second, A. D. Dawson; third, H. W. Hintze.

Four miles handicap—Won by Herman Hintze; second, A. D. Dawson; third, B. Markowitz.

Five miles miss-and-out—Won by A. D. Dawson; second, B Markowitz; third, H. W. Hintze.

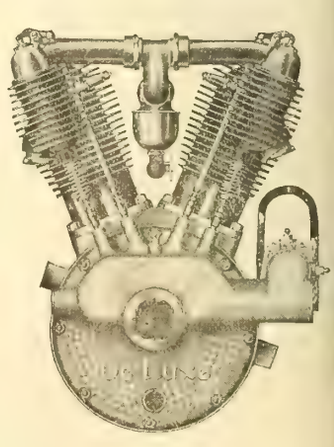
Total points won in the series: A. D. Dawson, 26; Benjamin Markowitz, 18; Herman Hintze, 9. Gold, silver, and bronze medals were awarded first, second and third respectively.

A REVOLUTION IN MOTORCYCLE MOTOR DESIGN

In bringing out our DE LUXE line of motorcycle motors, we have introduced a large number of improvements, and offer these motors as the most advanced now before the trade.

NOTEWORTHY IMPROVEMENTS.

One piece crank shaft.
One part crank case with cover.
Improved cam and magneto drive.
Oil tight motor.
Large Valves.
Simplified design throughout.
Reduced number of parts.
Quiet running motor.
Large Ball Bearings mounted in steel lined pockets.



Equipped with Bosch Magneto.

These improvements in design, together with the high grade materials used in construction, the modern methods of manufacturing applied, and the remarkable performance of these motors in road tests mark a revolution in motorcycle motor building.

Kokomo "New Oxford"

The wear-resisting qualities of Kokomo Tires due to the extra quality of materials used in their making, illustrate the reason why so many manufacturers of high grade bicycles are using them; also, why dealers all over the land are busy supplying the demands of experienced riders who require only the highest grade tires manufactured.

KOKOMO TIRES

will be sold in greater lots during 1912 than in previous seasons. Kokomo "New Oxford," a popular guaranteed tire that is especially designed and constructed for road use. It is made from the best materials obtainable, being built up by hand with pure para inner tube, and, owing to the very high quality of the inner tube used, a puncture is very easily repaired. Kokomo Defender Special, a medium price tire of more than ordinary quality. It is popular among riders. Also furnished in smooth tread.

Flanders "4" at $175

¶Mr. Dealer make sure when you sign up for a low price high grade motorcycle that you can secure this model at all times to fill your demands. Find out if it's a regular production or a clean up of 1911 models.

¶You can't afford to start something and then not finish it.

¶What you must have is a Flanders proposition, the one you can secure and hold trade with. That $175 Magneto Model Flanders is the one that will have the big demand. Think it over—then act.

FLANDERS MANUFACTURING CO.

Pontiac, Michigan

Pennsylvania VACUUM CUP Bicycle Tires

Stocked by the leading hardware and sporting goods jobbers throughout the country.

The raised rubber cups moulded on these tires absolutely prevent skidding on wet or slippery pavements or in mud. The cups "hold the road" better than any known form of non-skid, and by ensuring safety and better traction power they admit of increased speed. The rubber knobs render these tires exceptionally long wearing. They last.

The high quality of materials used in the manufacture of Pennsylvania Vacuum Cup Tires enables us to give with each an unqualified season's guarantee. Each tire carries our yellow guarantee tag.

Made by an Independent Company with a selling policy which ensures a fair margin of profit to jobber and dealer. Write for profitable particulars.

A New Prest-O-Lite Motorcycle Gas Tank, Equipped with Gauge, $10

The addition of a gauge makes our motorcycle gas tank similar to our well known automobile tank in everything but size. This gauge shows at all times, the amount of gas in the tank.

Our tank without gauge, which formerly sold at $10, will hereafter sell for $8. Any dealer will take in this tank and send it to us to be exchanged for the new model with gauge, if the user desires, upon payment of the difference in price, $2 and transportation charge, plus the usual exchange fee if the old tank is empty.

Prest-O-Lite Tanks are now handled by practically all motorcycle and automobile dealers in the United States.

Investigate Prest-O-Lite

Some of your friends are probably using this splendid lighting system.

Ask them if it costs any more to maintain than the troublesome, treacherous generator.

Ask them about its convenience, safety and insurance against accidents. Ask them how much pleasure they find in having 40 hours of brilliant, unflickering, dependable light, turned on and off like a gas jet.

Just one accident due to poor light would probably cost you more than a year's supply of Prest-O-Lite.

Get the genuine. Imitations can be exchanged in very few places. Prest-O-Lite Tanks, when empty, can be promptly exchanged, anywhere and always.

The Prest-O-Lite Co. 245 E. South St. Indianapolis, Ind.

Branches at Atlanta, Baltimore, Boston, Buffalo, Chicago, Cincinnati, Cleveland, Dallas, Detroit, East Cambridge, Jacksonville, Kansas City, Long Island City, Los Angeles, Milwaukee, Minneapolis, New York, Oakland, Omaha, Philadelphia, Pittsburg, Providence, San Francisco, Seattle, St. Louis and St. Paul.

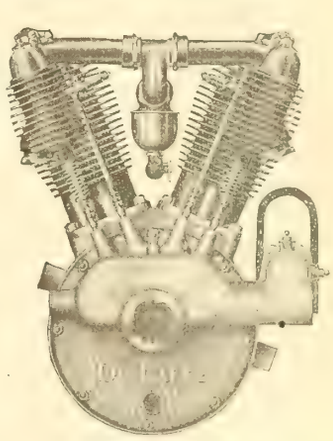
A REVOLUTION IN MOTORCYCLE MOTOR DESIGN

In bringing out our DE LUXE line of motorcycle motors, we have introduced a large number of improvements, and offer these motors as the most advanced now before the trade.

NOTEWORTHY IMPROVEMENTS.

One piece crank shaft.
One part crank case with cover.
Improved cam and magneto drive.
Oil tight motor.
Large Valves.
Simplified design throughout.
Reduced number of parts.
Quiet running motor.
Large Ball Bearings mounted in steel lined pockets.



Equipped with Bosch Magneto.

These improvements in design, together with the high grade materials used in construction, the modern methods of manufacturing applied, and the remarkable performance of these motors in road tests mark a revolution in motorcycle motor building.

Dealers' Pocketbooks Are Helped by Us

Bicycles that you can buy right and sell right, and that sell easily because of their superiorities, are what we supply.

CYRUS JUVENILE

Our capacity, with our new four story addition and a total floor space of 240,000 square feet, is a carload of bicycles a day, including Adlake, Cyrus, Crown and other models, in addition to which we can produce 5,000 pieces or parts per day, including Fauber hangers. Not only are we using Fauber patent one piece crank hangers in our bicycles but also roller chains, which we adopted two years ago, being in advance of the rest of the cycle manufacturers in this respect. Write for 1912 prices.

GREAT WESTERN MANUFACTURING CO., La Porte, Ind.

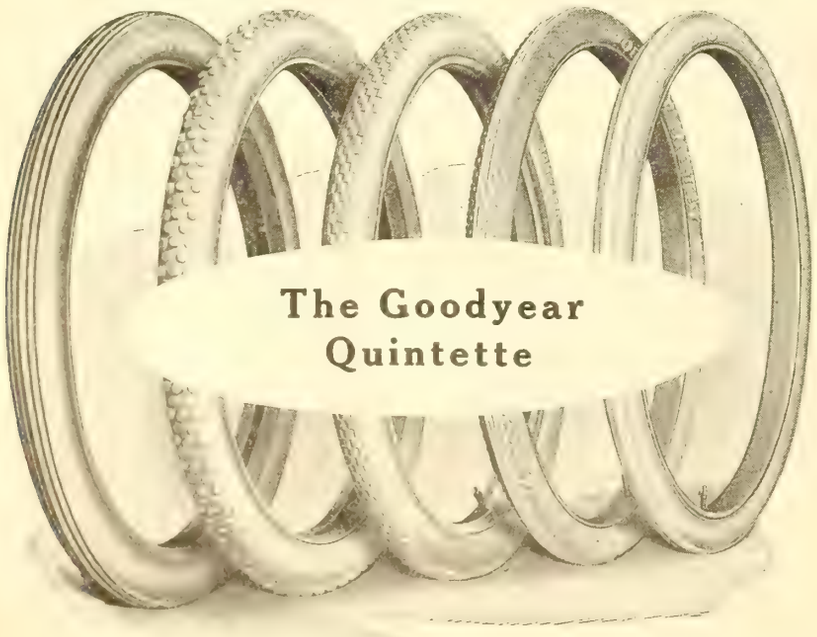
Goodyear Motorcycle Tires Smash Two More World's Records in California

Events in Oakland stir up renewed enthusiasm in these make-good tires. Wolters, on Goodyear Blue Streaks reels off 5 miles in 3:27 — 10 miles in 6:58. Both are world's records. Both tell of Goodyear Tire quality. Thousands endorse Goodyear excellence. Among them all the foremost motorcycle manufacturers in America.

Tires of Endurance and Resiliency

Endurance and resiliency have always characterized Goodyear Motorcycle Tires and lifted them out of the **commonplace** and into a place by themselves.

A **single** race won—a single record lowered, might be due to **many** causes. It might be due to a good set of tires on one machine or a poor set on another. On the other hand it might not be a question of tires at all. It would prove nothing.



But when the same tires hold **all** world's records **as do** Goodyears—when the same tires continuously and without break win first place everywhere in practically every event entered, as Goodyears are doing and as you have **seen** them do in nearly every issue of your motorcycling journal for months back—then this **does prove something.**

It proves that Goodyear Motorcycle Tires are **better tires.** It proves that they can always be depended on to **deliver.** It proves they are the tires you ought to have.

If you doubt this, write any one of the following concerns. They have specified Goodyear Motorcycle Tires for their 1912 output.

Aurora Automatic Machinery Co.	Thor
Black Hawk Motor Co.	Black Hawk
Consolidated Mfg. Co.	Yale
Emblem Mfg. Co.	Emblem

THE BICYCLING WORLD and MOTORCYCLE REVIEW
Founded 1877

Vol. LXIV. New York, U. S. A., Saturday, December 2, 1911. No. 11

PREDICTS 50 PER CENT. INCREASE

Lovell Johnson Looks for Large Increase in Bicycle Trade During Coming Year—His Reasons.

"From all indications our bicycle business will show in the coming year at least 50 per cent. increase over that of the season just closed," remarked J. Lovell Johnson to a Bicycling World representative a few days ago at the New York headquarters of the Iver Johnson Arms and Cycle Works, makers of the well known "Trust-the-Truss" bicycles. "Our travelers," continued Mr. Johnson, "have now completed one-third of the annual winter trip and the amount of business, both in renewed contracts and new agencies placed, is far beyond our expectations—considering the general impression prevalent in other lines of trade that 1912 will be an 'off' year in business.

"We find the new 'midget' juveniles, added this year, thus completing the largest possible range in small sizes, have met with the instant approval of the trade and the demand for immediate delivery indicates that the approaching holiday sales undoubtedly will equal, if not surpass, that of any in the history of the industry.

"These highly gratifying conditions are not alone confined to the children's wheels nor to any one section of the country. The entire line, including the ladies' models, is being called for by both city and country dealers, north and south, and our Pacific coast representatives have doubled their requisitions of previous initial orders for the coming season.

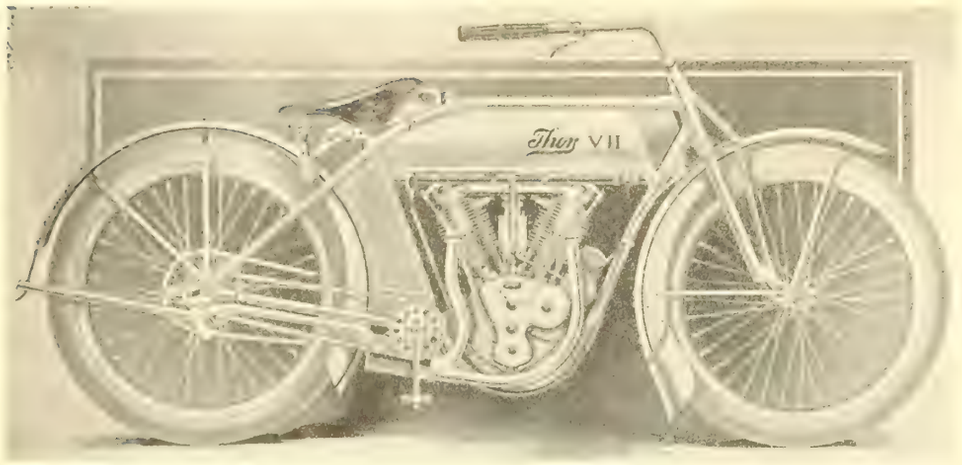
"With the exception of the territory west of the Rocky Mountains, all of the sales now are handled direct by our own staff which has been increased by 40 per cent., and their territories have been re-arranged. This is in accordance with a plan which we have had in contemplation for some time, one of the objects of which is to eliminate as far as possible the hitherto universal habit of considering the bicycle as a 'season' proposition, and, at least among 'I-J.' agents and through them the riding public, it is our aim to emphasize the all-year-round serviceability of the bicycle.

"The first step in putting this policy into practice, we took two years ago by sending out a few of our salesmen on a yearly trip instead of the usual short 'season' trip.

That this radical departure from accepted practice has been productive of amply satisfactory results we are convinced as is testified by the evident appreciation of the agents; and again in the increased sales throughout the territories in which the system was tried. A striking case in point is the showing made so far in one section, wherein during the past year the total gain over the previous season was more than 70 per cent., and on the trip now in progress a 40 per cent. increase in the sales as compared with those of the corresponding period of last year is shown."

New Michelin Inner Tube for Motorcycles.

A butt-end inner tube for use in motorcycle tires that promises to become as much of a favorite as the Michelin red inner tube for automobile tires is being placed on the market by the Michelin Tire Company, of Milltown, N. J. The new tube is made of the same material as the regular Michelin inner tubes, the ends fitting together in such a way as to minimize the possibility of them giving way.



HANDSOME NEW TWIN FROM THOR

Design Standardized With Many Novel Motor Features—Spring Seat Post and Two-Speed Introduced.

Without a doubt one of the handsomest and clean cut of the 1912 crop of twin cylinder motorcycles is the new Thor snow white "VII" which will be the "big thunder god" of the line for next year. At first glance this latest creation from the works of the Aurora Automatic Machinery Co., Aurora, Ill., appears to be an entirely new model, and truth to tell, it bears little family resemblance to its predecessor, though of course, several distinctive and original Thor features are retained, and some new ones added.

Among the new chips in the basket are an altered frame design, truss spring fork, redesigned motor, spring seat post, improved mud guards, improved stand, metal tool box, longer wheelbase, improved handlebars, new oil pump drive, symmetrical exhaust leads, magneto in front of motor, front guard splasher, multiple jet carbureter, two speed gear, and a sheaf of minor refinements. The machine is rated at seven horsepower, and lists at $300, a reduction of $25 on the previous model. The two speed is furnished for $25 extra.

As the motor is the heart of a motorcycle, the changes and improvements in this unit naturally are of first importance. Instead of the old tilted V form of mounting with the front cylinder lying half horizontal and the rear one upright, the motor now in set straight V with both cylinders bent outward equally from a vertical center. This arrangement gives a neater appearance, bet-

NEW 1912 THOR "VII" WHITE GHOST TWIN

ter mixture and oil distribution, equal cooling, and simpler manifold, carbureter and exhaust pipe arrangement. Cylinders now are set 50 degrees apart, an arrangement which is claimed to give better balancing and increased strength in the base at the apex of the V.

Spark plugs now are located on the inner sides of the cylinders, bringing them higher and affording more protection from fouling. The one piece cylinder and head casting, with all flanges horizontal, is retained. While mechanical inlet valves are continued, the operating mechanism is entirely new. In place of the former spanner pull down links, over head rockers and push rods are used. To take care of the offset necessary to clear the cooling flanges and also allow for side motion due to the angularity of the stroke of the push rods, they are coupled to the cam tappets by ball and socket joints. These permit of an easy take up of lost motion, and also contribute to quietness in the valve gear operation. Screw adjustments are provided on the rocker arms, where a ball and socket coupling also is used. Being permanently coupled at both ends there is no chance of the push rods jumping out of their seats and becoming lost, a mishap which is not unknown.

A new T inlet manifold is used, with the carbureter set between the cylinders. The carbureter has been redesigned and now incorporates the multiple jets, to give slow motor speed for city riding. It is fed by a short and direct pipe line from the tank directly overhead, and a loop is incorporated in the line to absorb road vibration and minimize breakage of the line. A pet cock shut off also is provided at the tank outlet.

Automatic magneto advance has been abandoned, and the Bosch enclosed arch type of magneto now is mounted in front of the motor, on a low platform cast integral with the motor base, where it does not impede the flow of air to the front cylinder. Provision for quick dismounting is made, and by a clever arrangement, the instrument may be removed without disturbing any gears or "breaking" the timing. The magneto gear housing is cast integral with the cam case, as also is the oil pump housing.

While the registering cup disc form of oil distribution is retained, it now is located on the right side of the motor base, below the cam gears, and is driven off the main shaft through eccentric internal gears. The oil flows by gravity from the rear compartment in the combination tank to the pump, and thence is forced to the rear side of the front cylinder wall, to insure sufficient lubrication to this cylinder, always a problem in V motors. There also is another lead to the motor base, where a constant pool is maintained at a fixed level. All of the interior mechanism is lubricated by splash, in addition to the auxiliary feed to the front cylinder wall. A sight feed cup is located directly beneath the tank outlet to afford quick detection of an exhaustion or clogging of the tank supply, while the pump operation may be tested by uncoupling a union in the front cylinder lead. A base compression relief valve is inserted in the cam case, and removable screw plugs in the oil pump housing permit of adjusting the quantity of oil fed. A needle shut-off valve is provided in the tank.

Roller bearings are continued in the main and crank shaft bearings. Each cylinder has a separate exhaust lead to the muffler, and the pipes easily are detached. The same type of muffler is continued, but the tail pipe has neater lines. The motor is attached to the frame by lugs and anchor plates.

Imported tubing and external fish tail joints are continued in the frame construction. However, the diagonal members of the loop have been given more rake to balance better and produce a neater cradle. There is more space between the seat post tube and the rear guard, which, of course, implys a lengthened wheel base. The top tube now has a sloping drop as it approaches the seat cluster, instead of the sharp slant on the previous model, and the seat is further back, due to the increased rake of the rear diagonal tube. Both head tubes are brought into the head in a neater and wider cluster.

That the Thor designers have not overlooked the importance of providing greater comfort than is to be had with the ordinary rigid frame, is apparent in the introduction of a spring seat post. The device is of the hinged T type with the springs carried on a plunger rod in the seat mast tube. The saddle is mounted on a horizontal hinged bar which is coupled to the spring plunger and two sets of springs of different strength are provided for light and heavy shocks. A rebound spring also is provided, and the compression springs are adjustable for loads and roads.

Another of the brand new features is the truss spring fork, displacing the well known pneumatic cushion fork previously employed. The truss is of conventional form with the cushioning springs housed in the main members and riding on plungers which are coupled to the rear ends of the lower rockers, the fork toes proper being linked to the center of the rockers, and the front axle to their forward ends. Large adjustable bearings are provided on the rockers, to meet the strains imposed by turning out of ruts and sand. Two sets of springs, one for compression to take the load, the other to check rebound, are used. The housing of the springs in the fork sides protects them from the elements.

As heretofore, the ball bearing friction disc clutch is carried on the motor reduction gear shaft. In the two-speed box, also ball bearing, the gears always are in mesh, the speed ratios being obtained by sliding sleeves with dog faces. The clutch is operated by a hand latch on the left handlebar, and where the two-speed is fitted, both mechanisms are controlled by this single lever. To guard against damage to the gear box by an attempt to shift speeds with the clutch engaged, an interlocking control system is used, whereby gear changes cannot be effected until the clutch is released. The well-known Thor system of chain drive through motor enclosed internal reduction gears is continued, only one chain being required, and a slower chain speed being secured. The motor reduction gears are mounted on large roller bearings.

Taking advantage of the three stem fork, a double stem handlebar is used, and all danger of the bars being twisted from a straight fore and aft position by sudden wrenching in sand or ruts is eliminated. A new style of handlebar has been adopted, a broad U type succeeding the rams horn V pattern. The bars now are parallel with the top frame tube throughout their length. As heretofore the motor control is centered in the grips and transmitted through Bowden cables.

Naturally the Thor coaster brake of the friction wedge type is used. The brake arm slips into a pocket brazed to the frame, dispensing with a screw and clip, and saving time and patience in dismounting or in-

serting the rear wheel. The presence of this brake arm pocket has been utilized to serve a double purpose, for it is brazed near the junction of the left upper and lower rear stays, forming a triangular reinforcement where an additional load is imposed.

Changes in the frame lines obviously are reflected in the tank outline, and in its new form is of neater appearance. It is made in two compartments, the gasoline reservoir holding three gallons, and the oil tank, one gallon. A separate petcock is provided for draining or drawing gasoline for priming, making it unnecessary to disturb any connections. To round out the priming facilities, priming cups are fitted to the cylinders. Rolled copper is used in making the tanks, and the external lap is used, so that a repair easily can be effected if necessary.

Mudgards have more clearance and are wider and longer. Metal side splashers are fitted to the front guard back of the fork, and a broad flaring leather visor is attached to the lower end to catch mud and water before it travels higher. The rear guard also has side splashers from the upper rear stays, for the full forward length of the guard. Flat braces are used. The rear guard is carried below the muffler in front, and to a point in line with the hub in the rear. This lower extension in back allows the stand to hang closer to the ground, and in line with the lower rear stays, making a more pleasing appearance for the whole machine.

A new stand of tubular construction is used, and is hinged to the rear fork ends on separate lugs, so that the wheel may be dismounted with the machine on the stand. Shorter and neater stand supporting arms are used, and the stand when in action against lugs brazed to the sides of the lower rear stays. Wheels are 28 inches, shod with 2¾ inch tires, but a choice of three sizes is obtainable, the rims taking either 2½ or 3 inch tires also. Sufficient frame clearance has been provided for three inch tires. Ample room for tools and spare inner tubes is provided in the metal compartment under the saddle. Not the least distinctive feature is the pure white finish, which will make the machine conspicuous in any gathering.

Goodyear Building Canadian Factory.

Toronto, Ont., Nov. 28.—To eliminate the customs duties, and better care for the demands of its Canadian trade, the Goodyear Tire & Rubber Co., Akron, O., is erecting a factory at Bowmanville. It is expected that the production of motorcycle tires will begin January 1.

Canada's first wirerless "rubbergrams" were discharged through the air last week when the private wireless system of the Goodyear Tire & Rubber Co., was put into operation at its Canadian factory in Bowmanville. The official opening of the "line" was signalized by the exchange of communication between the factory and the Toronto branch. Of course these stations also can "talk" with the parent factory in Akron, O. The commissioning of the system marks the first application of wireless for a private commercial use by a business concern in Canada. Advantages which led to the adoption of the system include its inexpensiveness as compared with similar public systems, absolute control over the messages which are transmitted, a saving in telegraph and telephone tolls, storm proof, and secrecy in transmission of important matters.

Excelsior General Will Job Bicycles.

C. W. Odell, president of the Excelsior General Supplies Company, 1436-38 Michigan avenue, Chicago, announces that his company has engaged F. W. Grubb, formerly with the Excelsior Supply Company, of that city, and will start jobbing bicycles and bicycle supplies at as early a date as possible. The company will have an entirely new and clean stock, and hopes to gain by prompt and courteous attention, the approval of the trade.

Mr. Grubb was formerly manager of the Excelsior Supply Company, the predecessor of the Excelsior General Supplies Company, and since then a member of the Fulton-Grubb Company, factory sales agents, Chicago.

Arrow Motorcycle Hails from Chicago.

Featuring what is designated as "an aviation type motor," the Arrow Motor Company, 2845 West Nineteenth street, Chicago, Ill., is offering the Arrow motorcycle in one model, a five horsepower single cylinder, with flat belt drive and Bosch magneto ignition. The list price is $225, and an attractive time payment selling plan by which the machine will be sold direct to the purchaser has been adopted.

A Winter Tip for Dealers.

Dealers who want to push a live selling accessory in winter, and riders of both motorcycles and bicycles who use their machines in cold weather, will find the following tip, offered by B. A. Swenson, of Providence, R. I., of value. He says: "I sell a great many hand wind shields these days, and take it from me they are all right. Any dealer who is skeptical about their merits should order a few, tell his rider customers about them, and then watch how fast they move and how pleased the purchasers are with them. They really are little handlebar muffs and they keep the cold wind from shooting up the rider's arms."

SOME SUGGESTIONS FOR DECORATING SHOW WINDOWS FOR THE HOLIDAYS

INCREASE OF CYCLING IN BELGIUM

Only American Representative in Ghent Gives Some Interesting Facts Regarding Conditions—Attributes His Success to Consistent Advertising and Attractive Store.

Henry DeRudder, the only American bicycle representative in Ghent, Belgium, arrived in New York on Thursday, the 23rd ult., for a six weeks visit, combining both business and pleasure. Mr. DeRudder is very enthusiastic regarding future possibilities for the cycling industry in Belgium, and says that there is an excellent opportunity for American motorcycles in some parts of his country, particularly Brussels, although the government seems to be somewhat opposed to motorcycling, demanding the payment of a yearly license of $10.00. Bicyclists have to pay a license of $1.00 per year, which goes to the maintenance of the six foot cinder bicycle paths which are on every street. Mr. DeRudder says:

"The bicycle business in my city has steadily increased, particularly in the last few years, and the prospects for the future are particularly bright. To outsiders the $1.00 license fee collected from bicyclists by the government may seem hard, but when it is considered that this money is expended for the maintenance of our present paths, which are six feet wide and on every street throughout the country, and the building of new ones, it is money well spent by the cyclist. We can go from Belgium, or, you might say, from the North Sea, to St. Petersburg, on these bicycle paths, a distance of approximately 3,000 kilometres. The great majority of our bicycle riders are of the working class, and only tax payers have to pay the bicycle tax, that is, if a man lives in a house, the rent of which does not exceed $1.00 per week, or he earns less than $20.00 per month, he pays no tax, with the exception of 20 cents for a bicycle license.

"Unfortunately, the American manufacturers lose out in the Belgium market because they do not make their bicycles to conform to our conditions. I can understand, to a certain extent, why they are not anxious for this trade, for I know that all the American factories are working up to the limit of their present facilities to supply the American market. The motorcycle has not been popular in Ghent because they will not allow them on the bicycle paths and the roads have been absolutely unfitted for this machine. The government is starting in to improve the roads very extensively and this will, no doubt, increase the popularity of the motorcycle. We have in Ghent a population of 168,000, but to my knowledge there are only 14 motorcyclists. Another thing that has tended to make the motorcycle more popular is the trains, and if a rider meets with an accident or anything of that kind, 18 or 20 miles out, he does not want to take a chance of that the railroads will not take them on having to walk back. I believe these conditions also will be improved in the near future. A peculiar thing about the natives of my city is the fact they cannot believe that the motorcycle is used in America for extended tours. I have been a subscriber to the Bicycling World and Motorcycle Review for the past eleven years, and I have a copy of every issue for that period, and when I show by friends in Ghent the stories of extended tours they take here in America they cannot believe them to be true. I remember particularly when I showed them the accountu of one of your American taking a trip from San Francisco to New York, my friends thought it was absolutely out of the question and simply a newspaper story.

"To go back to the bicycle end of the business, an interesting item is that nearly every proprietor of a saloon is a bicycle repairman, who repairs a puncture for two cents, sometimes even including this work with a glass of beer. A regular repair man charges five cents. I attribute my success, to a great extent, to the fact that I have taken the largest advertisement in the leading newspaper of our city. I cannot understand why so few dealers here in America do not see the great possibilities for them in newspaper advertising. I have been much interested in reading your various editorials in the Bicycling World and Motorcycle Review on this question, and from actual experience cannot endorse them too strongly. Of course, your rates for this advertising in such a city as New York particularly, is much higher than I have to pay, but the returns would be in proportion and I do not hesitate to say that I would not have the business that I have today if I had not advertised in the newspapers. By this I do not mean that I simply state, as you noted in your columns a few weeks ago, that I am engaged in the bicycle business at such and such an address, but I insert an interesting advertisement that will catch the eye.

"Then, of course, I back up this advertising with an attractive store. My good wife has a great deal to do with this, as she has everything in the shop shining so that you can see your face in it. I really do not wonder that some of your dealers here do not make more money, and yet they have a very extensive stock, thir rent is high and they pay their mechaniesc good salaries, but they simply think that because they have a sign out that it is a bicycle shop, the public does not care how dirty it is or unattractive, but will come in just the same. A man who did this in Belgium would not last three months. When I consider this tremendous expense and the worry the average American dealer has in caring for his large stock, etc., I cannot understand why one of them does not come to a city like Brussels, for I believe there is not a better opportunity elsewhere."

New Quarters for Splitdorf's Coast Branch.

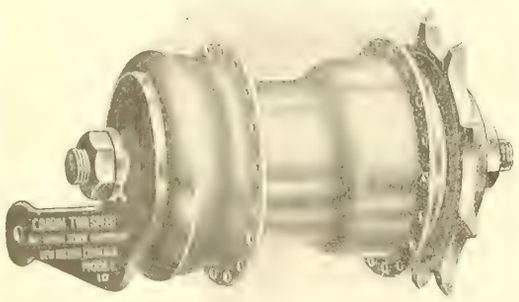
Extensive changes in the branch houses representing the ignition business of C. F. Splitdorf, are being made to meet tne requirements of that concern's extensive trade. The establishment of service departments equipped in factory miniature make heavy demand on space. Following the securing of new quarters in Chicago, and the establishment of a branch in Kansas City, the old quarters in San Francisco had to be abandoned for lack of room. Branch Manager P. E. Kempton, who looks after the Splitdorf Pacific Coast interests announces, however, that he has secured up-to-date headquarters at 430-436 Van Ness avenue, San Francisco, and is now prepared to handle his rapidly increasing trade with promptness and despatch.

Eccles Has Successful Business Trip.

W. E. Eccles, sales manager for the Persons Mfg. Co., of Worcester, Mass., recently completed a trip covering the principal jobbing centers of the west, including the Pacific Coast. The trail of Person's saddles following his wake is a reminder of the old days of the saddle trade, and bespeaks a very flattering future for the motorcycle and bicycle business. Mrs. Eccles accompanied her husband on the trip.

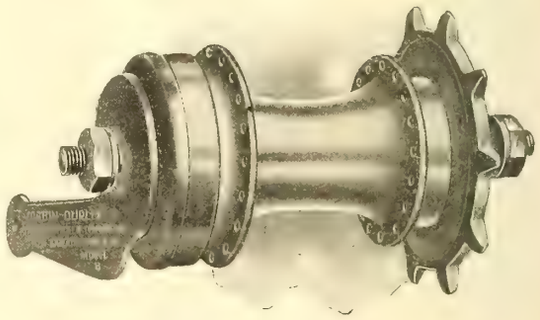
Goodman Becomes Advertising Specialist.

Joseph G. Goodman, formerly president of the Bicycling World Co., New York, now owned by the A. B. Swetland Co., has become identified with the Frank Presbrey Co., a large advertising agency, of that city. He will open a branch office in Hartford, Conn., where he resides, and already has secured a number of high class accounts, among them the Hendee Mfg. Co., Springfield, Mass.



Motorcycle Delivery in Indianapolis.

Indianapolis, Nov. 28.—Fred Stewart, who formerly operated the motorcycle messenger service in this city, has taken as a partner "Bill" Endicott, the former automobile racing driver. They will make a specialty of delivering packages for the large department stores. They have 10 machines in operation now ,which will be increased to about 20 to take care of the holiday rush.



It is not the power you generate, but the power you transmit that registers on the meter of efficiency.

NEW YORK, DECEMBER 2, 1911.

Passing of Factory Secretiveness.

Time was, and not so many years ago, when the mere thought of a motorcycle manufacturer or high executive visiting the plant of a rival, and going through it from cellar to roof would have been regarded as a flight of fancy not to be considered seriously for an instant. Factories in those days, beyond the offices were as a sealed book to outsiders, and an atmosphere of extreme secrecy and mystery, as to what went on was maintained and encouraged. Motorcycle manufacturers would as much have thought of taking a competitor through their plants, as an army in the field would, of inviting a spy into its camp and giving him carte blanche with pencil and paper.

All this has changed however, with the development of the business, and now there are few of the prominent manufacturers but who have been in at least one, and in some cases several of their rival's plants. And they did not stop at the office either, but were escorted through the works and had a chance to see and compare the methods in vogue with their own. And it is a good sign, this throwing open of factories to visitors, including rivals. Manufacturers have realized that there is nothing to be gained by a closed door policy, and that if rivals want to know what is going on, and what methods are used in a particular plant they easily can do so, either through spies among the workmen or via other underground channels.

In fact in the manufacturing departments all motorcycle factories are pretty much alike, and when a person has been through one big factory he has a pretty good idea of how motorcycles are built generally. Of course some plants naturally are better organized than others, and here the production department is seen at its best. However, it is in the experimental rooms that the valuable jewels of the draftsmen's pen are kept, and of course, these are sacred to all but a chosen few. A manufacturer who would take a rival into this holy of holies might just as well also show him his books, and leave no secrets of his business unrevealed.

That a manufacturer can learn something from a visit to the plant of "the other fellow" well is illustrated by a recent case in point where a prominent maker went through the plant of a big competitor and saw installed there a few things which he did not have in his own factory, but whose advantages at once were apparent. Shortly after his return he also installed some apparatus which had appealed to him during his stay in the "enemy's camp." Similarly the manufacturer who entertained his rival, later reciprocated the visit. and also picked up a few things of value, which now are duplicated at home. Therefore both profited by the interchange of visits.

No manufacturer has a monopoly on brains, nor ever can hope to have, and even the smallest and most insignificant maker may have some methods of production that his bigger rivals profitably can copy. Workmen shifting from one factory to another usually are "pumped" for what they may know, likewise agents and executives, so that some of the larger makers at least know pretty well what their rivals are doing. What they don't know but what they most would like to know is what their rivals are thinking of doing ,and are going to do. And it is in this respect that all factories, large or small, rich or poor, are on an even footing.

Nowadays the motorcycle manufacturer takes pride in showing a competitor through his plant, and letting him see how he has expanded, how he has solved production problems, how he secures the highest degree of efficiency from his machinery and his men, and how, in his own opinion at least, he is turning out a better motorcycle than anyone else. It's all a very good sign, this "open door" policy, for it benefits all, and the maker whose plant evokes admiration from a rival has good reason to congratulate himself on the success he has attained, rather than worry about what good ideas the "other fellow" may carry away.

American Side Car Difficulties.

Commenting on a recent editorial in this paper on the danger of a passenger riding in front of the operator on a single seated motorcycle, and recommending the tandem attachment as the only proper method of carrying an extra passenger on a two-wheeled machine, the Irish Cyclist observes: "The Yankee has not yet heard of the side-car as a passenger carrying outfit." Yes he has, Brother Mecredy, and of the fore car, too, but both manufacturers who put them out and riders who tried them, soon found that our roads were so bad, generally, that the motors did not have enough power to lug the extra load around, so their manufacture was dropped. Anyway, it's only within the last year or so that passenger carrying has come into vogue in this country to any extent, because the motors were not powerful enough to carry two people far into the country, especially in sections where steep hills or bad roads abounded. While both the fore and side car appeared over here as long ago as 1906, comparatively few of the former, and mighty few of the latter were built. There are signs, however, that the side car will re-appear here shortly.

Occasional inquiries for electric lamps for motorcycles indicate that the time is about ripe for an offering of this sort. So far as known there are no electric motorcycle lamps on the American market, but the popularity which the electric illuminating system has attained on motor cars, almost over night, is significant, and that it will enjoy equally great popularity among motor-cyclists, when its advantages are realized more fully, is a safe prophecy. No clogged or frozen generators, no handling of carbide ash, no tarnished or broken lenses from flaring burners, no choked burner tips, and no heavy and expensive tanks all listen good to the motorcyclist.

INDUSTRY'S OUTPUT STEADILY ADVANCES

Value of Products (Motorcycles and Bicycles) Increases 108 Per Cent. Between 1904 and 1909 — Capital Invested Shows Increase of 66 Per Cent.

Following up the usual course of procedure in classifying the manufacturing industries of the country the Bureau of the Census has issued a preliminary statement covering the manufacture of bicycles, motorcycles and parts which contains a summary of the general figures for 1904 and 1909, and includes statistics for all establishments that manufacture bicycles, tricycles, motorcycles or parts of these machines, such as seat posts, frames, gears, handle bars, chains, etc. The report was prepared under the direction of William M. Steuart, chief statistician for manufactures, Bureau of the Census. The figures are subject to such revision as may be necessary after a further examination of the reports.

The high-water mark in the bicycle industry was reached about 1899, when the annual product amounted to more than $31,000,000. By 1904 the product had decreased to $5,153,000. About 1904 the motorcycle came into prominence and its manufacture has increased rapidly.

The general summary shows increases in all the items at the census of 1909 as compared with that for 1904, except in the number of establishments, which decreased from 101 in 1904 to 95 in 1909, or 6 per cent.

The capital invested, as reported in 1909, was $9,780,000, a gain of $3,897,000, or 66 per cent., over $5,883,000 in 1904. The average capital per establishment was approximately $103,000 in 1909 and $58,000 in 1904.

The value of products was $10,699,000 in 1909 and $5,153,000 in 1904, an increase of $5,546,000, or 108 per cent. The average per establishment was approximately $113,000 in 1909 and $51,000 in 1904.

The cost of materials used was $5,083,000 in 1909, as against $2,628,000 in 1904, an increase of $2,455,000, or 93 per cent.

The value added by manufacture was $5,616,000 in 1909 and $2,525,000 in 1904, an increase of $3,091,000, or 122 per cent. This item formed 52 per cent. of the total value of products in 1909 and 49 per cent. in 1904. The value added by manufacture represents the difference between the cost of materials used and the value of products after the manufacturing processes have been expended upon them. It is the best measure of the relative importance of industries.

The number of salaried officials and clerks was 502 in 1909 and 361 in 1904, an increase of 39 per cent.; their salaries increased from $351,000 to $583,000.

The average number of wage earners employed during the year was 4,437 in 1909 and 3,319 in 1904, an increase of 34 per cent.; their wages increased from $1,971,000 to $2,908,000, or 48 per cent.

The number of bicycles manufactured decreased from 250,628 in 1904 to 233,707 in 1909, or 7 per cent. As a rule, the bicycles are manufactured in establishments that make a specialty of the industry, but there were 27 establishments in 1909 and 12 in 1904 engaged primarily in other industries, but which manufactured bicycles as a by-product.

In 1909 there were 18,628 motor cycles manufactured and in 1904 only 2,328. In 1909 there were 132 motor tricycles, and in 1904 only 5 were reported.

A comparative summary follows, giving the general statistics of the industry, 1904 and 1909:

Bicycles, Motorcycles, and Parts—General Summary: 1909 and 1904

	Census		Per cent. of increase, 1904-1909
	1909	1904	
Number of establishments	95	101	*6
Capital	$9,780,000	$5,883,000	66
Cost of materials used	$5,083,000	$2,628,000	93
Salaries and wages	$3,491,000	$2,322,000	50
Salaries	$583,000	$351,000	66
Wages	$2,908,000	$1,971,000	48
Miscellaneous expenses	$996,000	$575,000	73
Value of products	$10,699,000	$5,153,000	108
Value added by manufacture (products less cost of materials)	$5,616,000	$2,525,000	122
Employees:			
Number of salaried officials and clerks	502	361	39
Average number of wage earners employed during the year	4,437	3,319	34
Primary horsepower	5,932	5,730	4

Something About Porcelain Plugs.

Cracked spark plug porcelains usually are attributed to faulty material, when in reality often the owner of the motorcycle is responsible. Spark plugs never should be screwed into the cylinders as far as they will go, especially if the motor is warm. The proper way to fit a plug is to screw it in until it binds, then give it a fraction of a turn more, it being necessary to have it tight enough only to prevent the loss of compression. When the motor becomes hot the cylinders expand, and if the plugs are screwed in at this period they can be inserted a little further than when the motor is cold. The further the plugs project into the mixture the quicker will ignition occur.

When a cylinder becomes cool and contracts, great pressure is brought on a plug, and if it has porcelain insulation, it frequently cracks. Such fractures often are very minute and hardly can be detected. They usually occur near the middle of the porcelain. Allowing water to drop on porcelain when it is hot is very liable to cause it to crack. The best way to keep plugs clean is to dip them in gasoline and remove the soot and carbon with an old tooth brush. To clean the points of the electrodes a piece of emery cloth should be rubbed between them until they are bright, then removing all traces of the emery with a gasoline bath. Plugs should be removed from the cylinders only when they require cleaning, for frequent removal causes wear on the threads of the plug and its seat, making in time a poor fit and allowing loss of compression. In frequent removal there also is the danger of breaking the insulation.

The Repair Man and His Customer.

Motorcyclists and bicyclists who bring their machines to a dealer or repairman to have something fixed often are most unreasonable in their demands. They think that no matter how big the job is that a dealer ought to be able to fix it in jig time; sort of wave a hammer and screwdriver and produce a bit of magic result. Often a rider will bring in a machine, particularly a motorcycle, on which he has been tinkering for weeks trying to remedy some trouble. At first the trouble probably was only a trifle but the more the rider fussed with it the worse it grew, and when the machine reaches the dealer he has a long job ahead of him. The rider does not realize this and thinks that things ought to be fixed in a few minutes. In a case of this kind the repairman must set right all the little things that are sure to be wrong or out of adjustment. He will do this as a matter of policy, for if he doesn't he knows that later when they begin to give trouble that he will be blamed for not attending to them. An experienced repairman always will insist on everything about a machine being absolutely right before he allows it to go out of the shop. It is the only safe policy to follow. Riders should realize that a repairman cannot always make a repair in a few minutes, particularly if the rider himself has been tinkering with the machine for weeks until it is in a high state of disorder.

ACTIVITY IN SOUTHERN CALIFORNIA

Winter Season Promises Much Sport and Increased Trade—Big Motorcycle Show in February.

Los Angeles, Nov. 28.—Motorcyclists in Southern California are waking up for the winter season and already hill climbs, race meets, picnics and motorcycle shows are taking all the interests of the devotees of the game in the "Land of (sometimes) Sunshine." Dealers are bragging of their sales and the newspapers have just discovered to their eternal joy and boastfulness that Southern California is the biggest motorcycle land in the world. It is a fact, that was brought out by statistics furnished by C. Will Risden's exhibit of Indian machines at the recent Shriners' show, that Los Angeles is the center of more motorcycles than any other city in America, not excluding New York, and that means in the world. The Indian exhibit, by the way, the only motorcycle exhibit at the big Shriner's show, which lasted for two weeks, was the biggest thing of its kind ever held here.

December 3 is the date set for the annual hill climb at Lookout Mountain, one of the best tests for motorcyclists in the Southwest. From present indications there will be about fifty entrants for the event and fully two thousand will be at the start and finish to speed the racers up the mountain and to welcome them on their return. Practically all the enthusiasts in three counties gather annually for this event.

Shortly after this event comes the Bakersfield hill climb and road race under the auspices of the Bakersfield Motorcycle Club. This is a cross country affair and the course will cover 150 miles, "through those blankety-blank oil fields," as one member of the Bakersfield organization puts it.

The Los Angeles Motorcycle Club members are already campaigning for the annual election which occurs early next month. There is a good deal of rivalry for the offices in this club, which is now enjoying the most prosperous stage of its career so far. The various candidates for office want to be in when the big motorcycle shows comes off in February. Dealers and inventors are preparing to hold the most extensive and comprehensive show ever held and it is assured that it will break all records for Southern California, at least. There will be nothing but motorcycles and inventions and manufactures pertaining to motorcycles on exhibition at this show.

Members of the Los Angeles (Cal.) motorcycle police squad are "up in the air" over an order issued by Captain Lehnhausen to the effect that when a machine is in the shop undergoing repairs, its operator is to be marked "absent" on the roster and his salary cut off during the period the machine remains out of commission. Six men are affected by the order. While Chief Sebastian has not rescinded the order, he intimated his disapproval of it and voiced the opinion that when a police motorcycle is out of commission its operator should be detailed to beat and retained on the pay roll.

December 8, New York City—Annual ball of the Gotham Cycle Club at Apollo Hall, 126 Clinton street.

December 11-16, New York City, N. Y.—Madison Square Garden—Nineteenth annual international six days' professional bicycle race.

December 16, Brooklyn, N. Y.—First annual smoker-stag of the Atlas Bicycle Club at Stoetzer's Hall, 1213 Fulton street.

December 16, New York City—Fall athletic games, Fourteenth Infantry Athletic Association, at Armory, Eighth avenue and Fifteenth street, Brooklyn. Open bicycle event, two miles handicap, N. C. A. sanction.

December 31, Brooklyn, N. Y.—Annual New Year's Eve midnight scorch from Bedford Rest to Coney Island and return.

January 6-20, New York City—Twelfth annual automobile show in Madison Square Garden; motorcycle section included in first week.

January 10, New York City — Hotel Astor, 2 P. M., meeting of Executive Committees of the Cycle Jobbers' Association and Joint Committee of Cycle Jobbers' and Cycle Parts and Accessories Association, followed by a luncheon tendered the Jobbers', Bicycle and Motorcycle Manufacturers, by the Cycle Parts and Accessories Association.

January 10, New York City—Banquet of United Cyclists to manufacturers and visiting bicyclists and motorcyclists.

January 11, New York City — Hotel Astor, 2 P. M., joint meeting of Motorcycle Manufacturers' Association, Cycle Parts and Accessories Association and Cycle Jobbers' Association.

January 13-27, Philadelphia—Eleventh annual motorcycle and automobile show in First and Third Regiment armories.

January 20, New York City—Annual ball of the Century Road Club of America at Lyric Hall, Sixth avenue and 42d street.

January 20, New York City—Fourteenth annual ball of the Century Road Club Association, Eastern Division, at Alhambra Hall, Seventh avenue and One Hundred and Twenty-sixth street.

February 3-10, Chicago, Ill.—Eleventh annual motorcycle and automobile show in Coliseum and First Regiment Armory.

March 4-11, Denver, Colo.—Motorcycle and automobile show in Auditorium.

Marylanders Boost Membership Plans.

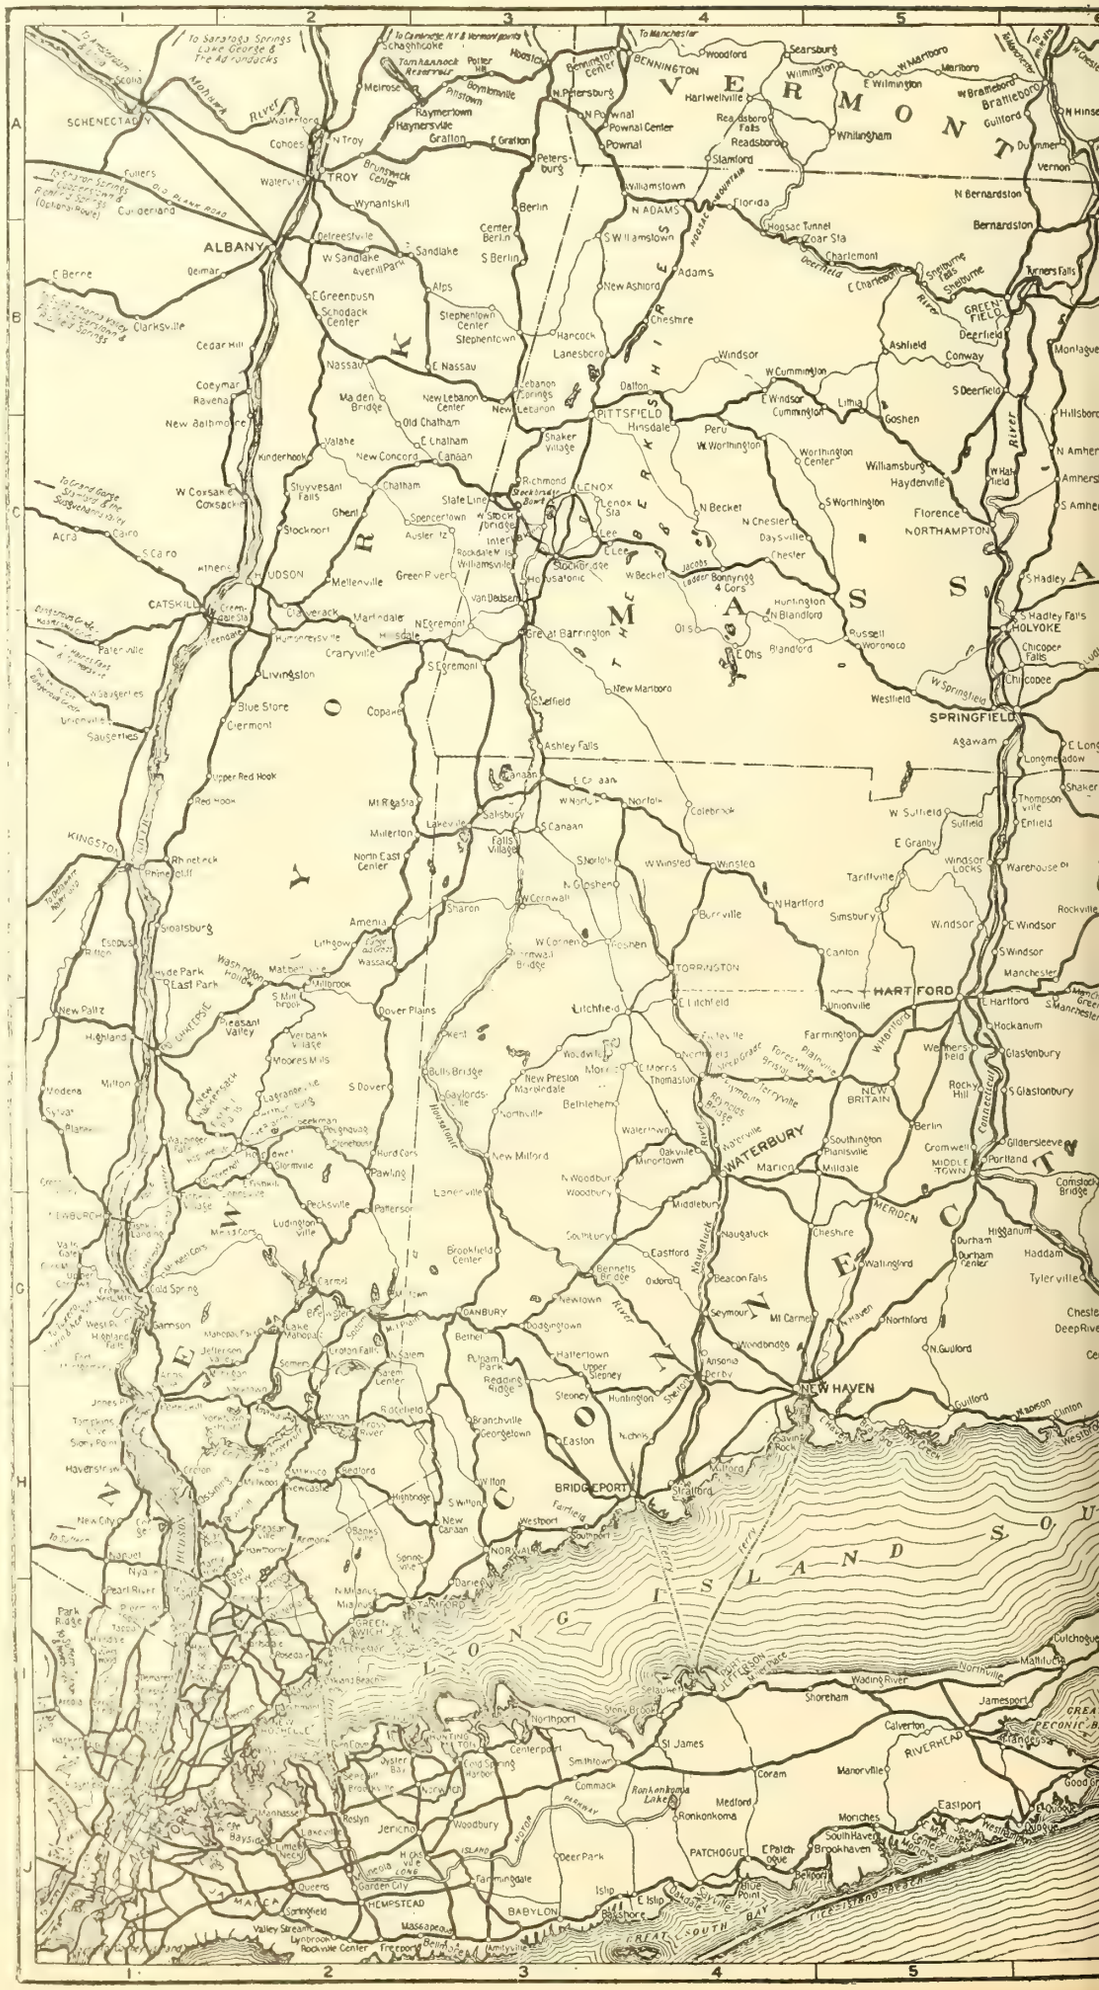
Baltimore, Nov. 27.—A campaign for new members has been started by the Maryland Motorcycle Club, of this city. A yellow card has been prepared with information anent the club, the F. A. M. and other information which would appeal to motorcyclists. The reasons for joining the club are set forth in plain words and the benefits to be obtained by becoming a member are pointed out in strong language. All this is on one side of the card. On the other side is printed an application form to be used by the prospective member. The campaign to enlarge the club membership will be prosecuted vigorously and the officers hope to obtain some good results before many months have elapsed.

Baltimoreans Join the Mudlarks.

Members of the Maryland Motorcycle Club, who are never afraid of any kind of weather, are rapidly acquiring the cognomen of "mudlarks." A number of them went for a run down to North Point recently—quite a historic place. Not satisfied with the excellent pike, some of the riders suggested that a spin be taken across country. So all started out to explore a new section. They got what they were not looking for. Mud, mud, deep mud, thick mud, sticky mud, and plenty of mud, met them before they had traversed any distance, and in a little time they were battling to keep their machines from sinking from view. They spent considerable time in getting out of their difficulties, and then all solemnly raised their hands and vowed "Never Again." Messrs. Wood and Essex, who had a similar experience on the Sunday previous, were conspicuous by their absence.

ROUTES OF LOWER NEW ENGLAND

First of a Series of Maps Showing Best Roads to Take When Making Touring Trips.



In presenting to the readers of the Bicycling World and Motorcycle Review the accompanying map of main traveled routes in lower New England, a new department is added to the many features that are in prospect to make this publication unexcelled in the special field it occupies. Every reader is interested in touring and it is this papers' purpose to help them perfect a plan whereby they can get the most enjoyment out of the wheels they ride, whether it be motorcycle or bicycle.

No section of the country is more prolific in improved highways than the far Eastern States, popularly known as New England. It was in this section of the country that public road improvement first took a definite form, and intercommunication between the commonwealths, by virtue of connecting systems of highways, became a reality. It is therefore fitting that precedence should be given this locality in presenting this, the first of a series of roads of various sections of the United States.

The compilation of this map is due to the painstaking work of Robert Bruce, manager of the Touring Information Board of the American Automobile Association. He is without a peer in work of compiling accurate and reliable touring information, his term of experience dating back from the early days of the bicycle, at which time he was the first to recognize the benefits of an organized systematic classification of route information.

The map delineates clearly the best routes for travel in lower New England and will prove of great aid to those of our readers contemplating tours at the present time of year or in the coming spring and summer.

Copies of this map, printed on heavy paper 17 x 22 inches in size, may be had while the present edition lasts, by addressing the Touring Information Board, A. A. A., 437 Fifth avenue, New York City, to whose courtesy the permission to reproduce the map is due.

California Constable Has Joy Ride.

Constable Wright, of Tehama, thought to get extra speed out of his bicycle by hitching it to the tail of one of those mechanical space annihilators known as a motorcycle, says the "People's Cause," of Red Bluff, Cal. He was going some all right, when his bike hit a rock and went into the air like a bucking broncho. When Wright picked himself up and made an invoice of his injuries he had the sum total of one shin badly peeled, one shine worse yet, one elbow turned up from the wrist, one hand peppered with coarse gravel, a sprained knee, and some 700 minor bruises.

MAIN TRAVELED ROUTES THROUGH
LOWER NEW ENGLAND
WITH PRINCIPAL CONNECTIONS INTO ADJOINING STATES

Latest F.A.M and Club News.

GIBSON WILL PAY THE BILLS

Amendment to F. A. M. By-laws Carried and All Monies in Future Go to the National Treasury.

In the matter of amending Article V, section 5, of the by-laws of the Federation of American Motorcyclists, Secretary-treasurer G. B. Gibson announces that the result of the mail vote is favorable. The amendment, in brief, was to cease having the national treasurer to send back to the district treasurers one-fourth of the fees received, and instead, have the national treasurer have charge of all the monies of the organization and pay all bills.

The directors voted favorably upon the amendment, and full and due notice of the intended change was published in the motorcycle journals early in October. On November 10, thirty days after the above mentioned publicity, circular letters were sent to 110 members, who were duly appointed and elected delegates to the 1911 National Assembly, and who were legally designated to act on matters requiring attention prior to the 1912 National Assembly.

A three-fourths vote of all ballots cast is required for the adoption of the amendment, and on November 25 Secretary Gibson announced that he had received the required number of ballots for its adoption, every one of which was recorded in favor of the measure.

Official notice is therefore issued under date of November 25, 1911, that in the future the national treasurer will keep and care for all the monies and other property of the F. A. M., he being under bonds to properly perform his duties. All bills will be promptly paid by him when properly presented. Bills against the National organization must bear the "O-K" of the officer incurring same, and district bills must bear the "O-K" of the district vice-president.

Elmirans Enjoy a Venison Dinner.

Elmira, N. Y., Nov. 28.—A membership contest is now engaging the attention of the Elmira Motorcycle Club, a Fisk Grip-fast tire having been offered for a prize to the club member bringing in the greatest number of new members by January 1. Already a large number of applications have been received.

The new club rooms have also acted as a great incentive to increase the membership. The photograph shown on this page of the interior was taken prior to the hanging of the pictures on the walls, but shows the rooms to be airy and convenient, and of the right type.

After the last regular meeting of the club, P. B. Rutan, of the firm of P. B. Rutan & Co., gave a dinner to the club members ,and venison was the leading feature of the bill of fare.

Mr. Rutan had just returned from the Adirondacks, where he was successful in pulling down two fine specimens of the 200-pound class of bucks. The host was voted the "best ever."

Columbus, (O.), Motorcyclists Will Dance.

Columbus, O., Nov. 29.—Members of the Columbus Motorcycle Club will entertain their friends at a dance to be given on the evening of December 5, at the Rader Oak Street Academy. L. P. Birkenbach heads the committee in charge of the affair. The club has a reputation for staging successful social functions, and the forthcoming affair should eclipse its predecessors.

ELMIRA CLUB'S NEW ROOMS.

MEMBERSHIP CAMPAIGN RESULTS

Several Clubs Affiliate With F. A. M.—Additional Repair Shops Registered—Chairman Estabrook Busy.

Chairman Estabrook's weekly bulletin from the headquarters of the F. A. M. membership committee, as usual is full of interest, and shows a continuation of the activity that has marked the progress of that department of the F. A. M. under his direction.

The latest addition to the list of affiliated clubs is No. 207, the Savannah (Ga.) Motorcycle Club, G. R. Rossignal, Jr., secretary, 2116 Hull street, that city. The club has 28 members and became affiliated November 18.

J. M. Poorman, of Fulton, Ind., has written Chairman Estabrook to learn if there is room in the F. A. M. for another club. Secretary Gibson allows that he has not run out of numerals as yet, and the loose leaf system will permit the list to grow until the F. A. M. gets in that big batch of clubs around next May, at least. Brother Poorman is invited to bring the boys in before the rush.

The Progress Auto Company, 1736 Richmond turnpike, New Brighton, N. Y., reports a very large increase in its motorcycle business during the past season, and states that the prospects are the brightest ever for next season. The company's headquarters is the meeting place of a goodly number of riders who are desirous of forming an F. A. M. club, and the matter of organizing same will be taken in hand at once. The company's garage is to become an F. A. M. registered shop and local club headquarters. There are facilities for handling this much—and then some.

Three new registered repair shops were added during the past week as follows: William A. Gaston, San Dimas, Cal.; Camplejohn Bros., 22 East Beaver street, Jacksonville, Fla.; A. C. Lemon, 116 Wick avenue, Youngstown, O.

The work of preparing the tool box envelopes containing F. A. M. literature is progressing merrily in the chairman's office, and 6,000 are being mailed weekly. Letters from friendly dealers and jobbers

that will assist the committee in its publicity work are still coming in, and this is much appreciated. All additional suggestions will be received gratefully.

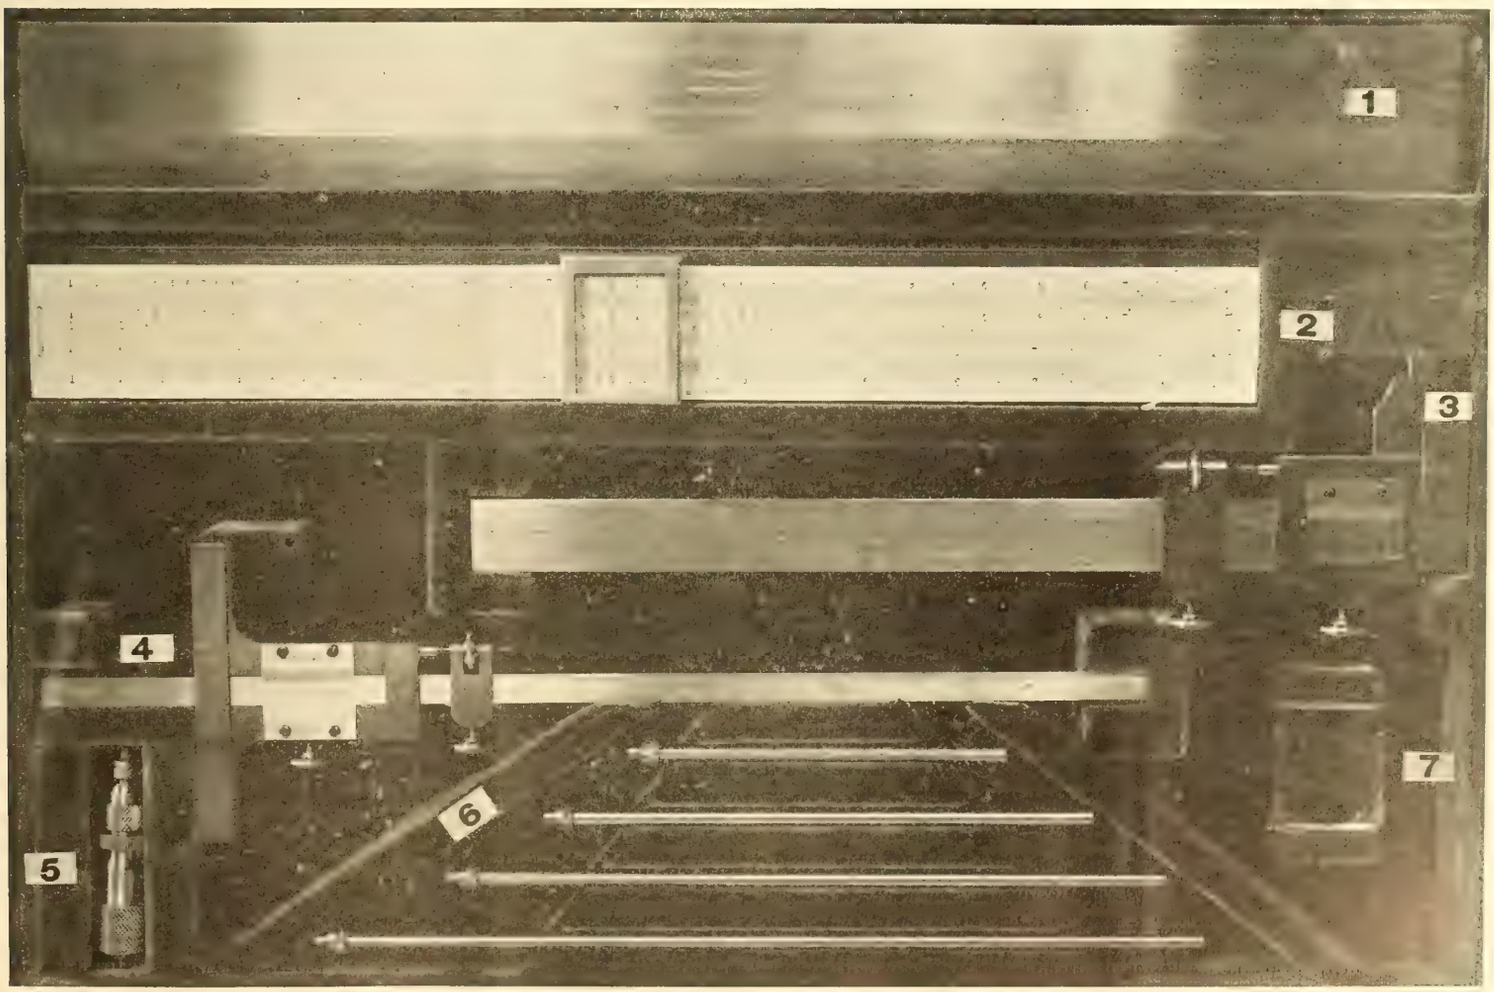
Motorcycle Signal Corps for Canada.

Toronto, Ont., Nov. 28.—So satisfactory have been the experiments of the Canadian Militia Department with motorcycling during the past season, that the headquarters authorities at Ottawa have decided to place the motorcycle division of the Canadian signal corps on a permanent service footing. A distinctive uniform will be issued to the riders, and all members of the division have been requested to attend a course of instruction in signaling, which will be inaugurated with a lecture in the Toronto Armories December 4.

Constant F. A. M. Cut-Out Reminder.

As an ever constant reminder to motorcyclists to keep their muffler cut-outs closed, the F. A. M. officers are sending out in their mail, lurid red and black leaflets, which catch the eye like a scarlet fever notice, calling attention to the abuse and the damage which it causes. The advice is golden, and a leaflet should be posted conspicuously in every dealer's store and motorcycle club, where the message will work 24 hours a day, the year round.

F. A. M. GETS NEW MEASURING INSTRUMENTS



Thornley Enlarges Facilities of Competition Committee for Determining Exact Piston Displacement of Racing Motors—Tools Will Take in Any Present Day Cylinder—Never Used Yet.

There is a new honor awaiting some racing motorcycle, in the office of Chairman Thornley of the F. A. M. competition committee, and that is to be the first to be measured with the new F. A. M. official measuring instruments. In order to be prepared for any machine which may be protested and sent to him for measurement of the piston displacement the chairman has purchased a $50 set of instruments which are shown in the accompanying illustration. Figure 1 is a straight edge for laying across a cylinder top to work from in determining the stroke. Figure 2 is a slide rule, with mathematical equivalents so arranged as to permit of quick calculation of decimals in figuring displacement. Figure 3 is a vernier caliper, with one-thousandth graduations for checking the reading of Figure 5, the inside micrometer with which the bore is measured. Figure 4 is a depth gauge, also graduated in thousandths of an inch, and is used in conjunction with Figure 1 for determining the stroke. Figure 5 is an inside micrometer for measuring the bore, and Figures 6 are interchangeable measuring shafts for use with Figure 5 for measuring any size cylinder bore up to seven inches. Figure 7 is a magnifying glass for attachment to the indicator frame of the slide rule to render easier the reading of the fine graduations on the scale. The instruments are of Brown & Sharpe make, and are stamped "Property of the F. A. M."

One on the Local Sherlock Holmes.

"Ye say ye haven't traveled faster'n fifteen miles an hour," said the constable, "and yet this here speed register o' yourn p'ints to forty-three."

"Oh, that!" smiled the motorcyclist, pleasantly. "That isn't a speed register, sir—that's my gas-meter, showing how much gasoline I've consumed since leaving home."

OFFICIAL F. A. M. INSTRUMENTS FOR MEASURING MOTOR DISPLACEMENT

FIVE WEEKS' CONTEST ENDS

Out of Thirty-seven Starters Only Two Finish With Perfect Scores in Final of 'Frisco Endurance.

San Francisco, Ca., Nov. 27.—After 1,800 miles of strenuous elimination riding, extending over a period of five weeks, the endurance run of the San Francisco Motorcycle Club came to an end on November 26-27, when the final run off was held, and at its conclusion two perfect scores remained—L. W. Connor (Pierce) and D. Hand (Indian). Connor was the only survivor in the trade rider class, and Hand achieved similar distinction among the private owners. These were all that remained with clean scores of the field of 37 starters, when the officials finally decided to stop the contest.

What was intended as a standard endurance run was held on October 28-29 over a 336 mile course, a 56 mile circuit being covered six times. The course was a hard one, embracing stiff grades and bad roads, and 18 hours were allowed for the full distance. Twenty-five men qualified for further honors, by turning in perfect scores. Then a series of eliminations was decided on to weed out the field.

For the first breakdown test on November 4-5 five men appeared as follows: L. W. Connor (Pierce); D. Hand (Indian); F. E. Karslake (Harley-Davidson); G. Van Nortwick (Pierce) and E. E. Stone (Thor). They went over the regulation route of 336 miles, and Stone and Van Nortwick passed into the mathematical discard, leaving three men still going. Two succeeding eliminations were held without effecting any change in the triple tie. Then, as the nights became colder—the men rode all night—and the officials experienced greater difficulty in securing trustworthy checkers in small farming towns on the course, strenuous measures were decided on to force a windup.

It was decided to make the final elimination one of distance rather than of time, and a 450 mile course was laid out, with the 18-hour schedule abandoned. The circuit was from Hayward, the starting point of all tht runs, to Stockton, Sacramento, Placerville and Auburn, returning via Oakland and Sacramento. The trio of cipher holders were dispatched at 2 p. m., on November 25. Maintaining a 20-mile schedule they checked for the night at Sacramento, and rode from there to Auburn and back to Oakland the day following, Sunday. On this leg Karslake was wiped out, failing to check on time, and with but two men left, and in separate classes the officials rang down the curtain and awarded first honors to Connor and Hand in their respective classes. The winning machines were used throughout the contest and survived the hard punishment to which they were subjected, in good shape. Connor rode a "four" single, and Hand a "seven."

Revision of the returns of the first run have made some changes in the results previously published. Credit for the only perfect team score, which first was given to the Racycle team, really belongs to the Indian team, composed of Hand, Gunn and Edginton. This make also won the only perfect score in the tandem team division, and had seven of its entries finish, six perfect. It also appears that the rider named Collins who was injured, was not W. G. Collins the racing man, but another party.

The Holiday at Los Angeles.

Los Angeles, Cal., Dec. 1.—Three exciting motorcycle road races were run at Glendale, over a three mile course, on Thanksgiving Day, Tobey, on a Merkel, taking two, and Pettit, Indian, annexing the other. The right angle turn at Ninth and Adams streets, proved ticklish to negotiate, and there were three spills here, but no one was hurt seriously. Summary:

Sixteen mile open, singles—Won by Tobey (Merkel); second, W. Reamer (Indian).

Twenty-four mile open, twins—Won by Pettit (Indian); second, Tobey (Merkel).

Thirty-five mile free-for-all—Won by Tobey (Merkel); second, Goode (Indian); third, R. Hammons (Harley-Davidson).

Hart Progressing Toward Recovery.

Frank Hart, the national amateur motorcycle champion, who is lying in St. Luke's Hospital, New York City, with a broken leg, has been transferred to a private room, where he now is accessible to visitors at any reasonable hour. Heretofore it has been rather difficult to see him, except during regular visiting hours. He is progressing nicely, and hopes to be able to attend the motorcycle show in the Garden in January. Hart has received letters of sympathy from admirers.

Toronto Flyer Becomes a Benedick.

Toronto, Ont., Nov. 28.—Herbert Kipp, the brightest star in the local racing firmament, won the greatest and most valued prize of his career, November 25, when he led Miss Margaret Trebilock to the altar. After the ceremony, the newlyweds fled to Detroit, "where life is worth living," to spend their honeymoon. They will be "at home" at 315 Gladstone avenue, Toronto. Kipp is in business with his father at the local Indian agency.

Monumental City Wants a Track.

Baltimore, Nov. 29.—This city may be on the motordrome circuit next year if present enthusiasm keeps up. Local promoters have listened with envious ears of the big crowds that are drawn to the Western saucers and are investigating the proposition with a view to planting a speedy bowl here if the necessary arrangements can be perfected.

PECK TAKES EIGHT FIRSTS

Great Riding at San Bernardino Thanksgiving Day Races—Close Finishes Cause Much Excitement.

San Bernardino, Cal., Dec. 1.—Local track records were smashed to smithereens at the motorcycle meet at Association Park, on Thanksgiving Day, when some of the keenest gasoline bouts ever run in this vicinity were pulled off. Ray Peck, a local boy, on an Excelsior, made a great showing, taking eight firsts, not to mention several places. Contrary to what the score would imply, Peck did not have any runaways, and often pounded out his victories by inch margins. Dave Kinney, on an Indian, also basked frequently in the limelight, and bagged the blue ribbon event of the day, the 25 mile free-for-all.

Excitement reached a climax in the 10 mile free-for-all, when Kinney, Peck and Knowles turned the laps wheel to wheel. In the final sprint Kinney squeezed through the winning pocket by a hair. Only one mishap occurred, Earl Peck, brother of Ray, getting mixed up with Clarence Cook, and Peck got the worst of it. The meet was run by the local club and drew a large attendance. Summary:

Five mile stock, 30½ inch motors—Won by Ray Peck (Excelsior); second, C. Clem (Harley-Davidson); third, J. Kennedy (Indian). Time, 5:17.

Five mile stock, 50 inch motors—Won by Ray Peck (Excelsior); second, McCullough (Excelsior). Time, 5:55⅗.

Five mile free-for-all, 30½ inch motors—Won by Ray Peck (Excelsior); second, C. Clem (Harley-Davidson); third, Frank McIntyre (Merkel). Time, 5:18⅕.

Five mile free-for-all, 50 inch motors—Wan by Ray Peck (Excelsior); second, D. W. Perry (Excelsior); third, Earl Peck (Excelsior). Time, 4:43⅗.

Six mile club relay, perpetual challenge trophy—Won by San Bernardino team; second, Riverside team. Time, 6:32⅖.

Ten mile free-for-all, 61 inch motors—Won by D. Kinney (Indian); second, Ray Peck (Excelsior); third, Charles Knowles (Indian). Time, 9:17.

Ten mile free-for-all, 30½ inch motors—Won by Ray Peck (Excelsior); second, C. Clem (Harley-Davidson); third, Clyde Pierson (Excelsior). Time, 10:24⅘.

Ten mile free-for-all, 61 inch motors—Won by J. Sawaya (Indian); second, A. Yoder (Indian); third, D. W. Perry (Excelsior). Time, 9:53.

Twenty-five mile free-for-all, 30½ inch motors—Won by Ray Peck (Excelsior); second, C. Clem (Harley-Davidson). Time, 23:12⅘.

Twenty-five mile free-for-all, 61 inch motors—Won by D. Kinney (Indian); second, Roy Shaw (Indian). Time, 21:55⅗.

PART II

Just before leaving for the continent we went to the Royal Automobile Club to get our continental passports and tryptiques. This proved easier than we had anticipated, and reports which have reached America of boundless red tape and fees necessary to secure international touring passports are grossly exaggerated. Our credentials consisted of an international pass to be signed in all countries visited, three small photographs of each of us, together with data as to birth, residence and other personal details, individual passports for Netherlands, Switzerland, Italy and Holland. We were required to make a deposit on our machines to cover German customs, which later was returned to us. The whole amount deposited by both of us was only $23.75 including the club fees.

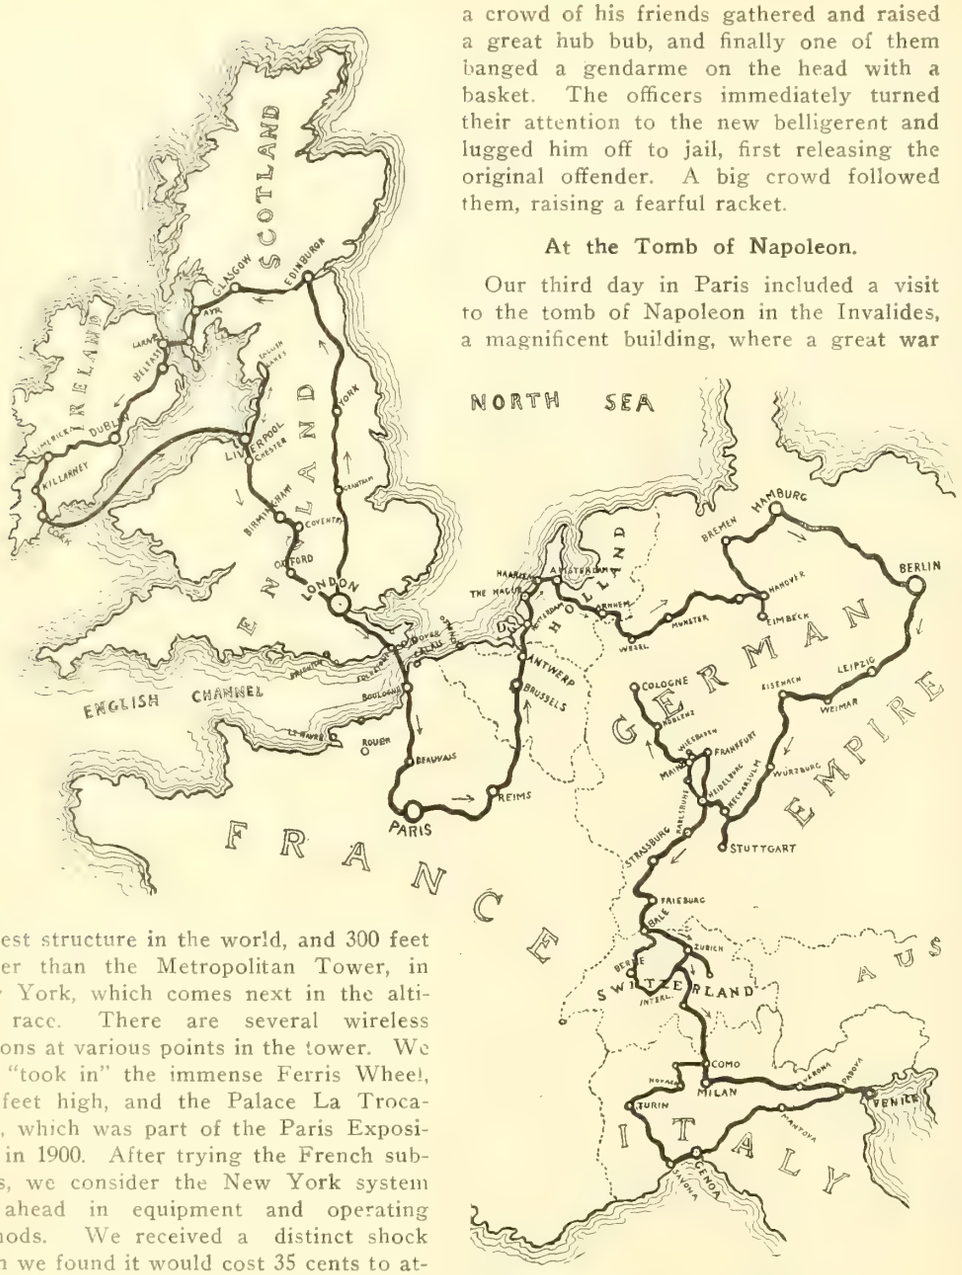
Then we were instructed to bring our machines to the club to demonstrate that we were competent to operate them, this formality being required before we could get our papers. However, it was very much of a farce, as far as a "demonstration" went, for all that was asked of us were the name and address of the makers of the machines, together with the motor numbers.

We landed at Boulogne, France, on August 11 at 9 P. M., and easily passed customs. We left our machines with the customs officers that night. Next morning we were astir early, and loaded our tanks with gasoline, at 48 cents a gallon. We did not tarry long in the city, being anxious to make Paris, 152 miles away. It was not long before we got a taste of the rough cobble roads which are so plentiful in sections of Europe. For 30 miles we pounded them, and it was not long before our luggage carriers gave way. They did the same thing many times over before our trip was finished.

Our Picturesque Entry Into Paris.

Of course we were having some difficulty in making ourselves understood when we wanted anything, but generally managed to find someone who spoke a little English and German. When 20 miles from Paris, it was getting pretty dark, and looking at our watches we found it was 8 P. M. As we had lamp troubles we decided that we would have all sorts of troubles on a strange road in a strange country, so we bargained with the driver of an automobile van, going into the city, and he finally consented to take us and our machines in for $1.00 which we thought was cheap enough, although we did not tell him so.

So it was that we entered Paris about 9:30 P. M. in a truck, although our motors were O. K. The chauffeur gave us our money's worth by taking us to a good hotel. We had not eaten since morning, and after putting away a hearty meal we "hit the hay." Next day when we got about we found that we could do no business as there were three holidays in a string. The Frenchman is great for holidays ,and he is not satisfied with one, but generally takes half a week off.



The French are mighty peculiar folks as an incident which befell us will show. While we were strolling with a friend, the latter accidentally bumped into a boy about 16 years old. The lad said something in French, and then I said to him in English, of course: "What's the matter, are you sick?" Immediately he began to shout in French: "If you want to insult me, insult me in French." I did not know what he was saying, but a crowd speedily gathered and, of course, understanding him, looked at us threateningly. Our friend spoke to the lad in French, and calmed him somewhat, but he passed on still sputtering.

We were fortunate in finding a friend who spoke French and English excellently to escort us around. He took us up in the great Eiffel Tower, 1,000 feet high, the

THE TURBULENT CHANNEL WAS CALM WHEN WE CROSSED

BOIS DE BOULOGNE SEEN FROM THE ARC DE TRIOMPHE

MAP SHOWING OUR ROUTE

highest structure in the world, and 300 feet higher than the Metropolitan Tower, in New York, which comes next in the altitude race. There are several wireless stations at various points in the tower. We also "took in" the immense Ferris Wheel, 200 feet high, and the Palace La Trocadero, which was part of the Paris Exposition in 1900. After trying the French subways, we consider the New York system far ahead in equipment and operating methods. We received a distinct shock when we found it would cost 35 cents to attend a moving picture show, but we were "game." Possibly the fact that the building formerly was a church, had something to do with it.

Next day a party of three of us decided to try a swim in the Seine. The best "bath" we could find was on the Place de la Concorde, and for 60 cents, we splashed around for more than an hour, and were fortunate enough to make the acquaintance of several American lads who were "doing" Paris. After the baths, we piled into a taxi and rode around the city visiting the fashionable Champs Elysee boulevard, and the Arch de Triomphe, erected in honor of Napoleon's victories. A stairway with 250 steps leads to the top of the arch, where a magnificent view of Paris may be had.

While returning from a visit to the famous Place de'l Opera we had another illustration of the excitable French temperament. The gendarmes, which correspond to our police, had arrested a truck driver for obstructing traffic. Immediately a crowd of his friends gathered and raised a great hub bub, and finally one of them banged a gendarme on the head with a basket. The officers immediately turned their attention to the new belligerent and lugged him off to jail, first releasing the original offender. A big crowd followed them, raising a fearful racket.

At the Tomb of Napoleon.

Our third day in Paris included a visit to the tomb of Napoleon in the Invalides, a magnificent building, where a great war musuem also is located. In the afternoon we took a boat ride on the Seine to St. Cloud, the highest point in the city, which also affords a beautiful view of the surrounding country. A visit to the St. Cloud forest, with its cool paths, certainly was refreshing after coming from the oppressive heat of the city. Upon returning to the city, we inspected the Richelieu palace, named after the famous cardinal and statesman of the sixteenth century.

Of all the places in Paris which we visited, we considered the Louvre art galleries the most interesting and magnificent. Here are collections of priceless paintings, from great masters. Admission is free and we spent over a day seeing all that was to be seen here. Just how small this world is, after all, was brought home to us, when I ran across an old schoolmate from San Francisco. A restaurant keeper who knew him, saw him passing one day, while we were eating, and hailed him to make us acquainted. Imagine the surprise of he and I when we recognized each other, while Esler and the restaurateur temporarily were speechless with astonishment.

In the Champagne Country.

We left Paris on Sunday, August 21, bound northward for Belgium. The first city of importance we touched was Rheims, the center of the champagne industry, but it held no joy for us, for we were off the "joy wagon." On this stretch we encountered a sharp shower, the first in four weeks. Rheims is 110 miles from Paris, and it was a very pretty sight where the road ran through the vineyards for miles. There were some cobble patches of course, particularly in the towns, but on the whole the roads were very fair. It cost us only 80 cents for lodging in one of the finest hotels in Rheims.

As usual we were abroad on the highways before bankers reach their offices, next day, and rode for miles and miles, over billiard table roads at a 40-mile gait. This steady

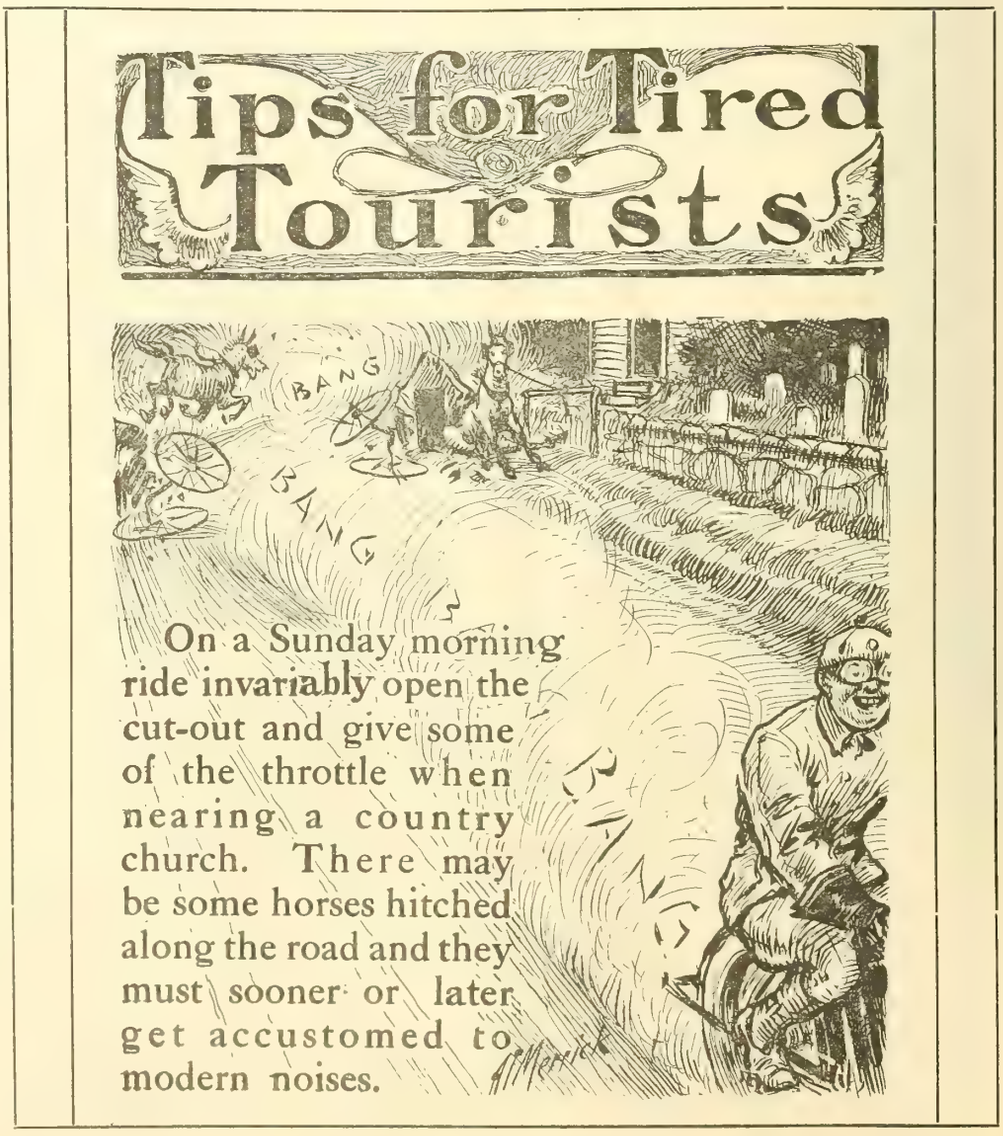
going brought us to the Belgian frontier in a few hours, but before we got off French soil I had my first puncture since leaving America. Before I had fixed it, a brisk rain caught us, and our entry into Belgium was a wet one indeed. It cost us 40 cents to pass the customs. In England we had been told that there were no roads in Belgium, so imagine our surprise when we found some ideal stretches. We had made Petite Chappelle when the rain, coming down in sheets drove us to shelter.

When the rain let up we decided to start out again, but it soon grew so dark we lost our way and went three miles past Marienbourg, where we intended to stay over night. We retraced our course, and after securing lodging, we sat down in wringing wet clothes to have our first square meal that day. We were so anxious to get into Belgium that we did not stop to eat dinner. On the road to Brussels next day we had a series of mishaps which upset our plans and delayed us considerably. After being punished on the cobbles, good and plenty, we were fortunate to strike a cycle path, which bordered the cobbles. On one side were trees and on the other square mounds of earth, eight feet apart to keep the motor cars off.

Near Brussels we passed the battlefield of Waterloo, which sent Napoleon a prisoner to Helena. On an artificial hill, about 150 feet high, was a bronze lion, erected by the allied powers several years after the famous battle in 1815. We climbed to the top of the hill, over a flight of 260 steps. There are several other monuments on the field, erected by Germany and England, in tribute to the valorous deeds and victories of their troops.

When we reached Brussels, which is the capital of Belgium we received a warm welcome from the N. S. U. agent. He placed an automobile at our disposal and whisked us off to a fine hotel. In the evening we visited some of the famous cafes, for which the city is noted. Next day we called on the local agents of the Bosch magneto and Peter Union tire, and spent the remainder of the day sightseeing in our automobile.



In company with an English army officer in the Indian service, Captain Livesay, whom we met in Brussels, and who is an enthusiastic motorcyclist and spends his vacations touring on the continent, we set out next day for Holland. However, our agreeable English friend, was going to the land of windmills by a different route, and we bade adieu at Malines. We continued on to Antwerp, the largest seaport in Belgium, but it did not stop, being anxious to reach Holland. When we arrived at the frontier at Putte, the good natured customs officer who was a typical burgher detected an error in our papers and at first threatened to make us pay duty. However, by cajolery, and playing on his vanity, we persuaded him that the error was not serious, and he finally passed us, and we crossed over to the land of dykes and wooden shoes.

"Daredevil" Stunts on Pacific Coast.

Los Angeles, Cal., Nov. 2 7.—Circus managers who are looking for some new and sensational acts, respectfully are referred to the Los Angeles (Cal.) Motorcycle Club. At its annual outing at Luna Park, on Sunday, November 26, the organization stages some daredevil stunts that easily would qualify for the sawdust arena. Fred Everett was the leading daredevil of the reckless artists, and won a charter membership in the "fearless" club by his stunts. First he caused a heart flutter by taking himself and his machine in a boat to the foot of a "shoot the chutes" slide, and then mounting and riding up the 300 foot and 33 per cent. grade at a lively clip. To cap the climax, he then turned around, and taking a passenger rode down the chute to the water's edge.

Everett was not through, yet, however, for he also won a slow race mounted on a New Era machine. In the "stingy" race as the economy event was dubbed, Erwin Knappe, riding a Minneapolis, was the last man out, and consequently the winner, making 49 laps on a half pint of "gas." Fancy riding by Everett and P. J. Q. Derkum completed the entertainment. Preceding the "stunts" a picnic luncheon was held, at which were present over 4,000 members of the club, together with their wives, children and sweethearts. It was the most successful outing the club ever has held, and brought together one of the largest motorcycle gatherings ever held in a section where large gatherings of motorcyclists are the rule. Local oil companies contributed to the general jollification by distributing gratis to the riders five barrels of gasoline. The committee of arrangements, to whom full credit for the success of the outing is due, consisted of C. Baylock, E. R. Langley, Harry White, Percy Bowers, R. S. Dissett.

Some friends of "Daredevil" Paul Derkum, of Los Angeles, Cal., best try to convey an impression of his marvelous stunts with a motorcycle by stating that "he can make a machine drink gasoline out of his hand." Someone who heard it remarked that a motorcycle would drink gasoline from anyone's hand if they fed it through a measure and funnel, and that a feat worth while is to induce a machine to eat speed from a wrench and screwdriver.

UNITED CYCLISTS' HANDICAP UNIQUE IN CYCLING

Spectacular Road Race Replete with Situations—Desired Publicity for Cause of Olympic Committee—Star Riders Furnish Soul-Stirring Finishes—Veteran Fisher and the Youthful Kaiser Outshine Classy Field.

"Twenty-four wins!" Clear, sharp, decisive came the words in a feminine voice, thrilling with the all-pervading excitement attending a brilliant victory, as the first rider crossed the tape with a truly wonderful burst of speed in the finish of the 15 miles handicap bicycle race on Pelham Parkway, New York City, Thursday, November 30. The voice was that of Mrs. T. M. R. von Kiler, a bride of six months, to whom was accorded the honor of picking the winner in the finish of the first road race under the auspices of the United Cyclists, the up-and-doing cycling organization, which, crystalized into being four weeks ago, immediately took up the work of proving to the public at large and the sporting world that the United States can and MUST send a bicycle team to the Olympic Games.

Its first endeavor to bring about this end, the promotion of the Pelham Parkway Handicap, was set in motion the week following the appointment of the American Olympic Bicycle Race Committee by the United Cyclists on its natal day, November 1, 1912. Then followed three weeks of as determined effort as ever was enlisted in any event in cycling history—and the result—first and foremost, publicity for the Cause, an entry list of 70 riders, this at a season when all of the riders had "broken training," a prize list valued at $250, an actual start of 42 riders, a crowd of 3,000 spectators, many of whom traveled from 10 to 15 miles from their homes on Thanksgiving Day, the one day of the year sacred to the fireside, and all indeed were rewarded well with what, in the unanimous opinion of veterans of the sport, was the most novel, interesting and altogether incomparable bicycle road race that ever had been their fortune to witness.

Promptly at 11 A. M, in response to the word from Starter Walter De Mara, the famous professional cyclist and 20 miles road record holder, the limit men, with 3 minutes 30 seconds start, were sent away, and throughout the ensuing 15 miles the riders never were out of sight. This was due to the arrangement of the course, a section of newly paved parkway, five-eighths of a mile in length by 65 feet wide being used with start and finish midway, and a slightly rising grade in both directions from the tape.

The limit men on the journey, there followed with scheduled precision the other riders from the various marks—3 minutes, 2 minutes 30 seconds, 2 minutes, 1 minute 45 seconds, 1 minute 30 seconds, 1 minute, and, with one of the limit men within 100 yards of completing his first of the necessary 12 laps and working desperately to catch them, the eight riders on scratch went away in a rush that despite his headlong speed, appeared to leave the oncoming leader of the race standing in his tracks.

"Whew!" said Will R. Pitman—"Happy Days"—of Boston Bicycle Club and Irvington-Milburn fame, in this instance as in hundreds of other races, Referee, "that was close, for handicapping that is drawing the line pretty fine; had that limit man closed that little gap what an advantage would have been his—one and a quarter miles completed and nothing to do but 'sleigh ride' all the way, but luckily that was missed by a margin the narrowest I ever have seen in my 30 years' experience in the game, and if I am not mistaken this will be the most interesting contest I ever have witnessed."

KAISER WINNING FROM 1:30 MARK

And so it proved; not alone to "Happy Days" but to all who witnessed the race. To and fro, the riders shuttled, passing and repassing any given point, 24 times in all, in a continuous stream, truly a most remarkable, unparalleled situation. As the race progressed, the riders gradually worked into larger and growing clusters. At six miles, the original eight squads were compressed into four. With four miles to go, the field was resolved into two divisions; in the first were about half the riders from handicaps of two minutes to the limit, inclusive; the second, but a scant quarter-mile in the rear, was made up of those of the long-markers who had been dropped and the scratch men, the latter setting a furious pace, extending every effort and working with clock-like regularity to close that tantalizing gap that intervened and which proved the salvation of the flying leaders.

The tenth time over the tape the advantage had been slightly increased. In the eleventh and last laps the scratch men closed to 300 yards, and up to three-quarters of a mile from the finish it was anybody's race—holding to this point the promise of a solid finish, shown since the scratch men had completed the first lap, when they demonstrated by their concerted pace-trading that they were in the race to ride "all the way," and win if possible. But this they were to be denied, as out in that flying squadron in front were three, Kaiser, Morgan and O'Connor, who realized the possibilities should the gap be closed and the seasoned sprinters on the honor mark be permitted to measure skill as well as speed with them in the final dash.

Coming down the stretch, a solid front of 12 riders was presented, bent low over the handlebars and every muscle tense for the spring; suddenly, 200 yards from the tape, a compact little rider, neatly clad in black trunks and white racing shirt, bearing the emblem of the Acme Wheelmen, appeared to literally lift himself forward from the pack, jumping clear of the line by a yard, this gain was increased with every revolution of the pedals in as straight and clean a sprint as could be desired. Over the line he fairly flew and then the announcement, "Twenty-four wins,' and such a win! by three open lengths. Then the rush, eight riders spread across and separated at the tape from first to last man by less than a wheel's length.

Harry Kaiser, a youth of 18 summers, was the winner. He started riding in competition May 7, this year, his first experience being in a race of 15 miles, in which he had a handicap of 4 minutes 30 seconds, and finished in twelfth position. He rode with increasing success, making his first win in the C. R. C. Association race of 10 miles, with a handicap of 2 minutes, November 12. He is a clean cut, stockily built lad, weighing 140 pounds, 5 feet 8 inches in

FISHER LEADS SCRATCH MEN HOME

height. A Pierce wheel geared to 91 inches and shod with Armstrong-Palmer tires, is his choice of equipment.

Within a minute of the time that Kaiser crossed the tape, 39 riders were checked. Just 52⅘ seconds separated the winner of the race and the leader of the scratch division, and time prize winner, Franklin Fisher, I. A. A. C., in twentieth position; his time was 38:47⅘, remarkably fast, as indeed was the time of all, when is taken into consideration the 24 turns around the "barrels" at the ends of the course. Jack Townsend, I. A. A. C., finished for second time prize, being beaten by Fisher by a scant length; third, William Van Den Dries, N. Y. A. C.; fourth, John Becht, E. C. W.; fifth, Joseph Shuster, E. C. W. Stanley Carmen, N. E. W., received a puncture early in the race, jumping on a borrowed wheel he resolutely dug after his fellow markers, the honor men, but was unable to overcome the lead, although he plugged along alone for 10 laps until overtaken by the first division in the home stretch. Joe Kopsky, another scratch man, a noted plugger and until recently the holder of the 100 miles record, was put out of the running in one of the very few spills on one of the turns. Frank Blatz, national amateur champion, the eighth of the back-markers, showed a lot of speed early in the race in short, snappy jumps, but evidently the distance and the different conditions of road riding as compared with that of the track was against him, as he did not show in the final jam.

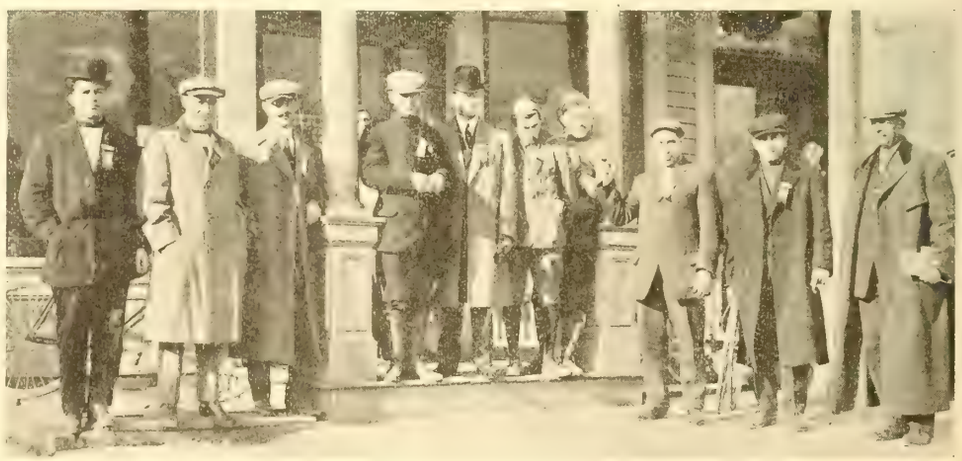
Franklin Fisher, the time prize winner, has been riding in competition just about as long as Kaiser, winner of first place, is years old; in fact, Fisher won his novice 18 years ago, rode on the first banked track built in Madison Square Garden, and has been a most enthusiastic wheelman, a consistent performer and frequent winner in all that time, and looks good for many years to come.

To the promoters, managers and officials, unstinted praise is due for the culmination of what, at the outset, with the short time in which to complete all the necessary details, appeared to be an almost impossible task, and it largely is due to the ceaseless efforts of the chairman of the Thanksgiving Day race committee, Mr. H. A. Gliesman, and his assistants, Harold J. Dibblee and Victor J. Lind, that the project was carried through to so brilliant a finish.

The race originally was planned for 25 miles, but the impossibility of securing a suitable course, free from public traffic, on which to run a race of that distance, and the final selection of the Parkway strip, made necessary the reduction to 15 miles to prevent the overlapping of the various handicap divisions, as naturally would have occurred in a race of 25 miles, with the consequent well nigh impossible task of scoring the riders and the obvious unfair advantage that would accrue to those riders who first finished a complete lap of the course. by reason of the fact that they could and undoubtedly would be able to maintain their lead by simply following the pace of the back-mark divisions.

So far as known, at least within the last decade, this is the first bicycle race to have been held with the sanction of the authorities of the City of New York, and with a closed and patrolled course. To Mr. Thomas J. Higgins, Commissioner of Parks, cyclists are indebted for the favors in this respect, and to Captain John McCauley, 69th Precinct, with a squad of 12 mounted men, for the excellent order maintained over the entire course from the starting gun until the last rider crossed the tape. Not an accident, beyond one or two of a minor nature, or interference of any sort, marred the proceedings.

The officials and prize winners, on Friday, December 8, will be the guests of the American Olympic Bicycle Race Committee at an informal dinner, at which also will be arranged the prize distribution.



Although this, the first attempt, may prove to be unremunerative financially, the United Cyclists have been encouraged by the general results obtained and the very evident appreciation of all who witnessed the race, and now are contemplating another of the same sort early in 1912.

The score of the first ten to finish and the time prize winners follows:

	Rider and Club	Hdcp. M. S.	Time M. S.
1	H. Kaiser, A. W.....	1:30	39:26
2	J. Townsend, I. A. A. C...	Scr.	38:48
3	H. L. Lind, Q. W.....	1:30	39:26⅘
4	F. Heusch, C. R. C. of A.	1:30	39:27
5	J. De Bruyn, A. W.....	2:00	39:57⅕
6	J. O'Connor, C. R. C. A..	1:30	39:27⅖

Results of Great Neck Cycle Races.

In the postponed races of the Great Neck, (N. Y.), Cycle Club, which were held November 12, two Irish American Club riders gave a good account of themselves. Jack Townsend won the half mile open and the four miles miss-and-out, and Franklin Fisher, his club mate, captured the mile handicap from scratch. The unlimited Australian pursuit race, which was called by darkness, resulted in a tie between John Becht of the Great Neck C. C., and Stanley Carmen, of the Empire City Wheelmen. A deciding match of three-fifths of a mile to settle the winner was won by Carmen.

PROMINENT CYCLING ENTHUSIASTS WHO OFFICIATED

UNITED CYCLISTS BECOME A NATIONAL FACTOR

Branches Being Formed Throughout the Country, Delegations From All Sections to Attend Big Dinner in January — Olympic Subscription List Started.

Subscriptions Pledged for the American Olympic Bicycle Race Fund.

New Jersey Division, Century Road Club Association	5.00
R. F. Kelsey, New York	10.00
J. A. Hall, Brooklyn, N. Y.	5.00

The regular meeting of the United Cyclists was held on Monday evening, the 27th ult., in the rooms of the Irish American Athletic Club, 110 East Fifty-ninth street, Manhattan. The meeting was called to order by President J. A. Hall with about 40 members present. The minutes of the last meeting were read by Secretary W. R. Stroud and approved of and then the reports of the committees were received. W. R. Stroud and H. J. Dibblee, reporting for the press, stated that approximately 200 columns of news regarding the United Cyclists and the Thanksgiving Day race and their work for the Olympic bicycle team had appeared in various newspapers throughout the country. Franklin Fisher, reporting for the racing committee, stated that the Irish American Athletic Club had very kindly offered the use of their gymnasium for a roller race meet and that he had taken up the matter with several professionals who had signified their willingness to ride in such an event. H. A. Gliesman, chairman of the Thanksgiving Day committee, reported that a very large entry list had been received and that Commissioner Higgins, Commissioner of Parks, had consented to close the portion of the Pelham Parkway just completed, between White Plains avenue and Williamsbridge road, for the race on Thanksgiving Day. Mr. Gliesman also stated that the police commissioner has agreed to have proper police control for that course. Numerous prizes have been donated by various manufacturers and others, and about 30 prominent men have been requested to serve as officials. A story of the race appears on another page. Letters were then read by the secretary from many prominent men, endorsing the movement for sending an American bicycle team to compete in the Olympic Road Race.

Prominent Men to Speak at Dinner.

Plans for a big dinner to be held on January 10, probably at the Hotel Astor, New York, were then discussed, and it was stated that Gov. John A. Dix of New York, Gov. Woodrow Wilson of New Jersey, Mayor W. J. Gaynor of New York, Comptroller William A. Prendergast, New York, Borough President Alfred E. Steers of Brooklyn, and many of the prominent men of the trade have been invited to be present and speak. Ladies will be included, and the tickets for the same will probably be $2.00 per plate. Visiting manufacturers and cyclists from all parts of the country are expected to be present, aggregating a number of about 1,000.

It was reported by the president that branches of the United Cyclists are about to be formed in Buffalo, N. Y.; Baltimore, Md.; Indianapolis, Ind.; Atlanta, Ga.; Philadelphia, Pa.; Chicago, Ill.; Boston, Mass.; Providence, R. I.; St. Louis, Mo.; Louisville, Ky.; Savannah, Ga.; Los Angeles, Cal., and San Francisco. Cal., for the purpose of aiding the general organization in the raising of funds for the Olympic Bicycle Race Committee and to arrange for elimination contests in their various communities.

Organizations Contribute to Olympic Fund.

It was then reported that the Century Road Club Association, Eastern Division, at its last meeting, held in New York on the 24th inst., had decided to donate $10 to the Olympic fund. The New Jersey division also reported a donation of $5.00; and E. Lee Ferguson of the Eastern Division was appointed to devise ways and means for raising an additional amount. He at once started a popular subscription list and reports very good progress from the same. The Eastern Division also offers to donate, for the use of the Olympic team on board ship, a set of home trainers. Mr. Franklin Fisher, reporting for the Empire City Wheelmen, stated that they would give the proceeds of their New Years' Eve race to the Olympic fund. Several other contributions have been received, as reported above on subscription list.

A collection was then taken up for the benefit of the Olympic fund and approximately $10 was secured. Thirteen applications for membership were read and accepted. M. J. Zulzer, reporting for the emblem committee, stated that he was securing estimates for the same and that he would report more definitely at the next meeting.

President J. A. Hall then spoke urgently for the need of contributions for the Olympic fund, as follows:

"The general American Olympic Committee must know as early as possible whether there is a possibility of our sending a bicycle team to compete in the Olympic Road Race. The American committee should at once advise the Swedish Olympic committee how many Americans are to enter in the Olympic games, so that accommodations may be secured for them in Stockholm and transportation secured. We are receiving daily assurances from all parts of the country of contributions that will be sent by those interested, but they do not state how much or when. The evident desire is to wait and see what some one else is going to do, and it readily can be seen that if everyone does this there is very little possibility that by January we will have sufficient funds for this team.

A Chance to Prove Your Sportsmanship.

"The committee has arranged a table, shown on another page, in the United Cyclists' advertisement, which calls for 955 contributors. Among the thousands of bicyclists in America there should be absolutely no trouble in securing the necessary $4,500 in this way in a comparatively short time. The committee states that they want 10 to contribute $100 each; 15 to contribute $50; 30 to contribute $35;—(if every manufacturer who secures the greatest benefit from the publicity obtained by such an event absolutely without cost to them, 200 columns being secured within the last month, and this just a start, would send in the above amounts at once, then the dealers and riders could take care of the rest): —50 contributing $10 apiece, 100, $5, 250, $2, and 500, $1. Many can accept the offer of the Bicycling World and Motorcycle Review to contribute one-half of the subscriptions received, through the United Cyclists, to the Olympic fund, in this way helping us out without taking one penny extra out of their own pocket and securing the Bicycling World and Motorcycle Review for one year, at the regular price of $2.00, one-half the amount of which will be donated by the company to the Olympic fund.

"The powder and ammunition manufacturers are getting together and are going to pay the entire expenses themselves for the revolver and rifle teams. The manufacturers of bicycles and accessories evidently have not yet awakened to the full realization of what it would mean to them by sending an American team to the Olympic games, not only in its direct advertising secured through the publicity obtained from newspapers in the country, but in the fact that bicycling today is just at a point where it needs only something big on this order to give the sport a tremendous and healthy revival as a sport and not simply as a means of travel.

Many Take Advantage of Unusual Offer.

A vote of thanks was tendered to Robert Lawson, who designed the United Cyclists' emblem and made a very fine drawing in colors of the same, and also to

W. T. Farwell, Jr., who furnished a black and white drawing for use in making line cuts. H. A. Gliesman, in reporting for the special subscription committee, stated that subscriptions for the Bicycling World and Motorcycle Review were beginning to, come in under the offer donating one-half of all subscriptions to the paper to the Olympic fund, and that Edgar Boehm, of Baltimore, had the honor of being number one on the list. He also stated that 2,500 circulars regarding the special subscription offer had been sent out and large advertisements were appearing weekly in the papers.

Through some misunderstanding, newspapers throughout the country are reporting that the United Cyclists are going to send a team of 12 motorcyclists to take part in the Olympic games. This statement is absolutely incorrect, as no motorcycle events are provided for in the Olympic games.

It is now planned to hold a big public meeting, probably the night before the dinner in New York, when delegations from various parts of the country will be present, and the Olympic question fully explained. The president will appoint a committee for this work, probably this week.

The next meeting will take place at Stoetzer's Hotel, 1312 Fulton street, Brooklyn, on Monday evening, December 11th. A report of the Thanksgiving Day race will be received and other important matters discussed. The meeting will be followed by a "Dutch";—something to eat, something to drink, and a general good time.

Ferguson Offers Excellent Suggestions.

The following suggestion from E. Lee Ferguson, of the Century Road Club Association, Eastern Division, is an excellent one, and if the individual cyclist would send in small contributions at once, they would soon count up.

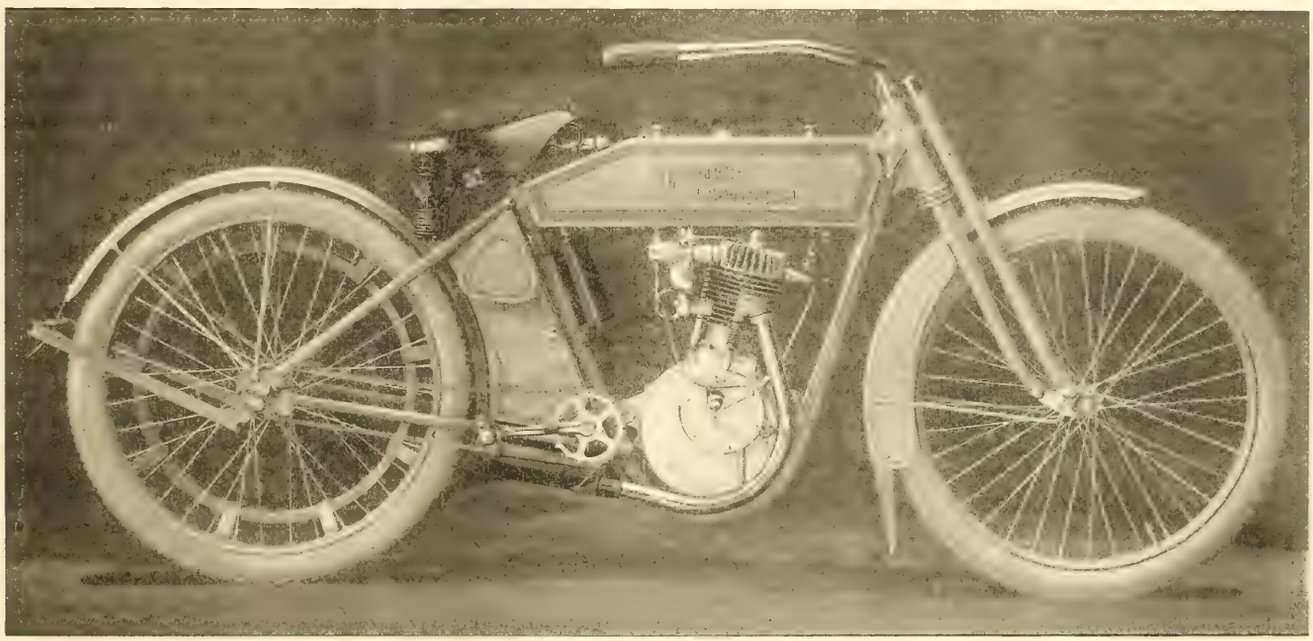
"As a member of the American Olympic Bicycle Race Committee I tried out an idea at the meeting of the Eastern Division of the C. R. C. Association, November 24, which may be of interest to others. I referred to the immediate need of funds, reading excerpts from the remarks of President J. A. Hall of the United Cyclists, and James E. Sullivan of the General American Olympic Committee, from the Bicycling World of November 18; and to the great sum that could be raised if each cyclist in Greater New York would contribute a trifling amount—from 10 cents to one dollar—and announced that I would accept any small sums from the members present. As a result I secured four dollars without asking any individual personally. It happened to be a relatively small meeting, otherwise the returns would have been greater. The point, however, that I desire to make is that a small contribution from each cyclist, such as would not be felt by the individual, will in the aggregate supply a fund larger than is actually required to pay the expenses of an American team There is no American cyclist but would be proud of the fact that he had contributed to the success of the movement, however small his contribution, and with concerted action on the part of the members of the committee, the dealers, and others interested, it would be practicable to bring this matter to the attention of a vast number of the cyclists of New York and produce a large total in cash at an early date. Large donations are of course desirable, but it is the aggregation of little things that produces results.

"The members of the Eastern Division of the C. R. C. Association who assisted me in my initial attempt to raise funds were as follows. A. B. Cooley, H. A. Gliesman, Alfred Horrey, Henry Kest, William Lexow, D. W. Moore, George Polacsy, Lucian Segal, Sylvain Segal, Isadore Taub, Adolph Wiener and H. W. Zarr. At the same time the Eastern Division appropriated ten dollars as a contribution to the fund, and the New Jersey Division pledged five dollars for the same purpose. The members of the Association feel a deep interest in the effort to have America properly represented in the great cycling feature of the Olympic games next year, and will have some candidates wearing the club colors in the elimination trials."

NICKELING WITHOUT ELECTRICITY

German Claims to Have Solved Problem With Galvanit—Powder, Water and Friction All That is Necessary.

How properly to nickel plate a piece of iron, steel or copper without the use of cumbersome and expensive electric apparatus, has been a dream of the inventor for many years. Many so-called "compositions" have been offered, but none of them proved capable of serving the purpose. Quite recently, however, M. A. Rosenberg, a distinguished German chemist, is credited with having discovered a method of covering metals with layers of tin, nickel, silver or cadmium by an electrolytic process which is absolutely independent of batteries, electric current, electrolytic solutions, etc. The necessary electric current is developed by humidity and friction while supplying the powdered coating metal to the cleaned surface of the metal to be covered.



The secret of Rosenberg's success lies in his discovery of a metallic mixture which will not attract humidity from the atmosphere, while stored, but which will set up electrolytic action immediately upon contact with water. For this reason the powder composition is mixed with certain inert substances, the object of which is nothing more than the protection of the effective particles of metal from humidity. To create the electrolytic action necessary for obtaining a smooth, serviceable coating of nickel small quantities of electro-positive metals, such as zinc, magnesium and aluminum, in the very finest powdered state, are mixed with the oxides or salts of the metal to be deposited.

For instance, if it is desired to nickel a plate of copper, the surface of the copper is dampened and the powdered composition sprinkled over it. The composition, in this case, would contain nickel oxide, finely powdered magnesium, and some powdered inert material such as infusorial earth. Immediately on contact with the water innumerable minute electric currents are created, by the aid of which tiny particles of metallic nickel are deposited upon the copper, forming a dense layer of nickel. It is this creation of electric current of very small intensity by means of the powder itself, which constitutes the novelty, for it long has been known that deposits of silver, mercury, etc., could be made upon polished surfaces by rubbing the oxides or salts of these metals upon the surfaces to be coated. The mere sprinkling of the powder on the copper surface, of course, does not create a perfect coating; in order to obtain this the powder must be rubbed in with a soft rag. During this friction a process of amalgamation takes place, and a homogeneous coat is formed, ready for polishing or buffing. The more powder that is placed on the rag, and the longer the rubbing is continued, the thicker the layer of metal coating becomes. It is even possible to produce beautiful designs by this method on iron, steel or copper; all that is necessary being a stencil, through the openings of which the nickel or silver is rubbed onto the metal to be covered.

Furthermore it is claimed that with the Rosenberg method it is unnecessary to first cover iron or steel with a layer of copper in order to cause the nickel to adhere properly; it is even possible to re-nickel damaged articles without removing the jagged coating or nickel still adhering to the surface. Simply by applying the powder and rubbing it hard into the metal, it is declared, it will form a perfect connection with the old coating, impossible of detection even by the microscope.

In this connection it is stated that in none of the compositions is there any use made of cyanides, mercury salts or free acids; they are not poisonous and do not even stain the fingers. The powders are to be marketed under the general trade name "Galvanit," and may be obtained for the following processes: To deposit tin upon copper, brass, German silver, silver, iron, steel; silver upon bronze, sopper, silver, German silver, iron, steel; cadmium (a rust preventive), upon copper, iron, steel, German silver, and nickel upon copper, iron, steel, brass, German silver, nickel.

Of the 59 Motorcycles Sold in Joliet, 52 Were Harley-Davidsons

Mr. F. E. Beck, of Joliet, Illinois, secured the agency for the Harley-Davidson in the Spring of 1909. Other dealers who also saw the possibilities in the motorcycle future continued to enter the field until there were seven different makes represented.

Today, there are 59 motorcycles in Joliet—52 of these are Harley-Davidsons.

Harley-Davidson Motor Company

153 C Street **MILWAUKEE, WIS.**

SIXTEEN TEAMS FOR SIX-DAY RACE

Lorenz and Saldow (German) Latest Addition to the Foreign Contingent—Teams Well Matched.

Facing the starter at five minutes past the hour of midnight Monday, December 11, in Madison Square Garden, New York City, will be represented 16 teams of long distance bicycle riders, the pick and cream of the world's best men in six-day races. The event will be the nineteenth annual recurrence of six-day contests in Madison Square Garden under the veteran management of Promoter P. T. Powers, and undoubtedly will be the last race of its kind held in the historic structure, as the Garden is slated to be torn down in the spring and be replaced by a large business block.

Be this as it may, it by no means signifies that New York will not have its annual six-day race, as another structure will be ready in an advantageous location in the metropolis ere this time next year, that will provide ample accommodations for this sporting classic.

There is ample material in the teams composing this year's contingent of contenders to warrant the belief that cycling history will be made, and that the record of 2,737.1 miles, made by McFarland and Moran in 1908 will be eclipsed. The entry of Kramer, the 11-time American champion, into the contest, with Moran, the veteran six-day grinder as his partner, has awakened an interest among the cycling fans of the country that cannot be overestimated, and the veterans of the game who are good at guessing frankly admit that the problem of the finish will be a hard one to solve.

The element of uncertainty is heightened by the fact that Kramer's chief rival, the redoubtable "Jackie" Clarke is teamed up with Joe Fogler, the Brooklyn wonder, and winner of several six-day races at the Garden in recent years. Then again, there is Eddie Root, who with Moran as a team mate last year, won the race by his finishing sprint. He is teamed with Fred Hill, and their friends say, a better combination of riding partners was never made.

Then again the brothers Bedell, John and Menus, whose faces have been missed from the field of starters for the past two years, are again in line and should make a first class showing. In fact the whole American field of riders shows class and among the fresh faces who will be in the field of starters there are several who will undoubtedly make good among the prize winners. Frank Cavanaugh, the Newark, N. J., amateur, who made such a strong bid for championship honors last season, has decided to cast his lot with the money chasers and has teamed with Norman Anderson, the Danish rider. Cavanaugh is the real novice of the race, but he has a tremendous amount of strength and should made a good showing.

Four of the foreign riders, Leon Georget, Lapize, Vanhouwaert, and Brocco, sailed last Saturday on the French liner "La Loraine," and are expected to land in New York to-day. Lapize and Vanhouwaert are newcomers to this country. The first named is a French rider of note, and the latter is a Belgian who has made a good name for himself in endurance contests. Leon Georget and Brocco both have been seen before in the Garden races and have rendered good accounts of themselves.

Sailing on board the "Prince Frederick Wilhelm" from Germany is Lorenz and Karl Saldow, who are reputed to be the greatest team of six-day riders in all Europe. They have won distinction in their own country by capturing one six-day race, held in Berlin, and finishing second in another. Lorenz also has the distinction of being one of the best sprinters in Europe, and will be matched to ride Kramer and Clarke in the Saturday night races of December 9, which act as a curtain raiser for the big event.

Palmer and Wells, who constitute the foreign team from Australia and New Zealand, are well known in America, having competed on the tracks of this country for several years past.

Arrangements which were in progress between the management of the race and Rutt and Stol, the well-known German-Holland team, have come to naught and neither of these riders will compete in the race this season.

The complete make up of the 16 teams is announced as follows:

American—Kramer and Moran, Root and Hill, Clark and Fogler, Bedell and Bedell, Collins and Pye, Halstead and Drobach, Cameron and Magin, Anderson and Cavanaugh, DeMara and Lawrence, Galvin and Wiley, Ryan and Jokus, Stein and Thomas.

French—Leon Gearget and Brocco.

French-Belgian—Lapize and Vanhouwaert.

German—Lorenz and Saldow.

Australasian—Palmer and Wells.

McCarthy Wants to be Reinstated.

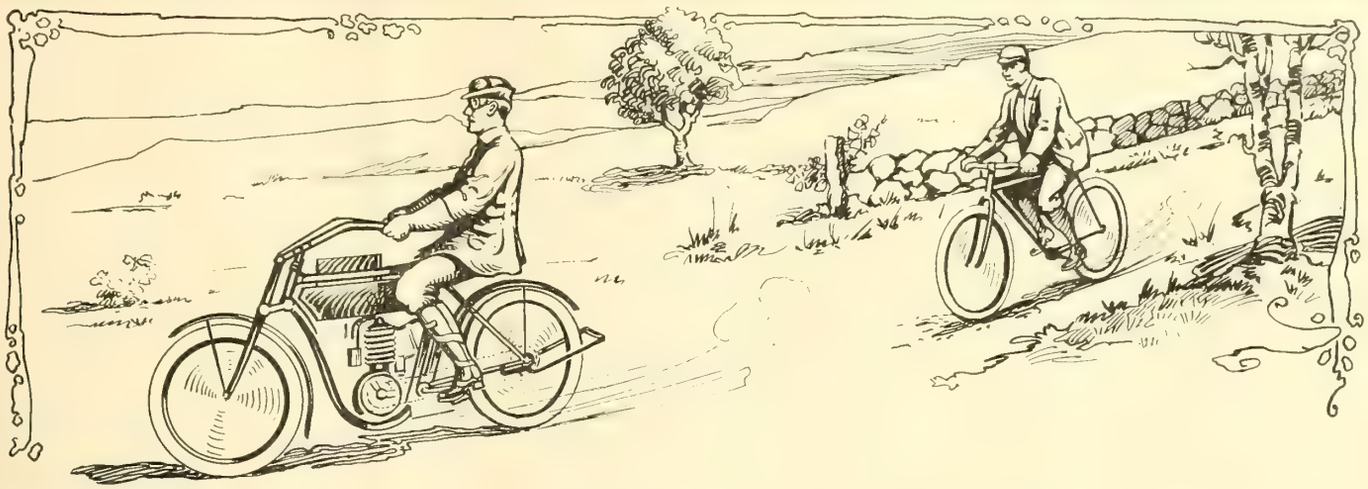
It was recommended at the special executive meeting of the Canadian Wheelmen's Association, November 24, that Fred McCarthy of Stratford, one of the old Canadian favorites, be reinstated to the amateur ranks. McCarthy has remained out of competition all summer, and having made written application for reinstatement, it is probable that he will be whitewashed at the annual meeting of the association next April. It is not expected that the N. C. A., by whom McCarthy was professionalized, will place any stumbling blocks in the way of his reinstatement, even though it be supposed that he will make one of the Canadian Olympic team. The N. C. A. will consider McCarthy's case at its annual meeting.

CANADA WILL HAVE OLYMPIC TEAM

Special Meeting of C. W. A. Shows Our Neighbors Strong for Representation in Lake Malar Road Race.

At a special executive meeting of the Canadian Wheelmen's Association, held at the Falconer Hotel, Toronto, Friday, November 24, it was decided to send a team of riders to Stockholm for the 1912 Olympic games and a recommendation to this effect was prepared, to be presented to the powers that be. The Dominion government financed the team that represented Canada at the London games in 1908 and it is expected that the Parliament of the country will again lend a helping hand. Eight riders will be sent. A series of long distance elimination trials will be held on the roads near Toronto early next season, and the men selected will be sent over at least a month in advance so that they may become acclimated. At least one member of the C. W. A. executive board will go along with the riders as advisor.

"Hares and Hounds" on Long Island.



Enjoying themselves to their heart's content in the healthy, bracing weather, the Century Road Club of America in conjunction with the C. R. C. Association, Acme Wheelmen and Iver-Johnson Wheelmen held their annual hare and hound chase November 26, at Manhasset, on the north shore of Long Island. Thirty riders participated.

Under the leadership of H. Hintze and H. Geiler, the wily hares with ten minutes start, each carrying a bag of colored paper laid the trial around Manhasset, Great Neck and Little Neck and endeavored to evade their pursuers, the route taking them through the woods, crossing the fields and streams and over hills and dales.

The hounds, in charge of E. Fraysse and J. Schmidt, followed in pursuit and were kept busy throughout the chase by false trails and the pleasing difficulties of crossing wire fences. However, after about eight miles of difficult traveling the hares were sighted and captured one by one, after which dinner was partaken of at the Centennial Hotel, Manhasset. The return home to Flushing finished the club run. Another chase will be held in the near future.

Veteran Shafer Again Shows Activity.

"Dave" Shafer, well known to cycling enthusiasas as one time manager of Jimmy Michael, has completed a very remunerative contract with an Australian exhibition company for the engagement of Arthur Stone to give performances in that country with a Metz aeroplane and his motorcycle globe-of-death act. Mr. Stone sailed November 30, from Vancouver, B. C., and Shafer will follow December 27.

Goodwin, I. A. A. C. Wins from Scratch.

New York's indoor flat-floor bicycle racing season opened auspiciously at the thirty-ninth games of the 23rd Regiment, N. G., N. Y. held in the armory, Bedford and Atlantic avenues, Brooklyn, Saturday, November 25. The two bicycle events on the lengthy general athletic program furnished thrills and excitement aplenty.

Eleven novices faced the starter in their mile open and contrary to expectations, they negotiated the eight laps of the glistening floor without a spill, A. Farrell (Co. "M") winning in 2:44⅕.

On the other hand, the 20 riders, several of whom were veterans and acknowledged flat-floor experts, who filled the ranks in the two preliminary and final two miles handicap for amateurs provided the spice of the evening in three hotly contested numbers interspersed with some rather rough going, garnished with the consequential spills and topped off with peppery finishes, with a dash of record breaking in the final when Eddie Goodwin, Irish-American A. C., made good his name in the time of 4:52, bettering the previous mark for the floor by three seconds.

One mile open, novice—Won by A. Farrell, Co. "M."); second, E. G. Manson, (Co. "M."); third, C. O. Soderstrom, (Co. "I"); time, 2:44⅕.

Two miles handicap, amateur—First heat—Won by J. Townsend, I. A. A. C. (15 yds.); second, Nat. Gutoff, W. A. S. (100 yds.); third, H. Murphy, A. B. C. (85 yds.).

Second heat—Won by Edw. Goodwin, I. A. A. C., (scratch); second, C. A. Mohrmann, I. A. A. C., (20 yds.); third, Franklin Fisher, I. A. A. C., (35 yds.).

Final heat—Won by Goodwin; second, H. J. Murphy; third, J. Townsend; time, 4:52.

Baltimoreans Close Together on Mileage.

The Century mileage contest of the Crescent Bicycle Club, of Baltimore, is resolving itself into a see-saw game. Charles H. Thoms, who held second place in October, has forged into first place for November, replacing William Leimbach. The two leaders are running a close race, and the final standing at the end of the year will show that neither one is far behind the other. August T. L. Leimbach is holding down third position, and by some hard riding could overtake the leaders and give them a hard run to beat him out. Sanborn is still fourth, which place he captured several months ago from Mommer, the Crescent's New York plugger.

The Leimbach brothers each rode a double century October 29, thereby getting even with Thoms, who put one on them earlier in the season. The total for October was 6,400 miles. Capt. Huber is the only man who knows how many miles each contestant has made since the beginning of 1911, and the end of the year is being anxiously awaited by the men. There has been no material changes in the standing.

Will You Do Your Share

toward sending a team of the best amateur bicycle riders of the country to represent America in the two hundred mile road race of the Olympic Games, in Stockholm, Sweden, on July 7th, 1912? America can win this—the world's greatest cycling event, if we can raise the funds to pay the expenses of sending the team.

WILL YOU BE ONE

—of 10	to contribute . . .	$100 each
—of 15	to contribute . . .	50 each
—of 30	to contribute . . .	25 each
—of 50	to contribute . . .	10 each
—of 100	to contribute . . .	5 each
—of 250	to contribute . . .	2 each
—of 500	to contribute . . .	1 each

You Can Contribute to the Fund Without Spending One Extra Cent

If you will send the special Olympic Subscription Committee, H. A. Gliesman, 782 Eighth Avenue, New York City, two dollars, by special arrangement with The Bicycling World and Motorcycle Review, you will be credited with one dollar contribution to the Olympic Bicycle Race Fund and will receive The Bicycling World and Motorcycle Review for one year, (52 issues), the regular price of which is two dollars. Thus you can contribute one dollar to the Olympic Fund, without an extra penny from your own pocket, or if you wish to contribute five dollars you can do so by sending four other subscriptions ($2.00 each) with your own. The main question is

Do You Want America Represented in the Olympic Road Race?

If so, there is only one way to show it and that is by sending in your subscription to Mr. Gliesman without further delay.

25 Cents Will Save You

much unnecessary motorcycle trouble, provided that the 25 cents is invested in getting by mail, prepaid, a copy of

"Care and Repair of Motorcycles"

¶ In its new, revised, 1911 edition it has been amplified and enlarged to include matter and illustrations relating to the more recent improvements on American motorcycles, such as mechanical lubricators, free engine clutches, two-speed gears, magnetos, etc., together with special sections concerning motors, valves, carbureters, fuel and important general subjects, all plentifully illustrated.

¶ "Care and Repair of Motorcycles" is sent prepaid to any part of the world for 25 cents. It is a book that every motorcyclist and every motorcycle repairman should have.

Don't Forget the Connecting Link When Buying a New Chain

You know this is important for quick repair on the road.

Diamond Chains have absolutely the simplest connection ever offered—one that can be made or broken in an instant. The chains themselves are right up to scratch in every way too.

Ask your dealer.

Reliance
(REG. U.S. PAT. OFF.)

In Special Motorcycle Type

A single drop of water will put every spark plug out of business—except one—the "Reliance." Put the Reliance in a glass of water and it continues to spark.

Do you appreciate the full import of this statement? Water is the greatest short-circuiting medium known; if water won't affect a plug, nothing else will. Carbon and soot have absolutely no effect upon "Reliance" Plugs. Its patented electrical action destroys them as fast as deposited.

When you realize that **ninety per cent.** of all plug troubles are caused by **carbon** and **soot** you begin to appreciate why the Reliance should be your first and last choice; you see why those who have once used Reliance troubleless plugs will have no other.

Regular Type $1.00
Magneto Type $1.25

For sale by most dealers, if yours does not carry, write and we will ship prepaid at prices quoted.

Kokomo "New Oxford"

The wear-resisting qualities of Kokomo Tires due to the extra quality of materials used in their making, illustrate the reason why so many manufacturers of high grade bicycles are using them; also, why dealers all over the land are busy supplying the demands of experienced riders who require only the highest grade tires manufactured.

KOKOMO TIRES

will be sold in greater lots during 1912 than in previous seasons. Kokomo "New Oxford," a popular guaranteed tire that is especially designed and constructed for road use. It is made from the best materials obtainable, being built up by hand with pure para inner tube, and, owing to the very high quality of the inner tube used, a puncture is very easily repaired. Kokomo Defender Special, a medium price tire of more than ordinary quality. It is popular among riders. Also furnished in smooth tread.

Pacific Coast Branch—Oakland, Cal.

Pennsylvania VACUUM CUP Bicycle Tires

Stocked by the leading hardware and sporting goods jobbers throughout the country.

The raised rubber cups moulded on these tires absolutely prevent skidding on wet or slippery pavements or in mud. The cups "hold the road" better than any known form of non-skid, and by ensuring safety and better traction power they admit of increased speed. The rubber knobs render these tires exceptionally long wearing. They last.

The high quality of materials used in the manufacture of Pennsylvania Vacuum Cup Tires enables us to give with each an unqualified season's guarantee. Each tire carries our yellow guarantee tag.

Made by an Independent Company with a selling policy which ensures a fair margin of profit to jobber and dealer. Write for profitable particulars.

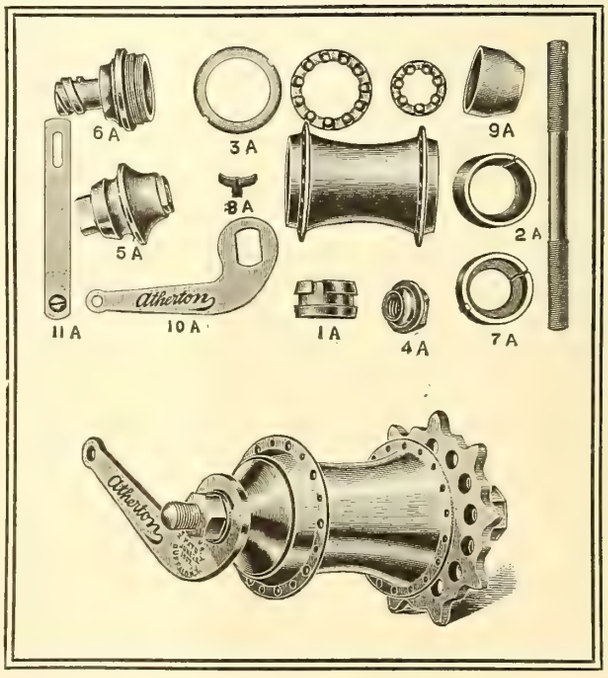
No slip in braking or in forward driving in the

CONCAVE ATHERTON

Coaster Brake for Bicycles



In the 1911 model there are three braking surfaces, giving as much or as little braking effect as the rider chooses.

Two driving points of contact make certain that there is no possibility of slip in the forward drive.

In every Atherton coaster brake there is satisfaction for both the rider and the dealer. It is the brake that affords absolutely free coasting and perfect braking.

Get the up-to-date coaster brake while you are about it.

It stays right!

The Pioneer Popular-Priced Machine

POPE MOTORCYCLE-$175 With Magneto

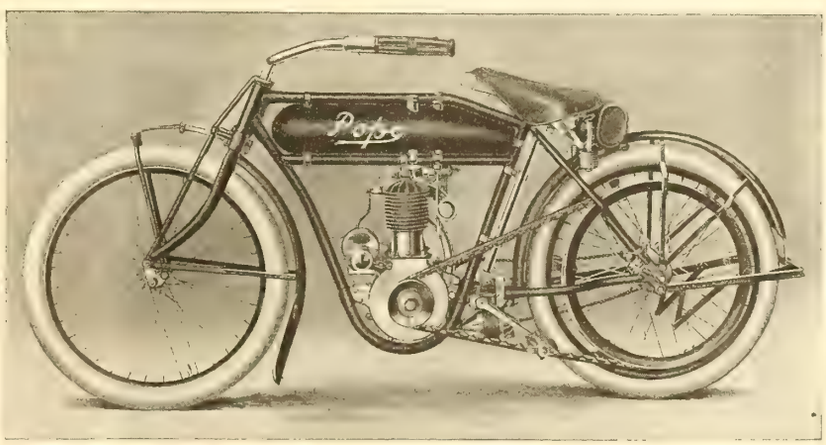
First machine of its kind on the market—First to succeed on the road—First to impress the public with its quality and reliability of performance—First in the confidence and favor of riders and dealers everywhere.

For 35 Years Pope Quality Has Never Been Questioned

That the public was ready for a popular-priced motorcycle of the very highest quality, recent events have conclusively proved. The universal success of the Pope Motorcycle, resulting in the establishment of a new and widely recognized standard of quality and value, is pretty generally accepted to account directly or indirectly for much that has been happening of late in the motorcycle industry.

A New Standard of Quality and Value

Those dealers who waited to see what the Pope would do before closing contracts, are now fully convinced that the idea which prompted the production of the Pope Motorcycle, as well as its complete realization in the machine itself, are absolutely sound and worthy of recognition.



The Pope for Quality and Reliability

Part by part examination of the Pope Motorcycle in the light of recent events does not alter our former statement that for recreation or business where quality, reliability and continuous service count for more than anything else, this machine offers more real value than can be found in any machine at any price.

In material, construction, design, adjustment, equipment and finish, the Pope Motorcycle is strictly high-grade and can be compared only with the best. It merits your support and best efforts as a dealer, in preference to all other machines, and will reward you accordingly.

Write for Details Concerning 1912 Eclipse Free-Engine Pulley.

ST. PAUL, MINN.

There's the Road and the Rider—

The Road with its numberless irregularities and the inevitable vibration which accrues—the Rider out for pleasure and enjoyment, and finding, oftentimes, discomfort through the absence of a perfect "go-between." And there's the

BROOKS B250—

a luxurious seat—a seat designed for Motor Cycles of the non-pedalling type, and

embodying the original and only genuine compound-spring—

the spring that absorbs vibration within itself yet, by its compensating action, eliminates entirely all tendency to bounce.

And that's the saddle to ensure the buyer's perfect comfort—the perfect "go-between"—the saddle you should offer every time.
